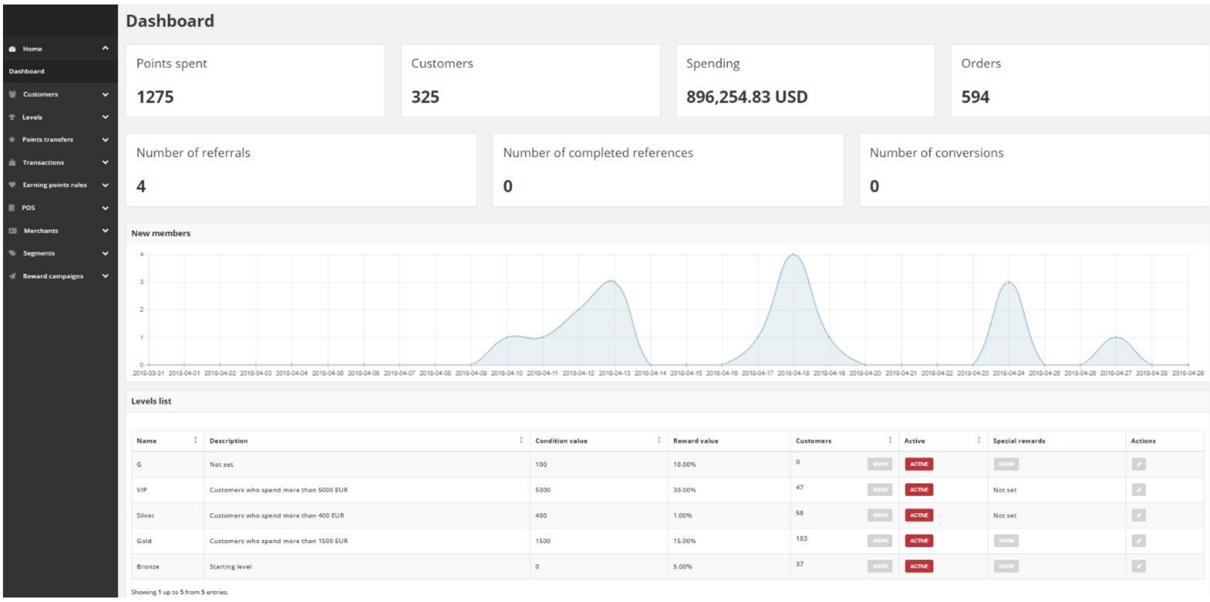
WELCOME TO THE OPEN LOYALTY PLATFORM!

Congratulations on your new Loyalty Platform. This manual is intended to help you get the most out of your Loyalty program in your day-to-day use.

This guide answers the “why, where, and how” questions that most users have when learning to use Open Loyalty platform. You’ll find lots of step-by-step instructions, screenshots and examples.

Revel Systems offers businesses the ability to customize their loyalty and rewards programs. This feature gives businesses the power to create engaging programs that generate customer loyalty and increase sales. Through this Platform, you can easily manage the rewards and loyalty points to be provided to your customers. Thereafter, the customers can earn or redeem the points as per the rules defined by you.



Open Loyalty Platform

GETTING STARTED

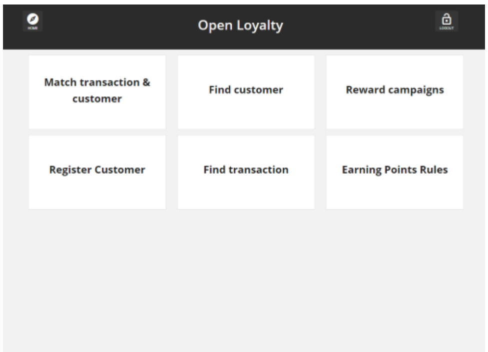
This section of the guide introduces your Loyalty Platform Admin, and walks you through the basic configuration settings. You'll get an overview of the resources that are available to you as an Admin of the Open Loyalty and how to log into your Admin account. Finally, you'll learn the concepts of loyalty platform and configuration scope, and establish best practices for project standards and requirements.

CHAPTER 1:

WELCOME

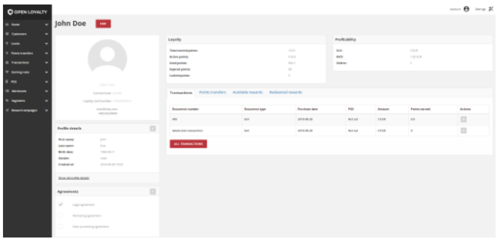
An Open Loyalty is technology for loyalty solutions. It's a loyalty platform in open source, with ready-to-use gamification and loyalty features, easy to set up and customize, ready to work on-line and off-line. Open Loyalty is an open source solution that can be easily **integrate with eCommerce** or can be used as a **standalone solution**.

There is variety of applications for Open Loyalty. Based on it you can build loyalty solutions like: loyalty modules for eCommerce, full loyalty programs for off-line and on-line, motivational programs for sales department or customer care programs with mobile application.



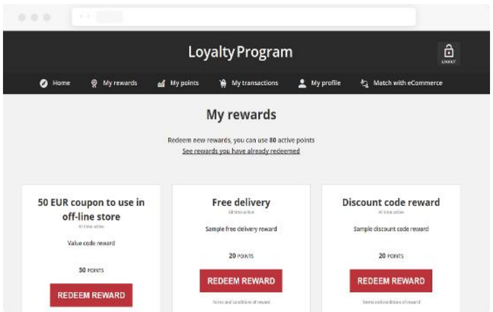
POS COCKPIT

Use the POS Cockpit and run your loyalty app in your off-line stores



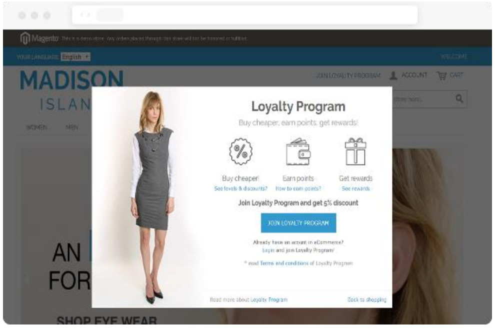
ADMIN COCKPIT

Use the Admin Cockpit to manage your loyalty application



CLIENT COCKPIT

Use the Client Cockpit and create a dedicated web portal for your customers



E-COMMERCE COCKPIT

New additional loyalty and gamification features as a seamless part of your webshop

API & CONNECTORS

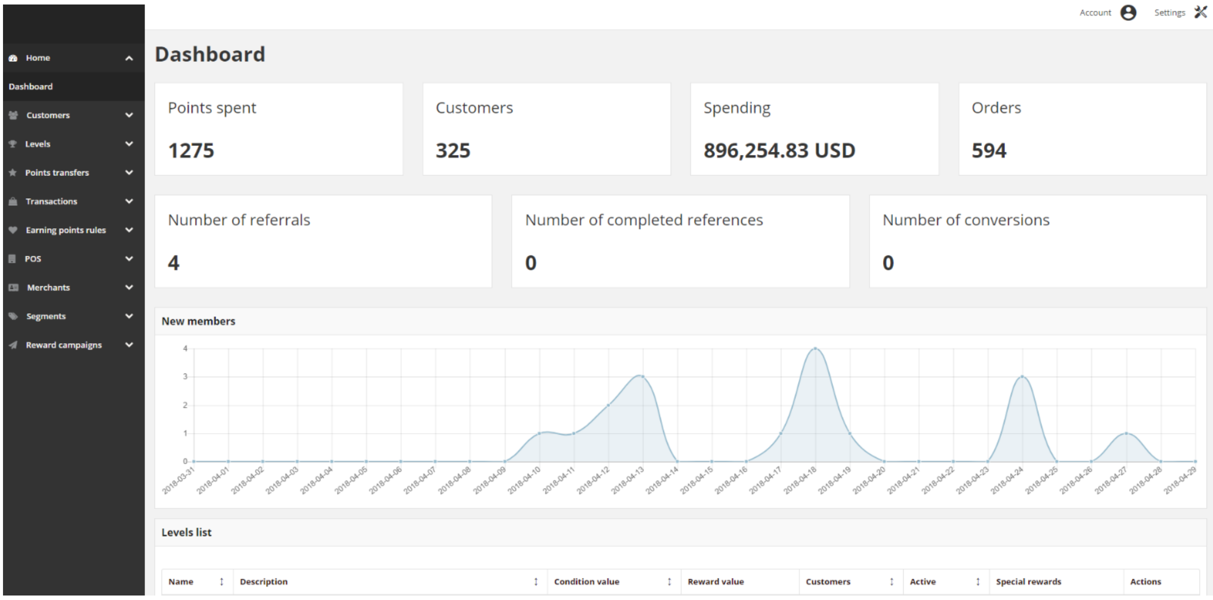
Connect Open Loyalty to eCommerce platforms, ERP systems, mobile applications, or any external system

CHAPTER 2:

OPEN LOYALTY ADMIN

Your store Admin is the password-protected back office where you can set up points rule, reward campaigns, manage customers, and perform other administrative tasks. All basic configuration tasks and loyalty campaign management operations are performed from the Admin.

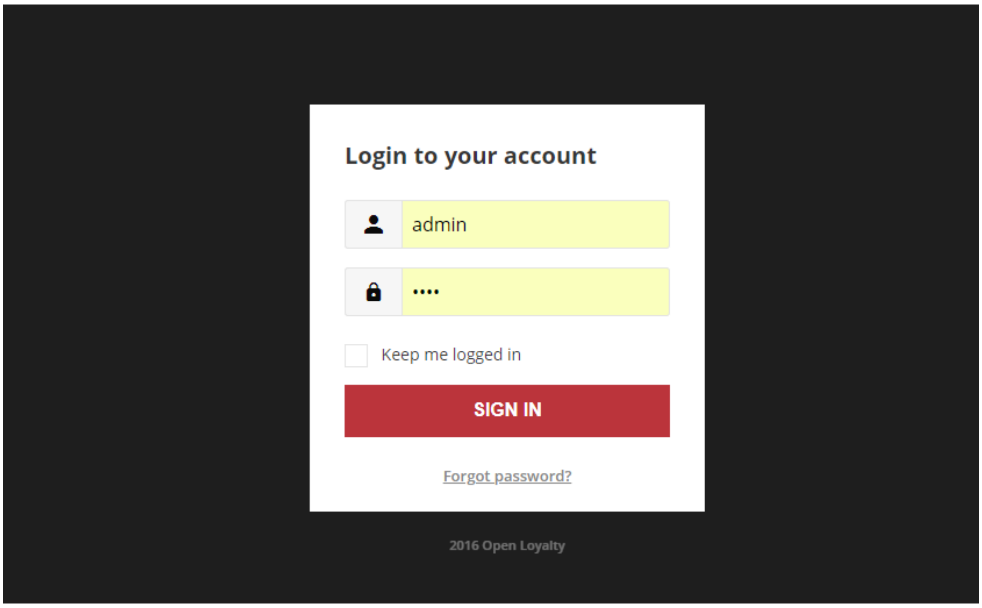
Your initial sign-in credentials were set up during the Open Loyalty installation. If you forget your password, a temporary password can be sent to the email address that is associated with the account



Admin Sidebar and Dashboard

Admin Sign In

The first thing you will learn is how to sign in and out of the Admin, and to reset your password. All of the instructions in the rest of this guide are written for a user with full administrative privileges, and begin with the assumption that you are logged in to the Admin.



Admin Sign In

To sign in to the Admin:

1. In the address bar of your browser, enter the URL that was specified during the installation, followed by the base URL of your store's Admin.
   The default Admin URLs look something like this:

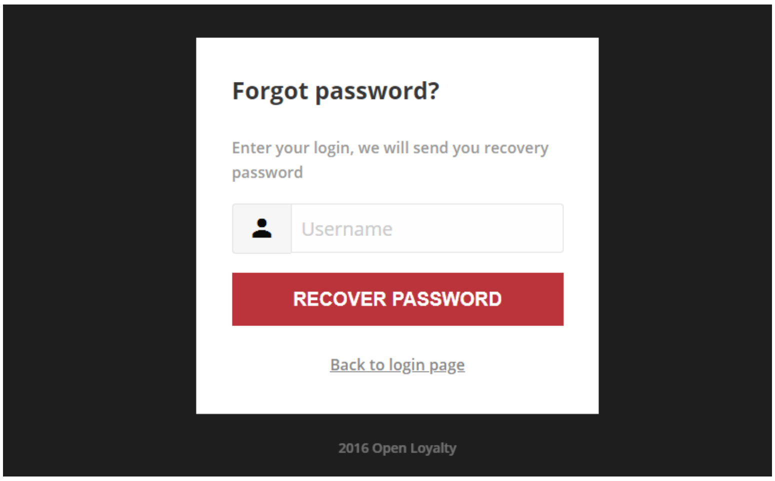
http://www.domain.com/admin

   You can bookmark the page or save a shortcut on your desktop for easy access.

2. Enter your Admin **Login** and **Password**
3. If you want to log in automatically every time you open the website without needing to enter your login and password mark **Keep me logged in** checkbox.
4. Tap **Sign in**

To reset your password:

1. If you forget your password, click the **Forgot password?** Link



Forgot Password

2. Enter the Email Address that is associated with the Admin account

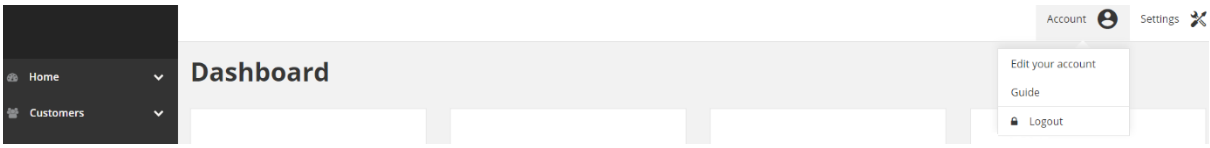
3. Tap **Recover Password**

   If an account is associated with the email address, an email with recovery password will be sent to reset your password.

Your Admin password must be eight or more characters long, and contains at least one upper case letters, one numeric character and one special character

To sign out of the Admin:

In the upper-right corner, tab the **Account** ( ) icon. Then on the menu, choose **Logout.**



Logout

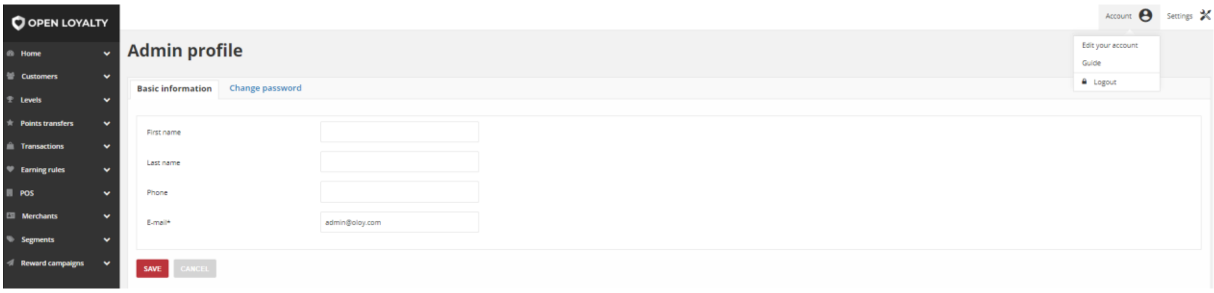
When you logout, the Sign-In page returns.

Your Admin Account

Your Admin account was initially set up during the installation. You can personalize your user name and password, and update your first and last name, and email address and phone number at any time.

To edit your account information:

1. In the upper-right corner, tab the **Account** ( ) icon. Then on the menu, choose **Edit your account**
2. Make any necessary changes to your profile information. If you change your password, make sure to write it down.
3. When complete, tap **Save**



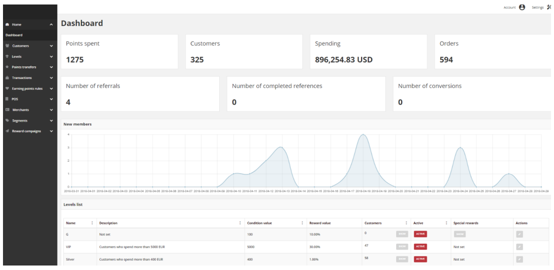
Admin Profile Information

Acceptable Phone Numbers format:

- + “country code” “local number” e.g. +48123456789
- “country code” “local number” e.g. 48123456789
- only “local number” e.g. 123456789

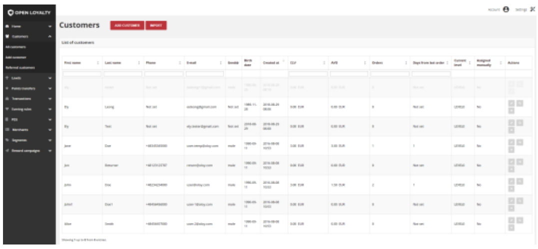
Admin Sidebar

The sidebar on the left is the main menu for your Loyalty Platform Admin, and is designed for both desktop and mobile devices. The menu provides access to all the tools you need to manage your loyalty programs on a daily basis.



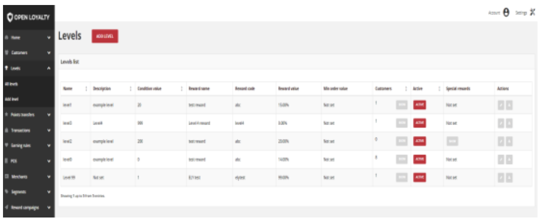
Dashboard

The Dashboard provides a quick overview of the customers activity in your loyalty programs, and is usually the first page that appears when you log in to the Admin



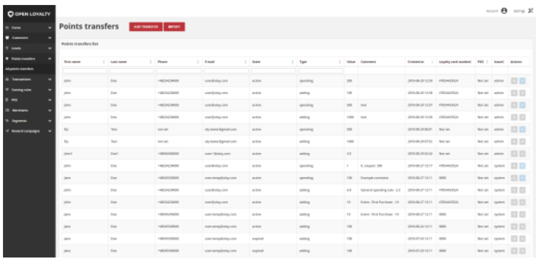
Customers

The Customers menu is where you can manage customer registered in your loyalty programs, and see referred customers list



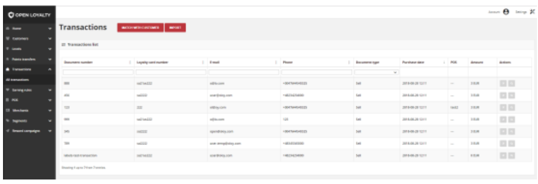
Levels

The levels menu is where you manage and define Customer levels with discounts and rewards.



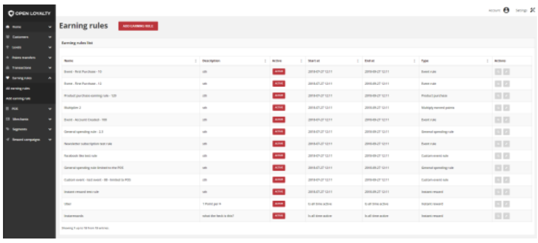
Points Transfers

The Points Transfer menu includes tools to controls everything related to your points transfer operation



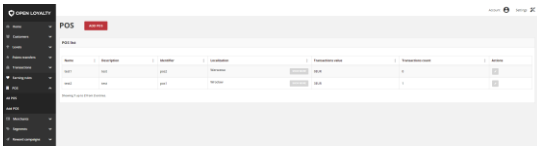
Transactions

The Transaction menu provides an overview of all data on offline and online transactions registered on customers



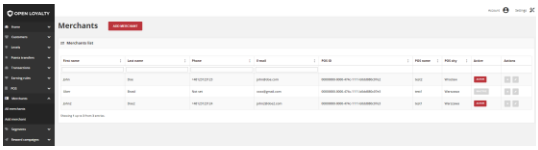
Earning Rules

The Earning Rules menu is where you set up rules for earning points based on transactions and behavior of Customers



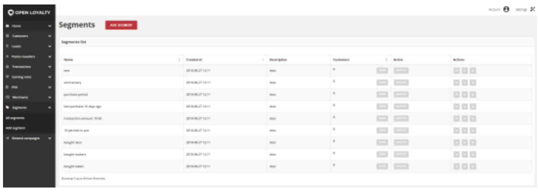
POS

The POS menu controls data related to your online and offline stores including localization and customers transaction values that were processed in POS.



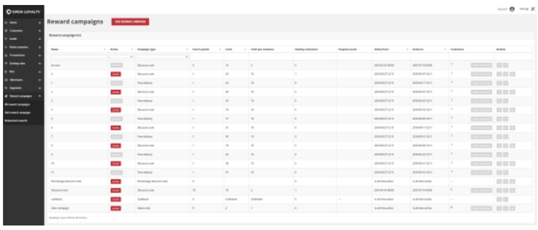
Merchants

The Merchants menu is where you can manage merchants and assigned them to particular POS.



Segments

The Segments menu is where you create customer segments based on customer transactions or behavior

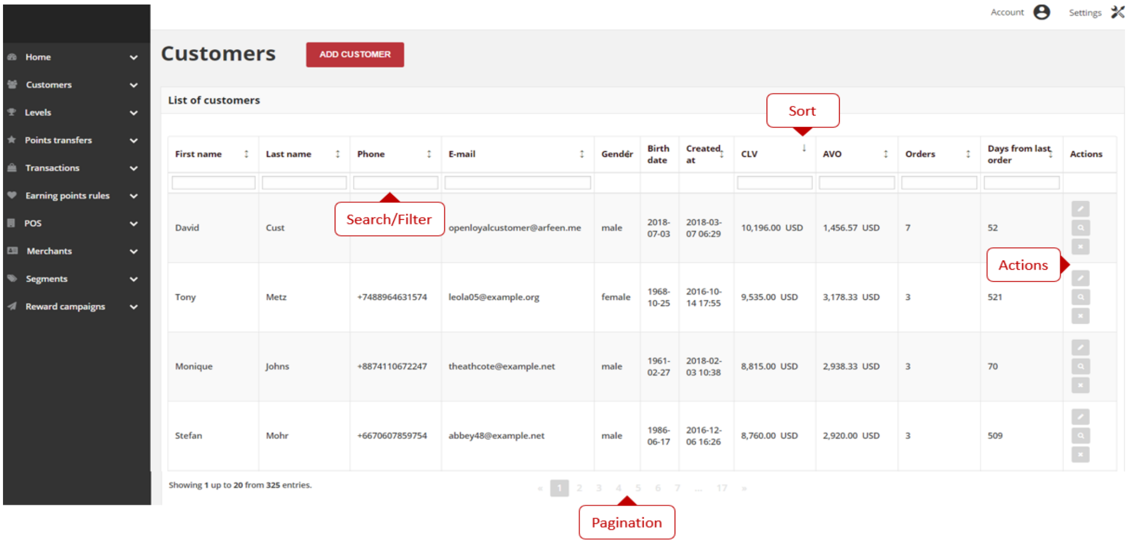


Reward Campaigns

The Reward Campaign menu is where you manage rewards available in your loyalty application, decide who can redeem rewards, and when

Admin Workspace

The Admin workspace provides access to all the tools, data, and content that you need to run your loyalty platform. The main pages have a grid that lists the data for the section, with a set of tools to search, sort, filter, select, and apply actions.



Admin Workspace

Workspace Controls

CONTROL	DESCRIPTION
Search / Filter	The filters in the header of each column can be used to limit the list to specific values. You can simply type the value you want to find and press Enter
Sort	The header of each column can be used to sort the list in ascending or descending order
Paginate	The pagination controls are used to view the additional pages of results
Actions	The Actions control applies an operation to selected record

Dashboard

The dashboard is the default startup page for the Admin – the first page that appears when you log in to the Admin. Dashboard gives an overview of the customers activity in your loyalty programs.

The blocks at the top of the page provide a snapshot of:

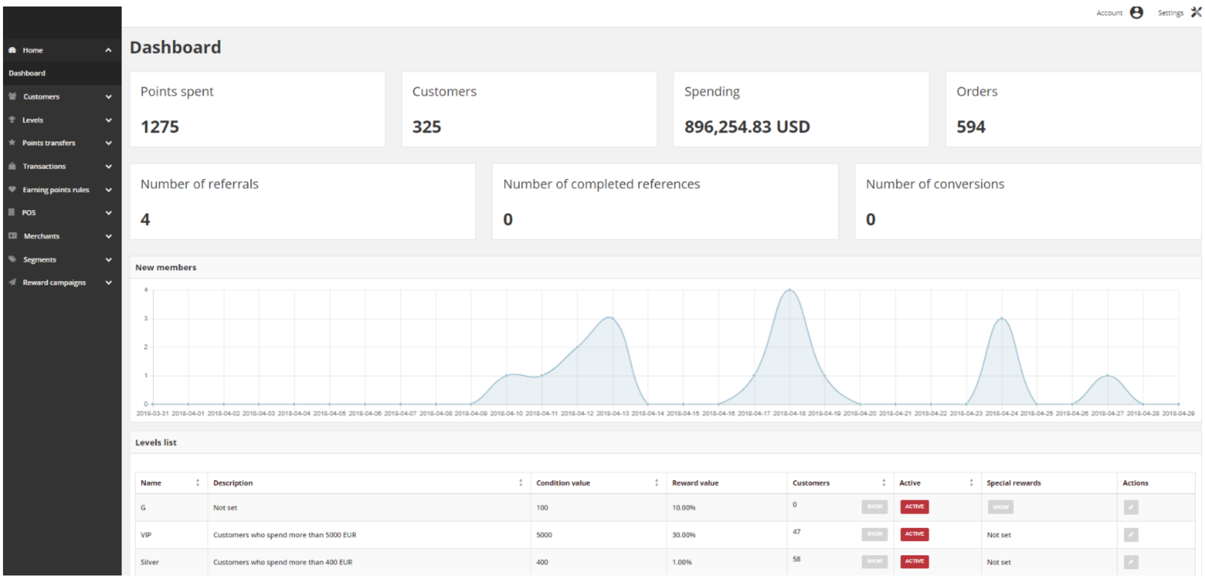
- Number of all spent points
- Number of all customer accounts
- Total amount of all registered transaction
- Number of all registered transactions

Blocks below, show some factors describing current state of referral program:

- Number of all invitations send by customers
- Number of all customers that register an account from invitation link
- Number of all customers that make purchase after register an account from invitation link

The chart shows the number of new customer accounts in time line. You can view the amount of member by hover your mouse over any day.

