

Mobile Games:

Trends from Japan

David Collier
dc@wm.namco.co.jp

namco[®]

The Total Service!

In Japan, the mobile publisher fills a broad role in the ecosystem

In Europe, we now have the handsets, the networks, and the content.

But a big missing link is still informing the consumer about what they can do with their new phone

The first download is the hardest!

Let's see how the carriers and content companies in Japan are working together to get users across the threshold

- In print
- In store
- On the phone

Trend: mobile charts

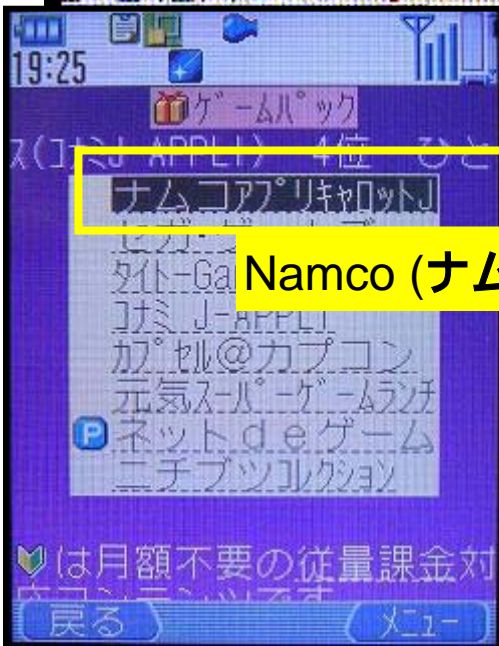

Docomo games topmenu

Site Ranking creates a fair competitive field
Different carriers rank their games in different ways – number of subscribers, page accesses, or revenue.

This leads to tactics like different pricing plans to game the system!

Different levels of the menu are organized in different ways too

Namco (ナムコ) ranks #1!

Docomo games categories:

Games 1 >

- Game pack
- Mini game → [total 26 sites](#)
- RPG
- Communication
- Sports · Table games · simulation

