About this Manual

This manual is intended for service personnel who have completed sufficient training to undertake the maintenance and inspection of personal computers.

It is organized to allow you to look up basic information for servicing and/or upgrading components of the ***P170EM*** series notebook PC.

The following information is included:

Chapter 1, Introduction, provides general information about the location of system elements and their specifications.
Chapter 2, Disassembly, provides step-by-step instructions for disassembling parts and subsystems and how to upgrade elements of the system.

Appendix A, Part Lists
Appendix B, Schematic Diagrams
Appendix C, Updating the FLASH ROM BIOS

IMPORTANT SAFETY INSTRUCTIONS

Follow basic safety precautions, including those listed below, to reduce the risk of fire, electric shock and injury to persons when using any electrical equipment:

1. Do not use this product near water, for example near a bath tub, wash bowl, kitchen sink or laundry tub, in a wet basement or near a swimming pool.
2. Avoid using a telephone (other than a cordless type) during an electrical storm. There may be a remote risk of electrical shock from lightning.
3. Do not use the telephone to report a gas leak in the vicinity of the leak.
4. Use only the power cord and batteries indicated in this manual. Do not dispose of batteries in a fire. They may explode. Check with local codes for possible special disposal instructions.
5. This product is intended to be supplied by a Listed Power Unit with an AC Input of 100 - 240V, 50 - 60Hz, DC Output of 19V, 11.57A (**220** Watts) minimum AC/DC Adapter.

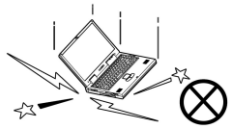
CAUTION

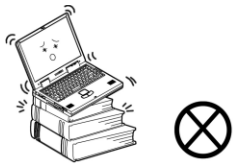
This Computer's Optical Device is a Laser Class 1 Product

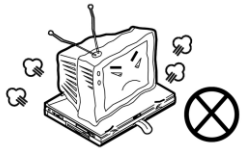
Instructions for Care and Operation

The notebook computer is quite rugged, but it can be damaged. To prevent this, follow these suggestions:

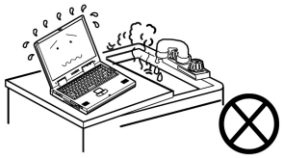
1. **Don't drop it, or expose it to shock.** If the computer falls, the case and the components could be damaged.

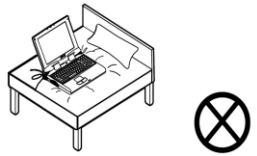
Do not expose the computer to any shock or vibration.	*Do not place it on an unstable surface.*	*Do not place anything heavy on the computer.*
		






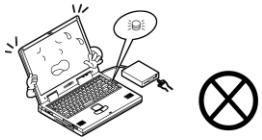
2. **Keep it dry, and don't overheat it.** Keep the computer and power supply away from any kind of heating element. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.

Do not expose it to excessive heat or direct sunlight.	*Do not leave it in a place where foreign matter or moisture may affect the system.*	*Don't use or store the computer in a humid environment.*	*Do not place the computer on any surface which will block the vents.*
			




3. **Follow the proper working procedures for the computer**. Shut the computer down properly and don't forget to save your work. Remember to periodically save your data as data may be lost if the battery is depleted.

Do not turn off the power until you properly shut down all programs.	*Do not turn off any peripheral devices when the computer is on.*	*Do not disassemble the computer by yourself.*	*Perform routine maintenance on your computer.*
			



Removal Warning

When removing any cover(s) and screw(s) for the purposes of device upgrade, remember to replace the cover(s) and screw(s) before restoring power to the system.

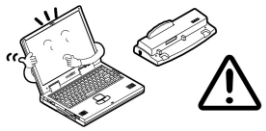
Also note the following when the cover is removed:

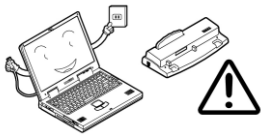
- Hazardous moving parts.
- Keep away from moving fan blades

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines and power cord). You must also remove your battery in order to prevent accidentally turning the machine on.

4. **Avoid interference.** Keep the computer away from high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage your data.
5. **Take care when using peripheral devices**.

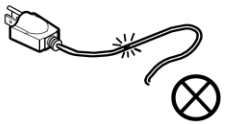
Use only approved brands of peripherals.	*Unplug the power cord before attaching peripheral devices.*
	


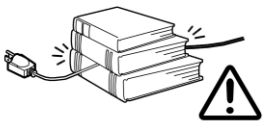


Power Safety

The computer has specific power requirements:

- Only use a power adapter approved for use with this computer.
- Your AC adapter may be designed for international travel but it still requires a steady, uninterrupted power supply. If you are unsure of your local power specifications, consult your service representative or local power company.
- The power adapter may have either a 2-prong or a 3-prong grounded plug. The third prong is an important safety feature; do not defeat its purpose. If you do not have access to a compatible outlet, have a qualified electrician install one.
- When you want to unplug the power cord, be sure to disconnect it by the plug head, not by its wire.
- Make sure the socket and any extension cord(s) you use can support the total current load of all the connected devices.
- Before cleaning the computer, make sure it is disconnected from any external power supplies.

Do not plug in the power cord if you are wet.	*Do not use the power cord if it is broken.*	*Do not place heavy objects on the power cord.*
		




Battery Precautions

- Only use batteries designed for this computer. The wrong battery type may explode, leak or damage the computer.
- Do not continue to use a battery that has been dropped, or that appears damaged (e.g. bent or twisted) in any way. Even if the computer continues to work with a damaged battery in place, it may cause circuit damage, which may possibly result in fire.
- Recharge the batteries using the notebook's system. Incorrect recharging may make the battery explode.
- Do not try to repair a battery pack. Refer any battery pack repair or replacement to your service representative or qualified service personnel.
- Keep children away from, and promptly dispose of a damaged battery. Always dispose of batteries carefully. Batteries may explode or leak if exposed to fire, or improperly handled or discarded.
- Keep the battery away from metal appliances.
- Affix tape to the battery contacts before disposing of the battery.
- Do not touch the battery contacts with your hands or metal objects.

Battery Guidelines

The following can also apply to any backup batteries you may have.

- If you do not use the battery for an extended period, then remove the battery from the computer for storage.
- Before removing the battery for storage charge it to 60% - 70%.
- Check stored batteries at least every 3 months and charge them to 60% - 70%.

Battery Disposal

The product that you have purchased contains a rechargeable battery. The battery is recyclable. At the end of its useful life, under various state and local laws, it may be illegal to dispose of this battery into the municipal waste stream. Check with your local solid waste officials for details in your area for recycling options or proper disposal.

Caution

Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Discard used battery according to the manufacturer's instructions.

Battery Level

Click the battery icon  in the taskbar to see the current battery level and charge status. A battery that drops below a level of 10% will not allow the computer to boot up. Make sure that any battery that drops below 10% is recharged within one week.

Related Documents

You may also need to consult the following manual for additional information:

User's Manual on Disc

This describes the notebook PC's features and the procedures for operating the computer and its ROM-based setup program. It also describes the installation and operation of the utility programs provided with the notebook PC.

System Startup

1. Remove all packing materials.
2. Place the computer on a stable surface.
3. Insert the battery and tighten the screws.
4. Securely attach any peripherals you want to use with the computer (e.g. keyboard and mouse) to their ports.
5. Attach the AC/DC adapter to the DC-In jack at the rear of the computer, then plug the AC power cord into an outlet, and connect the AC power cord to the AC/DC adapter.
6. Use one hand to raise the lid/LCD to a comfortable viewing angle (do not to exceed **130** degrees); use the other hand (as illustrated in Figure 1) to support the base of the computer (**Note**: **Never** lift the computer by the lid/LCD).
7. Press the power button to turn the computer "on".