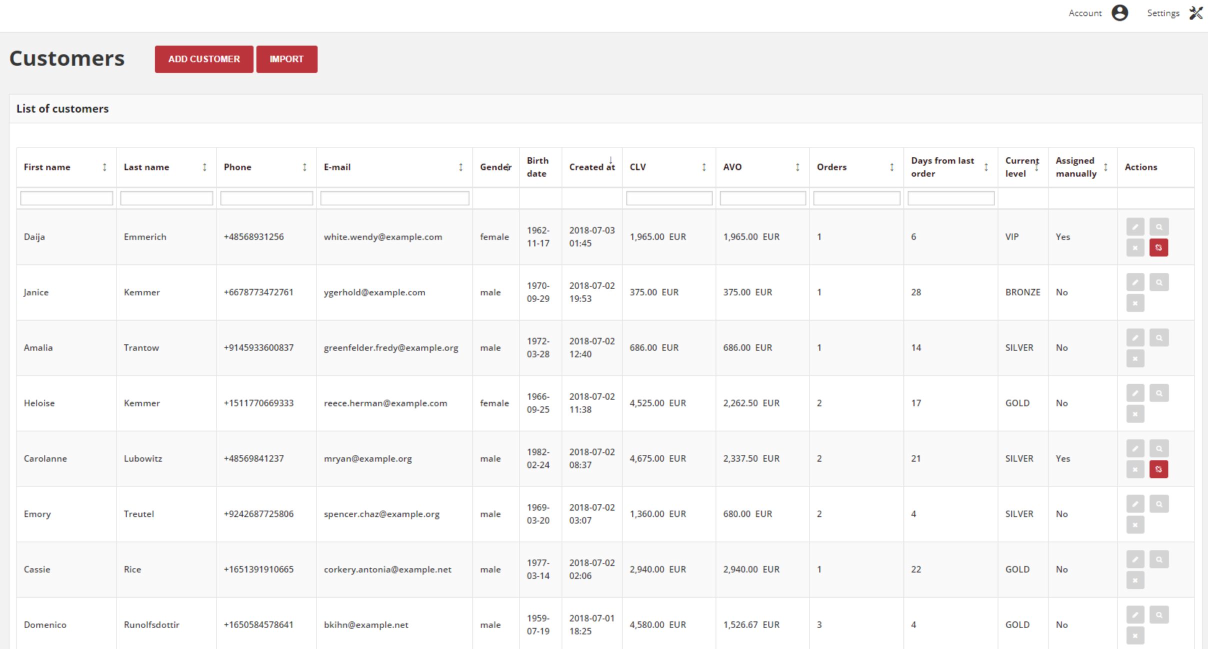
The tabs at the bottom provide quick overview of your Customer Levels list, associated to various benefits such as discounted fees and credentials for customer to reach this value. To learn more about customer Levels, see **Levels**



Dashboard

Grid Controls

Admin pages that manage data display a collection of records in a grid. The controls at the top of each column can be used to sort the data. The current sort order is indicated by an ascending or descending arrow in the column header. The Action column lists operations that can be applied to an individual record.



Customer Grid

To sort the list:

1. Tap any column header. The arrow indicates the current order as either ascending or descending.
2. Use the pagination controls to view additional pages in the collection.

To paginate the list:

1. Tap **Next** and **Previous** to page through the list, or click a specific **Page Number**.

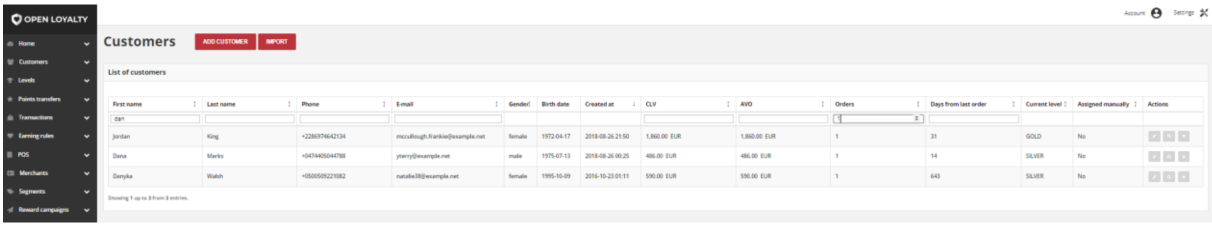
Pagination options

To search the list:

1. In the selected column in the field under column header type the value you want to find

- To find a close match, enter the few letters/signs of what you want to find
- To find an exact match, enter the exact word/number you want to find.

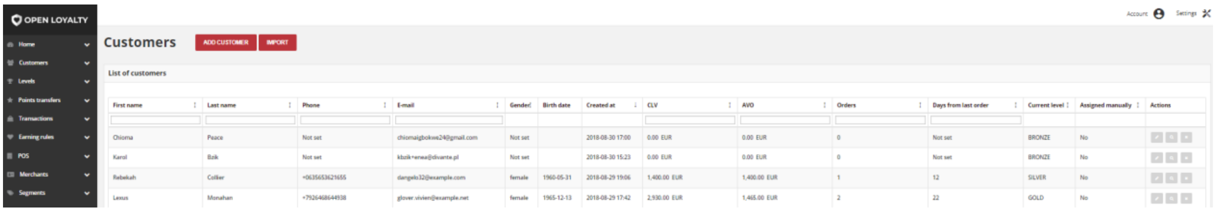
2. You can put as many values under different columns headers as needed to describe the conditions that must be met for the search result. Search values from each column create an AND Condition rule. It means that in search results only records matching all entered values are displayed.



Customer search controls

Actions Controls

When working with a collection of records in the grid, you can use the **Actions** control to apply an operation to the records. The Actions control lists each operation that is available for the specific type of data. For example, for Customer records, you can use the Actions control to edit basic information of selected customer, view the customer account form, or to deactivate record without possibility to activate them again.



Applying an Action to selected record

Actions by Grid

MENU	LIST	ACTIONS
CUSTOMERS		
	All Customers	Edit customer View Customer Account details Deactivate/Activate customer *Unlink manually assigned level - optional*
LEVELS		
	All Levels	Edit level Export customers to CSV
POINTS TRANSFER		
	All points transfers	View Points transfer details Cancel transfer
TRANSACTIONS		
	All transactions	Edit transaction labels View Transaction details
EARNING RULE		
	All earning rules	View earning rule details Edit earning rule
POS		
	All POS	Edit POS
MERCHANTS		

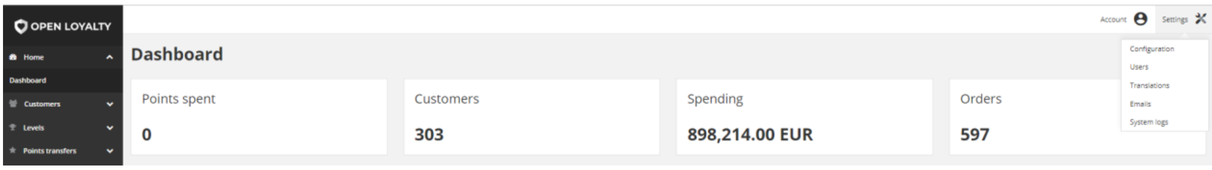
	All merchants	Remove merchant account Edit Merchant
SEGMENTS		
	All segments	Delete selected segment Edit segment Export customers to CSV
REWARD CAMPAIGNS		
	All reward campaigns	Edit reward campaign View campaign details Buy reward campaign for client
	All campaign categories	Edit campaign category

CHAPTER 3:

OPEN LOYALTY SETTINGS

The high level settings for the Admin management of your Loyalty Platform includes five areas that can be configured to enable and customize your activity.

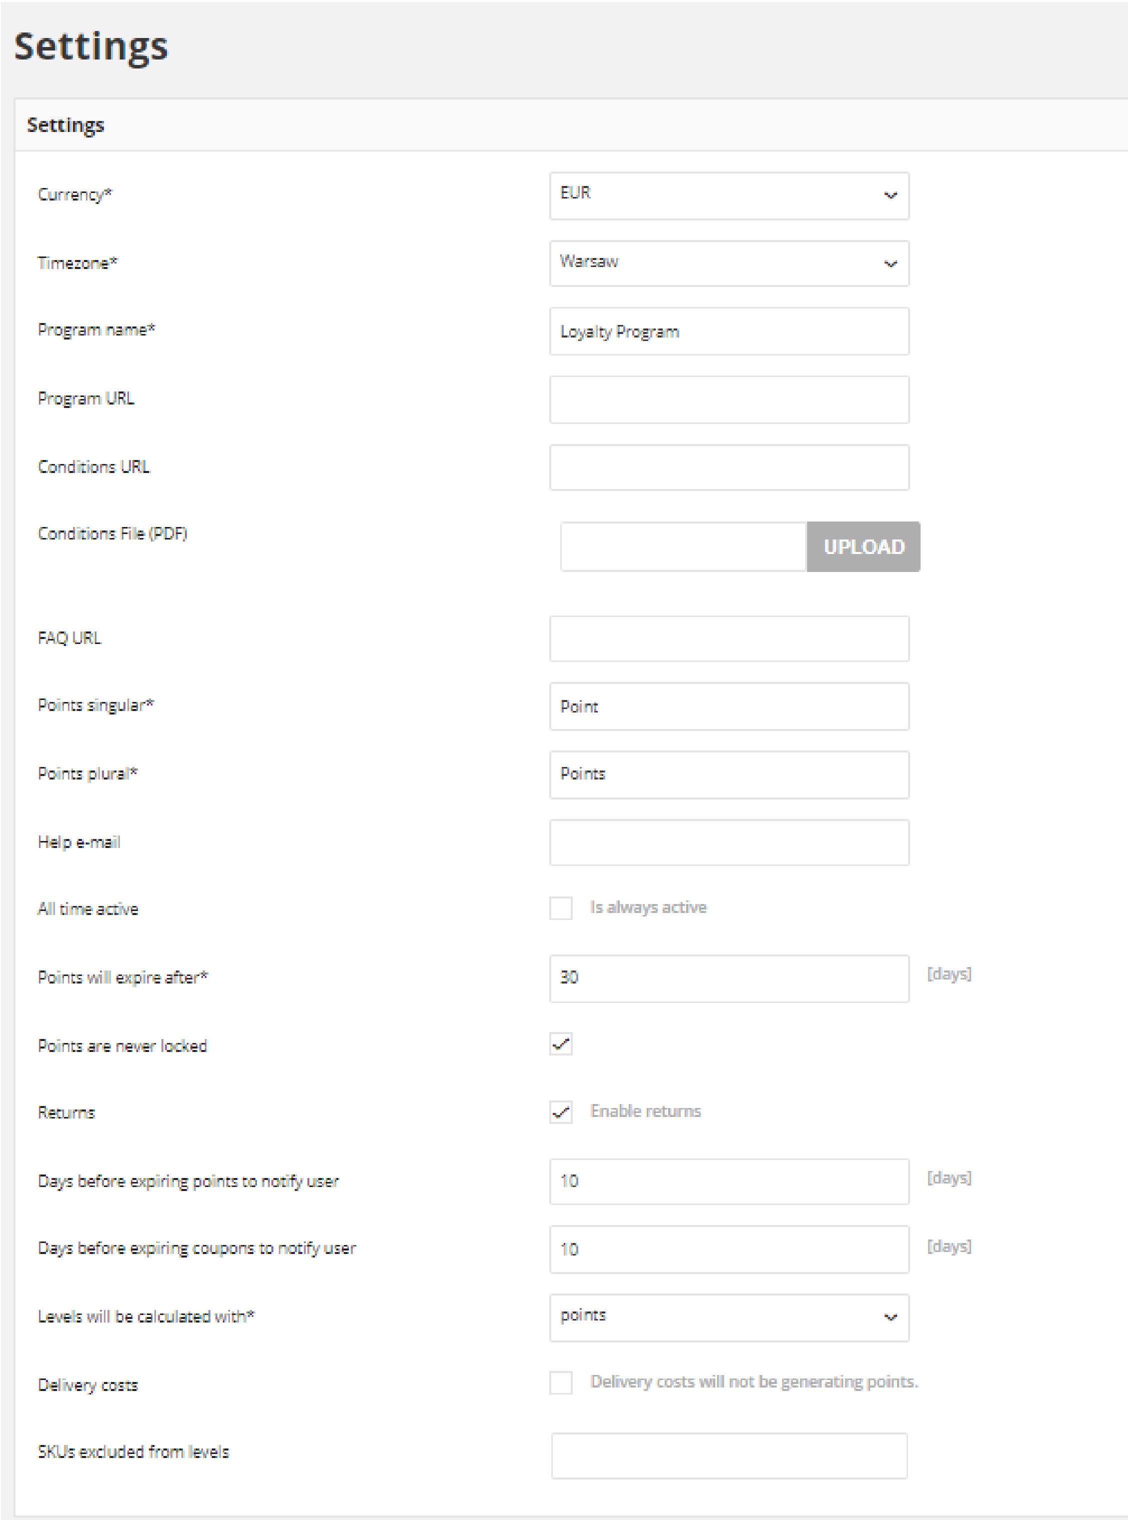
- **Configuration** - basic settings of loyalty platforms elements including loyalty programs behavior
- **Users** - detailed information about Open Loyalty users and theirs account settings
- **Translations** - available languages list with the editing possibility
- **Emails** - events list that send email from Open Loyalty system and theirs preview.
- **System logs** - informational, error and warning events list related to the Open Loyalty system



Open Loyalty Settings

Configuration

The Configuration section determines loyalty program and points details, customer earning and spending statuses, account activation, identification factors of matching transaction with customer and other settings that are used throughout the Open Loyalty system.



Open Loyalty Settings

To configure Open Loyalty:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Configuration**
2. In the **Settings** section, do the following:
    a. In the **Currency** list, select the currency to be used for online and offline transaction, to one of the following:
        - EUR
        - HKD
        - PLN
        - USD

    b. Select your **Timezone** from the list. Time zone is used for date time calculation

    c. Enter the **Program name** that you want to use in all communications

    d. If applicable, enter the URLs to the following:

Program URL	URL to page with Loyalty Program description
Conditions URL	URL to page with Loyalty Program Terms & Conditions description
FAQ URL	URL to page with Loyalty Program FAQ page

    e. If applicable, in **Conditions File (PDF)** field you can upload Loyalty Program Terms & Conditions document in .pdf. After uploading and saving settings a link where file is available appears

Conditions file uploaded

Document will be attached as a link in the Welcome system e-mails footer. For more information please see **system Emails**

    f. In **Points singular** and **Points plural**, type a unit label of scoring in singular and plural, that you want to appear. For example: Point, Points

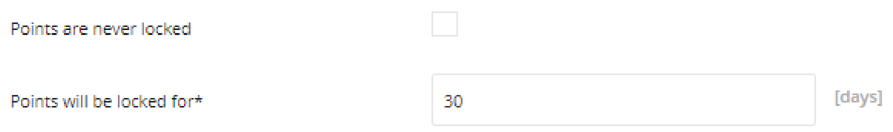
    g. Set **Help e-mail**, where customer can write to find help and support for you Loyalty Program.

    h. Mark the **All time active** checkbox, if you want the points accumulated by the participants of your loyalty program don't expire.

    i. **Points will expire after** field is available and required only when **All time active checkbox** is unselected. Points will expire after provided number of days from date of adding Points transfer.

j. Mark the **Points are never locked** checkbox, if you want assign points to Active points pool and recalculate customer level instantly when his transaction will be registered in Open Loyalty.

k. **Points will be locked for** field is available and required only when **Points are never locked** is unselected. Points will be locked for provided number of days from date of transaction registration. After passing selected locked time points automatically will get active and customer level will be recalculated.



Locked points options

Date until points will be locked and amount of locked points is displaying in Customer profile details from the Admin and for customers via Client Cockpit

l. If you marked **Returns** checkbox, then after Return process completed amount of points earned for returned transaction will be subtracted.

m. If you want to get a webhook notification about the customer earned points expiration you can define in **Days before expiring points to notify user** field number of days when notification will be sent. For proper operation, it is necessary to activate the webhook and provide the URL address to which the information will be sent (more in **Webhook section**)

Webhook notification option – points expiration

For example, when you enter 10, it means that every day Open Loyalty will be checking if there is any customer who have points which will expire in 10 days. If yes webhook event will be sent (on the URL address provided by you in Webhooks section) with information about: customer, sum of his points which will expire in 10 days and points expiration date.

n. If you want to get a webhook notification about the customer coupon expiration you can define in **Days before expiring coupons to notify user** field number of days when notification will be sent. For proper operation, it is necessary to activate the webhook and provide the URL address to which the information will be sent (more in **Webhook section**)

Webhook notification option – coupons expiration

For example, when you enter 10, it means that every day Open Loyalty will be checking if there is any coupon which will expire in 10 days. If yes webhook event will be sent (on the URL address provided by you in Webhooks section) with information about: customer, coupon code which will expire in 10 days, expiration date and coupon status (status is calculated based on ***days inactive*** *and* ***days valid*** defined during **reward campaign creation**).

o. Set the **Levels will be calculated with** field to one of the following:

Points	current level assignment will be calculated on the basis of sum of points earned from transactions (with use of earning rules)
Transactions	current level assignment will be calculated on the basis of the summary value of all transactions

When **Points** is selected additional section appears below. Please see **Level downgrade settings** to learn how to configure reset points after selected time period and level expiration.

p. When **Delivery costs** checkbox is selected then delivery cost will not be included in order value used for earned points calculation.

q. **Excluded SKUs of delivery cost** field is available and required only when **Delivery costs** checkbox is selected. SKU's provided in this field will be excluded from calculation of earned points.

r. In the **SKUs excluded from levels** enter SKUs that will not be included in order value used for earned points calculation.

3. When complete, tap **Save**

Level downgrade settings

Section appears only when **Levels will be calculated with points** option is chosen and allows to specify if and when customer level should be recalculated. Here you also determine whether level recalculation should be combined wait a customer points reset and define when and which points should be expired.

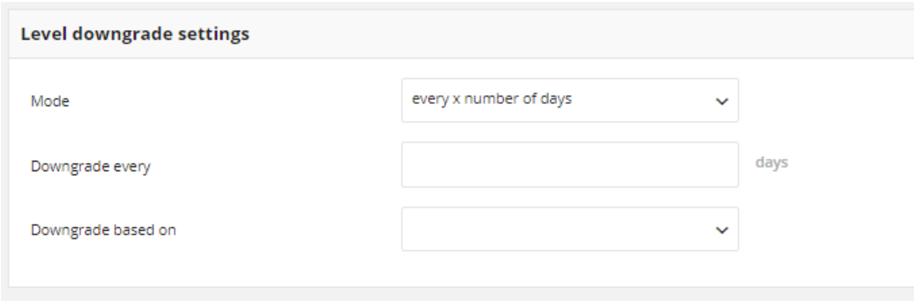
To configure level downgrade options:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Configuration**
2. Scroll down to **Level downgrade settings** section
3. Set the Mode option to one of the following:

Mode options

None	Customer level doesn't decrease and his accumulated points are not reset. No additional settings to configure here.
Automatic	Default Open Loyalty logic. The only scenarios when customer can return to previous level is when transaction (order), which caused this promotion, will be returned or his level will be changed manually by Admin. More about levels **here.** His accumulated points are not reset – Loyalty points pool based on **Points transfers.** No additional settings to configure here
Every x number of days	Customer level will be recalculated every provided number of days based on accumulated points counting from registration date/last downgrade date or last level change. If at the end of specified period (registration date/last downgrade date/last level change + number of days every which customer level is re-calculated) customer won't reach enough points to stay at the same level, a customer will be relegated to whichever level his points determine.

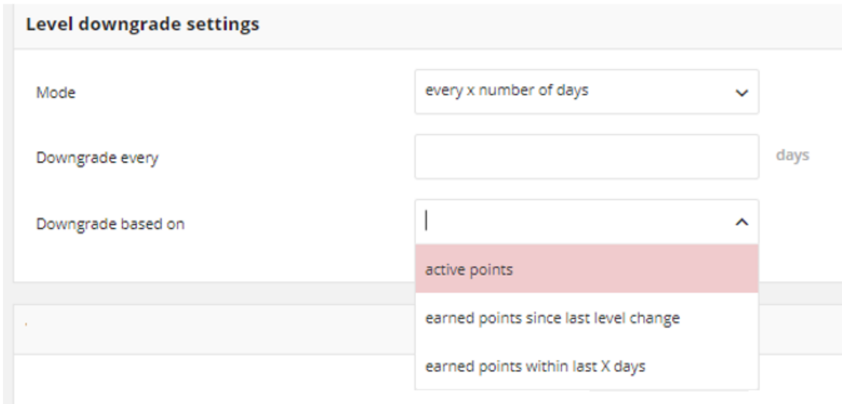
4. To set up level expiration after selected time period choose **Every x number of days** and do the following:



Level expiration settings

a. In **Downgrade every** field define after how many days since registration date or last downgrade date (in next period) level will be recalculated. For example, provide 365 to recalculate level every year.

b. In **Downgrade based on** field choose which points should be used to level recalculation after defined X number of days:



Level downgrade points pool options

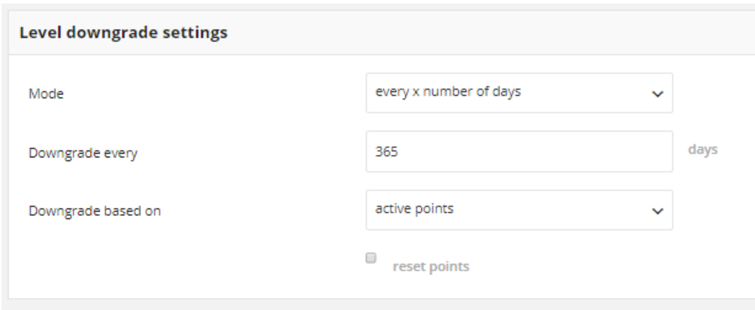
Active points	Calculate a customer current level based on only his active points pool
Earned points within last X days	Calculate a customer current level based on his earned points since last level recalculation date (registration date/las level recalulaction). It sums up added (Active) points. Used points won't affect on earned points. Locked points are also excluded from earned points and will be added after unlocking them. Currently earned points from last downgrade date are displaying in **Customer Loyalty points** balance as a **Total points earned since last level recalculation**. At the of every defined period amount of collected within points is reset.
Earned points since last level change	Calculate a customer current level based on his earned points since last level change date (base on his activity within loyalty program). For example, after registration customer is assigned to the basic level and from

the registration date, days till level recalculation is counted. If in the middle time, customer will earn points that implicate promotion to the next level days are counted from the beginning starting from the date of promotion

Currently earned points from last change are displaying in **Customer Loyalty points** balance as a **Total points earned since last level recalculation**. At the of every defined period amount of collected within points is reset

5. **Reset points** checkbox appears only when Active points are selected. When you mark it, Open Loyalty resets all Active and Locked points and move it to Expired points pool after specified **Downgrade every** number of days.

If you leave checkbox blank, Active points will not be reset and will pass to next period. The amount of Active points will be changing by Customer activity within Loyalty program – spending points for reward campaign, earning points for transaction, newsletter subscription, Admin adding/spending points transfer etc.



Reset points checkbox

6. When complete, tap **Save**

A customer changes his level, before points are reset. Points are reset after specified time period, counting from registration date, without customer level change.

Example of customer level downgrade base on earned points within last X days:

Your customer points credentials to level promotion :

- *Level O - if a customer has no points*
- *Level 1 – if a customer has 10 points*
- *Level 2 – if customer has 30 points*
- *Level 3 – if customer has 100 points*

You decided to recalculate level every year since the customer registration date and to use for this Active points, which will be reset at the end of the year (after level recalculation).