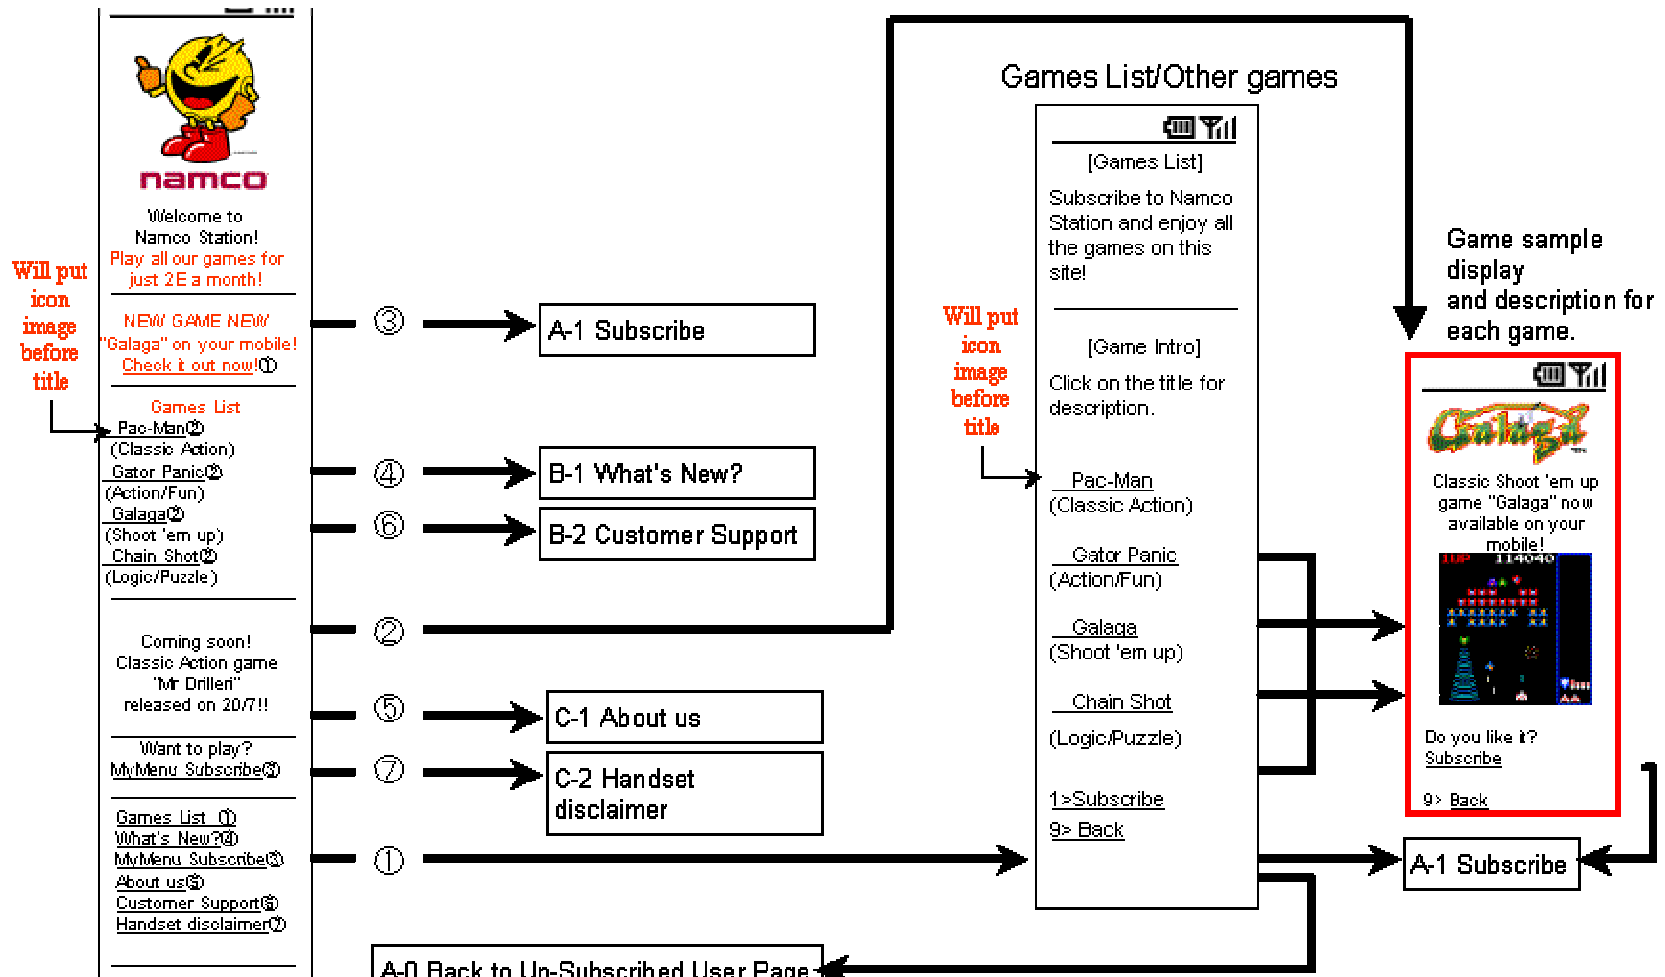

Games 2 >

- Variety · mail games · quiz
- nurturing · adventure, · novel
- character · general

Jsky game-pack menu

CPs provide the surrounding site

A huge difference between Japanese and European service structures.
Producing and running the site is a huge startup burden but provides a lot of merchandising flexibility to the CP.

Docomo “Weekly Guide”

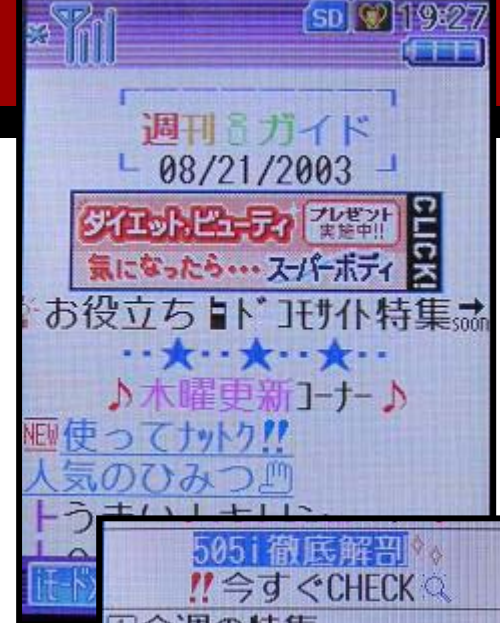

Very high traffic mobile site which is a guide to what’s new on i-mode

A way for the carrier to include more “editorial opinion” than just straight popularity rankings

- Introducing “what’s new”
- Special Feature
- Sites that use new tech or handsets
- Emoji graphics
- Tips and Tricks
- Single Banner ad

From this “weekly guide” you could foresee Docomo’s stance like “contents magazine”.

Docomo will never be a CP on their own to enable an even field for the content providers

Vodafone Japan famitsu appli guide

namco

Vodafone Japan produce a 36 page booklet detailing games, cheats, maps and more each month.

Also available on the phone itself as a mobile mag

Carrier marketing focuses on **content!**

namco

もはやゲーム機なのか。

ケータイの常識を超える迫力。
ボーダフォンは、フル3Dゲームへ。

Docomo creatively co-market with their content partners, distributing these type of gatefold leaflets to all their stores.