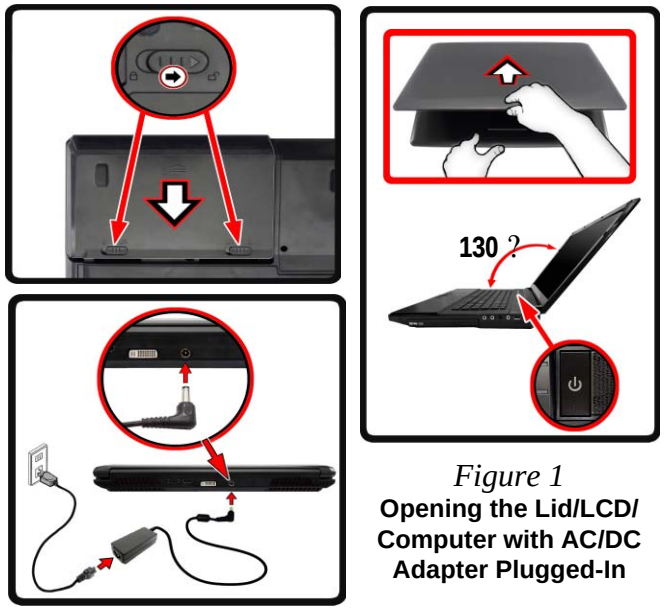


Figure 1

Contents

Chapter 1: Introduction

Overview

This manual covers the information you need to service or upgrade the ***P170EM*** series notebook computer. Information about operating the computer (e.g. getting started, and the *Setup* utility) is in the *User's Manual*. Information about drivers (e.g. VGA & audio) is also found in *User's Manual*. That manual is shipped with the computer.

Operating systems (e.g. *Windows 7*, etc.) have their own manuals as do application software (e.g. word processing and database programs). If you have questions about those programs, you should consult those manuals.

The ***P170EM*** series notebook is designed to be upgradeable. See ***Disassembly on page 2 - 1*** for a detailed description of the upgrade procedures for each specific component. Please note the warning and safety information indicated by the "  " symbol.

The balance of this chapter reviews the computer's technical specifications and features.

Specifications

Latest Specification Information

The specifications listed here are correct at the time of sending them to the press. Certain items (particularly processor types/speeds) may be changed, delayed or updated due to the manufacturer's release schedule. Check with your service center for more details.

CPU

The CPU is not a user serviceable part. Accessing the CPU in any way may violate your warranty.

Processor Options

Microsoft DirectX® 11 Compatible

nVIDIA® GeForce GTX 670M PCIe Video Card

1.5GB GDDR5 Video RAM on board

Microsoft DirectX® 11 Compatible

Security

Security (Kensington® Type) Lock Slot
BIOS Password
(**Factory Option**) Fingerprint Reader Module

Audio

High Definition Audio Compliant Interface
THX TruStudio Pro
S/PDIF Digital Output
One (3W) Sub Woofer
Built-In Microphone
2 Speakers

Pointing Device

Built-in Touchpad (scrolling key functionality integrated)

Keyboard

Full-size “WinKey” keyboard with numeric keypad

Communication

Built-In Giga Base-TX Ethernet LAN
(**Factory Option**) 2.0M Pixel FHD PC Camera Module

WLAN/ Bluetooth Half Mini-Card Modules:

(**Factory Option**) Intel® Centrino® Ultimate-N 6300 Wireless LAN (**802.11a/g/n**)
(**Factory Option**) Intel® Centrino® Advanced-N 6235 Wireless LAN (**802.11a/g/n**) + Bluetooth **4.0**
(**Factory Option**) Intel® Centrino® Wireless-N 2230 Wireless LAN (**802.11a/g/n**) + Bluetooth **4.0**
(**Factory Option**) Wireless LAN (**802.11b/g/n**) + Bluetooth **3.0**
(**Factory Option**) Wireless LAN (**802.11b/g/n**) + Bluetooth **4.0**

Card Reader

Embedded Multi-In-1 Card Reader
MMC (MultiMedia Card) / RS MMC
SD (Secure Digital) / Mini SD / SDHC/ SDXC
MS (Memory Stick) / MS Pro / MS Duo

Mini Card Slots

Slot 1 for **WLAN** Module or **Combo WLAN and Bluetooth** Module
(**Factory Option**) Slot 2 for **mSATA SSD**

Interface

Three USB 3.0 Ports (Including one AC/DC Powered USB/ eSATA port)
One USB 2.0 Port
One eSATA Port (USB 3.0 Port Combined)
One HDMI-Out (1.4a) Port
One DVI-Out Port
One S/PDIF Out Jack
One Headphone/Speaker-Out Jack
One Microphone-In Jack
One Line-In Jack
One Mini-IEEE1394b Port
One RJ-45 LAN Jack
One Display (1.1a) Port
One DC-In Jack

Note: External 7.1CH Audio Output Supported by Headphone, Microphone, Line-In and Surround-Out Jacks

Environmental Spec

Temperature
Operating: 5°C - 35°C
Non-Operating: -20°C - 60°C
Relative Humidity
Operating: 20% - 80%
Non-Operating: 10% - 90%

Power

Removable 8-cell cylinder battery, 76.96Wh (5200mAh)
Full Range AC/DC Adapter
AC Input: 100 - 240V, 50 - 60Hz
DC Output: 19V, 11.57A (**220W**)

Dimensions & Weight

412mm (w) * 276mm (d) * 41.8 - 45.4mm (h)

Chapter 2: Disassembly

Overview

This chapter provides step-by-step instructions for disassembling the ***P170EM*** series notebook's parts and subsystems. When it comes to reassembly, reverse the procedures (unless otherwise indicated).

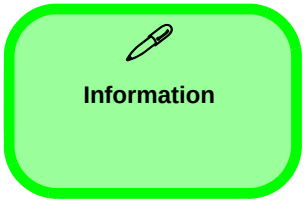
We suggest you completely review any procedure before you take the computer apart.

Procedures such as upgrading/replacing the RAM, optical device and hard disk are included in the User's Manual but are repeated here for your convenience.

To make the disassembly process easier each section may have a box in the page margin. Information contained under the figure # will give a synopsis of the sequence of procedures involved in the disassembly procedure. A box with a  lists the relevant parts you will have after the disassembly process is complete. **Note**: The parts listed will be for the disassembly procedure listed ONLY, and not any previous disassembly step(s) required. Refer to the part list for the previous disassembly procedure. The amount of screws you should be left with will be listed here also.

A box with a  will also provide any possible helpful information. A box with a  contains warnings.

An example of these types of boxes are shown in the sidebar.



NOTE: All disassembly procedures assume that the system is turned **OFF**, and disconnected from any power supply (the battery is removed too).

Maintenance Tools

The following tools are recommended when working on the notebook PC:

- M3 Philips-head screwdriver
- M2.5 Philips-head screwdriver (magnetized)
- M2 Philips-head screwdriver
- Small flat-head screwdriver
- Pair of needle-nose pliers
- Anti-static wrist-strap

Connections

Connections within the computer are one of four types:

Locking collar sockets for ribbon connectors	To release these connectors, use a small flat-head screwdriver to gently pry the locking collar away from its base. When replacing the connection, make sure the connector is oriented in the same way. The pin1 side is usually not indicated.
Pressure sockets for multi-wire connectors	To release this connector type, grasp it at its head and gently rock it from side to side as you pull it out. Do not pull on the wires themselves. When replacing the connection, do not try to force it. The socket only fits one way.
Pressure sockets for ribbon connectors	To release these connectors, use a small pair of needle-nose pliers to gently lift the connector away from its socket. When replacing the connection, make sure the connector is oriented in the same way. The pin1 side is usually not indicated.
Board-to-board or multi-pin sockets	To separate the boards, gently rock them from side to side as you pull them apart. If the connection is very tight, use a small flat-head screwdriver - use just enough force to start.