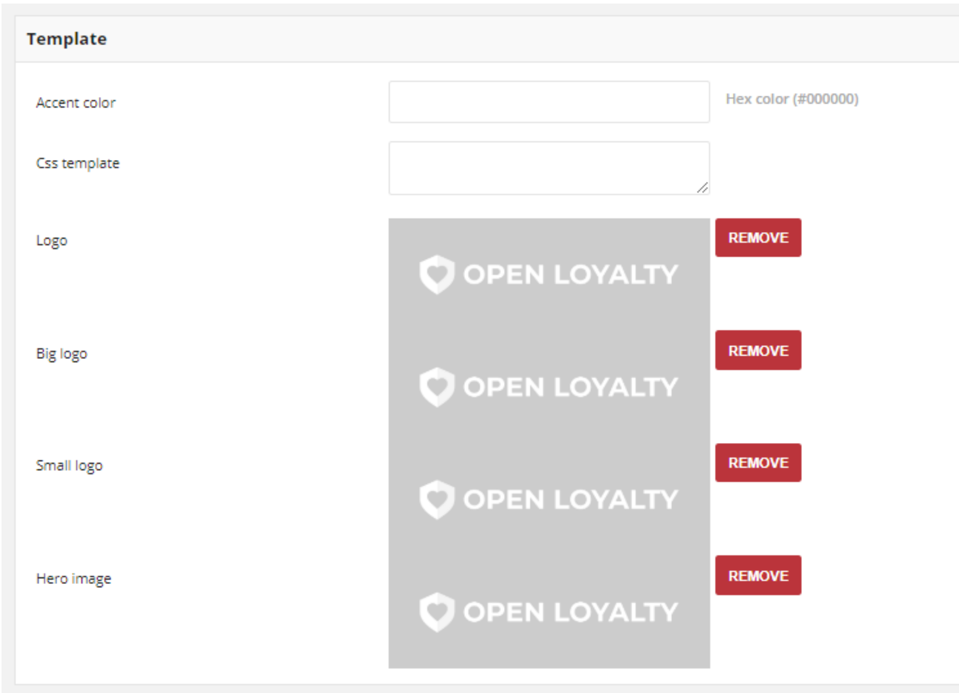
A customer made a two transactions and get 10 points and 20 points. After getting 10 points a customer leveled up to 1st level, after getting another 20 points a customer leveled up to 2nd level.

If at the end of year a customer:

- *has only **5 active points** then he is downgraded to the **Level0,** and all his points are re-set*
- *has **10 active points** the he is downgraded to the **Level1,** and all his points are reset*
- *has **30 active points** the he stays in the same **Level2,** and all his points are reset*

Template

Template management determines the logo, as well as the other content elements e.g. fonts, headers, colors, that are used for all pages within Open Loyalty.

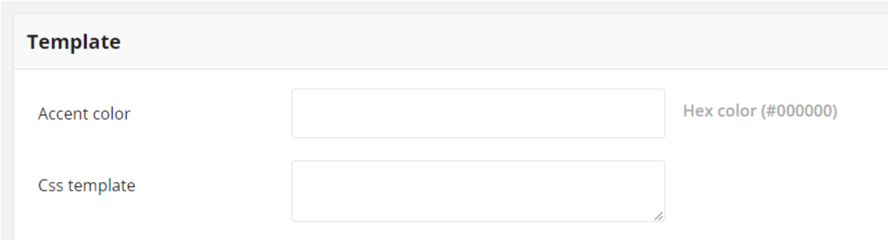


Template

The content is formatted with CSS, and can be easily edited and customizes by adding variables and other content element. You can make a color theme on the frontend using your primary color (Accent color).

To customize your template:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Configuration**
2. Scroll down to **Template** section and do the following:



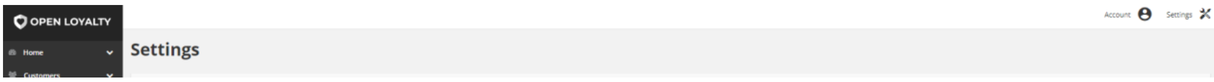
Content management

b. In **Accent color**, define your primary color indicator. Accent color is the color displayed most frequently across your Loyalty Program screens and components. Only Hexadecimal color values are supported.

c. In the **CSS template** box, enter the CSS code as needed. The content consists of a combination of CSS directives, variables and text.

One of the first things you'll want to do is to change the logo in the header above the menu. Your logo can be saved as either a **PNG, JPG, or JPEG** file type, and uploaded from the Admin of your Open Loyalty. The default Open Loyalty logo in the sample data is an PNG file. During upload, Logo and Small logo images will be automatically resized to applicable versions.

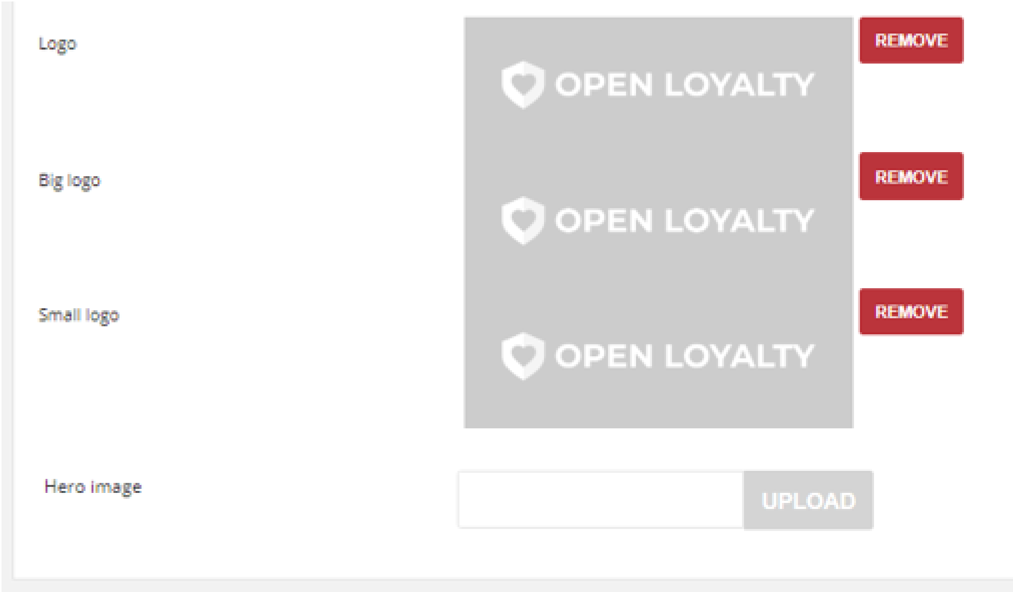
In addition, you can also add an oversized banner image, called **Hero image**, that will be placed on a login page. Hero image is the first visual element a customer's encounters on your site.



Logo in Header Menu

To upload your logo:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Configuration**
2. Scroll down to **Template** section and tap **Upload** on selected fields to do the following:



Logo Updating

a. In **Logo** field, to import logo image that will be displayed on desktop version in Admin cockpit. Then choose the file from your computer.

b. In **Small logo** field, to import logo image that will be displayed on mobile version. Then choose the file from your computer.

c. In **Hero image** field, to import image that will be displayed as a banner on login page.

3. When complete, tap **Save**

You can simply remove uploaded logo by taping **Remove**

Image Roles

FIELD	DESCRIPTION
Logo	Main logo image in the Admin cockpit placed in the header above the menu. Image is display on desktop version of application. Applicable image size: 512 x 512 pixels.
Big logo	Big logo image in the Client cockpit placed above login credentials section on a login page. Image is display on desktop version of application. Applicable image size: 512 x 512 pixels.

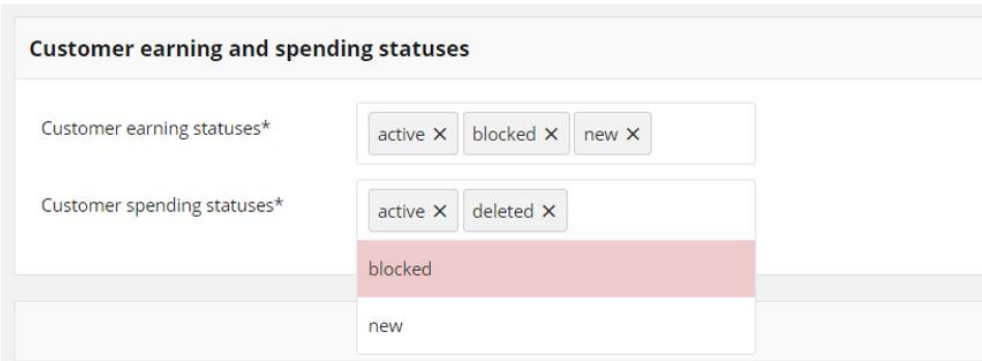
Small logo	Small logo image in the Client cockpit placed above login credentials section on a login page. Small image is display on mobile version of application. It can be also used as an icon of the application on the mobile device Applicable image size: 192 x 192 pixels.
Hero image	Large web banner image placed on a login page in the front. Hero image is the first visual element a customer's encounters on the site and display on mobile and desktop version.

Images sizing and formats

- The minimum and maximum image width is between 200-2560 pixels
- The minimum and maximum image height is between 200 – 1440 pixels
- The size of any one image must not exceed 2 MB
- Supported image formats: JPEG, JPG, PNG

Customer earning and spending statuses

The Customer statuses section allows to specify to which customers with particular status, points transfer can be handled. Specify the customer statuses which determines adding and subtracting loyalty points.



Customer Statuses

To assigned a status:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Configuration**
2. Scroll down to **Customer earning and spending** statuses section.
3. Set the **Customer earning statuses** field to one of the following:

New	Customer create an account in your Loyalty Program, but didn't activate it. To learn more about account activation, see: **Account activation**
Active	Customer create and activate an account in your Loyalty Program
Blocked	Customer is temporary inactive
Deleted	Customer has been removed

If the **Customer earning statuses** field remain blank, i.e. no status will be assigned, loyalty points will not be charged to any Customer.

4. Set the **Customer spending statuses** field to one of the following

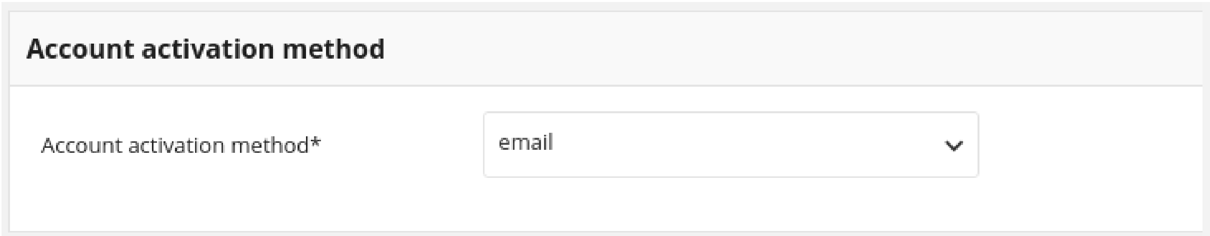
New	Customer create an account in your Loyalty Program, but didn't activate it. Customer is displaying in Customer grid from the Admin cockpit as a grayed-out. To learn more about account activation, see: **Account activation**
Active	Customer create and activate an account in your Loyalty Program. Customer is displaying in Customer grid from the Admin cockpit.
Blocked	Customer is temporary inactive
Deleted	Customer has been removed

If the **Customer spending statuses** field remain blank, i.e. no status will be assigned, any customer will be able to spend loyalty points.

5. When complete, tap **Save**

Account activation method

In order to use Open Loyalty Client cockpit, your customers must first activate their customer account. In Account activation section you set the method how their accounts will be activated – by clicking link in welcome email or by code received via SMS.



Account Activation Method

To set up account activation method:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Configuration**
2. Scroll down to **Account activation** section.
3. Set the **Account activation method** field to one of the following:

email	account will be activated after clicking on activation link sent to email address
SMS	account will be activated after entering a verification code sent to phone number. The Verification PIN is valid for 30 minutes

4. When complete, tap **Save**

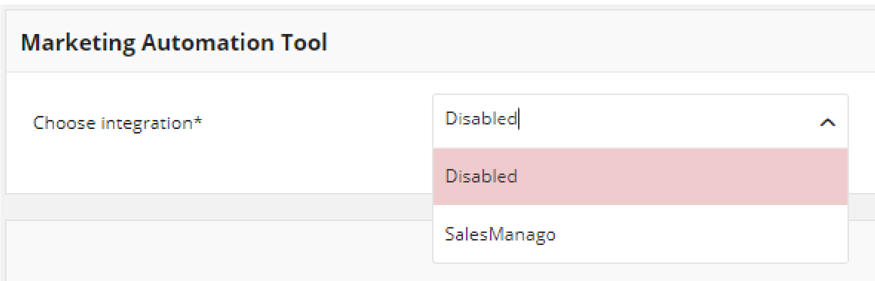
Marketing Automation Tool

To create effective email marketing and easy determine which of your products and services will suit to individual customer who registered to your Loyalty Program or just left their email address (newsletter subscription) you can integrate Open Loyalty Platform with SALESmanago.

Note

To integrate Open Loyalty platform with SALESmanago tool firstly, you have to create an account in SALESmanago. The data from you account will be needed to set up integration.

SALESmanago is the 1st in Poland and 6th in the world*[1] a comprehensive, next-generation platform for marketing automation. SALESmanago identify people entering your website, analyze their online behavior and transaction. Based on this information create complete and individual customer behavioral profile. This information is processed by the Machine Learning & AI algorithms to provide fully personalized offers.



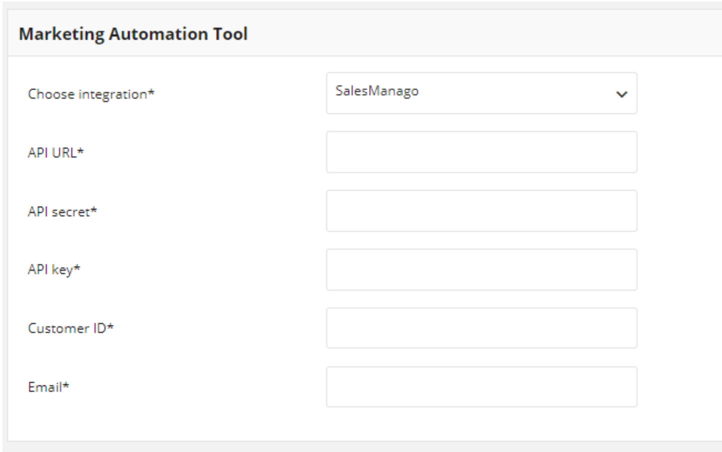
Marketing Automation Tool integration

To set up integration with SALESmanago:

1. In the upper-right corner, tab the **Settings** () icon. Then on the menu, choose **Configuration**
2. Scroll down to **Marketing Automation Tool** section.
3. To integrate with SALESmanago in **Choose integration** field select "***SalesManago***" from the dropdown list. By default, field is set as ***Disabled***.

[1] Source: https://www.salesmanago.pl/

4. Additional fields to complete will appear. To find information to fill them, open your SALESmanago account and choose: ***Settings -> Integration ->API Access***. Then do the following:



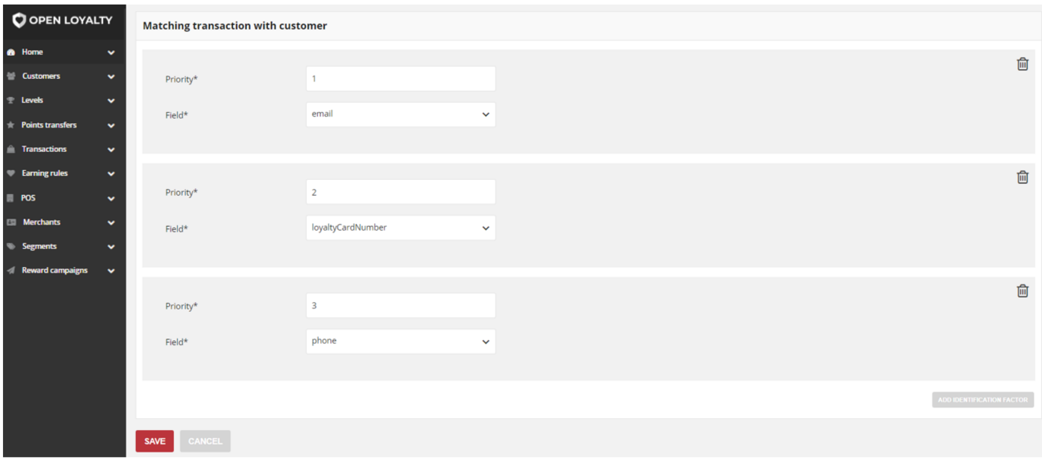
SalesManago settings

   a. In **API URL** field provide your SALESmanago Endpoint
   b. In **API secret** field provide your SALESmanago ApiSecret string
   c. In **API key** field provide your SALESmanago MicoSite Key- a random string used for authentication
   d. In **Customer ID** provide your SALESmanago Client ID
   e. In **Email** field enter the email address of the default owner of acquired contacts in SALESmanago

5. When complete, tap **Save**

Identification factors

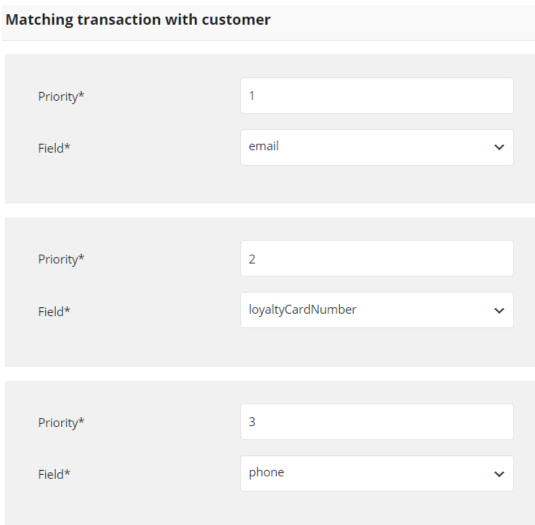
The identification factors determines the priority of factors used to match particular transaction with particular customer. Otherwise, these information are used to assign your loyalty program participant with transaction they making and transmitting relevant transaction data to Open Loyalty for completing or validating redemption-related transactions or rewards, calculating associated rewards or identifying transaction matches.



Identification factors

To set up identification factors:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Configuration**
2. Scroll down to **Matching transaction with customer** section. Fields in this section are used to prioritize which of factors will be taken first to calculate transaction to customer assignment.



Matching Factors with Priority

3. The **Priority** field determines the order in which the calculation will be handled. Enter a number to determine the Priority of this factor in relation to other factors that might be active at the same time (number 1 has the highest priority)

   For example, if there are three factors, with a priority of one, two, and three, the one with the highest priority (number one) is calculated before the others. If there will be no clear result, factor with the second highest priority is verified etc.

4. Set the **Field** to one of the following:

email	when matching transaction with the Customer email will be used (e.g. email provided in Loyalty Program and eCommerce must be the same)
loyalty card number	when matching transaction with the Customer loyalty card number will be used (e.g. Loyalty Card Number must be added to eCommerce account)
phone	when matching transaction with the Customer phone number will be used (e.g. phone number must be provided during account in Loyalty Program creation)

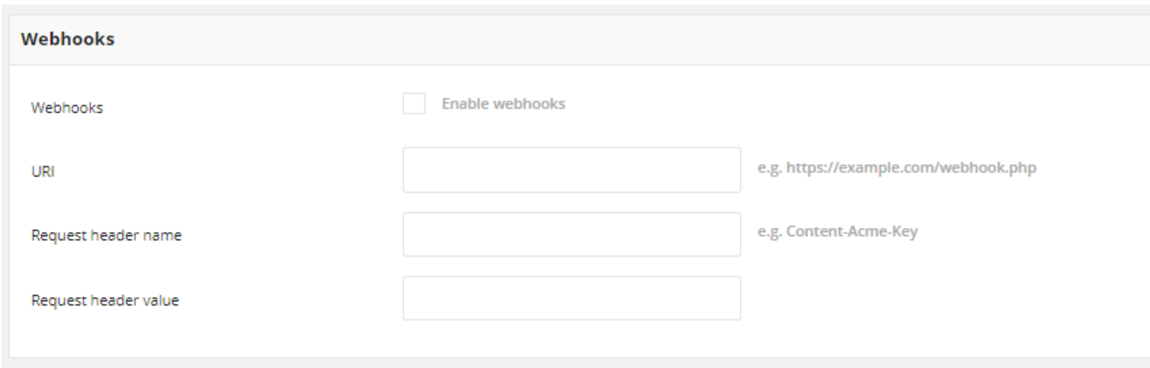
5. You can simply remove factor rule by clicking bin ( ) icon in a particular row.

6. When complete, tap **Save**

Webhooks

Webhooks is a mechanism allowing to send HTTP requests to the URL configured by Admin, triggered by some event, such us customer registration, transaction created, customer data edit etc. There is no need to be a request initiated on your end, data is sent whenever there’s new data available.

To setup a webhook all you have to do is register a URL with the company proving the service you’re requesting data from. That URL will accept data and can activate a workflow to turn the data into something useful.



Webhooks Enable Option

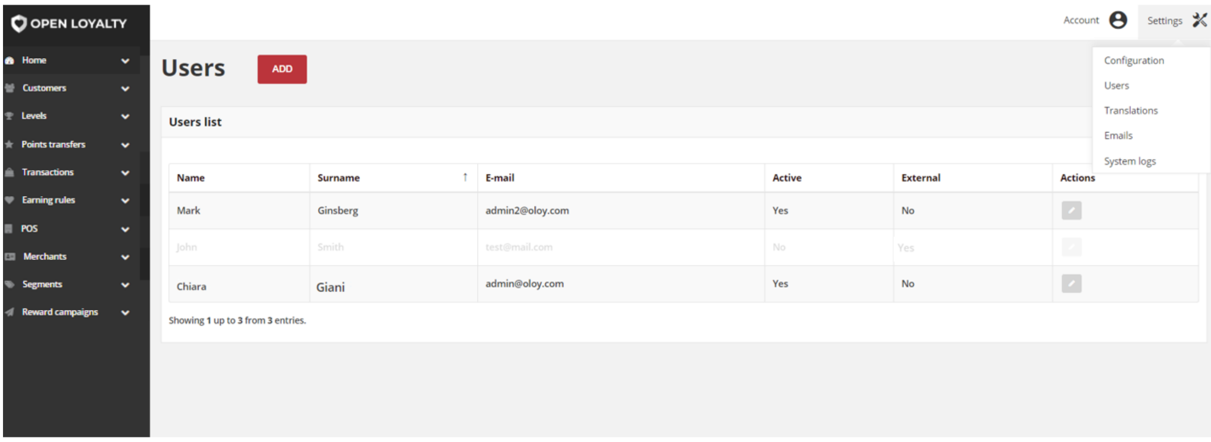
To enable Webhook:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Configuration**
2. Scroll down to **Webhooks** section, and to enable mechanism do the following:
   a. In **Webhooks** field mark ***Enable webhooks*** checkbox
   b. Enter configured **URL** address on which request will be sent
   c. In **Request header name** as an additional security measure for webhooks batch provide a custom header that batches can be securely sent to your webhook endpoint(s). This gives you the option of rejecting webhook batches if these custom headers and associated values are not included in the batch
   d. In **Request header value** enter associated with header value
3. When complete, tap **Save**

Users

When your store is first set up, you receive a set of login credentials for the Administrator role that has full permissions. If there are others on your team, or service providers who need access, you can create a separate user account for each from this section.

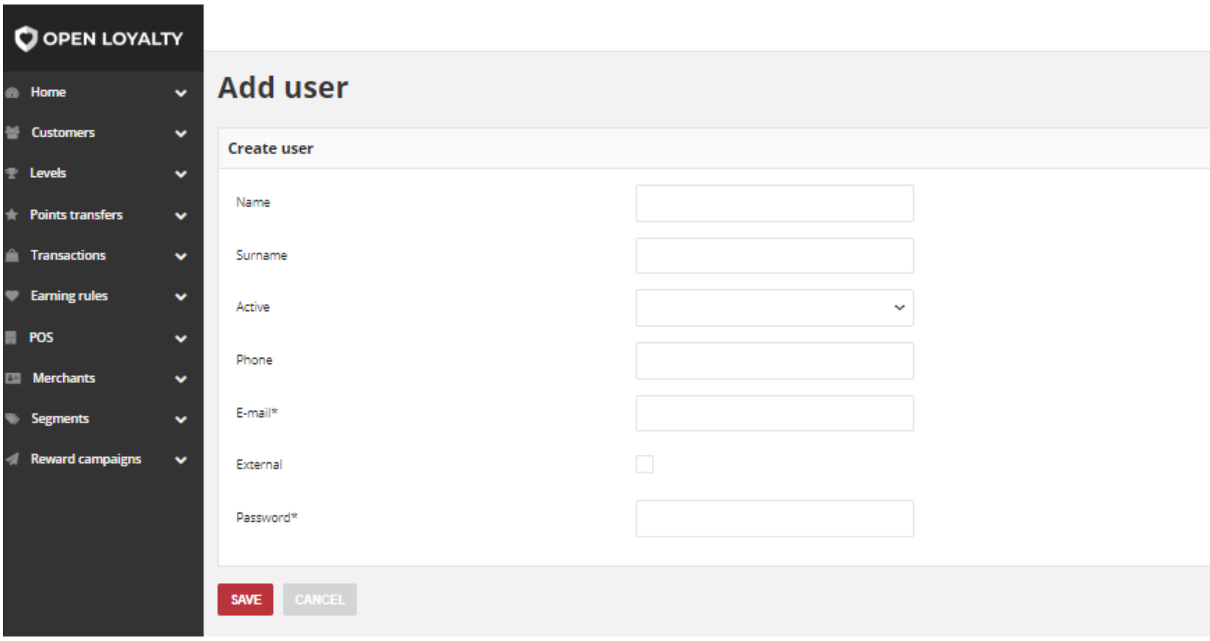
Users list include both active and inactive Admin user's – inactive are grayed-out. You can also see their status in Active column. Additionally Users list grid provides basic information about users – name, surname, email address and authenticate method.



All Users

To add New user:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Users.**
2. To add new user, tap **Add**



New User Account Information

3. In the **Create user** section, complete the following information:

    - Name
    - Surname
    - Phone
    - E-mail

    This email address must be different from the one that is associated with your original Admin account.