This Docomo brochure features four pages on “Taiko No Tatsujin” and also three other new Namco contents.

S&M: ICP gatefold format

namco

Content company fliers are distributed to retail for free by the carrier. A win-win situation where the carrier helps the content companies market.

Flyers Distributed free in-store at POS

namco

The candy store!

namco

What Beckham is really thinking...

namco

S&M: Cross-promotion

The logo for Namco, consisting of the word "namco" in a lowercase, sans-serif font. The letters are white with a red outline, set against a black rectangular background.

Huge problems with mobile spam means the carrier has all but banned email marketing

Basic cross-linking is also subject to discussion...

Examples:

- Exit traffic
- Related giveaways – eg free ringtones on a games site
- Loyalty programs and membership clubs (eg “Cybird Style”)

Some game co's have implemented their own 'virtual economy' with 'coins' to be spent in a virtual arcade

Has other added benefits

- Unused coins carry over across months, motivating players not to quit or they will lose these coins
- Different games can be valued differently. Eg a new or branded game could cost three coins
- Allows an 'event' billing model to be overlaid on the carrier's 'subscription' system.

The operators are starting “Open” billing

This means:

- a site can use charge end-users via the operator’s monthly statement
- But - the site won’t be featured on the operator portal, so has to be promoted independently
- The criteria are much less testing than becoming a formal official site

This is seen as an intake method to become an “official” site

Branding

Packaging

Backing the right technologies...

On the small screen: the brand is King

On mobile, branded games hugely outsell unbranded

ブランドって重要なもの？

- The tiny mobile phone storefront gives just an instant for consumers to decide which game to download
- Well-known games win every time
- Namco is a giant in the Japanese game industry with group consolidated turnover of \$1.4BN in 2002