Maintenance Precautions

The following precautions are a reminder. To avoid personal injury or damage to the computer while performing a removal and/or replacement job, take the following precautions:

1. **Don't drop it**. Perform your repairs and/or upgrades on a stable surface. If the computer falls, the case and other components could be damaged.
2. **Don't overheat it**. Note the proximity of any heating elements. Keep the computer out of direct sunlight.
3. **Avoid interference**. Note the proximity of any high capacity transformers, electric motors, and other strong magnetic fields. These can hinder proper performance and damage components and/or data. You should also monitor the position of magnetized tools (i.e. screwdrivers).
4. **Keep it dry**. This is an electrical appliance. If water or any other liquid gets into it, the computer could be badly damaged.
5. **Be careful with power**. Avoid accidental shocks, discharges or explosions.
   - Before removing or servicing any part from the computer, turn the computer off and detach any power supplies.
   - When you want to unplug the power cord or any cable/wire, be sure to disconnect it by the plug head. Do not pull on the wire.
6. **Peripherals** – Turn off and detach any peripherals.
7. **Beware of static discharge**. ICs, such as the CPU and main support chips, are vulnerable to static electricity. Before handling any part in the computer, discharge any static electricity inside the computer. When handling a printed circuit board, do not use gloves or other materials which allow static electricity buildup. We suggest that you use an anti-static wrist strap instead.
8. **Beware of corrosion**. As you perform your job, avoid touching any connector leads. Even the cleanest hands produce oils which can attract corrosive elements.
9. **Keep your work environment clean**. Tobacco smoke, dust or other air-born particulate matter is often attracted to charged surfaces, reducing performance.
10. **Keep track of the components**. When removing or replacing any part, be careful not to leave small parts, such as screws, loose inside the computer.

Power Safety Warning

Before you undertake any upgrade procedures, make sure that you have turned off the power, and disconnected all peripherals and cables (including telephone lines and power cord). You must also remove your battery in order to prevent accidentally turning the machine on.

Cleaning

Do not apply cleaner directly to the computer, use a soft clean cloth.
Do not use volatile (petroleum distillates) or abrasive cleaners on any part of the computer.

Disassembly Steps

The following table lists the disassembly steps, and on which page to find the related information. **PLEASE PERFORM THE DISASSEMBLY STEPS IN THE ORDER INDICATED.**

To remove the Battery:

1. Remove the battery *page 2 - 5*

To remove the HDD from the Primary Bay:

1. Remove the battery *page 2 - 5*
2. Remove the HDD *page 2 - 6*

To remove the Optical Device:

1. Remove the battery *page 2 - 5*
2. Remove the Optical device *page 2 - 9*

To remove the HDD from the Secondary Bay:

1. Remove the battery *page 2 - 5*
2. Remove the HDD *page 2 - 10*

To remove the Primary System Memory:

1. Remove the battery *page 2 - 5*
2. Remove the system memory *page 2 - 12*

To remove the Secondary System Memory:

1. Remove the battery *page 2 - 5*
2. Remove the keyboard *page 2 - 14*
3. Remove the system memory *page 2 - 15*

To remove the WLAN Module:

1. Remove the battery *page 2 - 5*
2. Remove the keyboard *page 2 - 14*
3. Remove the wireless LAN *page 2 - 16*

To remove and install a Processor:

1. Remove the battery *page 2 - 5*
2. Remove the processor *page 2 - 17*
3. Install the processor *page 2 - 19*

To remove and install a Video Card:

1. Remove the battery *page 2 - 5*
2. Remove the video card *page 2 - 20*
3. Install the video card *page 2 - 21*

To remove the Microphone:

1. Remove the battery *page 2 - 5*
2. Remove the HDD *page 2 - 6*
3. Remove the Optical device *page 2 - 9*
4. Remove the HDD *page 2 - 10*
5. Remove the system memory *page 2 - 12*
6. Remove the processor *page 2 - 17*
7. Remove the video card *page 2 - 20*
8. Remove the microphone *page 2 - 22*

Removing the Battery

1. Turn the computer **off**, and turn it over.
2. Slide the latch 1 in the direction of the arrow (***Figure 1a***).
3. Slide the latch 2 in the direction of the arrow, and hold it in place (***Figure 1a***).
4. The battery may be levered up at point 3 (***Figure 1b***).
5. Lift the battery 4 out of the compartment (***Figure 1c***).

Figure 1
Battery Removal

Figure 2
HDD Assembly Removal

a. Locate the HDD bay cover and remove the screws.
b. Remove the hard disk bay cover by levering the cover at point 3.

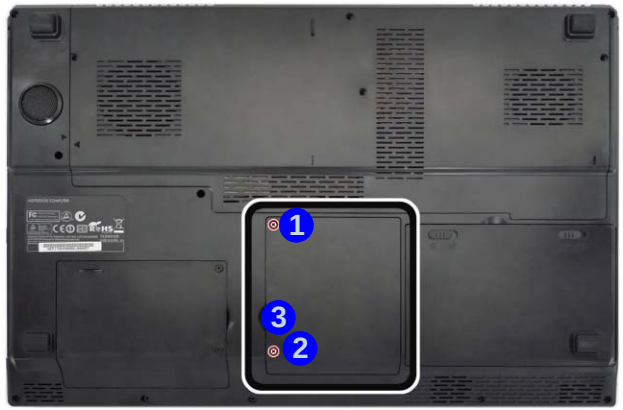
Removing the Hard Disk Drive

The hard disk drive can be taken out to accommodate other 2.5" serial (SATA) hard disk drives with a height of 9.5mm (h). Follow your operating system's installation instructions, and install all necessary drivers and utilities (as outlined in **Chapter 4 of the User's Manual**) when setting up a new hard disk.

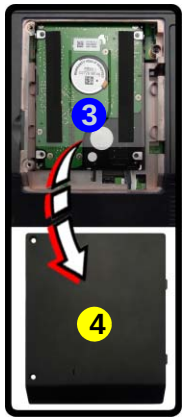
Hard Disk Upgrade Process

1. Turn **off** the computer, and remove the battery (*page 2 - 5*).
2. Locate the hard disk bay cover and remove screws 1 - 2 (*Figure 2a*).
3. Remove the hard disk bay cover 4 by levering the cover at point 3 (*Figure 2b*).

a.



b.



4.Hard Disk Bay Cover

- 2 Screws

HDD System Warning

New HDD's are blank. Before you begin make sure:

You have backed up any data you want to keep from your old HDD.

You have all the CD-ROMs and FDDs required to install your operating system and programs.

If you have access to the internet, download the latest application and hardware driver updates for the operating system you plan to install. Copy these to a removable medium.

4. Slide the HDD assembly in the direction of the arrow 4 (*Figure 3c*).
5. Remove the hard disk assembly 5 (*Figure 3d*).
6. Remove screws 6 & 7 and the insulation plate 8 (*Figure 3e*).
7. Reverse the process to install a new hard disk (do not forget to replace all the screws and covers).