4. Then you have to decide which of following user authenticate method to choose:

    a. To authenticate user via an API key, do the following:

    - Mark checkbox **External**
    - Enter an **API key**, received from Open Loyalty provider

    In this case, you will authenticate the user and store that authentication in the session so that the user is automatically logged in for every subsequent request.

    b. To authenticate user via Password, do the following:

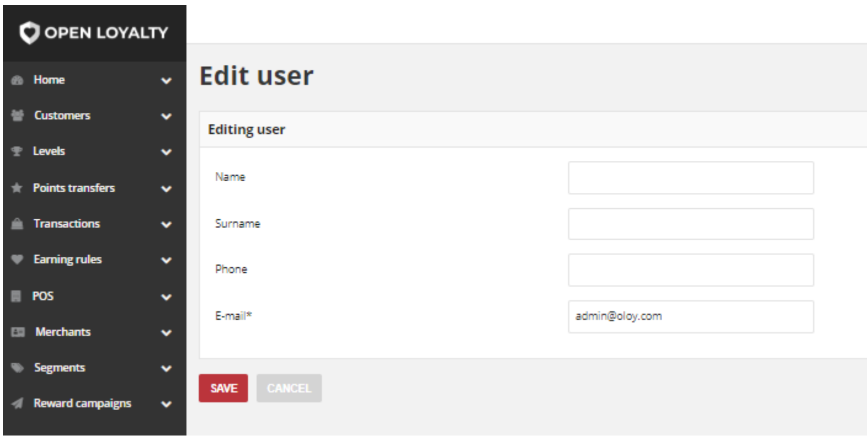
    - Leave **External** checkbox blank
    - Assign a **Password** to the account.

5. Set **Active** field to “Active”

6. When complete, tap **Save**

Locked users

Any user account that is currently inactive appears in the Users list as grayed-out. An account can be unlocked (set to active) by other Admin user.



Admin User Editing

To edit an admin account:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Users.**
2. In the Users list, find the record to be edited and click **Edit** ( ) icon in the Action column to open the record in edit mode.
3. Make any necessary changes to user account information. If you change password/API key, make sure to inform user about changes
4. When complete, tap **Save**

To lock/unlock an admin account:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Users.**
2. In the Users list, find the record to be edited, and click **Edit** ( ) icon in the Action column to open the record in edit mode
3. Set **Active** field, to one of the following:

Active	to unlock admin account. User can log in and have access to the Open Loyalty platform.
Inactive	To lock an admin account. User will not be able to log in and have access to the Open Loyalty platform.

Admin users can not be deleted from Open Loyalty platform. To prevent any user from access to the platform, set the Active field as Inactive.

Translations

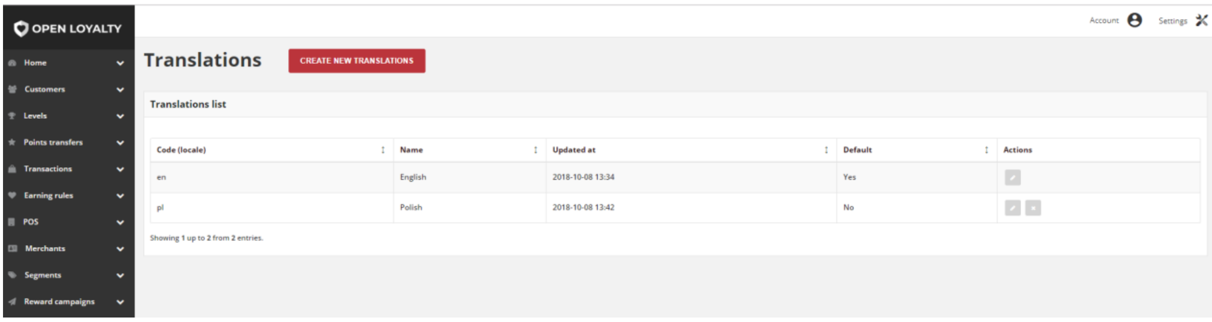
The Translations section allows defining many language versions used throughout the Open Loyalty platform in both, Client cockpit and Admin cockpit. All content elements will appear in the selected **default language**.

Most of the text that appears to be hard-coded on pages throughout your loyalty platform can be instantly changed to a different language by changing the default language parameter. The Default language is selected at the translation creation process but can be changed at any time in edition mode.

Moreover, during Reward campaigns and Levels creation/edition processes admin can fulfill Basic Information section in every language version listed here. For example, if we have Polish and English translations, there is a possibility to provide Basic information of Levels and Reward Campaign in this both languages.

Thanks to this, changing the default language translate the text word-for-word and references a different translation table that provides the interface text that is used in the Admin and Client cockpit. The text that can be changed includes navigational titles, labels, buttons, and links such as “List of customers” and “Account”, Reward campaigns and Levels name, description etc.

Currently, Open Loyalty is available in **two** languages: English and Polish.



Translations Lists

Field description

FIELD	DESCRIPTION
Code (locale)	Language identifier
Name	Language name
Updated at	Date of last language version modification
Default	Information which language is default. Options include: Yes/No
Actions	The operations that can be applied to selected translations. Options include: • Edit translation • Remove translation. Note – <u>there is not possible to remove default language version.</u>

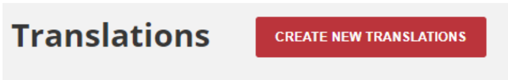
Create new translations

You can create and versions your loyalty platform in multiple languages. You can have only one default language at a time.

> **Before adding new translations, copy existing content in JSON and paste into new one.**
>
> **It helps you to include all content elements that should be translated and keep JSON format of file.**

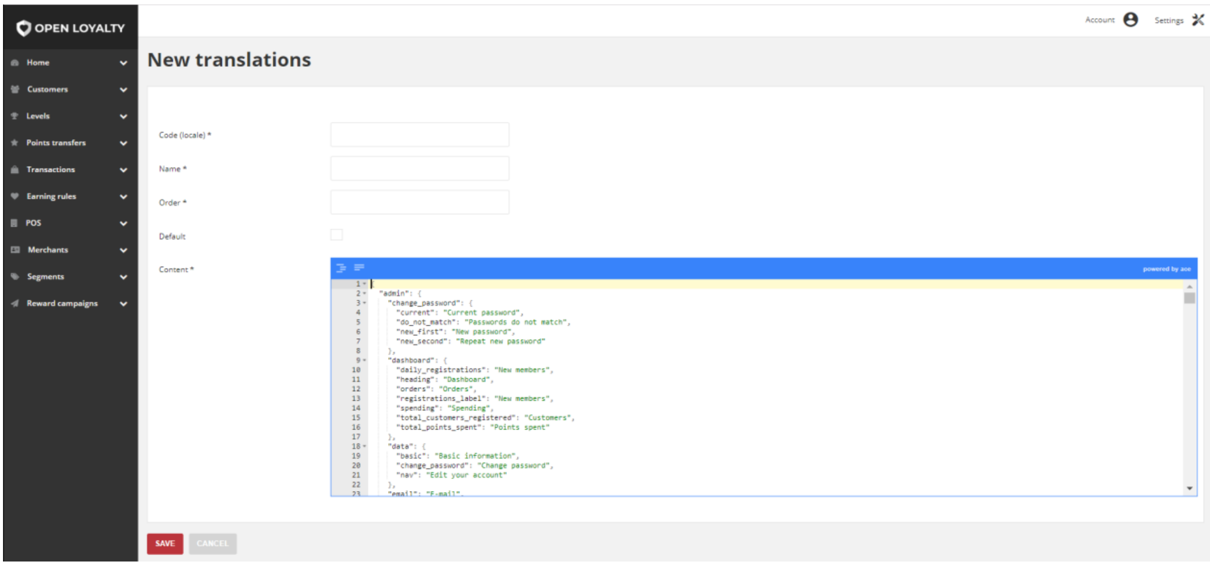
To add new translation:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Translations.**



Add new translation button

2. To add new translation, tap **Create new translations**



New Translations Form

3. Enter a **Code (locale)** in lowercase characters to identify the language. For example: de
4. Enter a **Name** for the translations. For example: German
5. Enter a sort **Order** number to determine the sequence in which the translation is listed on a Translations list

6. To set translation as a main language within the platform, mark **Default** checkbox
7. In **Content** field, for each text to be edited either paste or type the translated text into the field. Translated text is marked in green.

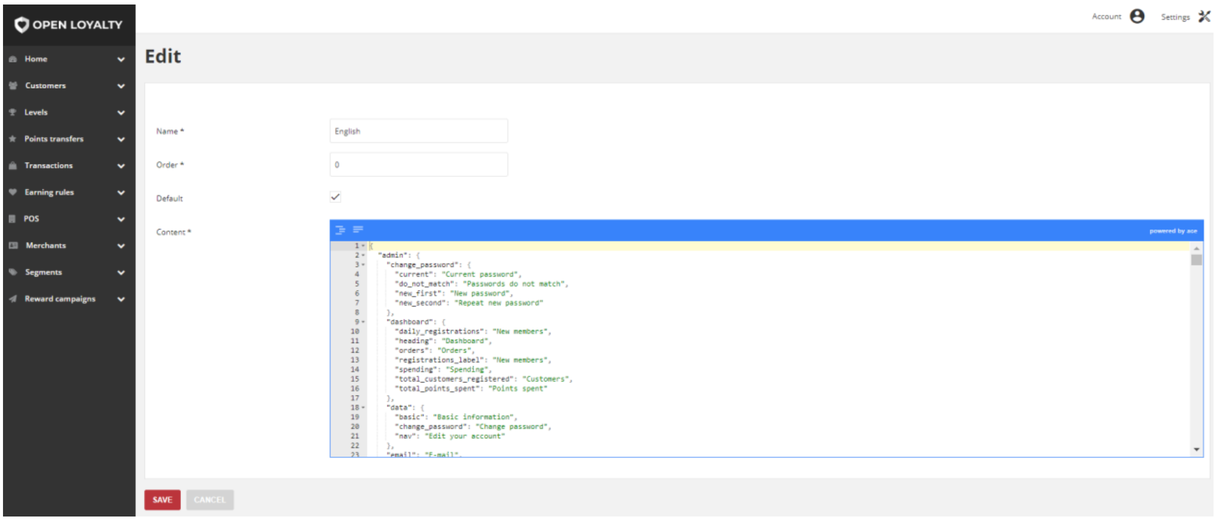
   Text in editor must be valid JSON.

   Content field is available in two JSON format:

   - Format JSON data, with proper indentation and line feeds
   - Compact JSON data, remove all whitespaces
8. When complete, tap **Save**
9. Repeat the process for all language version used in the Open Loyalty

Updating translations

You can edit all data provided during translation creation process (except Code locale), including change the default language to another. You can update translation data by selecting it's record from **Translations list**.



Translation Editing mode

To edit a translation:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Translations**
2. In the **Translations list** grid, find the record to be edited, and click **Edit** ( ) icon in the Action column to open the record in edit mode
3. Make any necessary changes to translated text.
4. When complete, tap **Save**

5. Date of last translation modification will be displaying in the **Translations list** grid in the **Updated at** column.

To change default language:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Translations**
2. In the **Translations list** grid, find the language to be set as default, and click **Edit** ( ) icon in the Action column to open the record in edit mode
3. Mark **Default** checkbox
4. When complete, tap **Save**

   Date of last translation modification and selected as default will be displaying in the **Translations list** grid.

Emails

Email templates define the layout, content, and formatting of automated messages sent from Open Loyalty. Open Loyalty includes a set of responsive email templates that are triggered by a variety of events that take place during the operation of your Loyalty Program. You will find a variety of prepared email templates related to customer activities, admin actions, and system messages that you can customize

Email Templates

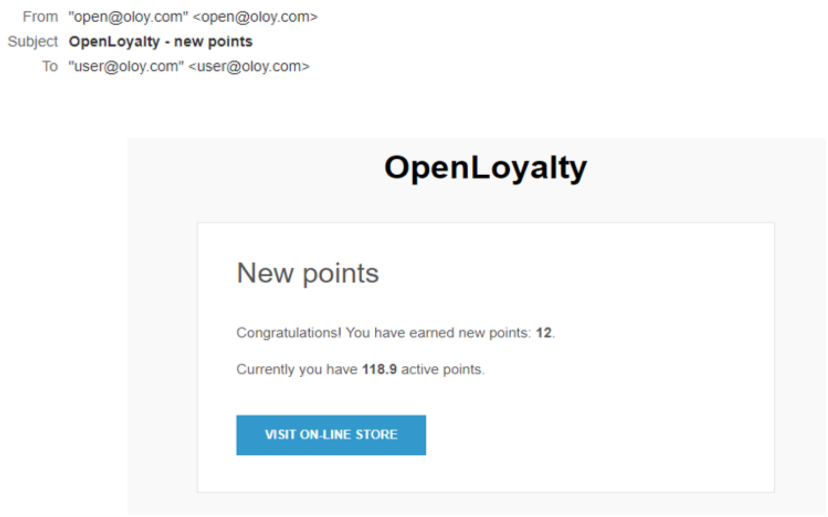
Email templates

EMAIL	EVENT	DESCRIPTION
ACCOUNT CREATED		
	E-mail send when Customer register to program using Customer Cockpit.	Email with link to activate account (password is entered by customer during filling out registration form) and link to download Terms & Conditions file (.PDF)
ACCOUNT CREATED		
	E-mail send after registering new Customer Account using Administrator Cockpit, POS Cockpit, API.	It contains temporary password to activate an account and link to download Terms & Conditions file (.PDF)
PASSWORD RESET REQUESTED		
	Send when user click on Forgot password and provide proper email address	E-mail with reset password link
NEW REWARD		
	Send after Customer confirm reward redemption	It contains coupon code and reward campaign name.
NEW POINTS		
	Send after Customer earn points	It contains new points value and current amount of all active points
NEW LEVEL		

	Send after Customer reach next level	It contains information about customer new level and new discount.
INVITATION		
	Send after Customer invite his friend to loyalty program (refer a friend)	It contains referrer customer name and registration link for his friend

Customizing Email templates

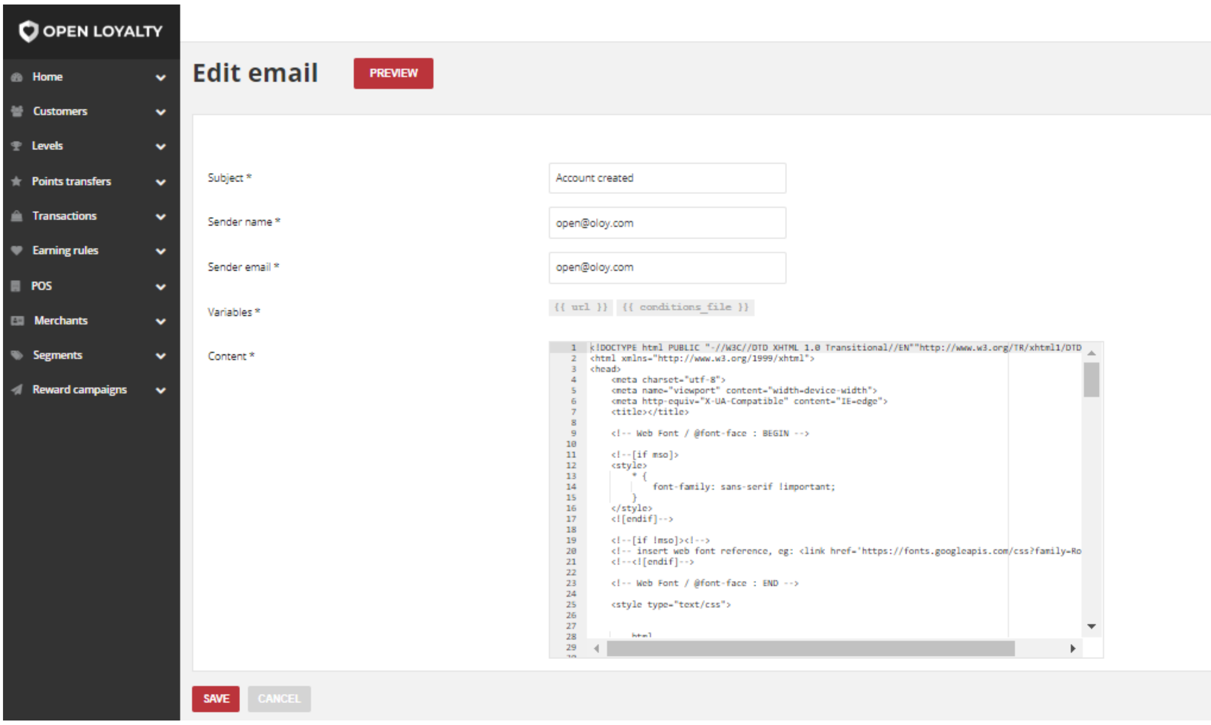
Open Loyalty includes a default email template for the body section of each message that is sent by the system. The template for the body content is formatted with HTML and CSS, and can be easily edited, and customized.



Preview of New Points Email

To edit an email template:

1. In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **Emails**
2. In the **Emails list** grid, find the record to be edited, and click **Edit** ( ) icon in the Action column to open the record in edit mode



Template Information

3. Make any necessary changes to the following:

   a. Enter new **Subject** of email message which will be displayed when recipient get email. For example OpenLoyalty – new points. The Template Subject appears also in the Subject column in **Emails list** grid.

   b. In **Sender name** field enter the name which will be displayed when recipient open an email in external email system, as the reference so that your recipient knows it was you who sent the message

   c. In **Sender email** field provide an email address which will be displayed when recipient open an email in external system,

   d. Every template has predefined variables added to content in **Variables** field. The selection of available variables depends on the template and can not be changed.

   e. HTML code is used to define content of email**.** In the **Content** box, modify the HTML as needed. Any changes of the content should be made by technical persons, who knows HTML to avoid further technical issues with templates.

When working in the template code, be careful not to overwrite anything that is enclosed in double braces

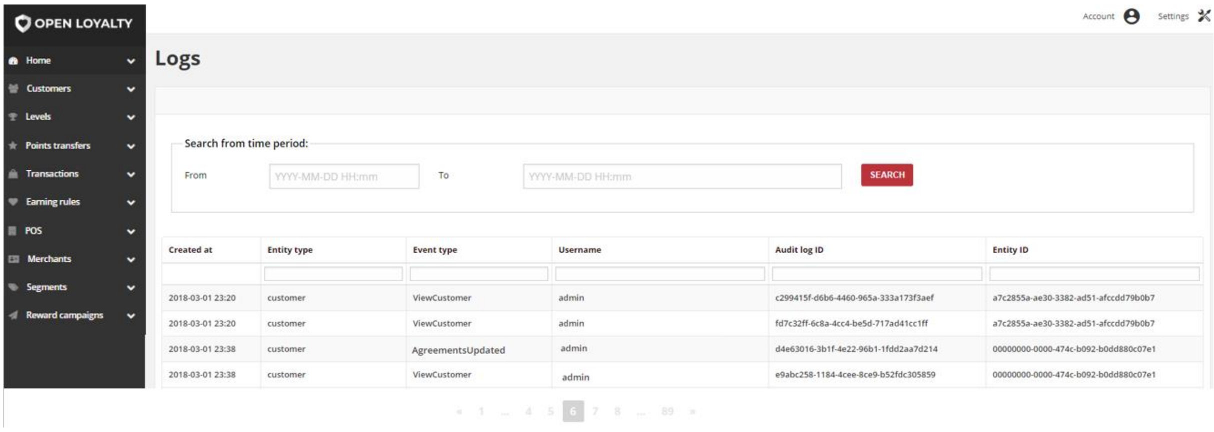
4. When you are ready to review your work, tap **Preview** . Then, make adjustments to the template as needed.

5. When complete, tap **Save**

System logs

Logs grid allows to monitor every changes on the customer data. The log file is accessible only to Admin users throughout the Admin Cockpit. Logs view allows you to check the date and time that change was made, type and unique ID of change and user name and his unique ID associated with this change.

In addition you can control logs results by filter and search option.



System Logs

System monitors and logged following events/operations:

1. ***Create*** –
   Customer and all elements related to customer: transactions, transfers.

   For example: new points transfer to customer account creation

2. ***Modify*** -
   Customer, all elements related to customer (transactions, transfers, redeemed rewards), operations that change customer data indirectly (segments and level assignment)

   For example: agreements updated,

3. ***Read*** -
   Customer and all elements related to customer: transactions, transfers, redeemed rewards

   For example: view customer

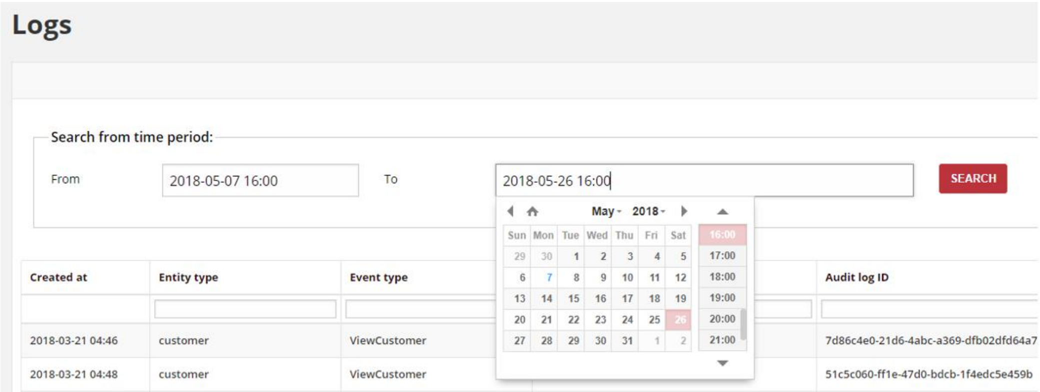
4. ***Delete*** -
   Customer, all elements related to customer (transactions, transfers, redeemed rewards), operations that change customer data indirectly (segments and level assignment)

   For example: delete points transfer to customer account

Search Logs by date range

You can search for system logs by a certain time period using **Search from time period** search box. Date ranges can be specified with static start and end dates.

The date format is as follows: “YYYY-MM-DD HH:mm” and allows to display logs that have been placed from and up to the specified date



Search box

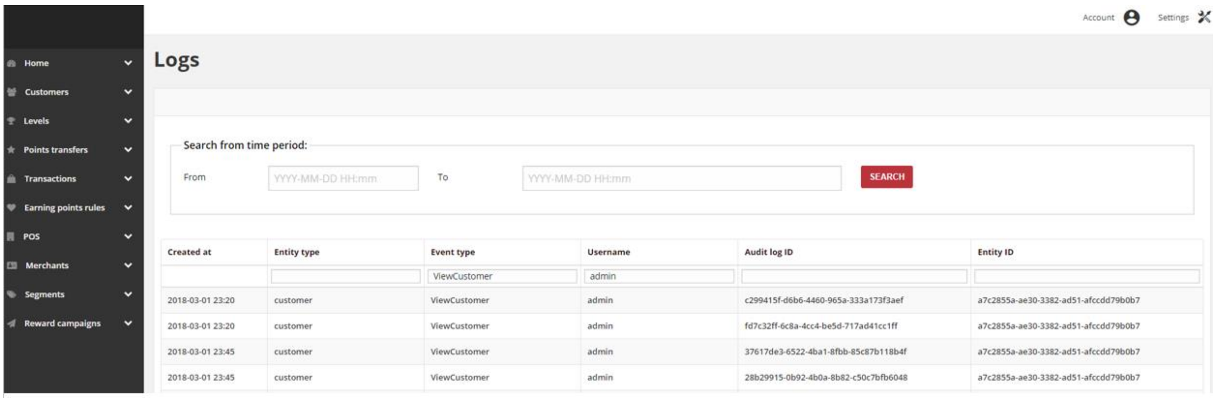
To find a match:

In the upper-right corner, tab the **Settings** ( ) icon. Then on the menu, choose **System logs**

4. Set up the starting date in **From** field by selecting date and time from calendar grid
5. Set up the end date in **To** field by selecting date and time from calendar grid
6. When complete, tap **Search**

Search/Filter Logs

The filters in the header of each column can be used to limit the list to specific values. You can simply type the value you want to find and press Enter.



Search/Filter Logs Results

To search the list:

1. In the selected column in the field under column header type the value you want to find
   - To find a close match, enter the few letters/signs of what you want to find
   - To find an exact match, enter the exact word/number you want to find.
2. You can put as many values under different columns headers as needed to describe the conditions that must be met for the search result. Search values from each column create an AND Condition rule. It means that in search results only records matching all entered values are displayed.

