ahca\_polls

American Health Care Act Polls

# **Description**

The raw data behind the story "Why The GOP Is So Hell-Bent On Passing An Unpopular Health Care Bill" https://fivethirtyeight.com/features/why-the-gop-is-so-hell-bent-on-passing-an-unpopular Health

# Usage

ahca\_polls

## **Format**

A data frame with 15 rows representing polls and 7 variables:

start Start date of the poll.

end End date of the poll.

**pollster** The entity that conducts and collects information from the poll.

favor The number of affirmative responses to the question at the pollster.

oppose The number of negative responses to the question at the pollster.

**url** The website associated with the polling question.

text The polling question asked at the pollster.

# **Source**

See https://github.com/fivethirtyeight/data/blob/master/ahca-polls/README.md

# Examples

```
# To convert data frame to tidy data (long) format, run:
library(tidyverse)
library(stringr)
ahca_polls_tidy <- ahca_polls %>%
    gather(opinion, count, -c(start, end, pollster, text, url))
```

airline\_safety 5

airline\_safety Should Travelers Avoid Flying Airlines That Have Had Crashes in the Past?

# **Description**

The raw data behind the story "Should Travelers Avoid Flying Airlines That Have Had Crashes in the Past?" https://fivethirtyeight.com/features/should-travelers-avoid-flying-airlines-that-have-h

# Usage

```
airline_safety
```

#### **Format**

A data frame with 56 rows representing airlines and 9 variables:

airline airline

incl\_reg\_subsidiaries indicates that regional subsidiaries are included
avail\_seat\_km\_per\_week available seat kilometers flown every week

incidents 85 99 Total number of incidents, 1985-1999

fatal\_accidents\_85\_99 Total number of fatal accidents, 1985-1999

fatalities\_85\_99 Total number of fatalities, 1985-1999

incidents\_00\_14 Total number of incidents, 2000-2014

fatal\_accidents\_00\_14 Total number of fatal accidents, 2000-2014

fatalities\_00\_14 Total number of fatalities, 2000-2014

## Source

Aviation Safety Network http://aviation-safety.net.

## **Examples**

```
# To convert data frame to tidy data (long) format, run:
library(tidyverse)
library(stringr)
airline_safety_tidy <- airline_safety %>%
  gather(type, count, -c(airline, incl_reg_subsidiaries, avail_seat_km_per_week)) %>%
  mutate(
    period = str_sub(type, start=-5),
    period = str_replace_all(period, "_", "-"),
    type = str_sub(type, end=-7)
)
```

6 avengers

antiquities\_act

Trump Might Be The First President To Scrap A National Monument

#### **Description**

## Usage

antiquities\_act

#### **Format**

A data frame with 344 rows representing acts and 9 variables (Note that 7 of the original rows failed to parse and are omitted here):

current\_name Current name of piece of land designated under the Antiquities Act

states State(s) or territory where land is located

original\_name If included, original name of piece of land designated under the Antiquities Act

**current\_agency** Current land management agency. NPS = National Parks Service, BLM = Bureau of Land Management, USFS = US Forest Service, FWS = US Fish and Wildlife Service, NOAA = National Oceanic and National Oceanic and Atmospheric Administration

action Type of action taken on land

date Date of action

year Year of action

pres\_or\_congress President or congress that issued action

**acres\_affected** Acres affected by action. Note that total current acreage is not included. National monuments that cover ocean are listed in square miles.

avengers

Joining The Avengers Is As Deadly As Jumping Off A Four-Story Building

# **Description**

The raw data behind the story "Joining The Avengers Is As Deadly As Jumping Off A Four-Story Building" https://fivethirtyeight.com/features/avengers-death-comics-age-of-ultron/.

## Usage

avengers

avengers 7

#### **Format**

A data frame with 173 rows representing characters and 21 variables:

url The URL of the comic character on the Marvel Wikia

name alias The full name or alias of the character

**appearances** The number of comic books that character appeared in as of April 30

**current** Is the member currently active on an avengers affiliated team?

gender The recorded gender of the character

**probationary\_intro** Sometimes the character was given probationary status as an Avenger, this is the date that happened

**full\_reserve\_avengers\_intro** The month and year the character was introduced as a full or reserve member of the Avengers

year The year the character was introduced as a full or reserve member of the Avengers

years\_since\_joining 2015 minus the year

**honorary** The status of the avenger, if they were given "Honorary" Avenger status, if they are simply in the "Academy," or "Full" otherwise

death1 TRUE if the Avenger died, FALSE if not.