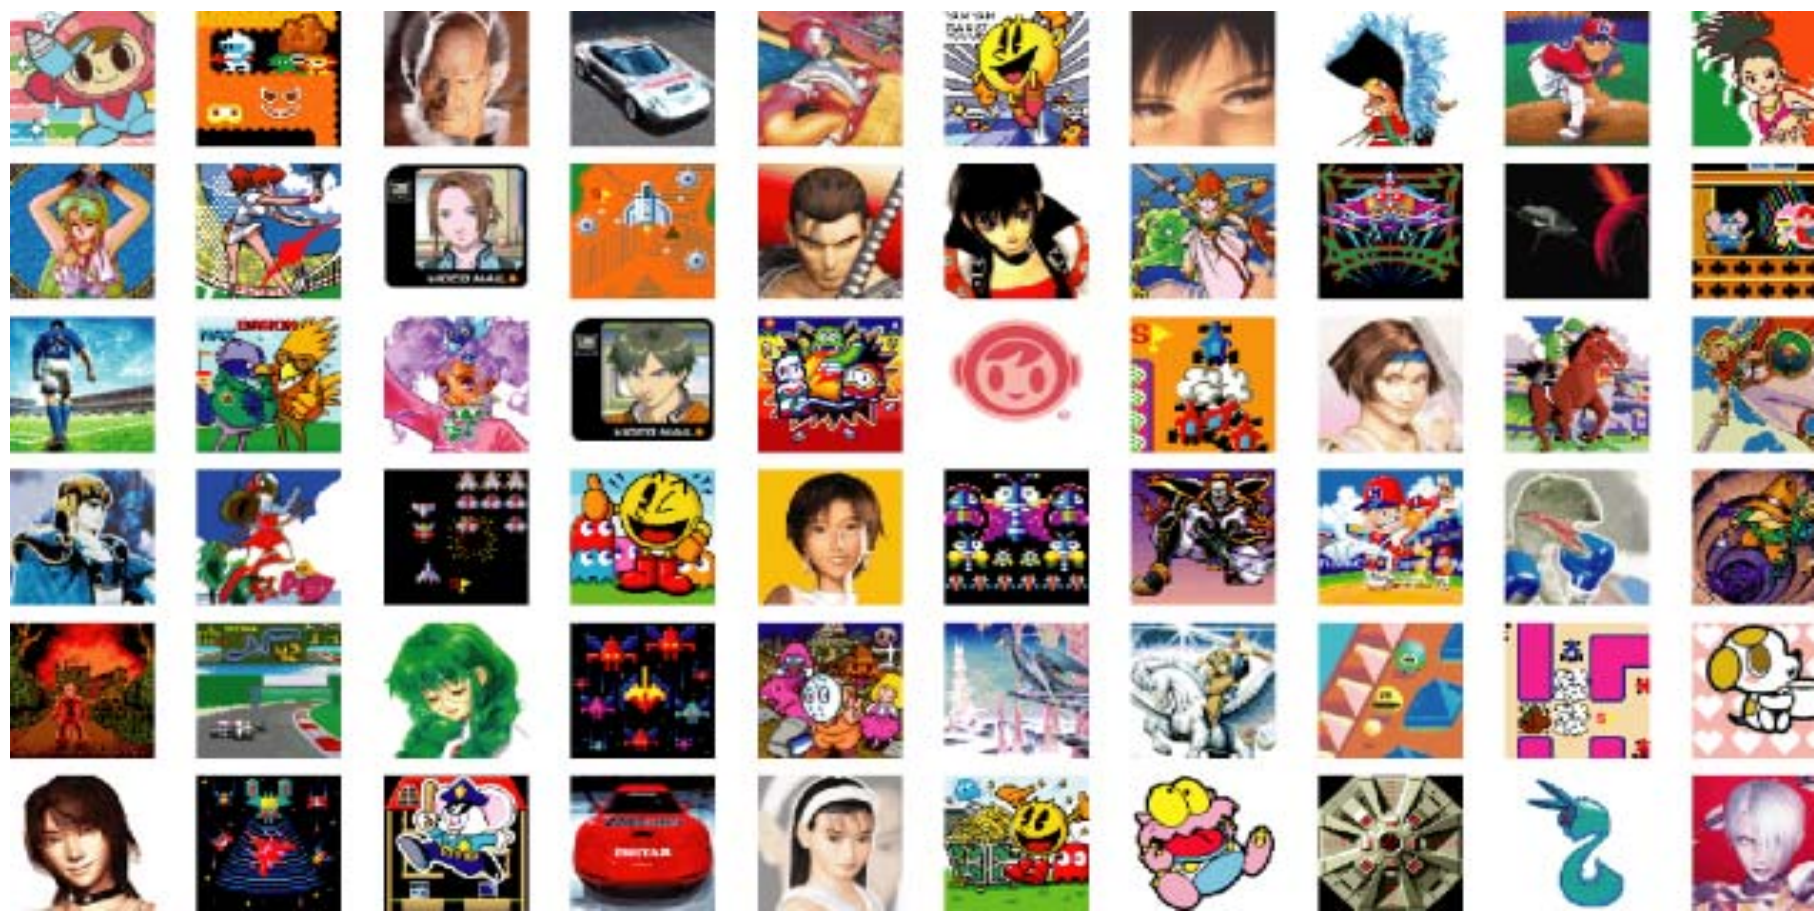

Killer Brands...

Namco games have inspired a range of books eagerly taken up by fans.

This banner for Pac-Man had such strong recognition that it won the D2C award for best mobile advert. Even people who did not grow up with Pac-Man immediately recognized it as a fun game.

Brand power: Namco Melo-Chara

Namco's brands are in such demand that people want screen savers and melodies of the games and characters. So we provide the "Melo-Chara" site

mobile phone: perfect for Arcade Classics

Arcade classics are perfectly suited for mobile and have proven to be huge hits...

Designed for short bursts of quick play

Can play instantly without reading the manual!

Suits the technology perfectly

Catchy brands and addictive game-play mechanics

Top 10 Most Popular Games	
As selected by KCOV readers	
1.	Pac-Man [Namco]
2.	Galaga [Namco]
3.	Donkey Kong
4.	Star Wars
5.	Ms. Pac-Man [Namco]
6.	Dig Dug [Namco]
7.	Asteroids
8.	Defender
9.	Tetris
10.	Tempest (Atl)
10.	Centipede (Atl)

Pac-Man

Xevious

DigDug

Galaga

Tekken 4

Namco has 4 of the top ten arcade games of all time

In the beginning there was **i-mode**...

namco

We were a launch partner for DoCoMo's i-mode

We invented the "Game-Pack" idea with "Namco Island"

Now we provide 12 different sites to Docomo, more than any other game company.

Namco Island was our first Docomo site.

Namco invented the idea of a "Game Pack" bundle of games for a monthly fee.

#1 Brew game at KDDI Launch: Xevious

- Huge success! Clearly the most popular game on the menu
- Tuned for the Japanese Brew launch
- Well marketed by KDDI
- We chose a fast paced shooting game because it showed off Brew's native high-performance very well

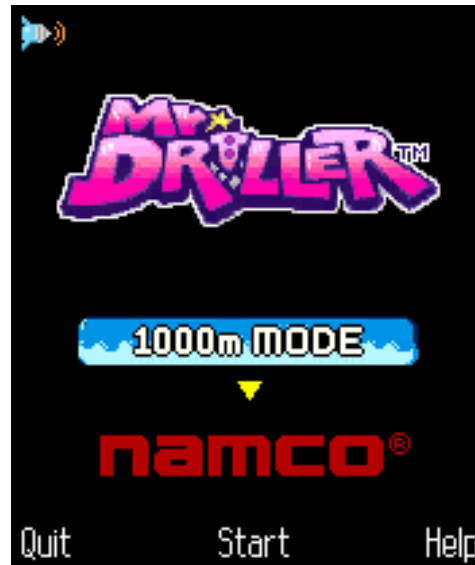

なぜBrewでゼビウス？

Hits keep coming! Mr. Driller

namco

A smash hit on the Gameboy

- The perfect action puzzle for the phone

This game has been a huge smash on gameboy and playstation, spawning a range of merchandise, fan-sites character goods and competitions.