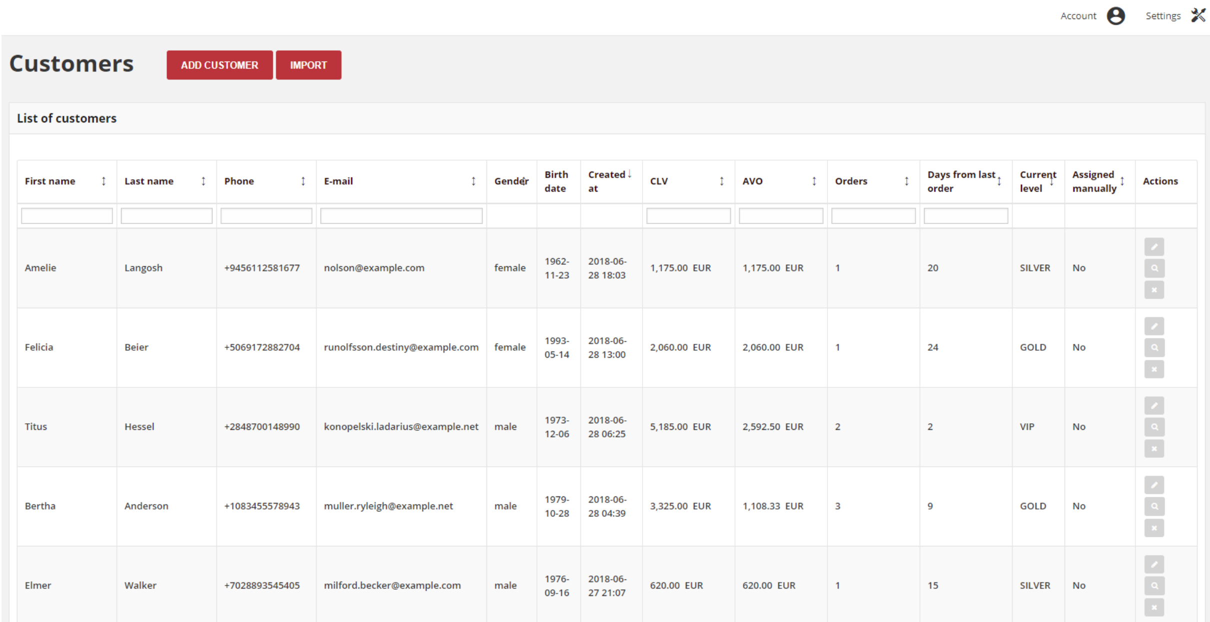
CUSTOMERS

In this section of the guide, you will become familiar with the customer account menu, and learn to manage customer accounts according to adding, deleting and modifying data. You will also learn how to create customer account that can be referenced in customer levels and segments.

CHAPTER 4:

CUSTOMERS MENU

The Customers menu provides access to all customer information required for its existence in your Loyalty Program. This applies to both, customer personal data (such as name, surname, gender, date of birth and contact details) and data on its activity in the program (such as registered transactions and points transfer).

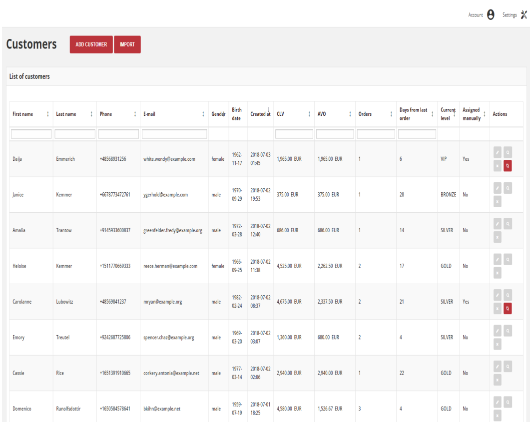


Customers Menu

To display the Customers menu:

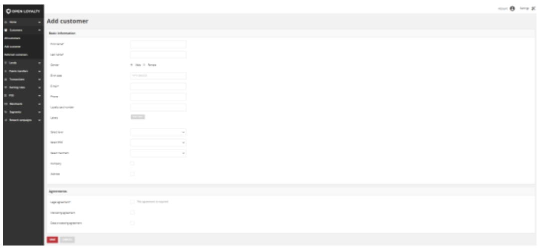
On the Admin sidebar, tap **Customers**, then choose **All customers**.

Menu options



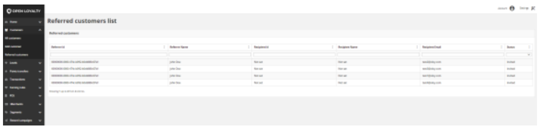
All customers

Lists all customers who have registered for an account with your loyalty program, or were added by the administrator.



Add customer

Lists all data that need to be filled out to add new customer to your Loyalty Program



Referred customers

Lists all referred customers and recipients of their invitations details

All Customers

The Customers page lists all customers who have registered for an account with your loyalty program, or were added by the administrator (manually or imported from XML file)

Use the standard controls to sort the list, filter and search customer by typing in the field under column header value you want to find, and apply actions to selected customers. Pagination controls appear if there are more customer records than fit on the page, and are used to move from one page to the next.

All Customers

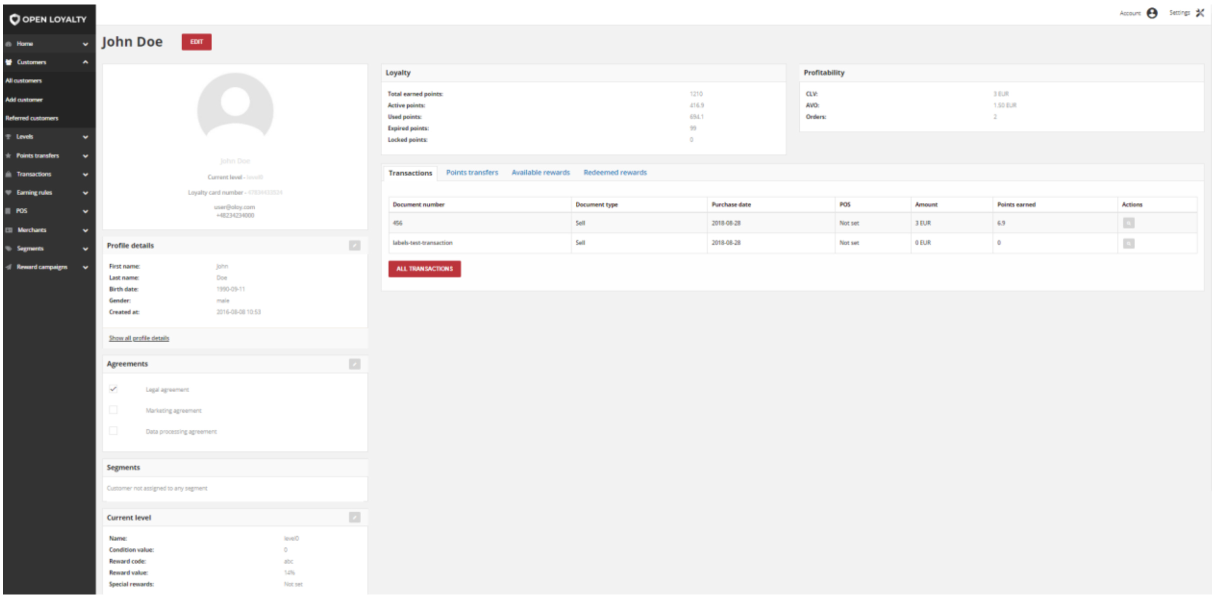
Field description

FIELD	DESCRIPTION
First name	The first name of the customer
Last name	The last name of the customer
Phone	The customer's phone number in one of acceptable format. Can be used as a login to Customer Cockpit or search/filter option.
E-mail	The customer's email address. Can be used as a login to Customer Cockpit or search/filter option.
Gender	The customer gender
Birth date	The customer's date of birth
Created at	The date when customer account was created
CLV (Customer Lifetime Value)	The total amount of customer registered transactions

AVO **(**Average Value of Order)	The average amount of customer registered transactions
Orders	The total number of registered transactions (orders) from customer registering in the Loyalty Program
Days from last order	The number of days since the last registered customer transaction
Current level	Current level that is assigned to customer account. To learn more about levels see **Levels**
Assigned manually	Information whether current customer level was assigned manually by Admin or not. Options include: Yes/No. To learn more about distinction between manually assigned level and system assignment please see **Levels**
Actions	The operations that can be applied to selected customer record. Options include: • Edit customer account • View Customer profile details • Deactivate customer account • Unlink manually assigned level. Previous system level will be assigned.

To view customer detail information:

1. On the Admin sidebar, tap **Customers**. Then choose **All Customers**
2. In the Customers list, find the record to be previewed and click **View** ( ) icon in the Action column to open the record in view mode.



Customer Record Preview

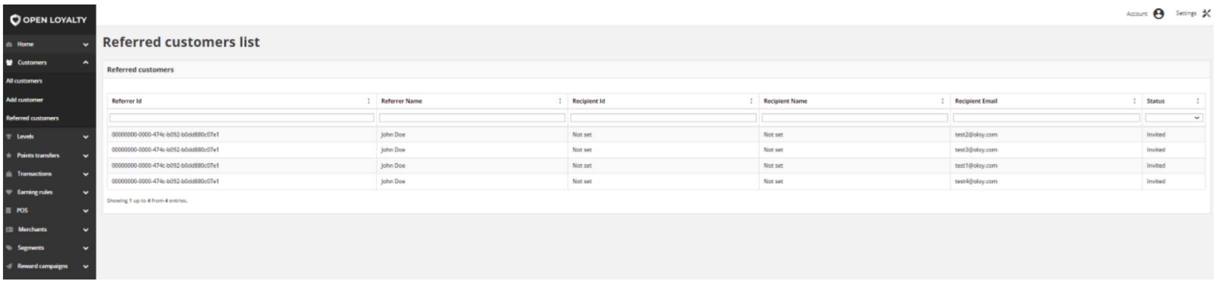
To learn more about **Customer Profile Detail Page,** see **Profile details**

Referred customers

Referral (refer a friend, member get member) functionality allow to reward Customers for invitation other Customers to Loyalty program. It allows to give prize either referrer (Customer who send invitation) and recipient (Customer who respond with action to invitation).

Administrator can view all invitations sent by customer with current status:

- **Invited** – invitation was sent by referrer to the recipient on his email address
- **Registered** – referred customer (recipient) register new account in Open Loyalty
- **Made purchase** – referred customer (recipient) made first purchase in Open Loyalty



Referred Customers

To see all customers who send and received invitation:

1. On the Admin sidebar, tap **Customers**. Then choose **Referred customers.**

Column descriptions

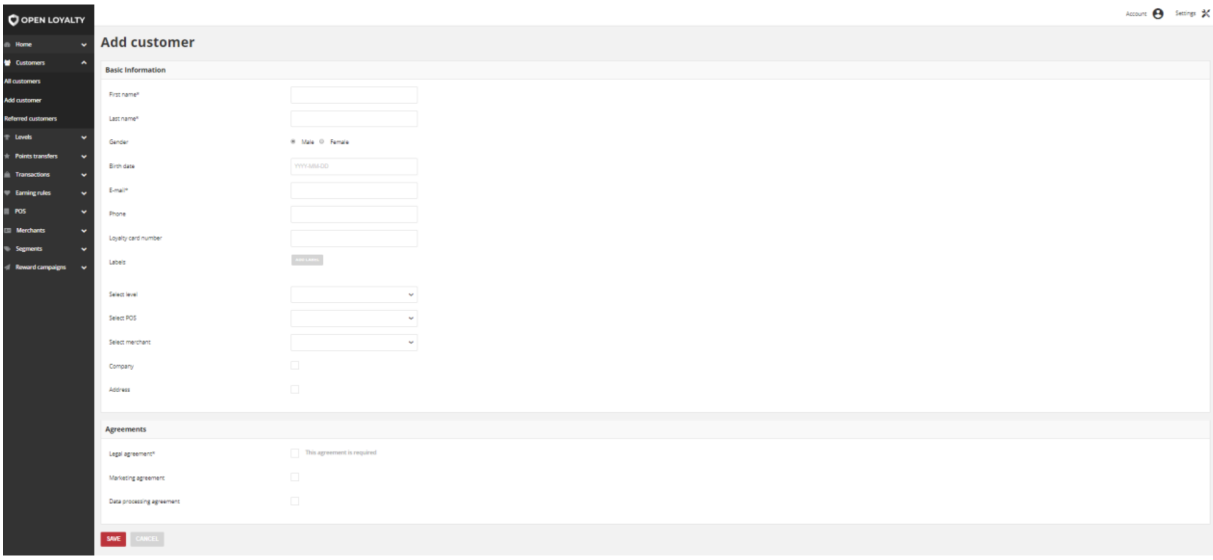
COLUMN	DESCRIPTION
Referrer Id	The customer ID of a registered customer, who send invitation
Referrer Name	The name and surname of a registered customer
Recipient Id	The customer ID of a referred person. Will be shown when referred customer will register
Recipient Name	The name and surname of a referred person. Will be shown when referred customer will register
Recipient Email	The email address of an invitation recipient
Status	Options include: invited/registered/made purchase

CHAPTER 5:

CREATING CUSTOMER ACCOUNT

Customer usually create their own accounts from your webshop or using Customer Cockpit. However, you can also create customer account directly from the Admin or POS Cockpit, which is useful when customers order by phone or at merchant location.

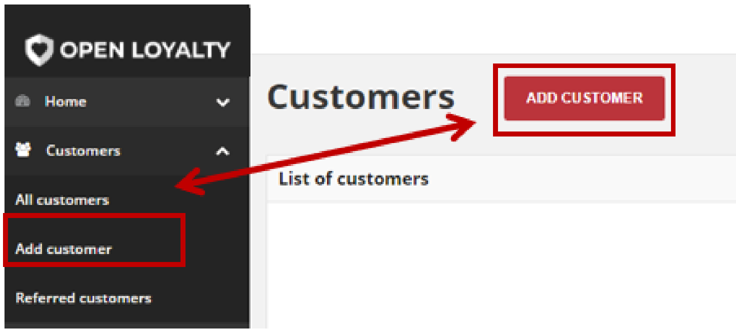
The Customer account created from the Admin or POS Cockpit has an active status at once, so there is no need to activate its account by him



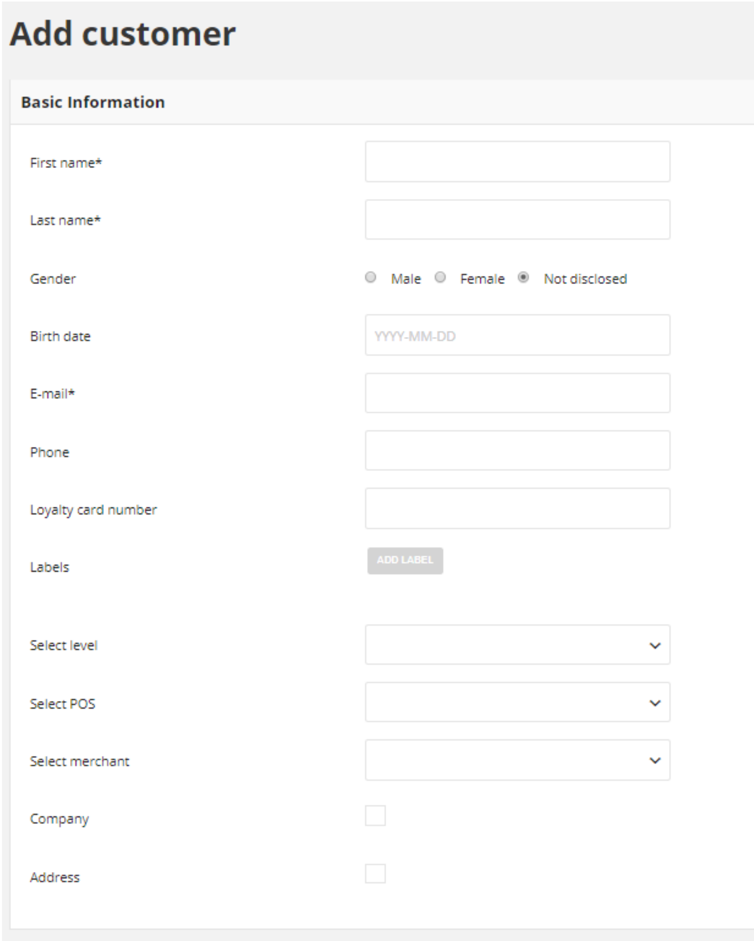
New Customer Account Information

To create a New Customer Account :

1. On the Admin sidebar, tap **Customers**. Then, choose **Add Customer**. You can also add customer directly from **All customers** list by clicking **Add Customer** at the top of the page.



Add Customer Options



Basic Information

2. In the **Basic Information** section, complete the following required fields:

- First name
- Last name
- E-mail

For one email address only one Customer Account could be created.

You can change the email address associated with an account by editing a customer

3. In the same section, complete the optional fields as needed:

- Gender
- Birth date
- Phone (in one of acceptable format)
- Loyalty card number

- Select level
- Select POS
- Select merchant

4. If applicable, create **Label(s)** you want refer to customer. Labels are intended to be used to specify identifying attributes of customer. Labels can be used to organize and to select subsets of customers at customer segmentation process. To learn more about Customer segmentation, see **Segments**

Customer Labels

a. To create Label, tap **Add Label** and do the following:

- Type label **Key**, which is a label name
- Type label **Value**

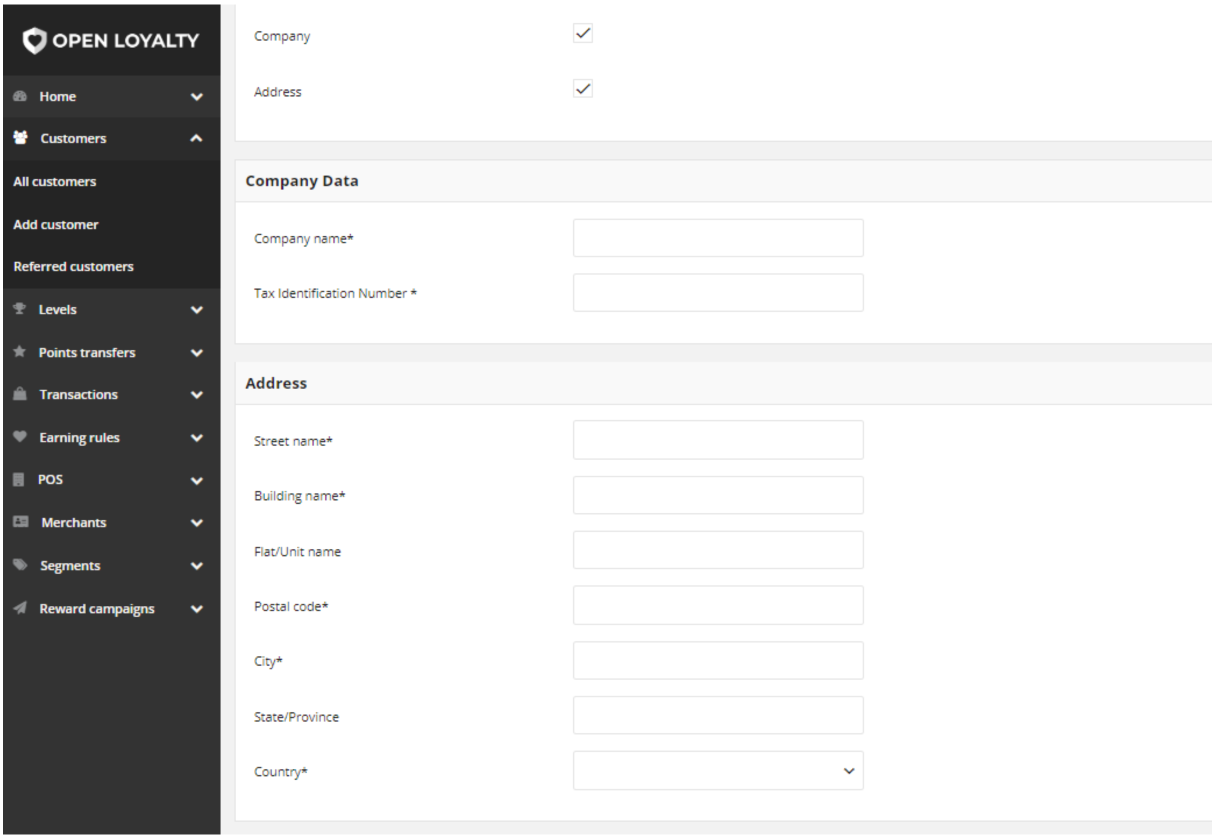
  For example: Key – Customer type, Value – wholesale

b. Repeat the process for all labels you want to used in your Loyalty Program

Labels can be added to customer during account creation and subsequently added and modified at any time

5. Mark **Company** checkbox, to define customer type if needed.

6. Mark **Address** checkbox, to complete customer address information if needed.



Company Data and Address Sections

7. **Company Data** section is available only when **Company** checkbox is selected. All fields available in this section i.e. **Company name** and **Tax Identification Number** are required and need to be filled out.

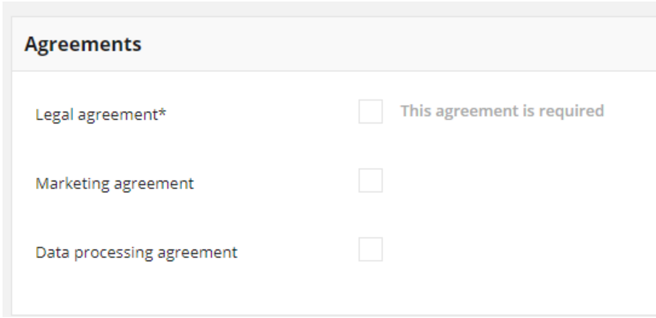
8. **Address** section is available only when **Address** checkbox is selected. Complete the following required fields:

    - Street name
    - Building name
    - Postal code
    - City
    - Country

    In the same section, complete the optional fields as needed:

    - Flat/Unit name
    - State/Province

9. Mark the **Agreements** that customer has agreed to. **Legal agreement** is required and need to be filled out to set up an account.



Agreements

10. When complete, tap **Save**

When the customer account is saved, it’s record appears at **All customers** list. The Customer Profile Details tab displays a summary of account activity and data provided during account creation. To learn more about Customer Profile, see **Profile details**

Field description

FIELD	DESCRIPTION
BASIC INFORMATION	
First name*	The customer’s first name
Last name*	The customer’s last name
Gender	Identifies the customer’s gender as Male, Female or Not disclosed
Birth date	The customer’s date of birth. Information can be used to calculate points for the birth anniversary
Email*	The customer’s email address. Is used as a login name while logging to Customer Cockpit.
Phone	The customer’s phone number. Formatting is as on follow example: • Country code: +48/48 • Subscriber number: 123456789 • In total: +48123456789 / 123456789 / 48123456789
Loyalty card number	The customer loyalty card number
Labels	Internal tags you can use to refer your customer. If applicable, can be used to segmentation to identify the customers that this segment applies to
Select level	Starting level assigning to customer
Select POS	POS which will be linked to the customer
Select Merchant	Merchant account, which will be linked to the customer
Company	customer associated with company. If marked then additional section will be shown.
Address	customer address needed. If marked then additional section will be shown
COMPANY DATA *Visible only when **Company** checkbox is marked*	

Company name*	The company name, if applicable for this customer

ADDRESS
*Visible only when **Address** checkbox is marked*

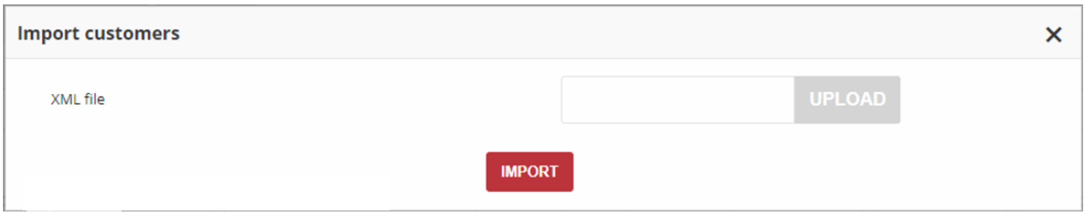
Street name*	The street address of the customer
Building name*	The name/number of a building or property where the customer resides at this address
Flat/Unit name	The flat/unit name or number of the customer at this address
Postal code*	The postal code of the customer at this address
City*	The city where the customer resides at this address
State/Province	The state or province of the customer at this address
Country*	The country where customer resides at this address

AGREEMENTS

List of consents to which the customer can/has agreed. Options include:
- Legal agreement (required)
- Marketing agreement
- Data processing agreement

Import Customer list

If you have a customer list that you want to add to your Loyalty Program, you can enter it into a customer XML file and then import it in your Open Loyalty Admin.

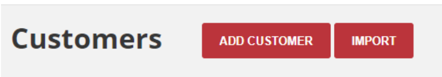


Customers import

Importing a XML file will create a customer in your Loyalty platform for each email address, phone number and loyalty card number in the file. **Any customers with duplicate email addresses, phone numbers or loyalty card number will be skipped** during an import

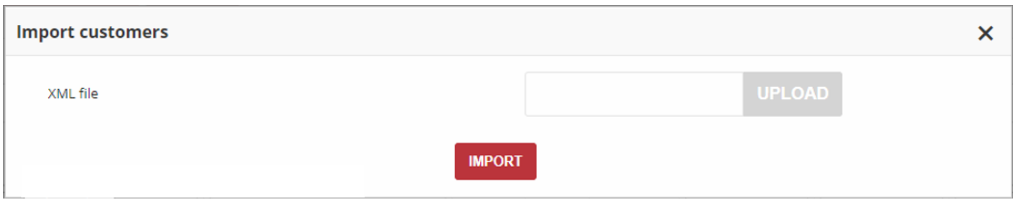
To import a Customer list from a file:

1. On the Admin sidebar, tap **Customers**. Then, choose **All Customers**
2. Click **Import** at the top of the page, next to **Add customer**



Customers Import Button

3. In the **Import Customers** dialog, click **Upload** and then choose your customer XML file.



Import customers

4. When file selected, click **Import**

The customers whose records you've added to the XML file will appear in the All customers list in your Open Loyalty admin

XML file structure

Example of complete Customer XML file structure below.