**return1** TRUE if the Avenger returned from their first death, FALSE if they did not, blank if not applicable

**death2** TRUE if the Avenger died a second time after their revival, FALSE if they did not, blank if not applicable

**return2** TRUE if the Avenger returned from their second death, FALSE if they did not, blank if not applicable

**death3** TRUE if the Avenger died a third time after their second revival, FALSE if they did not, blank if not applicable

**return3** TRUE if the Avenger returned from their third death, FALSE if they did not, blank if not applicable

**death4** TRUE if the Avenger died a fourth time after their third revival, FALSE if they did not, blank if not applicable

**return4** TRUE if the Avenger returned from their fourth death, FALSE if they did not, blank if not applicable

**death5** TRUE if the Avenger died a fifth time after their fourth revival, FALSE if they did not, blank if not applicable

**return5** TRUE if the Avenger returned from their fifth death, FALSE if they did not, blank if not applicable

notes Descriptions of deaths and resurrections.

#### Source

Deaths of Marvel comic book characters between the time they joined the Avengers and April 30, 2015, the week before Secret Wars #1.

8 bachelorette

bachelorette

Bachelorette / Bachelor

# **Description**

The raw data behind the stories: "How To Spot A Front-Runner On The 'Bachelor' Or 'Bachelorette'" https://fivethirtyeight.com/features/the-bachelorette/, "Rachel's Season Is Fitting Neatly Into 'Bachelorette' History" https://fivethirtyeight.com/features/rachels-season-is-fitting and "Rachel Lindsay's 'Bachelorette' Season, In Three Charts" https://fivethirtyeight.com/features/rachel-lindsays-bachelorette-season-in-three-charts/.

# Usage

bachelorette

#### **Format**

A data frame with 887 rows representing the Bachelorette and Bachelor contestants and 23 variables:

show Bachelor or Bachelorette.

season Which season?

contestant An identifier for the contestant in a given season.

elimination\_1 Who was eliminated in week 1.

elimination\_2 Who was eliminated in week 2.

elimination\_3 Who was eliminated in week 3.

elimination\_4 Who was eliminated in week 4.

elimination\_5 Who was eliminated in week 5.

elimination\_6 Who was eliminated in week 6.

**elimination\_7** Who was eliminated in week 7.

elimination\_8 Who was eliminated in week 8.

**elimination\_9** Who was eliminated in week 9.

elimination\_10 Who was eliminated in week 10.

dates\_1 Who was on which date in week 1.

dates\_2 Who was on which date in week 2.

**dates\_3** Who was on which date in week 3.

dates\_4 Who was on which date in week 4.

dates\_5 Who was on which date in week 5.

dates\_6 Who was on which date in week 6.

dates\_7 Who was on which date in week 7.

dates\_8 Who was on which date in week 8.

dates\_9 Who was on which date in week 9.

dates\_10 Who was on which date in week 10.

bad\_drivers 9

#### **Details**

Eliminates connote either an elimination (starts with "E") or a rose (starts with "R"). Eliminations supersede roses. "E" connotes a standard elimination, typically at a rose ceremony. "EQ" means the contestant quits. "EF" means the contestant was fired by production. "ED" connotes a date elimination. "EU" connotes an unscheduled elimination, one that takes place at a time outside of a date or rose ceremony. "R" means the contestant received a rose. "R1" means the contestant got a first impression rose. "D1" means a one-on-one date, "D2" means a 2-on-1, "D3" means a 3-on-1 group date, and so on. Weeks of the show are eliminated by rose ceremonies, and may not line up exactly with episodes.

http://bachelor-nation.wikia.com/wiki/Bachelor\_Nation\_Wikia and then missing seasons were filled in by ABC and FiveThirtyEight staffers.

bad\_drivers

Dear Mona, Which State Has The Worst Drivers?