It is doing equally well on the mobile phone as the gameplay is perfectly suited for the advanced mobile phones out now.

Trend: Larger games

Harder and harder to get a carrier to offer menu listing for a single standalone game

Taiko no Tatsujin is an exception, a single game that people subscribe to so they can get new songs each month.

Currently the most popular “single game” item on the docomo menu.

ゲームセンターから飛び出した、
太鼓の達人、大ヒット！

Trend: Multiplayer Games

namco

Packet fees are still very high and ICPs don't get a cut, so little motivation to get users rack up huge packet fee bills.

- Example: a game of Othello will cost 50cents per player

Tekken Command Battle

- used KDDI's free "C-Mail" messaging protocol to allow players to compete without incurring packet fees.
- Also carriers prevent services that enable match-up and communication between strangers...
- Korea is much more flourishing for mobile multiplayer because there is a revenue share model for packet data.

Trend: 3D - Ridge Racer on Vodafone Japan

The mobile phone is a PlayStation One!

- Created a new high 500yen price point for premium content
- Reinforced the brand value of the Ridge-Racer Series
- Blockbuster! the most expensive mobile game ever produced
- Almost identical to the PlayStation version

リッジがすごいのは
分かるけど高くない？

Namco felt someone had to lead the industry to a higher price point, to help the mobile game business evolve.

It was high risk as this is the most expensive mobile game ever produced.

The sales have exceeded expectations and so far we have had no user complaints about the price point.

Namco partners with carriers and handset makers to create killer launch apps

Technology

Where are the standards going?

DoCoMo DoJa

European i-mode
DoJa 1.5

NEC

NOKIA

SAMSUNG

KDDI Brew

Brew

LG Electronics

Handset manufacturers

Content is used to differentiate handsets and show off new features...

Many of the 505 series handsets featured optional additions to the spec

- Fingerprint reader (Fujitsu)
- Speech Synthesis (NEC, MA5 chip)
- 3D screen effect (Sharp)
- OCR (Nec, sharp)
- Synchronization (Panasonic)

Often this commissioned content is the first to use new technologies

Panasonic / 写かりきペット

namco

Virtual pet | Japan | 1 player | J2ME + camera + IR |

Virtual pet that uses the camera to create food to feed!

- Shows when you have mail as a screensaver
- You can IR rare food items to your friends

NEC - photo battler

namco

fighting | Japan | n players | J2ME + camera + IR |

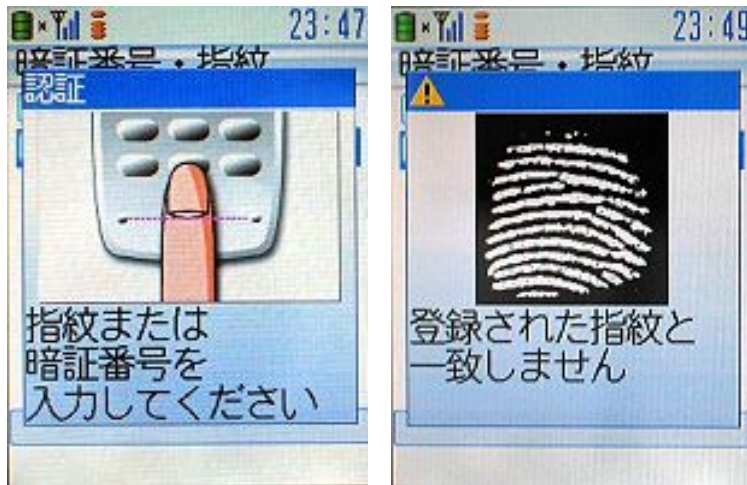

Fighting Game that uses the camera

- Using photos to create your characters
- Depending on the photo different attributes: life, power, speed
- You can add comments
- You can also infrared the battlers and play against other people
- You can add comments and these will get transferred as your "warrior" if you IR the photo to someone else
- NEC used this game to promote features of their N504iS

Fujitsu Fingerprint game

namco

Using fingerprint authentication as part of the gameplay
If the dog knows it is you, the owner, he gets especially happy when you pet him!

Panasonic - “fishing anywhere”

namco

simulation | Japan | n players | BREW + GPS |

Location based fishing game.