Inserting the Hard Disk Into the HDD Bay

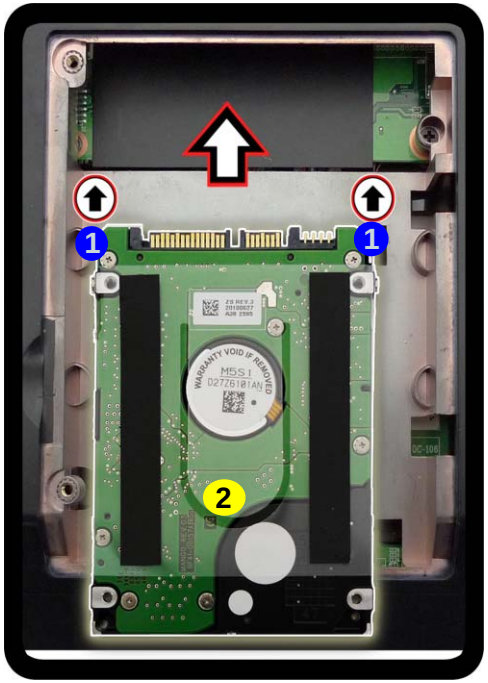
1. Make sure the HDD assembly is aligned with the black taped area 1 (***Figure 4a***).
2. When aligned, carefully insert the HDD assembly 2 into the case so that the connectors line up (***Figure 4a***).
3. Replace the hard disk bay covers and screws.

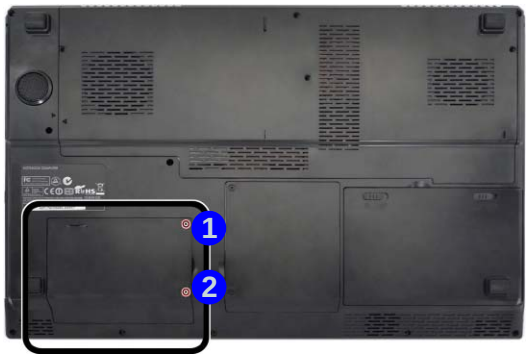
a.



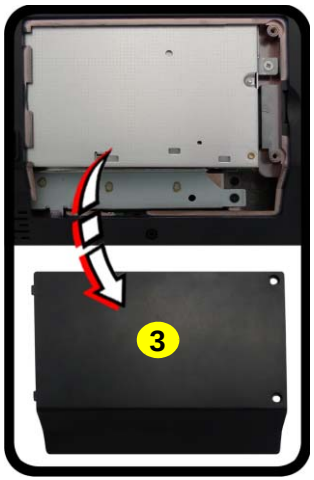
Removing the Optical (CD/DVD) Device

1. Turn **off** the computer, and remove the battery (*page 2 - 5*).
2. Locate the **secondary** hard disk bay cover and remove screws 1 & 2 (*Figure 5a*).
3. Remove the hard disk bay cover 3 (*Figure 5b*).
4. Remove the screw at point 4 (*Figure 5c*), and use a screwdriver to carefully push out the optical device 5 out of the bay at point 6 (*Figure 5d*).
5. Reverse the process to install any new optical (CD/DVD) device.

a.



b.



c.

d.

3. Secondary HDD Bay Cover
5. Optical Device

- 3 Screws

Removing the Hard Disk from the Secondary HDD Bay

Note that the **secondary** hard disk (if installed) is located under the optical device bay (CD/DVD).

1. Turn **off** the computer, and turn it over, remove the battery (*page 2 - 5*) and optical device (*page 2 - 9*).
2. Remove screws 1 - 3 from the secondary HDD assembly (*Figure 6a*).
3. Slide the secondary HDD assembly in the direction of the arrow 4 (it will not move fully out of the bay *Figure 6a*).
4. Lift the secondary HDD assembly 5 up and out of the bay (in the reverse direction of the arrow 4 *Figure 6c*).

Figure 6
Secondary HDD Assembly Removal

a. Remove the screws from the secondary HDD assembly.
b. Slide the secondary HDD assembly in the direction of the arrow.
c. Lift the secondary HDD assembly up and out of the bay.

- 3 Screws

5. Remove screws 6 - 9 and the insulation plate 10 (*Figure 7d*).

d.

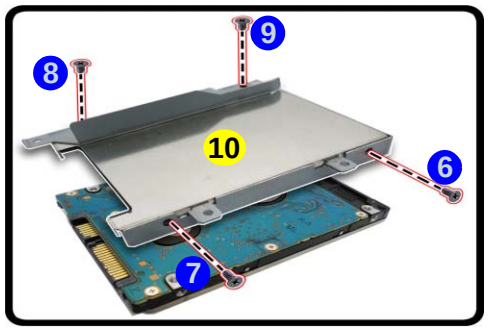

Figure 7
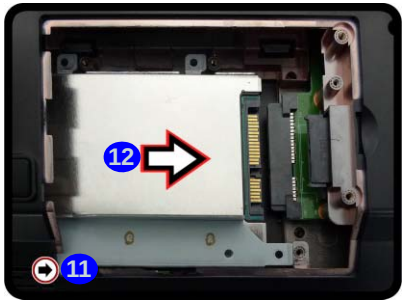
Secondary HDD Assembly Removal

d. Remove the screws and the insulation plate.

6. Reverse the process to install a new disk (make sure you install the insulation plate).
7. Slide the HDD assembly into the bay at an angle as illustrated.
8. Make sure the insulation plate slides under the HDD bay guide at point 11.
9. Slide the assembly in the direction of the arrow 12 and secure the assembly with the screws.



10. HDD Insulation Plate

- 4 Screws

Figure 8
RAM Module Removal

a. Remove the screws.
b. Slide the bottom cover until the cover and case indicators are aligned.

Removing the Primary System Memory (RAM)

The computer has **four** memory sockets for 204 pin Small Outline Dual In-line (SO-DIMM) **DDR III (DDR3)** type memory modules (see ***"Memory" on page 1 - 2***). The total memory size is automatically detected by the POST routine once you turn on your computer.

Note that **four SO-DIMMs are only supported by Quad-Core CPUs**; **Dual-Core CPUs support two SO-DIMMs maximum (see *"Memory" on page 1 - 2* for full details).**

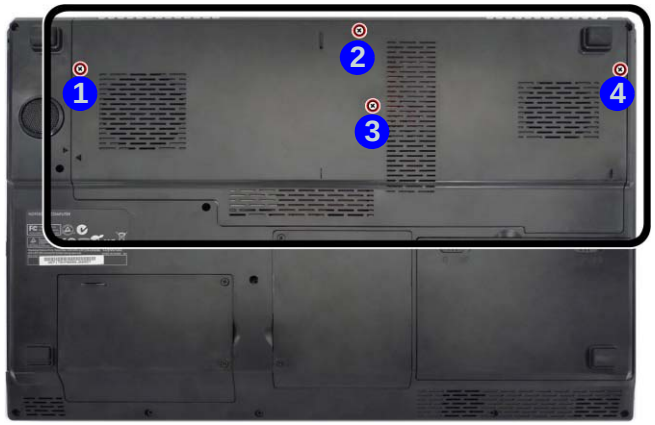
Two primary memory sockets are located under component bay cover (the bottom case cover), and two secondary memory sockets are located under the keyboard (not user upgradable). If you are installing only two RAM modules then they should be installed in the primary memory sockets under the component bay cover.

Note that the RAM located under the keyboard is not user upgradable. Contact your service center for more information if you wish to upgrade the memory in the secondary memory sockets.

Memory Upgrade Process

1. Turn **off** the computer, and turn it over, remove the battery (***page 2 - 5***).
2. Remove screws 1 - 4 (***Figure 8a***).
3. Slide the bottom cover until the cover and case indicators 5 are aligned (***Figure 8b***).

a.

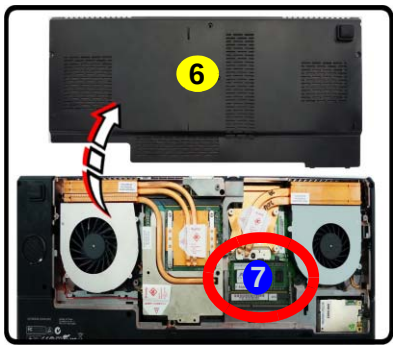


b.