## **Description**

The raw data behind the story "Dear Mona, Which State Has The Worst Drivers?" https://fivethirtyeight.com/features/which-state-has-the-worst-drivers/

# Usage

bad drivers

#### **Format**

A data frame with 51 rows representing the 50 states + D.C. and 8 variables:

state State

num\_drivers Number of drivers involved in fatal collisions per billion miles

perc\_speeding Percentage of drivers involved in fatal collisions who were speeding

perc\_alcohol Percentage of drivers involved in fatal collisions who were alcohol-impaired

perc\_not\_distracted Percentage of drivers involved in fatal collisions who were not distracted

perc\_no\_previous Percentage of drivers involved in fatal collisions who had not been involved in any previous accidents

insurance\_premiums Car insurance premiums (\$)

losses Losses incurred by insurance companies for collisions per insured driver (\$)

biopics

'Straight Outta Compton' Is The Rare Biopic Not About White Dudes

# **Description**

The raw data behind the story "'Straight Outta Compton' Is The Rare Biopic Not About White Dudes" https://fivethirtyeight.com/features/straight-outta-compton-is-the-rare-biopic-not-about-An analysis using this data was contributed by Pradeep Adhokshaja as a package vignette at http://fivethirtyeight-r.netlify.com/articles/biopics.html.

# Usage

biopics

# **Format**

A data frame with 761 rows representing movies and 14 variables:

title Title of the film.

site Text to construct IMDB url. Ex: http://www.imdb.com/title/tt1711425

country Country of origin.

year\_release Year of release.

**box\_office** Gross earnings at U.S. box office.

director Director of film.

number\_of\_subjects The number of subjects featured in the film.

**subject** The actual name of the featured subject.

type\_of\_subject The occupation of subject or reason for recognition.

**race\_known** Indicates whether the subject's race was discernible based on background of self, parent, or grandparent.

subject\_race Race of the subject.

person\_of\_color Dummy variable that indicates person of color.

subject\_sex Sex of subject.

**lead\_actor\_actress** The actor or actress who played the subject.

candy\_rankings

Candy Power Ranking

# **Description**

The raw data behind the story "The Ultimate Halloween Candy Power Ranking" http://fivethirtyeight.com/features/the-ultimate-halloween-candy-power-ranking/.

## Usage

```
candy_rankings
```

#### **Format**

A data frame with 85 rows representing Halloween candy and 13 variables:

```
competitorname The name of the Halloween candy.
```

chocolate Does it contain chocolate?

**fruity** Is it fruit flavored?

caramel Is there caramel in the candy?

**peanutyalmondy** Does it contain peanuts, peanut butter or almonds?

nougat Does it contain nougat?

crispedricewafer Does it contain crisped rice, wafers, or a cookie component?

hard Is it a hard candy?

bar Is it a candy bar?

**pluribus** Is it one of many candies in a bag or box?

sugarpercent The percentile of sugar it falls under within the data set.

**pricepercent** The unit price percentile compared to the rest of the set.

winpercent The overall win percentage according to 269,000 matchups.

# Source

Comic Books Are Still Made By Men, For Men And About Men

#### **Description**

The raw data behind the story "Comic Books Are Still Made By Men, For Men And About Men" https://fivethirtyeight.com/features/women-in-comic-books/. An analysis using this data was contributed by Jonathan Bouchet as a package vignette at http://fivethirtyeight-r.netlify.com/articles/comics\_gender.html.

#### Usage

comic\_characters

# **Format**

A data frame with 23272 rows representing characters and 16 variables:

publisher Comic publisher: DC Comics or Marvel

page\_id The unique identifier for that characters page within the wikia

name The name of the character

urlslug The unique url within the wikia that takes you to the character

id The identity status of the character (Secret Identity, Public identity, [on marvel only: No Dual Identity])

align If the character is Good, Bad or Neutral

eye Eye color of the character

hair Hair color of the character

sex Sex of the character (e.g. Male, Female, etc.)

**gsm** If the character is a gender or sexual minority (e.g. Homosexual characters, bisexual characters)

alive If the character is alive or deceased

**appearances** The number of appearances of the character in comic books (as of Sep. 2, 2014. Number will become increasingly out of date as time goes on.)

first\_appearance The month and year of the character's first appearance in a comic book, if available

month The month of the character's first appearance in a comic book, if available

year The year of the character's first appearance in a comic book, if available

date The date of the character's first appearance in a comic book, if available

## **Source**

DC Wikia http://dc.wikia.com/wiki/Main\_Page and Marvel Wikia http://marvel.wikia.com/Main\_Page. Characters were scraped on August 24, 2014. Appearance counts were scraped on September 2, 2014. The month and year of the first issue each character appeared in was pulled on October 6, 2014.

Be Suspicious Of Online Movie Ratings, Especially Fandango's

# **Description**

The raw data behind the story "Be Suspicious Of Online Movie Ratings, Especially Fandango's" https://fivethirtyeight.com/features/fandango-movies-ratings/. contains every film that has a Rotten Tomatoes rating, a RT User rating, a Metacritic score, a Metacritic User score, and IMDb score, and at least 30 fan reviews on Fandango.