- The phone's GPS is used in this game to send info to server
- You compete against other people in your area
- Bundled with the C3003P as a Brew app

This game used the unique sound sampling functions of the SH53 new phone from Vodafone and Sharp

- Vodafone Japan (J-Phone) and Sharp pair to add another new feature to java... audio sampling.

Speak into the MIC and your answer is compared to a sample of the correct answer

© Mercis BV, © NEC Interchannel Ltd 2003

Sharp - Games using 3D effect

The logo for Namco, consisting of the word "namco" in a stylized, lowercase, sans-serif font. The letters are white with a red outline, set against a black rectangular background.

These are pretty hard to show as they rely on an optical illusion that won't come over too well on the presentation screen...

- Best to come up to the podium afterwards!

Tech – hardware – handy karaoke

It's a wireless world!

namco

BowLingual

MeowLingual

Docomo want to sell more wireless devices
than there are people in japan.

////// The full service

namco

Beyond individual games... a holistic approach!

- Game Packs
- Lifecycle management
- Pricing Models

A mobile game service is like a **Game Center**

namco

Enter the “game pack”:

- A package of games bundled together and sold as a monthly subscription service

Its not just about a single game but a well rounded service

Killer brands out front by the door

Table games around the side to keep people

Contests and prizes

Constant turnover of new titles...

モバイルコンテンツサイト =
バーチャルゲームセンター？

Namco operates theme parks across Japan, including NamjaTown in Ikebukuro.

This allows us to develop rich game ideas that can be used across other platforms

Vodafone Japan: #1 Game Pack

Namco Appli Carrot-J

J-Phone produce a monthly magazine featuring the latest games. Encouraging competition among content providers they show charts of which sites are popular.

Namco is #1 on J-Phone/Vodafone Japan

Games have a Lifecycle

Just like a game center,

different games serve different purposes. The service needs the right mix...

Big brand titles like Ridge-Racer act as “**acquisition**” apps, bringing in new customers in and convincing them to join the service.

“Killer Apps” like Pac-Man just keep people playing constantly month after month.

Games like table-games have a lower but constant play factor. These are the “**retention**” apps that keep people subscribed to the service after they join.

This is just a brief snapshot but of course you need to keep adding new titles to maintain people’s interest in the service...

Subscription vs Per-Download Business model

namco

月額課金 vs DL課金

海外の現状は？

Subscription model creates a better long-term business

Pay-per-download looks good initially but the business is demanding to sustain

Our desire is to move from pay-per-download services to subscription services as we have more content available internationally and billing systems mature.

Global standards?

Global market?

Write once,
run all over the planet...

...debugging ☹️

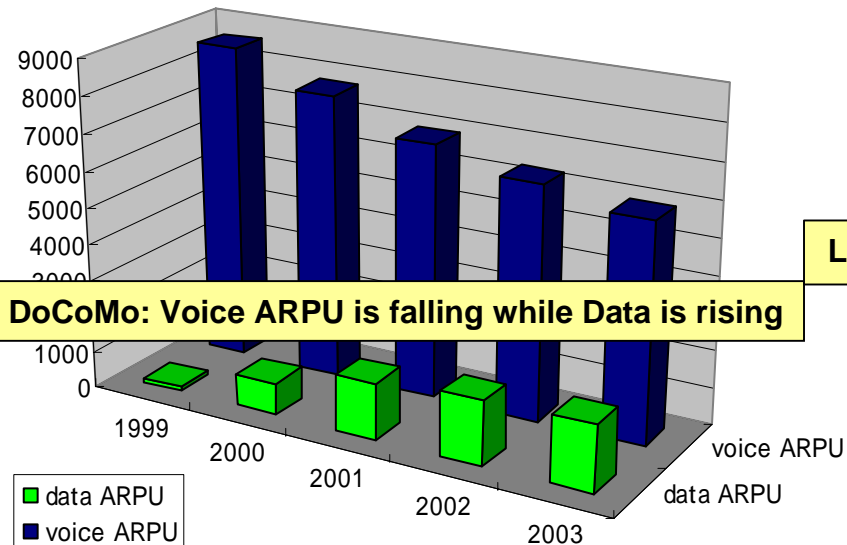

Mobile games **boost** ARPU!