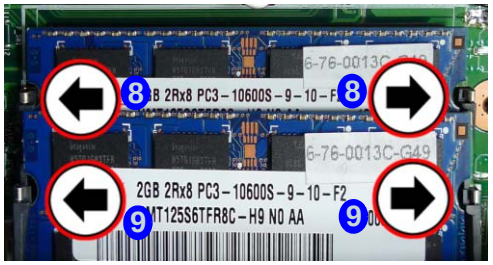
- 4 Screws

4. Lift the component bay cover 6 off the computer case. The modules will be visible at point 7 (*Figure 9c*).
5. Gently pull the two release latches (8 & 9) on the sides of the memory socket(s) in the direction indicated below (*Figure 9d*).
6. The RAM module 10 will pop-up, and you can remove it (*Figure 9e*).
7. Pull the latches to release the second module if necessary.
8. Insert a new module holding it at about a 30° angle and fit the connectors firmly into the memory slot.
9. The module's pin alignment will allow it to only fit one way. Make sure the module is seated as far into the slot as it will go. DO NOT FORCE the module; it should fit without much pressure.
10. Press the module in and down towards the mainboard until the slot levers click into place to secure the module.
11. Replace the bay cover and screws.
12. Restart the computer to allow the BIOS to register the new memory configuration as it starts up.

c.



d.



e.

Figure 9
RAM Module Removal (cont'd.)

c. Lift the component bay cover off the computer case. The modules will be visible at point 7.
d. Gently pull the two release latches on the sides of the memory socket(s) in the direction indicated below.
e. The RAM module will pop-up, and you can remove it.

Contact Warning

Be careful not to touch the metal pins on the module's connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module's performance.

6. Component Bay Cover
10. RAM Module

Figure 10
RAM Module Removal

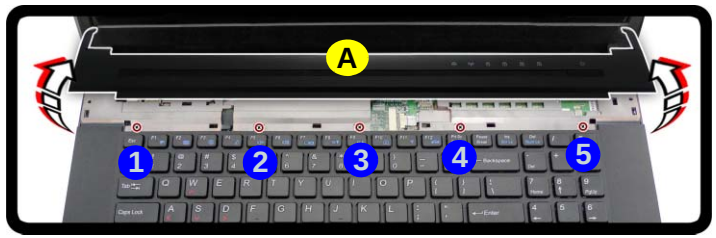
a. Remove the top cover module.
b. Remove the screws.
c. Carefully lift the keyboard up, being careful not to bend the keyboard ribbon cable.

Removing the Secondary System Memory (RAM)

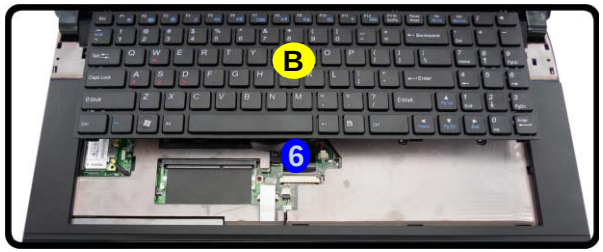
Memory Upgrade Process

1. Turn **off** the computer, and turn it over, remove the battery (***page 2 - 5***) and the component bay cover.
2. Remove the top cover module A (***Figure 10a***).
3. Remove screws 1 - 5 (***Figure 10a***).
4. Carefully lift the keyboard B up, being careful not to bend the keyboard ribbon cable 6 (***Figure 10c***).

a.



b.

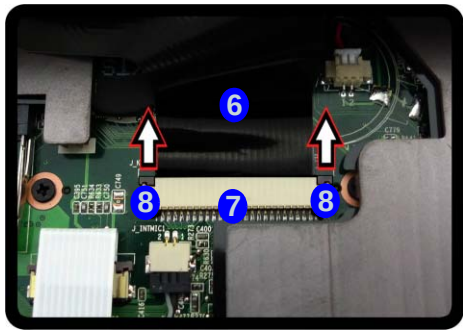


A. Top Cover Module
B. Keyboard

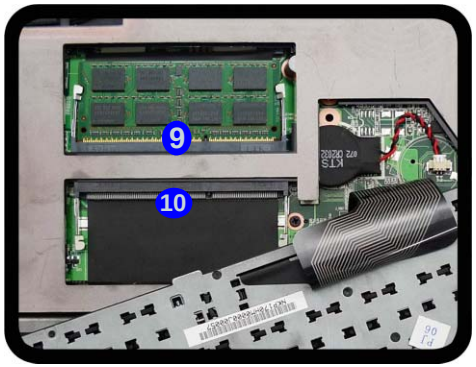
- 5 Screws

5. Disconnect the keyboard ribbon cable 6 from the locking collar socket 7 by using a small flat-head screwdriver to pry the locking collar pins 8 away from the base. (*Figure 11e*).
6. Remove the keyboard and the memory sockets 9 & 10 will be visible (*Figure 11f*).
7. Gently pull the two release latches (11 & 12) on the sides of the memory socket(s) in the direction indicated below (*Figure 11g*).
8. The RAM module 13 will pop-up, and you can remove it.
9. Pull the latches to release the second module if necessary.
10. Insert a new module holding it at about a 30° angle and fit the connectors firmly into the memory slot.
11. The module's pin alignment will allow it to only fit one way. Make sure the module is seated as far into the slot as it will go. DO NOT FORCE the module; it should fit without much pressure.
12. Press the module in and down towards the mainboard until the slot levers click into place to secure the module.
13. Replace the bay cover and screws.
14. Restart the computer to allow the BIOS to register the new memory configuration as it starts up.

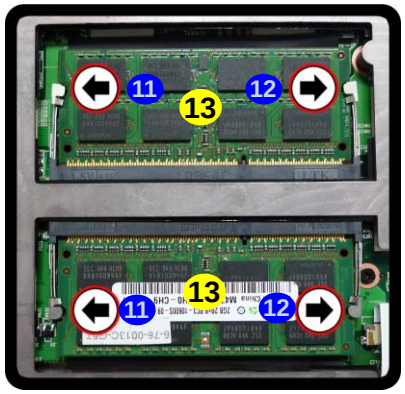
e.



f.



g.



Contact Warning

Be careful not to touch the metal pins on the module's connecting edge. Even the cleanest hands have oils which can attract particles, and degrade the module's performance.

Figure 11
RAM Module Removal (cont'd.)

e. Disconnect the keyboard ribbon cable from the locking collar socket by using a small flat-head screwdriver to pry the locking collar pins away from the base.
f. Remove the keyboard and the memory sockets will be visible.
g. Gently pull the two release latches on the sides of the memory socket(s) in the direction indicated below.

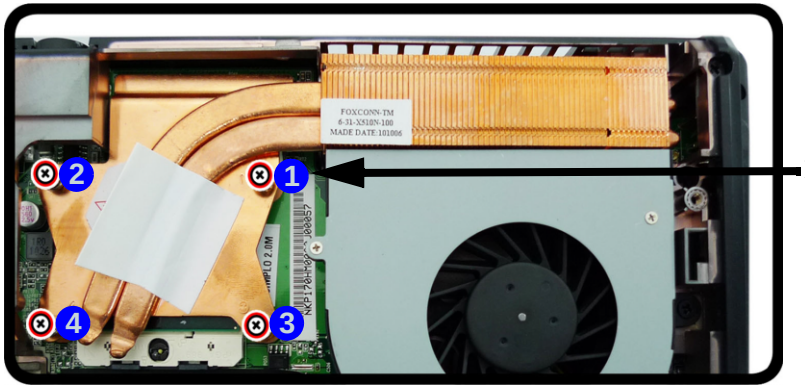
- 1 Screw

Removing and Installing the Processor

Processor Removal Procedure

1. Turn **off** the computer, remove the battery (*page 2 - 5*), and component bay cover (*page 2 - 10*).
2. Remove screws 1 - 4 from the heat sink unit in the order indicated on the label (i.e screw 4 first through to screw 1 last *Figure 13a*).
3. Carefully (it may be hot) remove the heat sink unit 5 (*Figure 13b*).

a.