## Usage

fandango

#### **Format**

A data frame with 146 rows representing movies and 23 variables:

**film** The film in question

year Year of film

rottentomatoes The Rotten Tomatoes Tomatometer score for the film

rottentomatoes user The Rotten Tomatoes user score for the film

metacritic The Metacritic critic score for the film

metacritic user The Metacritic user score for the film

imdb The IMDb user score for the film

fandango\_stars The number of stars the film had on its Fandango movie page

**fandango\_ratingvalue** The Fandango ratingValue for the film, as pulled from the HTML of each page. This is the actual average score the movie obtained.

rt\_norm The Rotten Tomatoes Tomatometer score for the film , normalized to a 0 to 5 point system
rt\_user\_norm The Rotten Tomatoes user score for the film , normalized to a 0 to 5 point system
metacritic\_norm The Metacritic critic score for the film, normalized to a 0 to 5 point system
metacritic user nom The Metacritic user score for the film, normalized to a 0 to 5 point system

imdb\_norm The IMDb user score for the film, normalized to a 0 to 5 point system

**rt\_norm\_round** The Rotten Tomatoes Tomatometer score for the film , normalized to a 0 to 5 point system and rounded to the nearest half-star

**rt\_user\_norm\_round** The Rotten Tomatoes user score for the film , normalized to a 0 to 5 point system and rounded to the nearest half-star

**metacritic\_norm\_round** The Metacritic critic score for the film, normalized to a 0 to 5 point system and rounded to the nearest half-star

**metacritic\_user\_norm\_round** The Metacritic user score for the film, normalized to a 0 to 5 point system and rounded to the nearest half-star

**imdb\_norm\_round** The IMDb user score for the film, normalized to a 0 to 5 point system and rounded to the nearest half-star

metacritic\_user\_vote\_count The number of user votes the film had on Metacritic

imdb\_user\_vote\_count The number of user votes the film had on IMDb

fandango\_votes The number of user votes the film had on Fandango

**fandango\_difference** The difference between the presented Fandango\_Stars and the actual Fandango\_Ratingvalue

### **Format**

A data frame with 248 rows representing performers on TV shows and 15 variables:

**performer** The name of the actor, according to IMDb. This is not a unique identifier - two performers appeared in more than one program

**show** The television show where this actor appeared in more than half the episodes

show\_start The year the television show began

**show\_end** The year the television show ended, "PRESENT" if the show remains on the air as of May 10.

46 male\_flight\_attend

**status** Why the actor is no longer on the program: "END" if the show has concluded, "LEFT" if the show remains on the air.

**charend** The year the character left the show. Equal to "Show End" if the performer stayed on until the final season.

years\_since 2015 minus CharEnd

**num\_lead** The number of leading roles in films the performer has appeared in since and including "CharEnd", according to OpusData

**num\_support** The number of leading roles in films the performer has appeared in since and including "CharEnd", according to OpusData

num\_shows The number of seasons of television of which the performer appeared in at least half the episodes since and including "CharEnd", according to OpusData

score #LEAD + #Shows + 0.25\*(#SUPPORT)
score\_div\_y "Score" divided by "Years Since"
lead\_notes The list of films counted in #LEAD
support\_notes The list of films counted in #SUPPORT

**show\_notes** The seasons of shows counted in #Shows

Most Police Don't Live In The Cities They Serve

### **Description**

The raw data behind the story "Most Police Don't Live In The Cities They Serve" https://fivethirtyeight.com/features/most-police-dont-live-in-the-cities-they-serve/.

### Usage

police\_locals

#### **Format**

A data frame with 75 rows representing cities and 8 variables:

city U.S. city

force\_size Number of police officers serving that city

all Percentage of the total police force that lives in the city

white Percentage of white (non-Hispanic) police officers who live in the city

non\_white Percentage of non-white police officers who live in the city

black Percentage of black police officers who live in the city

hispanic Percentage of Hispanic police officers who live in the city

asian Percentage of Asian police officers who live in the city

# **Details**

The dataset includes the cities with the 75 largest police forces, with the exception of Honolulu for which data is not available. All calculations are based on data from the U.S. Census.

The Census Bureau numbers are potentially going to differ from other counts for three reasons:

1. The census category for police officers also includes sheriffs, transit police and others who might not be under the same jurisdiction as a city's police department proper. The census category won't include private security officers.