Voice ARPU is falling everywhere, but data is rising

- Games create significant data traffic

モバイルゲームが
ARPUを引き上げる？

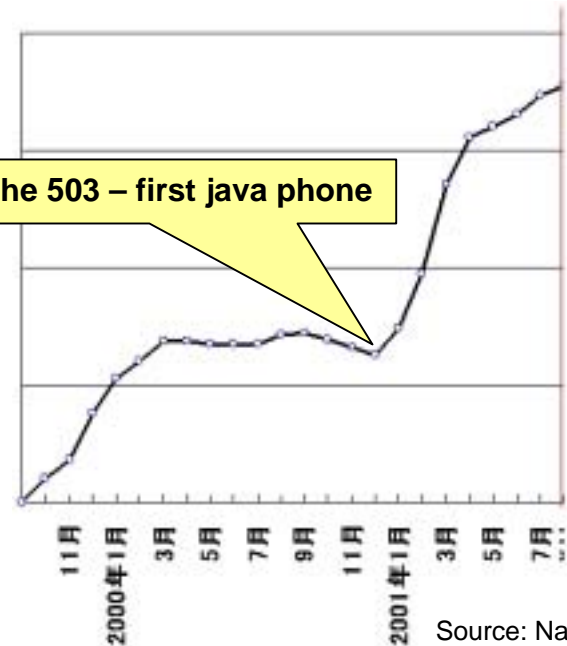

Our well known brands are helping operators attract a mass-market mobile game audience and launch their data services

WHAT IS IT? [CLICK HERE FOR MORE INFO](#)

- Vodafone strategy was to focus on relationships with a few of the worlds top mobile game brands
- Namco is one of only a handful of companies with a “search by brand” option
- 30% of Vodafone Live! content revenues are said to be going to Japanese content providers

Namco is now Live on other leading European carriers O2, Telefonica, Eplus, KPN with others in development

Questions for entering Japan

What is the breadth of your catalog

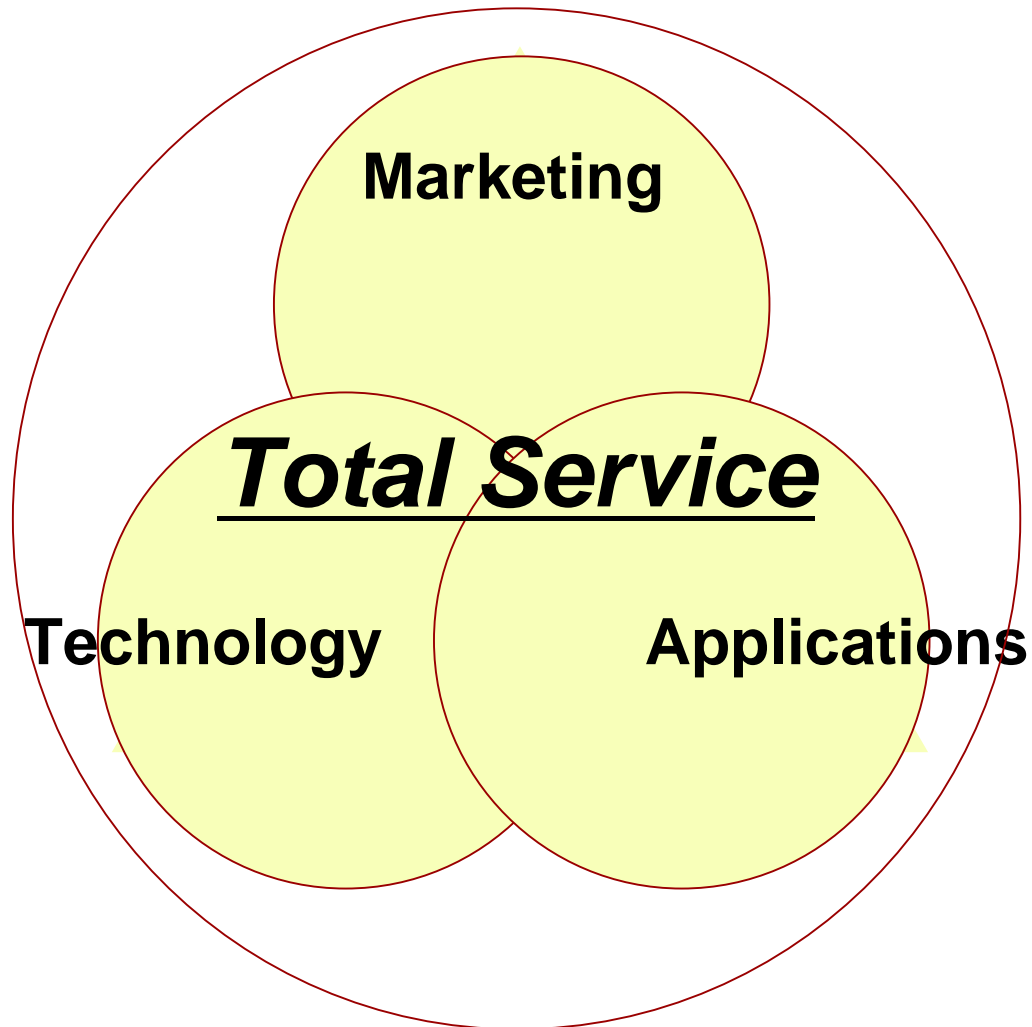

- Could you sustain an independent menu offering or better to work inside another portal?
- Can you create a bundle for “game pack” packaging?