TIPS

1. If you don't have or don't want to import all this data, **remove all code line/section instead leave it blank.**

   For example, if you don't want to include province remove all line from the code. Don't leave it with no value as below:

   ~~<province>dolnoslaskie</province>~~ OK

   <province> </province> WRONG

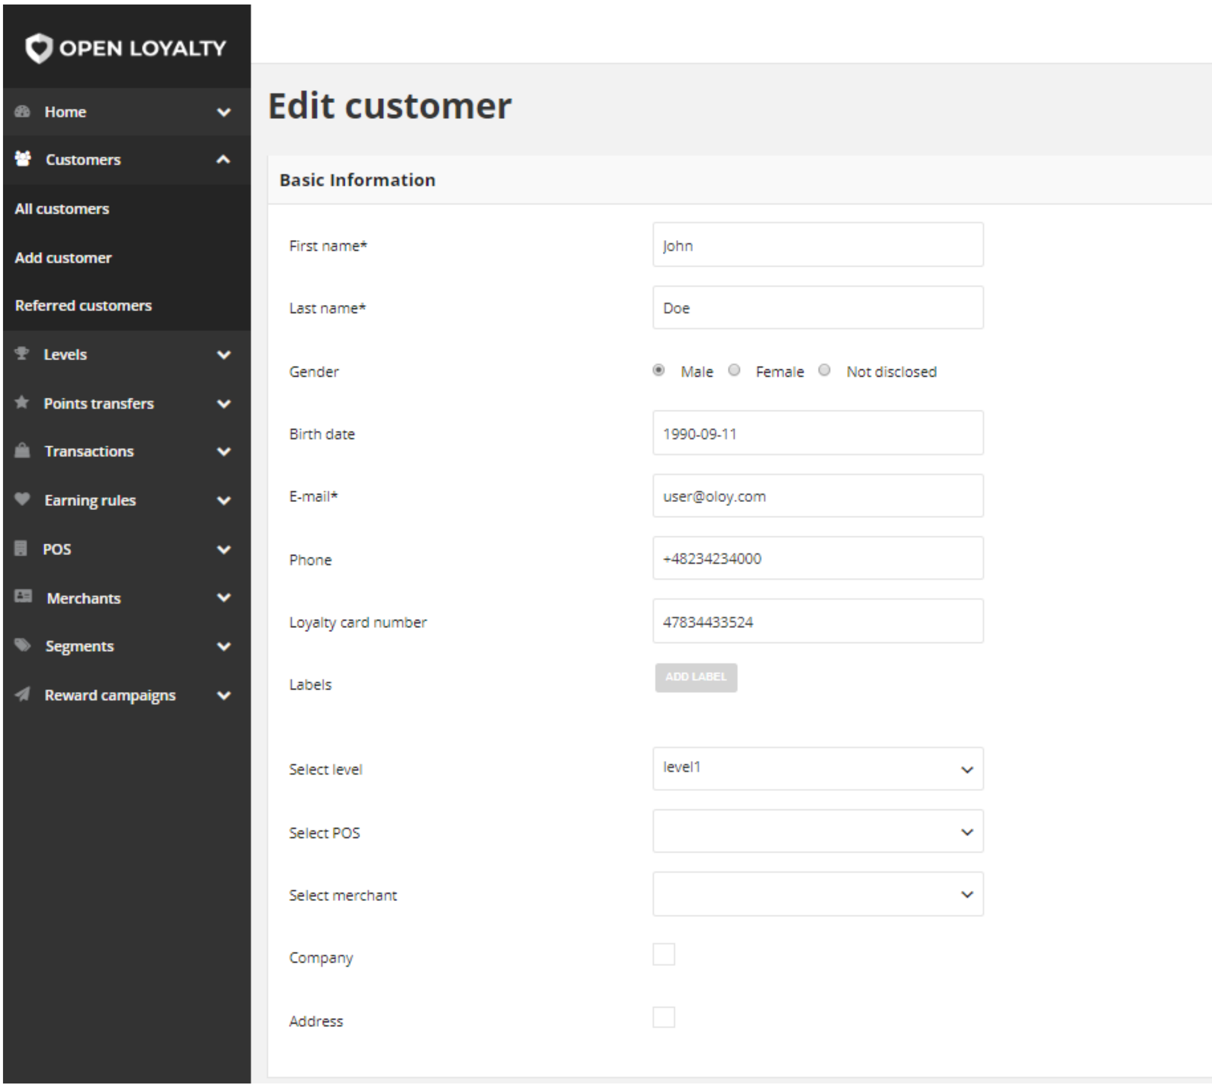
   Remember that some of them are required, so if you remove it Import will not be possible.

```xml
<?xml version="1.0" encoding="UTF-8"?>
<customers>
  <customer>
    <active>true</active>
    <sendActivationMail>false</sendActivationMail>
    <address>
      <address1>Building name </address1>
      <address2>Flat/Unit name</address2>
      <city>Wroclaw</city>
      <country>PL</country>
      <postal>45-123</postal>
      <province>dolnoslaskie</province>
      <street>Main road</street>
    </address>
    <agreement1>true</agreement1>
    <agreement2>true</agreement2>
    <agreement3>true</agreement3>
    <birthDate>1985-02-03</birthDate>
```

```
        <company>
            <name>Company</name>
            <nip>123-12-22-123</nip>
        </company>
        <email>jdoe@example.com</email>
        <firstName>John</firstName>
        <lastName>Doe</lastName>
        <gender>male</gender>
        <labels>
            <label>
                <key>group</key>
                <value>wholesaler</value>
            </label>
        </labels>
        <loyaltyCardNumber>936592735</loyaltyCardNumber>
        <phone>+48231231233</phone>
        <levelID>000096cf-32a3-43bd-9034-4df343e5fd93</levelID>
        <posId>00000000-0000-474c-1111-b0dd880c07e2</posId>
        <sellerId>00000000-0000-474c-b092-b0dd880c07e4</sellerId>
    </customer>
</customers>
```

Updating customer account

You can edit information about your customers, including all their data provided during account creation process. You can update customer data directly from their Profile Detail Page or by selecting it's record from All Customers list.

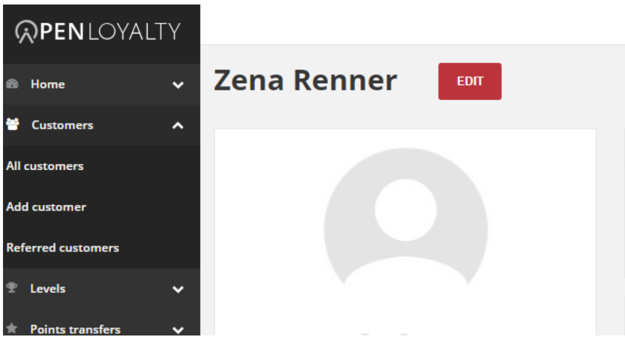


Customer account editing

To edit a Customer Account from Customers list:

1. On the Admin sidebar, tap **Customers**. Then, choose **All Customers**.
2. In the Customers list, find the record to be edited and click **Edit** ( ) icon in the Action column to open the record in edit mode.
3. Make any necessary changes to the customer account information.
4. When complete, tap **Save**

To edit a Customer Account from Profile Detail Page:



Edit Option in Profile Details

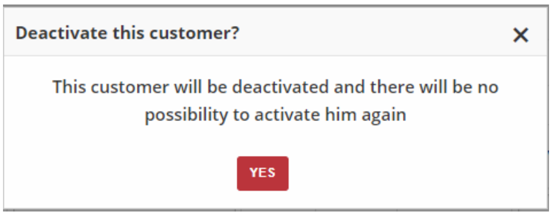
1. On the Admin sidebar, tap **Customers**. Then, choose **All Customers**.
2. In the Customers list, find the record to be previewed and click **View** ( ) icon in the Action column to open the record in view mode.
3. Click **Edit** at the top of the page. The same editor will be opened like in example above.
4. Make any necessary changes to the customer account information.
5. When complete, tap **Save**

Deactivate a customer's account

Any customer account that is currently inactive appears in the Customers list as grayed-out. An account can be locked and unlocked (set to active) by Admin user.

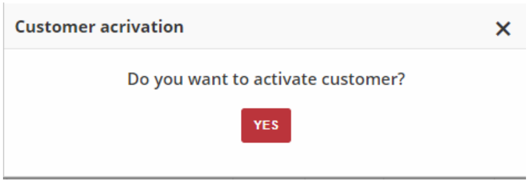
To lock/unlock an admin account:

1. On the Admin sidebar, tap **Customers**. Then, choose **All Customers**. You can also deactivate/activate customer account from **Edit mode**.
2. In the Customers list, find the record to be lock/unlock and click **Deactivate/Activate** ( ) icon in the Action column.
3. System will display a message asked you to confirm the action



System Message

4. The deactivated customer account appears on the Customers list as a greyed-out.
5. To activate an account click the same icon ( ) and confirm the action



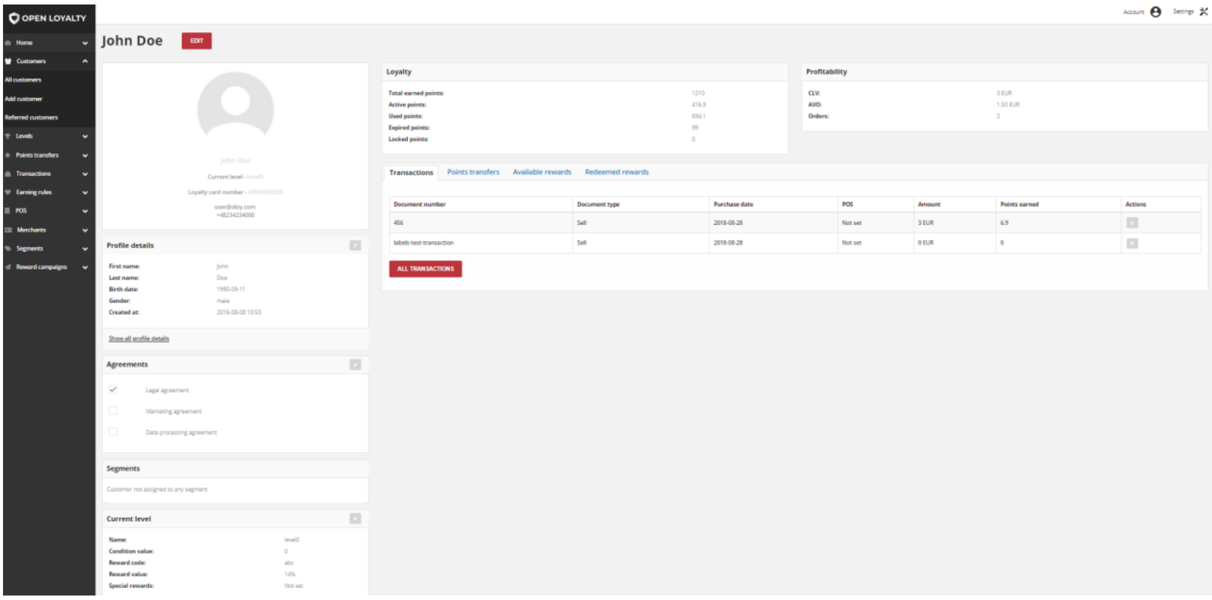
System message

6. The activated customer account appears on the Customers list as a black

CHAPTER 6:

CUSTOMER PROFILE DETAILS

The Customer Profile Detail Page is used to hold all the details of your customers. You can view and manage the customer's loyalty & personal information, history of customer transactions, points transfer and redeemed rewards.



Customer Profile

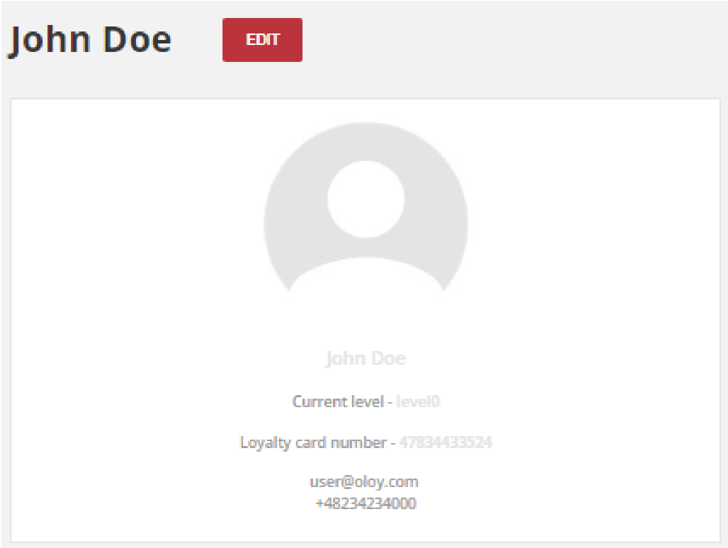
Customer Account details

Profile details

The Customer Profile details section provides the short customer account summary and information of customer provided during registration.

Block in the upper left corner, shows some factors describing Customer and its account summary, such as:

- First name,
- Last name,
- Current loyalty level,
- Loyalty card number (if assigned)
- Email address
- Phone number (in one of acceptable format)

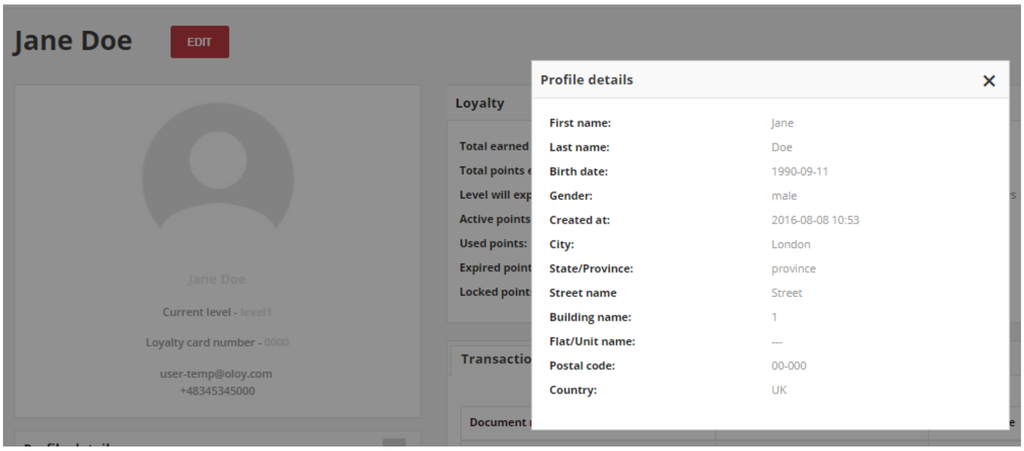


Customer Account Summary

Block below, provides a snapshot of customer personal information entered during registration process both required and optional. Address information will appear in small window after clicking ***Show all profile details*** link.

If the optional information (such as birth date, gender, address etc.) will not be completed during registration, the corresponding fields in this sections remain blank.

To update customer data go to edit mode by clicking **Edit** ( ) icon in the block header or Click **Edit** above account summary block, at the top of the page.



Customer Profile Details

The following details are displayed in this section:

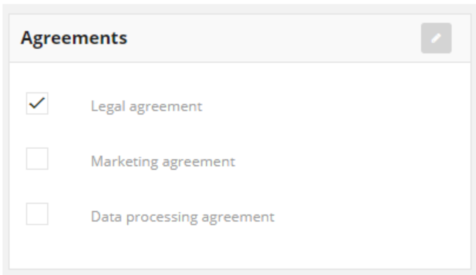
1. **Profile details (displaying in block)**
   - First name

- Last name
- Birth date
- Gender
- Created at

2. **Profile details (after link clicking)**
    - Basic information displaying in block, and in addition address information:
        - City
        - State/Province
        - Street name
        - Building name
        - Flat/Unit name
        - Postal code
        - Country

Agreements

Agreements section is a list of consents and include information about their acceptance by customer. If the customer has accepted the agreement, the checkbox in the name record is marked.

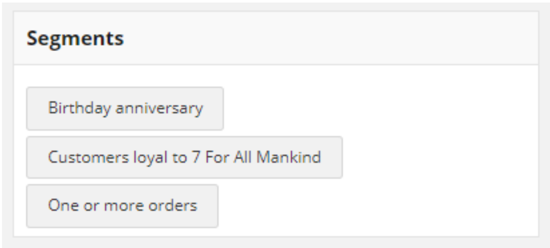


Agreements

To mark the agreement as a accepted by the customer go to edit mode by clicking **Edit** ( ) icon in the block header or Click **Edit** above account summary block, at the top of the page. The same behavior is used to withdrawal of consent by the customer.

Segments

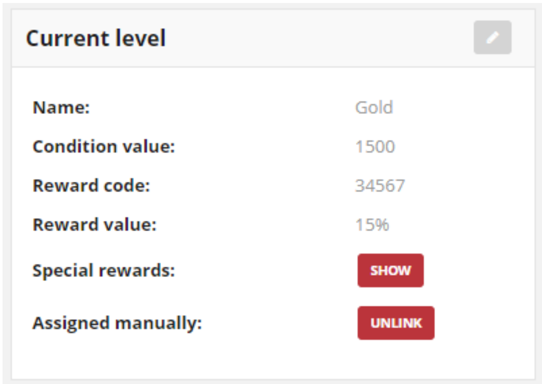
Segments box consists list of segments to which the customer is currently assigned. To learn more about segments, see **Segments**



Segments

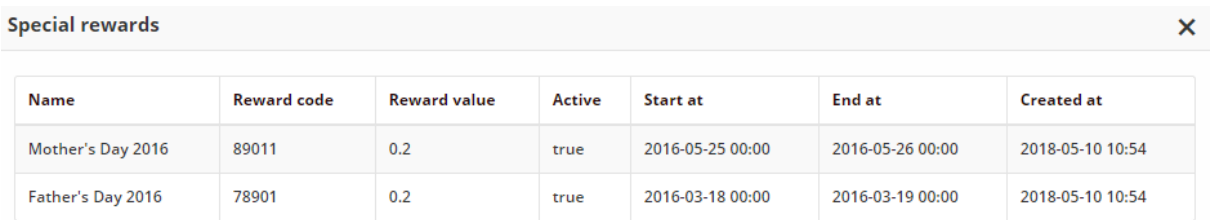
Current level

Current level section provides information about current (assigned to customer) level and rewards if available.



Level Section

Special rewards specify temporary additional discounts that customer assigned to this level can get.

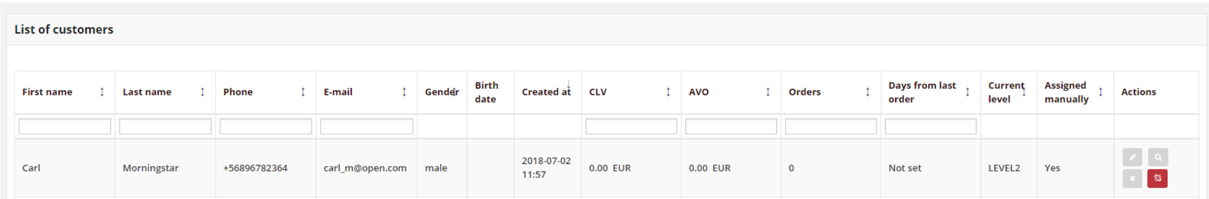


Special Rewards Preview

To **change manually the level** to which the customer is assigned go to edit mode by clicking **Edit** ( ) icon in the block header or click **Edit** above account summary block, at the top of the page. Then, additional field **Assigned manually** appears.

To remove manual assignment by Admin, and let customer earn points based on Earning rules click **Unlink**

You can also simply Unlink manually assignment also from All customers list by clicking **Unlink** ( ) icon in the **Action** column.



Unlink manual assignment

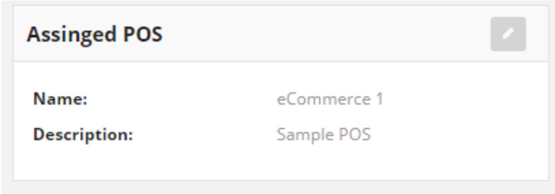
To learn more about levels and special rewards, see **Levels**

Field description

FIELD	DESCRIPTION
Name	Name of the customer level
Condition value	The points limit value after which customer was assigned to the level
Reward code	Discount code to be used on
Reward value	Percentage discount value
Special rewards	Special discounts available when additional conditions are met
Assigned manually	Field will be displayed only when customer level will be assigned manually by Admin – during adding or editing account. To remove manual assignment click **Unlink**

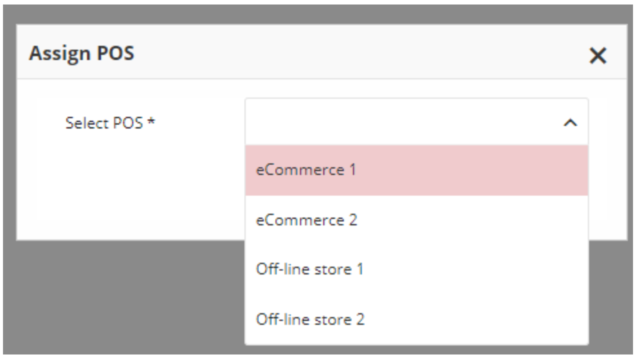
Assigned POS

Assigned POS section include information about customer account assignment to the offline or online store. Customer can be assigned to only one POS.



Assigned POS

To change the POS to which the customer is assigned click **Edit** ( ) icon in the block header and select new POS from a list or Click **Edit** above account summary block, at the top of the page to go to edit mode.

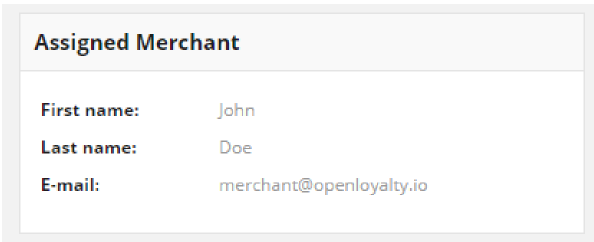


Change of POS assignment from Profile Detail Page

To learn more about offline stores, see **POS**

Assigned Merchant

Assigned Merchant section provide information to which merchant customer is assigned. Not only merchant from POS assigned to customer account can be selected.

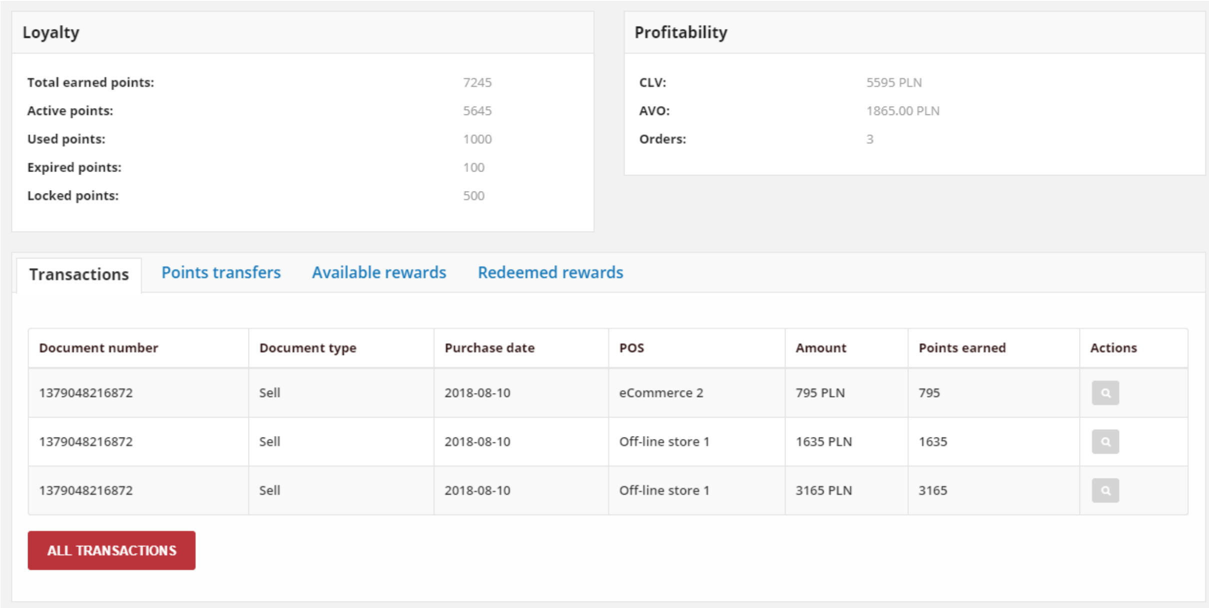


Assigned Merchant

To change the Merchant to which the customer is assigned click **Edit** above account summary block, at the top of the page to go to edit mode.

Customer Loyalty Activity

In the middle part you will find customer data related to his activity in Loyalty Program such as loyalty points balance, transactions, points transfer and rewards (available and redeemed) summary.

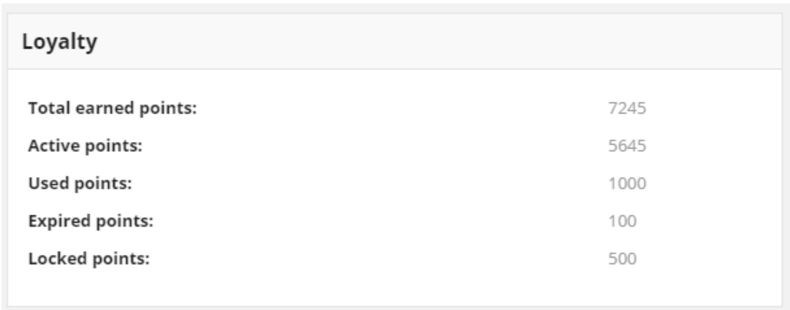


Customer Loyalty Activity

Loyalty

In **Loyalty** section you can view Loyalty Points balance in the customer's account. Depending on the **Configuration** (whether level is calculated with points or transactions) different values will be displayed.