68 pres\_2016\_trail

2. The census data is estimated from 2006 to 2010; police forces may have changed in size since then.

3. There is always a margin of error in census numbers; they are estimates, not complete counts.

Note: Missing values means that there are fewer than 100 police officers of that race serving that city.

Senator Dataset

#### **Description**

Senator Dataset

#### Usage

senators

#### **Format**

Because of R package size restrictions, only a preview of the first 10 rows of this dataset is included; to obtain the entire dataset see Examples below. A data frame with 10 rows representing tweets and 10 variables:

created\_at The date and time the tweet was posted

user The user posting the tweet

text The text of the tweet

url The link to the tweet

replies The number of replies to the tweet

retweets The number of retweets

favorites The number of favorites

bioguide\_id The poster's member ID from the "Biographical Directory of the United States Congress"

party The poster's political party affiliation

**state** The state the poster represents in Congress

#### **Details**

Data collected on Oct 19 and 20

For A Trump Nominee, Neil Gorsuch's Record Is Surprisingly Moderate On Immigration

# **Description**

The raw data behind the story "For A Trump Nominee, Neil Gorsuch's Record Is Surprisingly Moderate On Immigration" https://fivethirtyeight.com/features/for-a-trump-nominee-neil-gorsuchs-record

# Usage

tenth\_circuit

#### **Format**

A data frame with 954 rows representing cases and 13 variables:

title Name of the case

date Date of decision

federalreporter\_cit Case citation, as listed in the Federal Reporter Series

westlaw\_cit Case citation, Westlaw format

issue Issue number, in cases divided into multiple issues

weight Weight per issue (total weight per case equals one)

judge1 Name of first judge

judge2 Name of second judge

judge3 Name of third judge

**vote1\_liberal** Vote of first judge. 1 = liberal, 0 = conservative.

**vote2\_liberal** Vote of second judge. 1 = liberal, 0 = conservative.

**vote3\_liberal** Vote of third judge. 1 = liberal, 0 = conservative.

category Category of case, immigration or discrimination

84 trumpworld\_issues

#### Note

In immigration cases, partial relief to immigration petitioner is coded as liberal because the petitioner typically seeks just one core remedy (e.g., withholding of removal, adjustment of status, or asylum); in discrimination cases, partial relief is coded as multiple issues because the plaintiff often seeks separate remedies under multiple claims (e.g., disparate treatment, retaliation, etc.) and different sources of law.

What the World Thinks of Trump

#### **Description**

The raw data behind the story "What the World Thinks of Trump" <a href="https://fivethirtyeight.com/features/what-the-world-thinks-of-trump/">https://fivethirtyeight.com/features/what-the-world-thinks-of-trump/</a>: Trump World Issues Dataset

#### **Usage**

trumpworld\_issues

#### **Format**

A data frame with 185 rows representing countries and 6 variables:

**country** The country whose population is being polled

**net\_approval** The difference in the number of respondents from the given country who approve and who disapprove of the issue (Trump proposal) in question (approve-disapprove)

**approve** The number of respondents from the given country who approve of the issue (Trump proposal)

**disapprove** The number of respondents who disapprove of the issue

dk\_refused undefined

issue The specific trump policy proposal being posed. Specifically: 1: Withdraw support for international climate change agreements 2: Build a wall on the border between the U. S. and Mexico 3: Withdraw U.S. support from the Iran nuclear weapons agreement 4: Withdraw U.S. support for major trade agreements 5: Introduce tighter restrictions on those entering the U.S. from some majority-Muslim countries

Where People Go To Check The Weather

# **Description**

The raw data behind the story "Where People Go To Check The Weather" https://fivethirtyeight.com/features/weather-forecast-news-app-habits/.

#### Usage

weather\_check

# **Format**

A data frame with 928 rows representing respondents and 9 variables:

respondent\_id Respondent ID

ck\_weather Do you typically check a daily weather report?

weather\_source How do you typically check the weather?

weather\_source\_site If they responded "A specific website or app" when asked how they typically check the weather, they were asked to write-in the app or website they used.

**ck\_weather\_watch** If you had a smartwatch (like the soon to be released Apple Watch), how likely or unlikely would you be to check the weather on that device?

age Age

female Gender

**hhold\_income** How much total combined money did all members of your HOUSEHOLD earn last year?

region US Region

96 weather\_check

# Source

The source of the data is a Survey Monkey Audience poll commissioned by FiveThirtyEight and conducted from April 6 to April 10, 2015. See https://github.com/fivethirtyeight/data/tree/master/weather-check