Note: Loosen the screws in the reverse order 4-3-2-1 as indicated on the label.

b.

Figure 13
Processor Removal Procedure

a. Remove the screws in the correct order.
b. Carefully remove the heat sink unit.

CPU Warning

In order to prevent damaging the contact pins when removing the CPU, it is necessary to first remove the WLAN module from the computer.

5. Heat Sink Unit

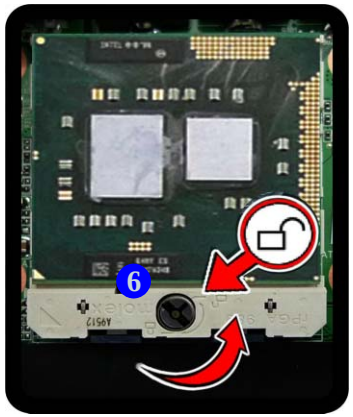
- 4 Screws

Figure 14
Processor Removal (cont'd)

c. Turn the release latch to unlock the CPU.
d. Lift the CPU out of the socket.

4. Turn the release latch 6 towards the unlock symbol, to release the CPU (***Figure 14c***).
5. Carefully (it may be hot) lift the CPU A up out of the socket (***Figure 14d***).
6. See ***page 2 - 19*** for information on inserting a new CPU.
7. When re-inserting the CPU, pay careful attention to the pin alignment, it will fit only one way (DO NOT FORCE IT!).

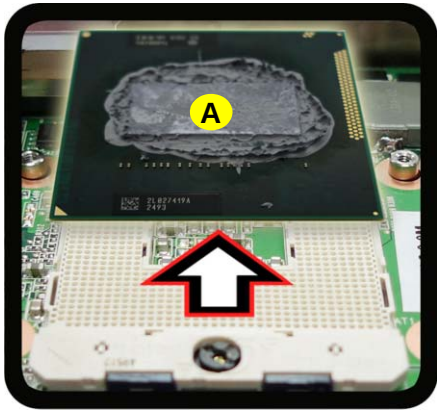
c.



Unlock

Lock

d.



A. CPU

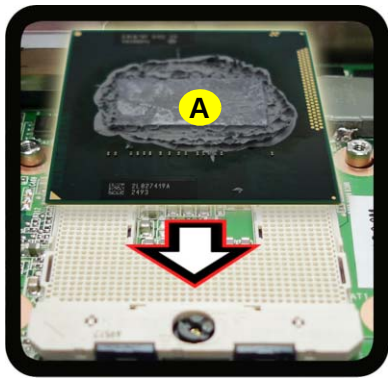
Caution

The heat sink, and CPU area in general, contains parts which are subject to high temperatures. Allow the area time to cool before removing these parts.

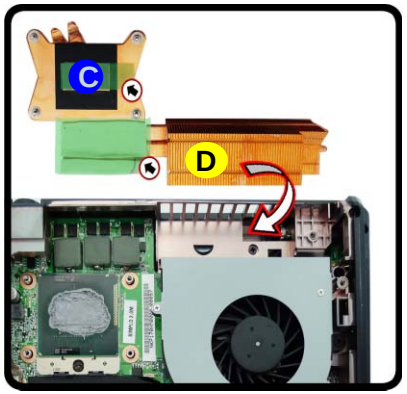
Processor Installation Procedure

1. Insert the CPU (A), pay careful attention to the pin alignment (***Figure 15a***), it will fit only one way (DO NOT FORCE IT!), and turn the release latch (B) towards the lock symbol (***Figure 15b***).
2. **Remove the sticker** (C) (***Figure 15c***) from the heat sink unit.
3. Insert the heat sink unit (D) as indicated in ***Figure 15c***.
4. Tighten the CPU heat sink screws in the order (1), (2), (3) & (4) (the order as indicated on the label and ***Figure 15d***).
5. Replace the CPU fan, component bay cover and tighten the screws (***page 2 - 17***).

a.

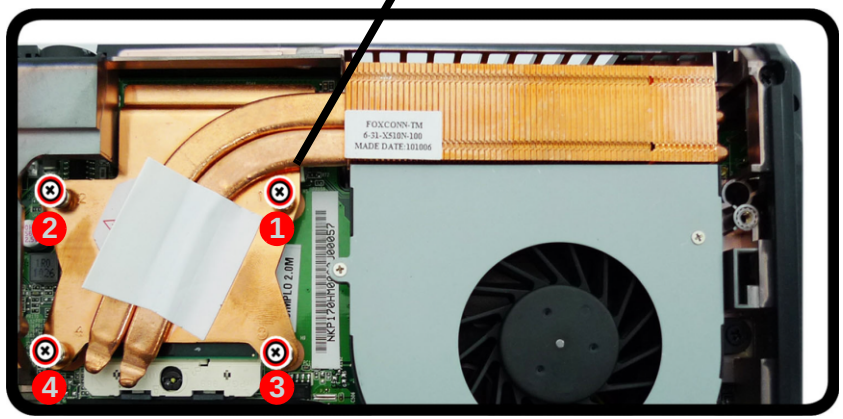


c.



b.

d.



Note:

Tighten the screws in the order 1-2-3-4 as indicated on the label.

Figure 15
Processor Installation

a. Insert the CPU.
b. Turn the release latch towards the lock symbol.
c. Remove the sticker from the heat sink unit and insert the heat sink.
d. Tighten the screws.

A. CPU
D. Heat Sink

- 4 Screws

Figure 16
Video Card Removal Procedure

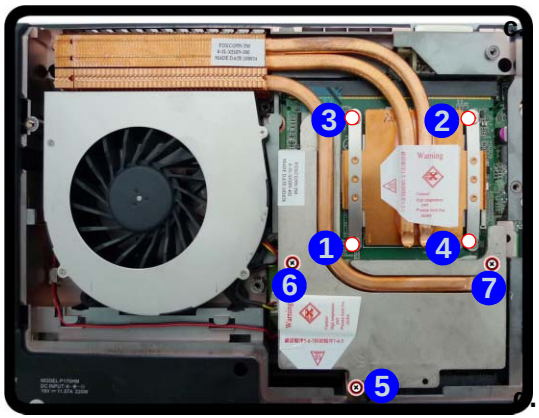
a. Remove the screws in the correct order.
b. Carefully remove the heat sink units.
c. Remove the video card screws. The video card will pop up.
d. Remove the video card.

Removing and Installing the Video Card

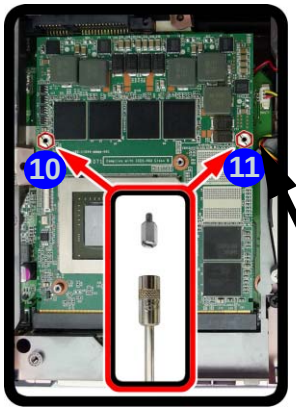
Video Card Removal Procedure

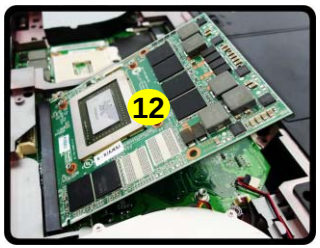
1. Turn **off** the computer, turn it over and remove the battery (***page 2 - 5***) and component cover (***page 2 - 10***).
2. Remove screws 1 - 7 from the heat sink unit in the order indicated on the label (i.e screw **7** first through to screw **1** last) (***Figure 16a***).
3. Carefully (**they may be hot**) remove the heat sink units 8 & 9 (***Figure 16b***).
4. Remove screws 10 & 11 from the video card and the video card 12 will pop up (***Figure 16c***).
5. Remove the video card 12 (***Figure 16d***).

a.



c.