Level is calculated with transactions



Loyalty Points Balance

a. Total earned points – Total accumulated points assigned to the customer account thought various activity within the loyalty program based on Earning Rules. Sum of active, locked, used and expired points.

b. Active Points - Points that may be used to redeem a reward campaigns. Depending on the **Configuration**, this value can be used to level recalculation instead Total points earned since last level recalculation amount.

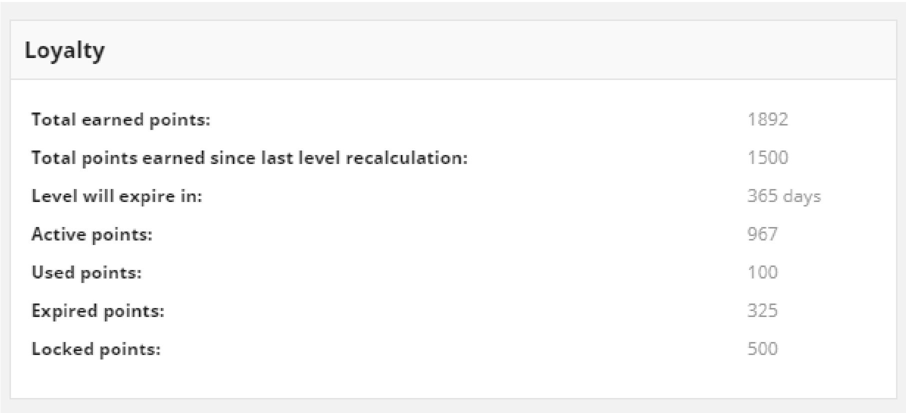
c. Used Points - Points redeemed by the Customer thought various Reward Campaigns within the loyalty program

d. Expired Points - Points expired due to non-redemption of assigned active points. Points will expire after number of days from date of adding Point transfer. Points lifetime is set in **Open Loyalty Configuration**

e. Locked points – Points earned through various activity within the loyalty program that cannot be used after passing selected locked time. Points will be locked for number of days set in **Open Loyalty Configuration**, as a customer may return whole transaction or selected products. Locked points are not used to calculate customer level. After passing selected locked time, points automatically get active. When points get active, a customer level will be recalculated.

Level is calculated with points

When you set up in Open Loyalty configuration to use points for level recalculation additional information about level expiration date and earned points within specified period amount will be displayed.

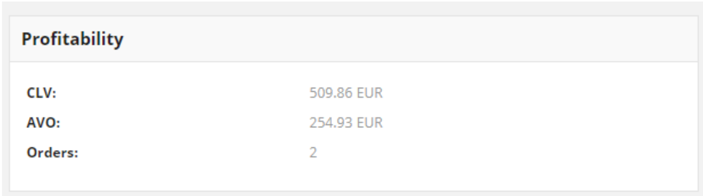


a. Total points earned since last level recalculation - currently earned points from last downgrade date/level changed. The displayed value is sum of all Active points earned within specified in **Level downgrade settings** period. Depending on the Configuration, this value can be used to level recalculation instead Active points amount.

b. Level will expire in – Number of days until customer level recalculation. It is calculated since registration date or last downgrade date plus configured in **Level downgrade settings** number of days

Profitability

Profitability include information about basic factors regarding customer transactions within the loyalty program.



Customer Profitability

1. **CLV** (***Customer Lifetime Value)*** - the total amount of customer registered transactions
2. **AVO** (***Average Value of Order***) - the average amount of customer registered transactions
3. **Orders** **-** the total number of customer registered transactions (orders)within the Loyalty Program

Transactions

Transactions is a tab which contain latest transaction data such as type, place and date of transaction, value of earned points etc. linked with Customer:

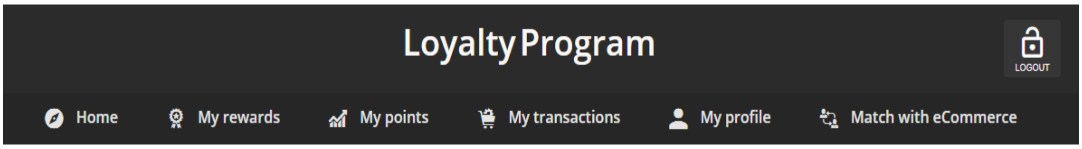
) icon.

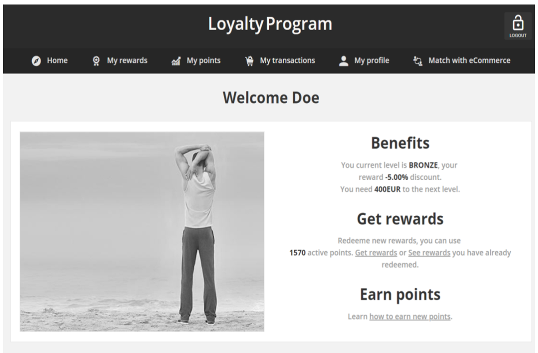


Logout

When customer logout, the Sign-In page returns.

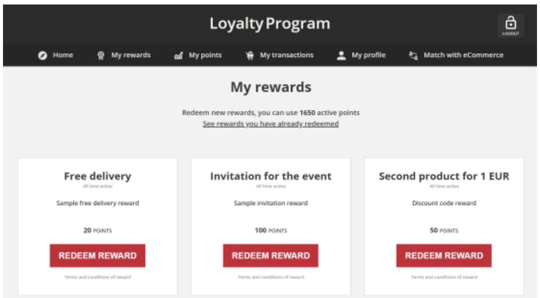
Customer Account

Customers through theirs account can view all their activity within Loyalty Program, and manage their own personal information.



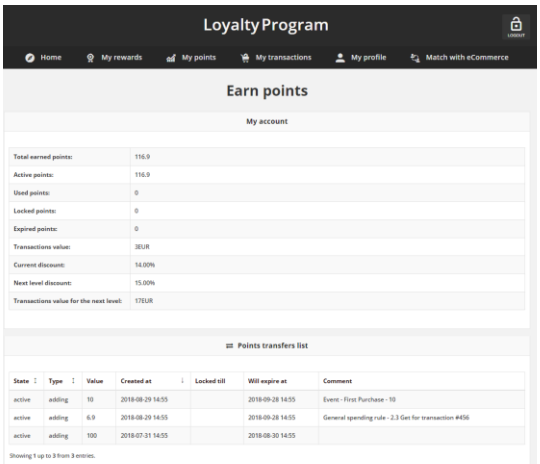
Home

The customer's Home page provides them the ability to view current level and assigned to this level reward, active points balance, points missing to next level and links to other areas of loyalty activities: redeem rewards, get more points, edit profile, check transaction, invite friend etc.



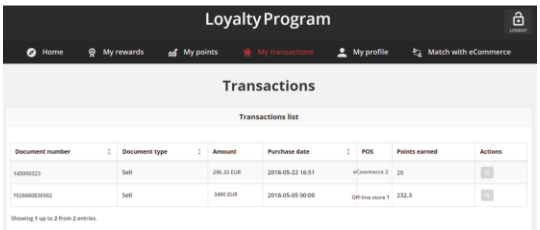
My rewards

Lists all available for customer account rewards with information about Active points amount and a link to see rewards he has already redeemed.



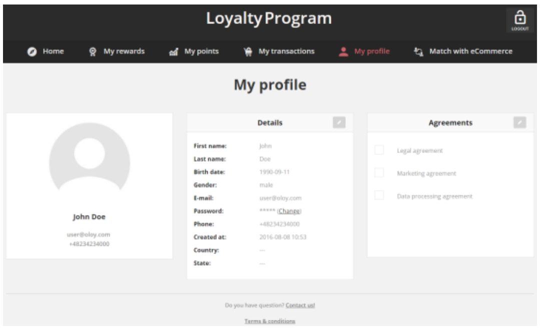
My points

Displays a loyalty points balance and levels details. Menu gives him also ability to track all points transfers with detail information regarding the date, point's state and type and reward (in case of transfers with "spending" type)



My transactions

Displays a list of all customer transaction, with a link to each to see more information – purchased items and transaction details.



My profile

Customers can update their account information and change their password as needed. The store Admin can also update **customer accounts.**

LEVELS

In this section of the guide, you will learn how to create and use customer levels to create opportunities for customer engagement and how to set up targeted discounts and rewards based on a variety of conditions. The more points customers receive, the higher level they'll reach. And, the higher level of loyalty, the more rewards customers will get.

You can use levels to offer customer incentives, such as:

- assigned a fixed reward to the particular level. The higher level – the better reward.
- offer limited in time special rewards for customer assigned to particular level

CHAPTER 8:

LEVELS MENU

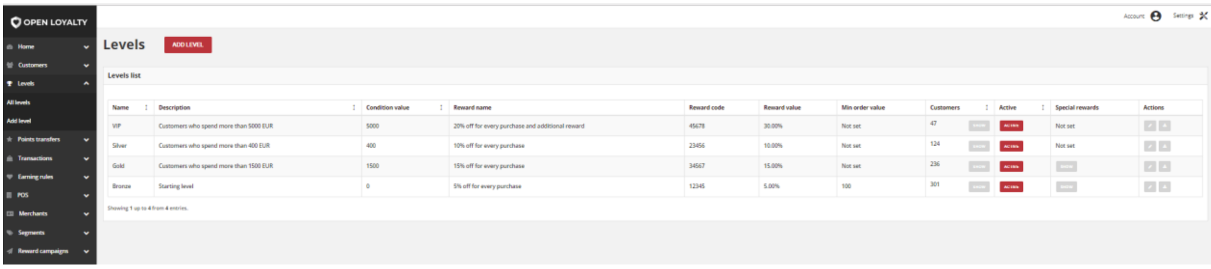
Levels are used to categorize customers based on the value of their transactions (orders) - The higher value/amount of transaction, the more points they will get and the higher level they'll reach.

Customer is assigned to only one level at a time. Customers are placed into a levels based either on their total amount of transaction or points they have earned. If customer has spent enough money or earned enough points to move up a level, his level will automatically move up and he will be informed about it via email.

The only scenario when customer can return to previous level is when order, which caused this promotion, will be returned.

Customer level can be also changed to higher or lower manually by the Admin user. If you move a customer to a level manually, they are excluded from any automatic levels upgrades or downgrades.

Each level can provide fixed discounts and also have exclusive rewards that can only be claimed when a customer is on that level.

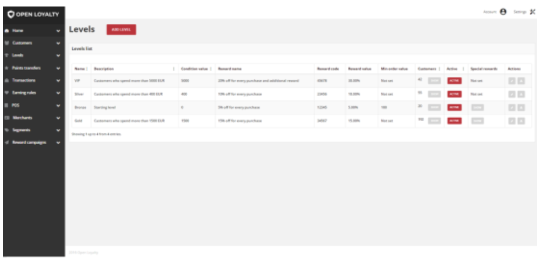


Customers Levels

To display the Levels menu:

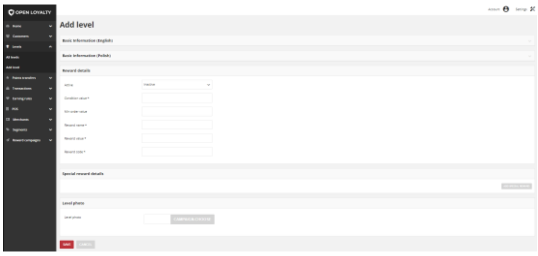
On the Admin sidebar, tap **Levels**, then choose **All levels**.

Menu options



All levels

Lists all customers level within your loyalty program with additional information regarding conditions values, assigned rewards and possible, limited in time, special rewards



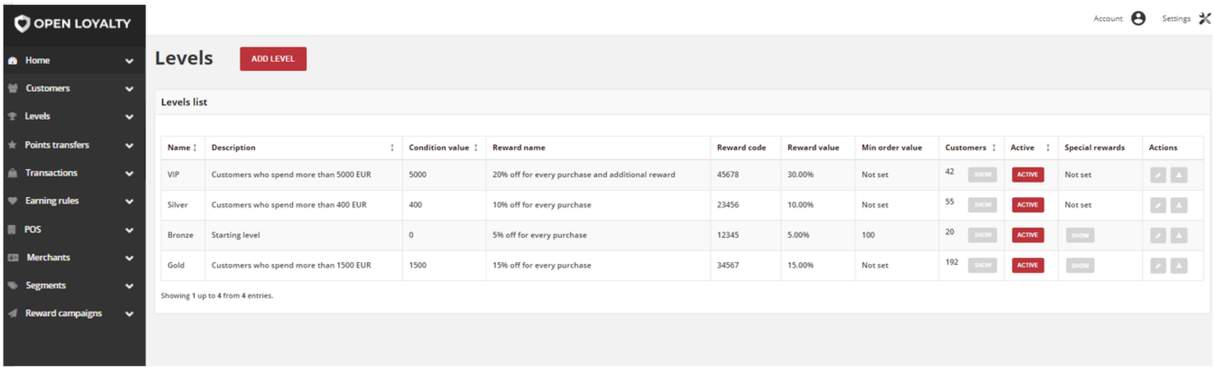
Add level

Lists all data that need to be filled out to add new customer level

All levels

The Levels page lists all customers levels available to reach within Loyalty Program. The same list is also visible from the Dashboard.

You can easily view and modify all levels credentials such as condition value, assigned rewards and special rewards. Tab allows also to preview number of customers assigned to particular levels and see theirs detail or download in .CSV file.



Customers Levels

Use the standard controls to sort the list and apply actions (modify and download targeted customer) to selected levels.

Field description

FIELD	DESCRIPTION
Name	Name of the Customer level, visible when information about level will be displayed
Description	Level brief description
Condition value	Minimum sum of earned points or sum of all transactions value needed to be assigned to this level
Reward name	Description of level reward (e.g. 5% discount).
Reward code	Discount code to be used on
Reward value	Discount value for this level (e.g. 5)
Min order value	Only when earned points for one transaction or one transaction value exceed provided value then it will be added to sum. If level has not defined Min order value then "Not set" will be shown.
Customers	Show customers account number assigned to this level. After **Show** click, list of these customer details will be shown.
Active	Action to change is Level active. Option include: Active/Inactive
Special rewards	Show Special Reward data related to Level, available when additional conditions will be met. If Level has not defined Special Reward then

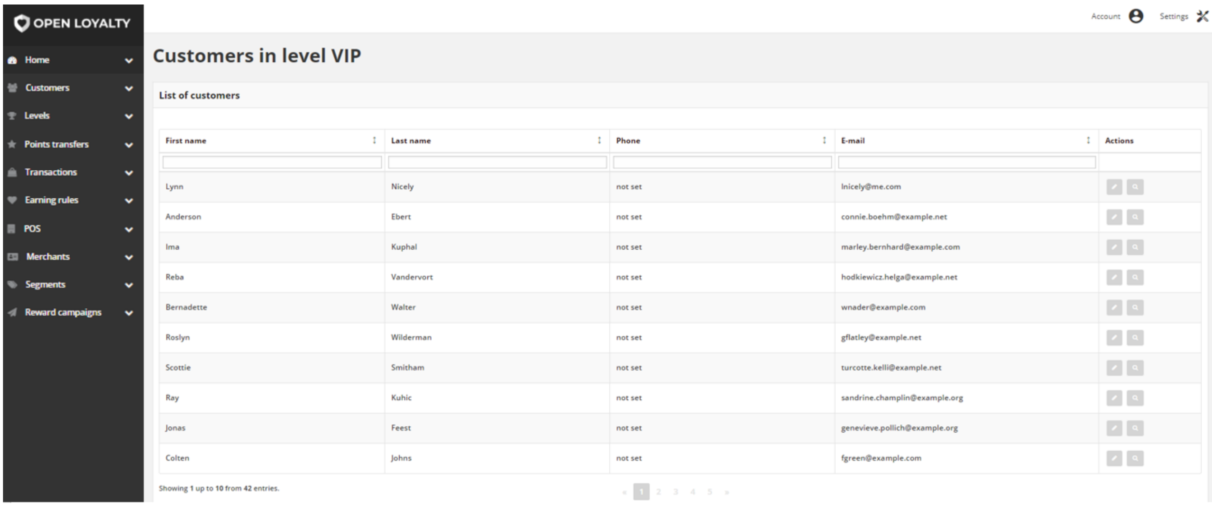
	"Not set" will be shown. To learn more about special rewards, see **special reward** section.
Actions	The operations that can be applied to selected customer record. Options include: • Edit level data • Download list of customers details assigned to this level

Customers assigned to level list

You can simply view not only the number but also the list of customers with details assigned to particular level.

To display the list of customers:

1. On the Admin sidebar, tap **Levels**. Then, choose **All levels**.
2. In the levels list, find the level you want to see customers list and click **Show** in the **Customers** column. After clicking, the list of customers will be opened, filtered according to the assigned level.



List of Customers in Level VIP

Use the standard controls to sort the list, filter and search customer by typing in the field under column header value you want to find, and apply actions to selected customers (edit and view). Pagination controls appear if there are more customer records than fit on the page, and are used to move from one page to the next.

Download the Customers list

There is also possibility to download a list of customers to a CSV file.

To download the list of customers assigned to a level:

1. On the Admin sidebar, tap **Levels**. Then, choose **All levels**
2. In the levels list, find the level you want to download customers list and click **Download** ( ) icon in the **Action** column.

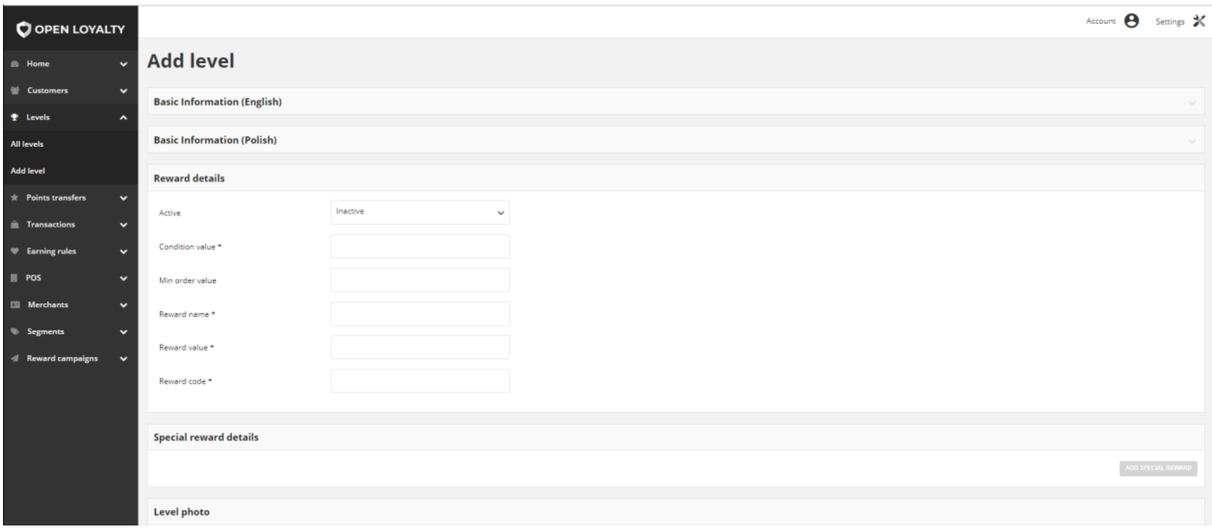
   After clicking, the list of customers will be download in .CSV format.

CHAPTER 9:

CREATING CUSTOMER LEVEL

You can create unlimited amount customizable customers levels for your loyalty program based on various conditions.

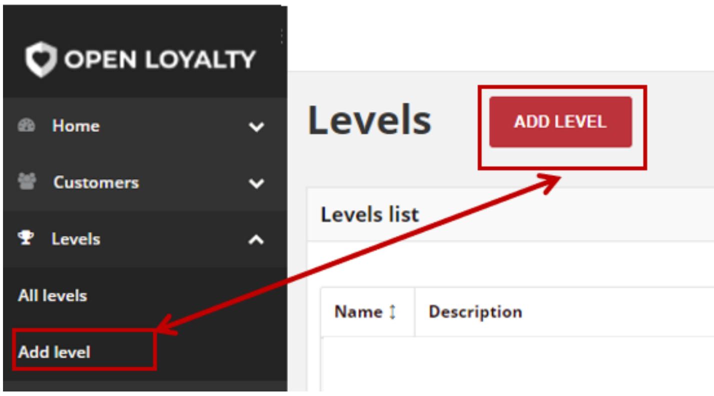
Depending on the Translations settings, **Basic information's** can be provided in different language versions (listed in **Translations**). Information from that section can be display on a Client cockpit depending on a chosen from the admin cockpit default language version. For example, when default language is English, information are display in English, but when we change it on polish as a default language, all basic information will be displayed in polish (if provided).



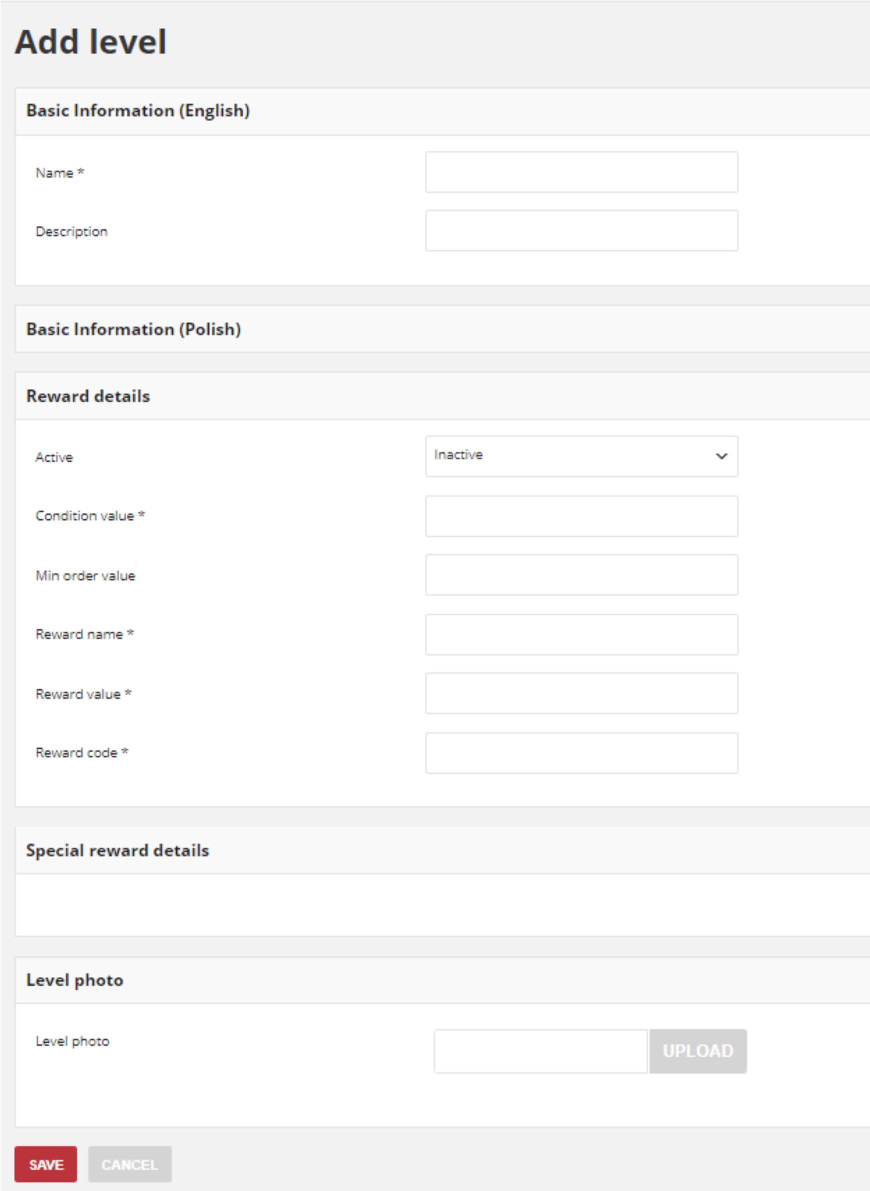
Add New Level

To create a New Customer Level :

1. On the Admin sidebar, tap **Levels**. Then, choose **Add level**. You can also add level directly from **All levels** list by clicking **Add level** at the top of the page.



Add Level Options



Add Level Form

2. In **Basic Information** section related to the default language version do the following:
   a. Enter a unique level **Name** to identify the customer level
   b. Enter a brief **Description** that explain purpose of the level for internal reference
   c. If applicable, fulfill the same fields in other language version e.g. polish as on a screen above.

3. In **Reward detail** section do the following:
   a. To activate the customer level, in **Active** field select “**Active**” from the dropdown list
   b. Depending on the configuration, set **Condition value** as a minimum points value or minimum transaction amount needed to be achieved to be assigned to this level

To check whether customer levels should be calculated based on points or transaction see Configuration settings

c. Field **Min order value** is currently not used so you don't have to fill it in.

d. In **Reward name** provide a brief description that explain purpose of the reward. For example, 15% off for every purchase

e. In **Reward value** field enter a discount value for level reward. For example, value 15 means 15% discount

f. Enter a **Reward code** to be used by customers assigned to this level authorizing to **Reward value**.