Can you create “Deluxe” versions for japan

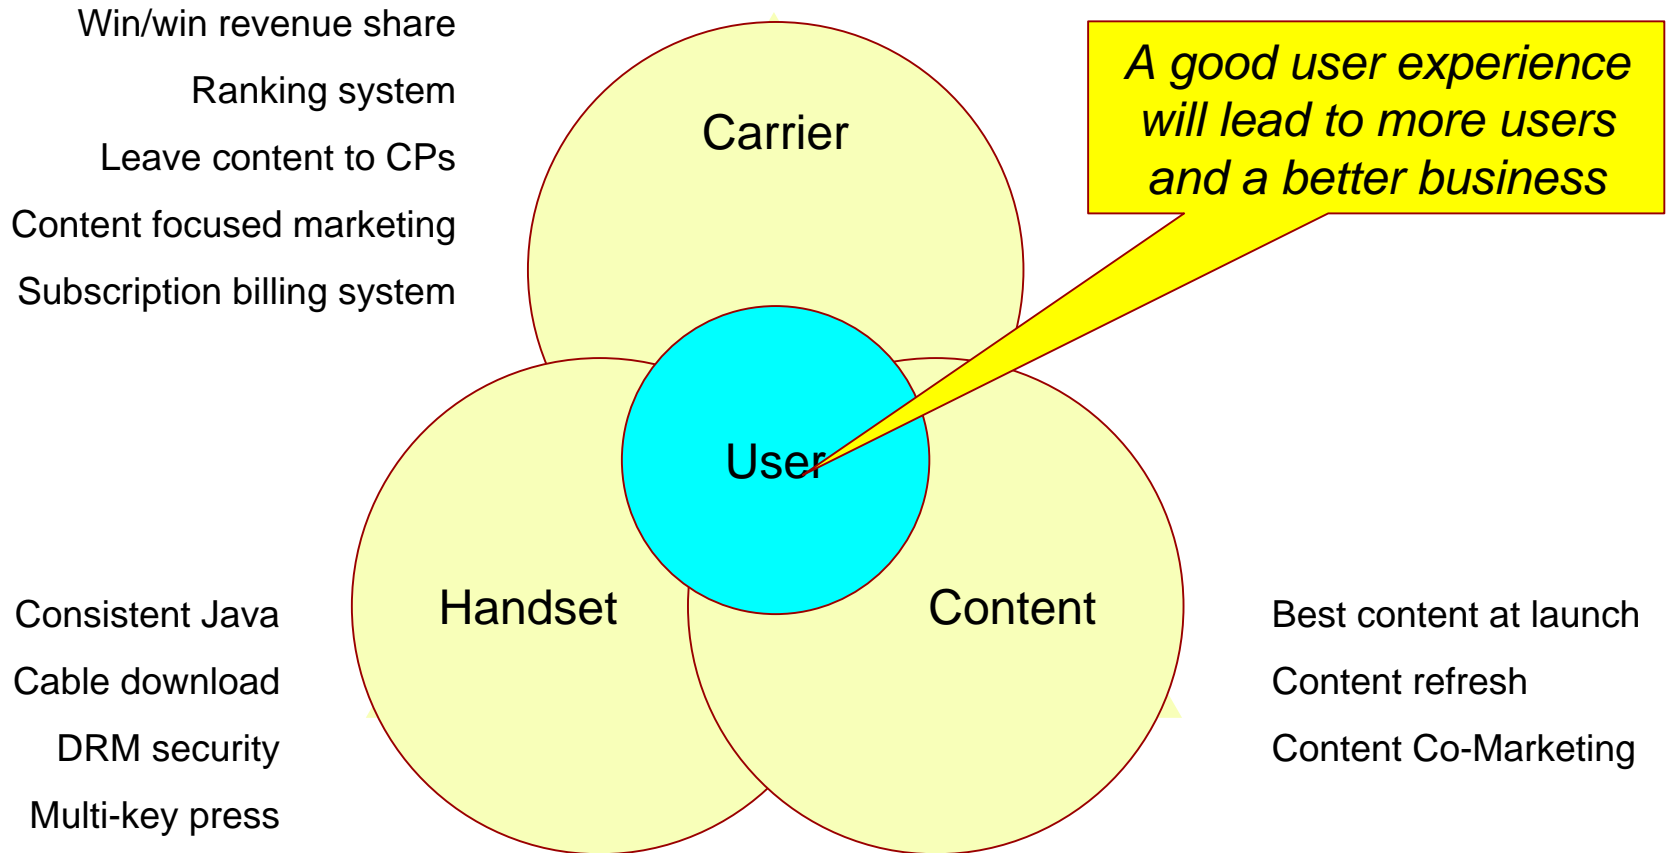

- Eg that use the extended java features like 3D

The Total Service!