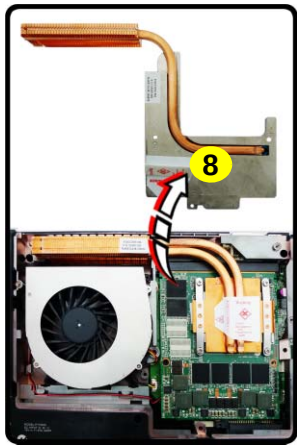


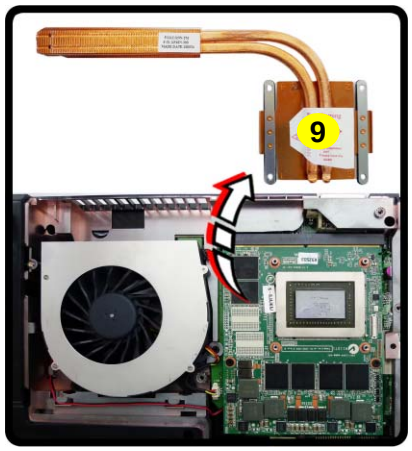


Note:

Please use a flat head screwdriver to remove screws 10 & 11.

b.





d.

Caution

The heat sink, and video card area in general, contains parts which are subject to high temperatures. Allow the area time to cool before removing these parts.

8 & 9.Heat Sink Units
12. Video Card

- 9 Screws

Heat Sink Screw Removal and Insertion

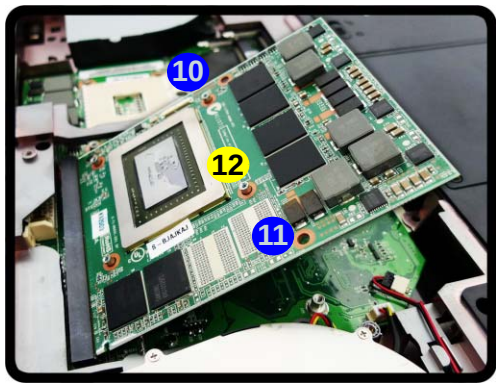
Remove the screws from the heat sink in the order indicated here: 7-**6-5-4-3-2-1**.

When tightening the screws, make sure that they are tightened in the order: **1-2-3-4-5-6-7**.

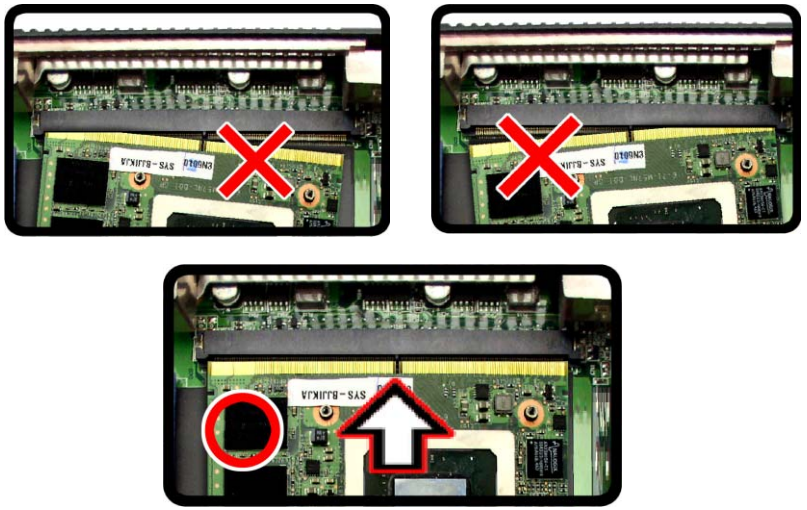
Installing a New Video Card

1. Prepare to fit the video card 12 into the slot by holding it at about a 30° angle (*Figure 17e*).
2. The card needs to be fully into the slot, and the video card and socket have a guide-key and pin which align to allow the card to fit securely (*Figure 17f*).
3. Fit the connectors firmly into the socket, straight and evenly.

e.



f.



4. DO NOT attempt to push one end of the card in ahead of the other.
5. The card's pin alignment will allow it to only fit one way. **Make sure the module is seated as far into the socket as it will go** (none of the gold colored contact should be showing). DO NOT FORCE the card; it should fit without much pressure.
6. Secure the card with screws 10 & 11 (*Figure 17 on page 2 - 21*).
7. Place the heat sink back on the card, and secure the screws in the order indicated in *Figure 17 on page 2 - 21*.
8. Attach the video card fan and secure with the screws as indicated in *Figure 16 on page 2 - 20*.
9. Reinsert the component bay cover, and secure with the screws as indicated in *Figure 10 on page 2 - 14*.

Figure 17
Installing a New Video Card

e. Insert the video card at a 30 degree angle.
f. Fit the connectors straight and even.

Caution

The heat sink, and video card area in general, contains parts which are subject to high temperatures. Allow the area time to cool before removing these parts.

12. Video Card

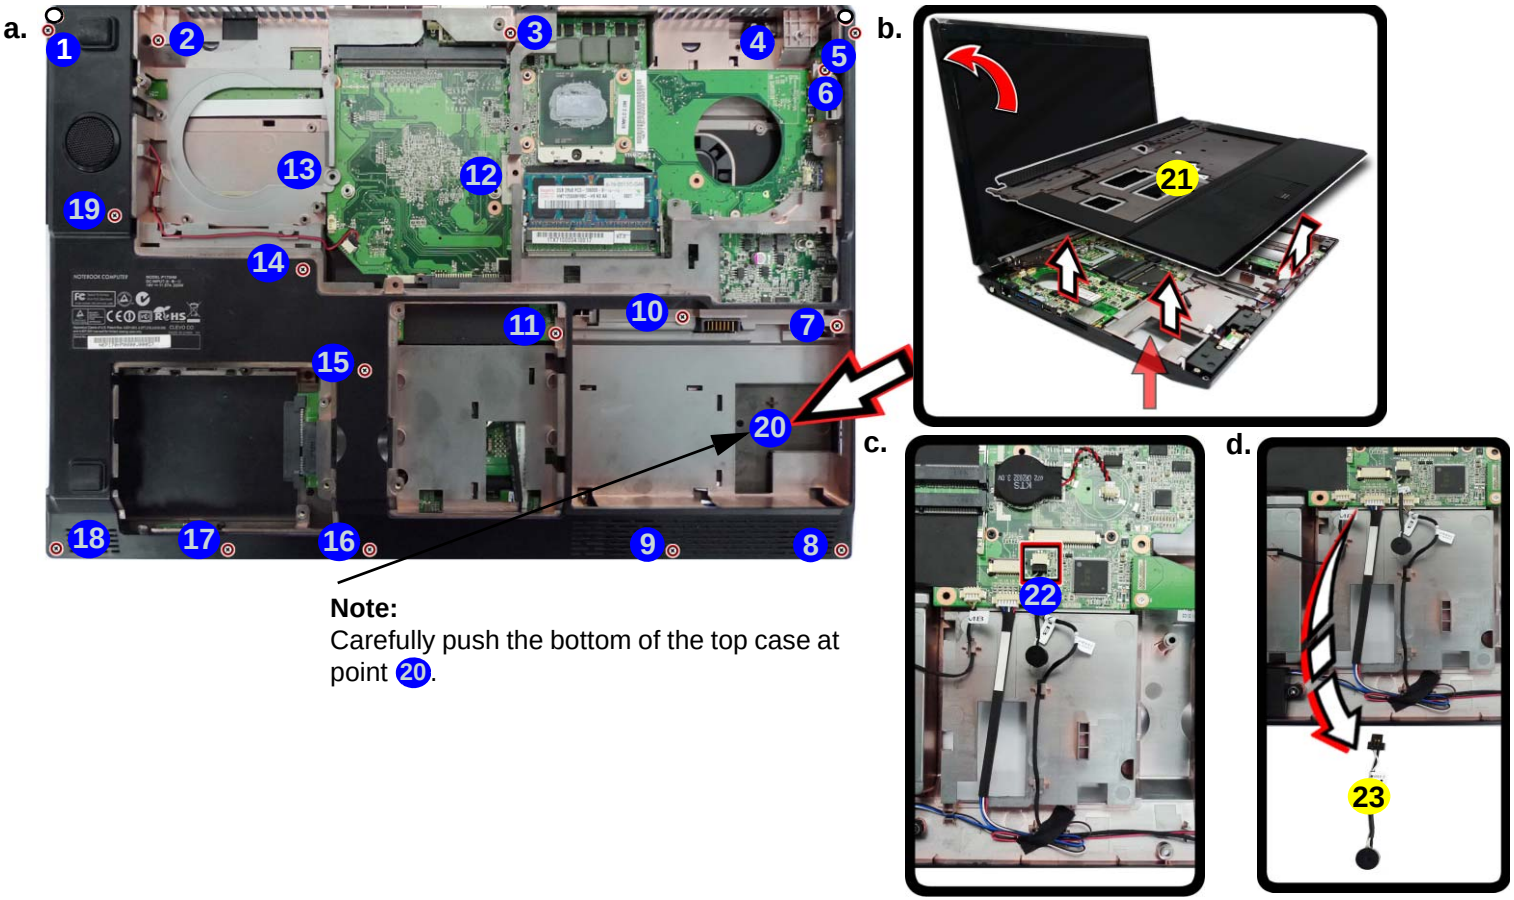
- 2 Screws

Figure 18
Microphone Removal

a. Remove the screws.
b. Lift the top case up, keeping it level (do not tilt it).
c. Disconnect the microphone cable.
d. Remove the microphone.

Removing the Microphone

1. Turn **off** the computer, and remove the battery (***page 2 - 5***), component bay cover (***page 2 - 10***), processor (***page 2 - 17***), hard disk (***page 2 - 6***) (***page 2 - 10***), optical device (***page 2 - 9***), and video card (***page 2 - 20***).
2. Remove screws 1 - 19 and carefully push the bottom of the top case at point 20 (***Figure 18a***)
3. Lift the top case 21 up, keeping it level (do not tilt it) ***Figure 18b***.
4. Disconnect the microphone cable 22 (***Figure 18c***).
5. Remove the microphone 23 (***Figure 18d***).



Note:
Carefully push the bottom of the top case at point 20.

21. Top Case
23. Microphone

- 19 Screws

Appendix A: Part Lists

This appendix breaks down the ***P170EM*** series notebook's construction into a series of illustrations. The component part numbers are indicated in the tables opposite the drawings.

Note: This section indicates the *manufacturer's* part numbers. Your organization may use a different system, so be sure to cross-check any relevant documentation.

Note: Some assemblies may have parts in common (especially screws). However, the part lists DO NOT indicate the total number of duplicated parts used.

Note: Be sure to check any update notices. The parts shown in these illustrations are appropriate for the system at the time of publication. Over the product life, some parts may be improved or re-configured, resulting in *new* part numbers.

Part List Illustration Location

The following table indicates where to find the appropriate part list illustration.

Appendix B: Schematic Diagrams

This appendix has circuit diagrams of the ***P170EM*** notebook's PCB's. The following table indicates where to find the appropriate schematic diagram.

Table B - 1
Schematic Diagrams

Version Note

The schematic diagrams in this chapter are based upon version 6-7P-P15EE-002. If your mainboard (or other boards) are a later version, please check with the Service Center for updated diagrams (if required).

Appendix C:Updating the FLASH ROM BIOS

To update the FLASH ROM BIOS, you must:

- Download the BIOS update from the web site.
- Unzip the files onto a bootable CD/DVD/USB Flash Drive.
- Reboot your computer from an external CD/DVD/USB Flash Drive.
- Use the flash tools to update the flash BIOS using the commands indicated below.
- Restart the computer booting from the HDD and press **F2** at startup enter the BIOS.
- Load setup defaults from the BIOS and save the default settings and exit the BIOS to restart the computer.
- After rebooting the computer you may restart the computer again and make any required changes to the default BIOS settings.

Download the BIOS

1. Go to **www.clevo.com.tw** and point to **E-Services** and click **E-Channel**.
2. Use your user ID and password to access the appropriate download area (BIOS), and download the latest BIOS files (the BIOS file will be contained in a batch file that may be run directly once unzipped) for your computer model (**see sidebar for important information on BIOS versions**).

Unzip the downloaded files to a bootable CD/DVD or USB Flash drive

1. Insert a bootable CD/DVD/USB flash drive into the CD/DVD drive/USB port of the computer containing the downloaded files.
2. Use a tool such as Winzip or Winrar to unzip all the BIOS files and refresh tools to your bootable CD/DVD/USB flash drive (you may need to create a bootable CD/DVD with the files using a 3rd party software).

Set the computer to boot from the external drive

1. With the bootable CD/DVD/USB flash drive containing the BIOS files in your CD/DVD drive/USB port, restart the computer and press **F2** (in most cases) to enter the BIOS.
2. Use the arrow keys to highlight the **Boot** menu.
3. Use the "+" and "-" keys to move boot devices up and down the priority order.
4. Make sure that the CD/DVD drive/USB flash drive is set first in the boot priority of the BIOS.
5. Press **F4** to save any changes you have made and exit the BIOS to restart the computer.

BIOS Version

Make sure you download the latest correct version of the BIOS appropriate for the computer model you are working on.

You should only download BIOS versions that are V1.01.XX or higher as appropriate for your computer model.

Note that BIOS versions are not backward compatible and therefore **you may not downgrade your BIOS to an older version** after upgrading to a later version (e.g if you upgrade a BIOS to ver 1.01.05, you **MAY NOT** then go back and flash the BIOS to ver 1.01.04).

Use the flash tools to update the BIOS

1. Make sure you are not loading any memory management programs such as HIMEM by holding the **F8** key as you see the message "**Starting MS-DOS**". You will then be prompted to give "**Y**" or "**N**" responses to the programs being loaded by DOS. Choose "N" for any memory management programs.
2. You should now be at the DOS prompt e.g: DISK **C**:\> (C is the designated drive letter for the CD/DVD drive/USB flash drive).
3. **Type the following command** at the DOS prompt:

   C:\> Flash.bat

4. The utility will then proceed to flash the BIOS.
5. You should then be prompted to press any key to restart the system or turn the power off, and then on again but make sure you remove the CD/DVD/USB flash drive from the CD/DVD drive/USB port before the computer restarts.

Restart the computer (booting from the HDD)

1. With the CD/DVD/USB flash drive removed from the CD/DVD drive/USB port the computer should restart from the HDD.
2. Press **F2** as the computer restarts to enter the BIOS.
3. Use the arrow keys to highlight the **Exit** menu.
4. Select **Load Setup Defaults** (or press **F3**) and select "**Yes**" to confirm the selection.
5. Press **F4** to save any changes you have made and exit the BIOS to restart the computer.

Your computer is now running normally with the updated BIOS

You may now enter the BIOS and make any changes you require to the default settings.