4. If you want to give special discount for Customer but only in limited time, complete the **Special reward details** section. To learn how to assigned special reward to particular level, see **Special Rewards**

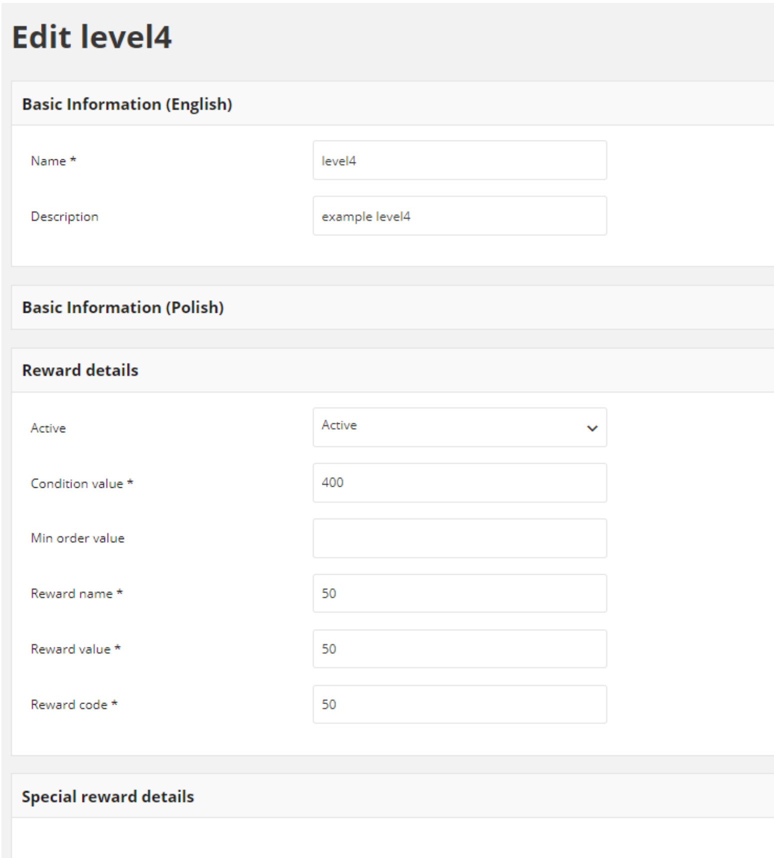
5. If applicable, upload a **Level photo** that will be displayed on a storefront

6. When complete, tap **Save**

Image size is limited to 2MB. Image dimensions could not be smaller than 600 x 600 px. Allowed file formats: png, gif, jpg.

Updating levels data

You can edit all data provided during level creation process. You can update level data by selecting it's record from **All levels** list.



Level Edition

To edit a level:

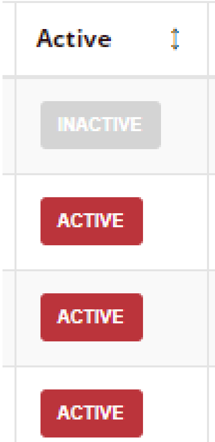
1. On the Admin sidebar, tap **Levels**. Then, choose **All levels**.
2. In the Levels list, find the record to be edited and click **Edit** ( ) icon in the Action column to open the record in edit mode.
3. Make any necessary changes to the level data
4. When complete, tap **Save**

Activate/deactivate a level

Any levels from the list can be activated and deactivated by Admin user.

To activate/deactivate level:

1. On the Admin sidebar, tap **Levels**. Then, choose **All levels**. You can also deactivate/activate level from **Edit mode**
2. In the levels list, find the level to be deactivated and click **Active** in the **Active** column. The button in the column change to ***Inactive*** and appear as a grey-out.



Active Column

When you deactivate levels, customers accounts assigned to this level will be still display level name but redeeming rewards and special rewards assigned to this level will not be possible.

3. To activate the level click **Inactive** in the **Active** column. The button in the column change to ***Active*** and appears as a red.

Customer can be assigned only to Active levels

Special rewards

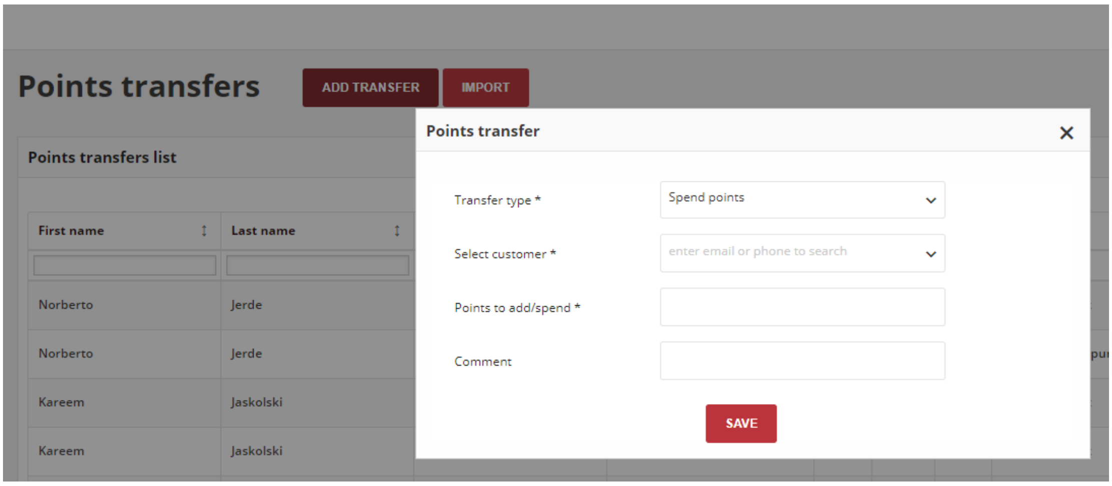
Points transfer details

FIELD	DESCRIPTION
Comment	Show details about transfer, e.g. for what Customer gets points, for what Customer spend points. Field is automatically filled in with the reward campaign name when the customer spends points for the reward using his account. Field is automatically filled in with the earning rule name, used to earn points by customer. If transfer is created manually by Admin user, field is filled in with information provided by the Admin during transfer creation.
Expires at	Date when points earned by customer expire. Number of days after points expire is set up in **Open Loyalty Configuration**.

Creating points transfer

Customers usually earn and spend points within Open Loyalty system – points are added for transaction and activity based on Earning Rules and spent for Reward Campaigns selected by customer within customer cockpit . However, you can also create customer points transfer directly from the Admin, which is useful in case of ad-hoc special situation e.g. long delivery delay, the biggest purchase among customers in year etc.

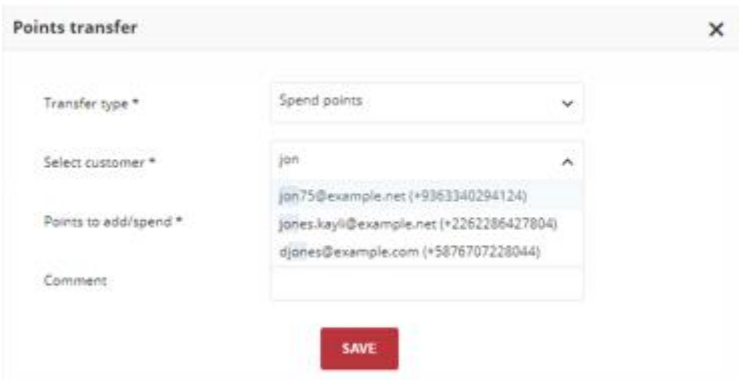


Add Points Transfer

To add points transfer manually:

1. On the Admin sidebar, tap **Points transfers**. Then, choose **All points transfers**
2. Tap **Add transfer** at the top of the page. Then, do the following:
   a. From the dropdown list choose **Transfer type:**
      - If you want to subtract points select ***Spend points***
      - If you want to add points select ***Add points***

   b. **Select customer** account for which points transfer will be deal with. Enter few letters/signs of customer name/surname/phone. System display the list of all matching customer record.



Select Customer

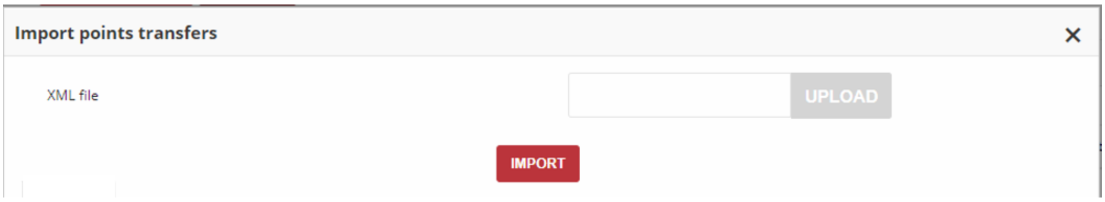
c. **In Points to add/spend field enter** amount of points that will be added to/ subtracted from Customer Account active Points

d. If needed, provide a **Comment** for operation as a brief description that explain purpose of the transfer e.g. information on what they were spent or why they were subtracted

3. When complete, tap **Save**

Import points transfers

If you have a customer list that you want to add points within your Loyalty Program, you can enter it into a Points transfer XML file and then import it in your Open Loyalty Admin.



Import Points Transfers

Importing a XML file will create a points transfers for each customer:

- email address
- phone number
- ID
- Loyalty card number

At least one, of the listed above value, must be provided to identify the customer and create points transfer for him. For example, in XML file you can provide only customer loyalty card number – if this number is unique and allow to identify him. If not provide e-mail or phone number for better authentication.

If all information is provided, platform uses them to assign your loyalty program participant with points transfer based on hard-coded priorities assigned to this value. Priorities can't be changed.

Priorities are as follows:

1. Customer ID
2. Customer e-mail address
3. Customer Loyalty card number

4. Customer phone number

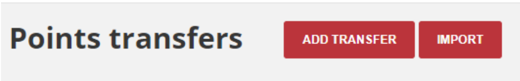
Mechanism of matching the customer with points transfer basing on priorities is the same like in **Identification factors** description (number 1 has the highest priority)

For example, if XML file includes customer ID and email address, customer ID is used for matching before the email address. If there will be no clear result, email is verified.

If any of this four listed value will not give a result an error message occurred.

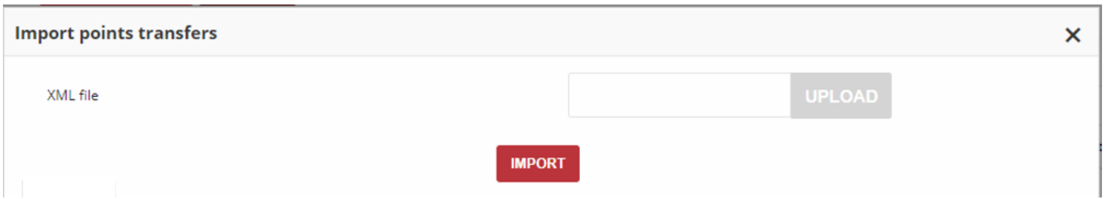
To import a points from a file:

1. On the Admin sidebar, tap **Points transfers**. Then, choose **All points transfers**
2. Click **Import** at the top of the page, next to **Add transfer**



Points Import Button

3. In the **Import points transfers** dialog, click **Upload** and then choose your customer XML file.



Import Points Transfers

4. When file selected, click **Import**

The points transfers details of customers whose you've added to the XML file will appear in the All points transfers list in your Open Loyalty admin.

XML file structure

Example of Points transfer XML file structure below:

TIPS

1. If you don't have or don't want to import all this data, **remove all code line/section instead leave it blank.**

   For example, if you don't want to include phone number remove all line from the code. Don't leave it with no value as below:

   ~~<customerPhoneNumber>**+48888888888**</customerPhoneNumber>~~ **OK**

   <customerPhoneNumber></customerPhoneNumber> **WRONG**

   Remember that some of them are required, so if you remove it Import will not be possible.

```

TRANSACTIONS

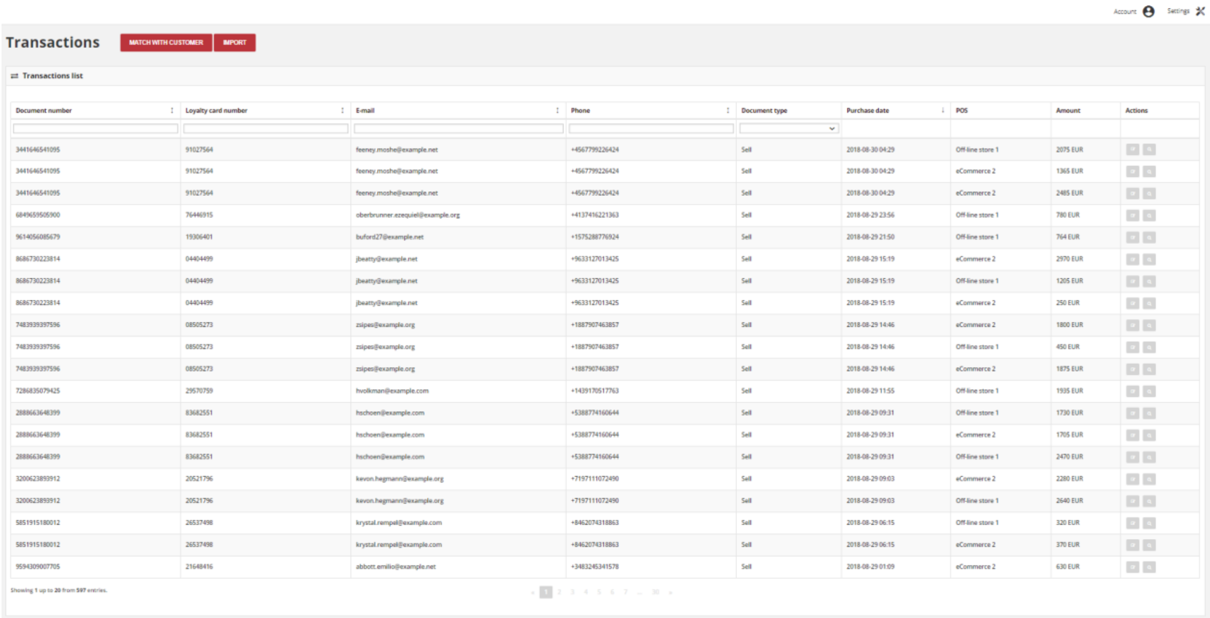
In this section of the guide, you'll learn how to manage all aspects of the transaction, including matching transaction with customer and better understanding of terms and transaction process.

TRANSACTIONS MENU

CHAPTER 11:

TRANSACTIONS MENU

The Transactions grid lists all (system and imported) payment activity that has taken place between your store system and customers, and provides access to more detailed information about purchased items and transaction itself.



Transactions

To display the Transactions menu:

On the Admin sidebar, tap **Transactions** , then choose **All transactions**.

All transactions

The All transactions lists gives you information about type and value of all payment activity referred to customer. Moreover, list contains detail information about store and date when transaction was made, transaction internal number and allows to preview transaction and purchased items detail.

Transactions List

Use the standard controls to sort the list by Purchase date, filter and search transfers by typing in the field under column header value you want to find, and apply action (preview) to selected transaction records. Pagination controls appear if there are more transaction records than fit on the page, and are used to move from one page to the next.

Field description

FIELD	DESCRIPTION
Document number	Unique transaction ID from your store internal system (e.g. e-commerce)
Loyalty card number	Number of customer loyalty card related to the transaction If transaction is linked with customer account
E-mail	Email address of customer related to the transaction
Phone	Phone number of customer related to the transaction
Document type	Transaction type: • Sell – customer buy products • Return – customer return bought products
Purchase date	Valid date of transaction
POS	POS where transaction was made

Amount	The amount of the transaction
Actions	The operations that can be applied to selected transaction record. Options include: • View transaction details • Add/Edit transaction labels

Transaction details

Click **View** ( ) icon in the Action column to open the transaction details – customer detail information and purchased items.

Transaction Record Preview

Field description

FIELD	DESCRIPTION
TRANSACTION DETAILS	
Customer name	First and last name of customer related to the transaction

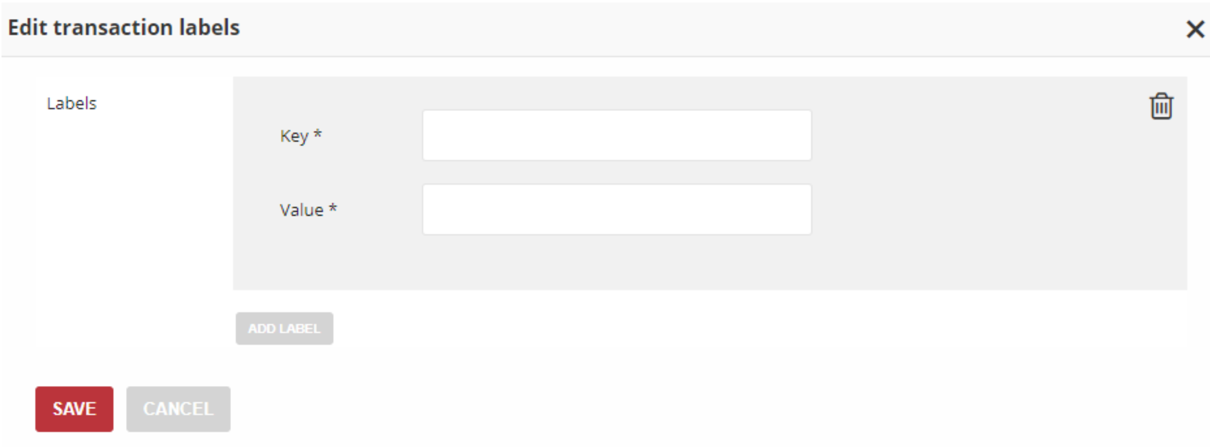
Phone	Phone number of customer related to the transaction
Email	Email address of customer related to the transaction
Loyalty card number	Number of customer loyalty card related to the transaction If transaction is linked with customer account
City	The city where the customer resides at this address
State	The state or province of the customer at this address
Street	The street address of the customer
Building name	The name/number of a building or property where the customer resides at this address
Postal code	The postal code of the customer at this address
Country	The country where customer resides at this address
Purchase date	Valid date of transaction
Document number	Unique transaction ID from your store internal system (e.g. e-commerce)
Points earned	How many points Customer earned/lose for this transaction (order). Transaction with the type "Sell" adds points, and "Return" subtracts
POS name	POS where transaction was made
Document type	Transaction type: • Sell – customer buy products • Return – customer return bought products
Labels	Assign **transaction labels**
ITEM DETAILS	
Name	Bought product name
Quantity	Bought product quantity
SKU	Bought product SKU
Category	Bought product category
Gross value	Gross value of bought product
Labels	Bought product label, if assigned
Brand	Bought product brand, if assigned
SUM	Total amount of bought products within one transaction

Transaction labels

As an administrator you can add a label refer to transaction during creation or after creating a transaction in the system. Transaction labels are intended to be used only for the informational purpose. Transaction doesn't have to be matched with customer to add a label.

Customer from Client cockpit can also add or edit transaction labels but only this related with transaction matched with him. In that case administrator need to match transaction with a customer from Admin panel.

Click **Edit labels** ( ) icon in the Action column to open the transaction labels editor.



Transaction labels editor

To create Label, tap **Add Label** and do the following:

- Type label **Key**, which is a label name
- Type label **Value**

  For example: Key – Special event, Value – Birthday

Repeat the process for all labels you want to use in your Loyalty Program

Labels can be added to during transaction creation and subsequently added and modified at any time

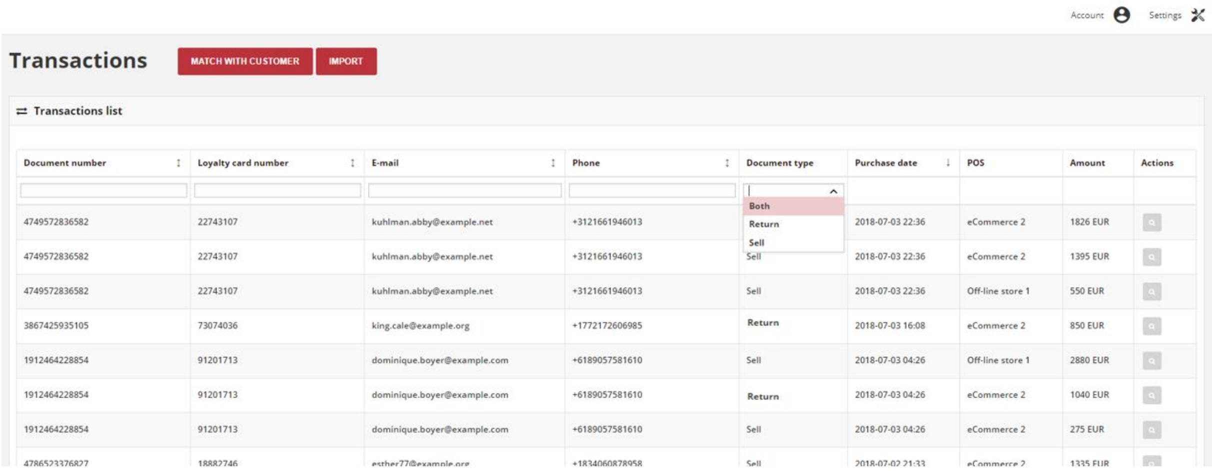
Returns

If for any reason the customer returns the purchased products and claims a refund a Return transaction is created. Customer can request a return from both, online and offline stores and both, partial or full refund. Typically, customer contacts the merchant to request a refund. If merchant authorize the return and agree for refund, a unique document number of related sell transaction is required to identify the returned products and sell transaction, that caused the points earned.

The **All transactions** menu lists all – return and sell transactions. To see only returns, you have to filter the list.

To display Return transactions:

1. On the Admin sidebar, tap **Transactions**. Then, choose **All transactions.**
2. In the field under **Document type** column header, click on the arrow.
3. To see only returns, choose **Return** from dropdown list



Return and Sell Transactions Filter

When Returns are enable (see **Configuration** section), if the customer made a Return, in addition to subtracting the transaction value from the total value of transactions assigned to Customer, the number of earned points assigned to a given sell transaction is also reversed.

The reversed points will be listed in **All points transfers** menu with ***Type spending***.

Points Transfer as a Result of Return Transaction

After the return, points are subtracted from the pool of Active points, according to the number of points earned within sell transaction and in proportion to the amount of transaction.

Points are not reversed according to points earned for bought specific products but in proportion to the all transaction amount (including all bought products)

For better understanding please see Example below

<u>Example:</u>

Your customer transaction value is 40 € and include following products:

- *Product A – 10 €*
- *Product B – 10 €*
- *Product C – 20 €*

For following transactions and purchase of these products your customer has earned the value of points as below:

- *Product A – 10 points (for bought specific products)*
- *Product B – 20 points (for bought specific product)*
- *Product C – 0 points*
- *40 points for total transaction value (1€ spend = 1 point earned)*

*<u>So in total customer spent 40 € and earned 70 points</u>. Points were added to his **Active points** pool, and transaction value to total amount of his registered transaction value (**CLV** attribute).*

For some reason, he decided to return Product C, which cost 20 €, which is a half of the total transaction value.

*And exactly in the same proportion will be calculated the value of points that will be subtracted. For this transaction he earned 70 points, so half of them – 35 points will be subtracted from the **Active points** pool.*

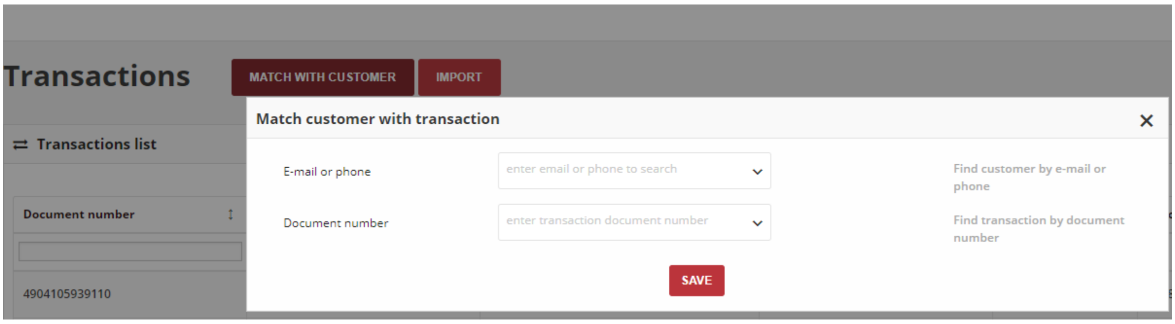
Note, that the transaction value also affects to the **Levels** and **Segments**, which criteria are based on this value. Customer can return to previous level or not be included in a given segment when transaction, which caused this promotion, will be returned.

For more information please see **Levels** and **Segments** chapters.

Match transaction with customer

Usually, transaction come from your store system with information about customer related with. However, you can link transaction with Customer Account directly from the Admin in Open Loyalty, which is useful when you send to Open Loyalty only transactions.

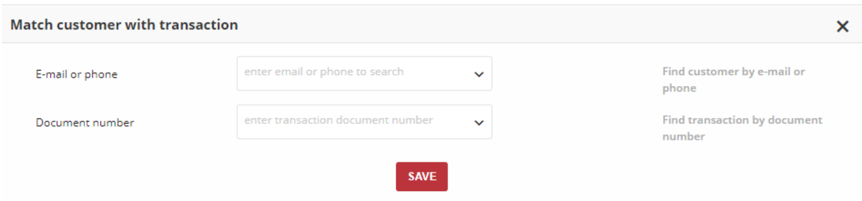
Depending on Matching transaction with customer identification factors priority (set up in Configuration) customer email, phone number or/and loyalty card number can be used. To remain about identification factors please see **Configuration**



Match Customer Account with Transaction

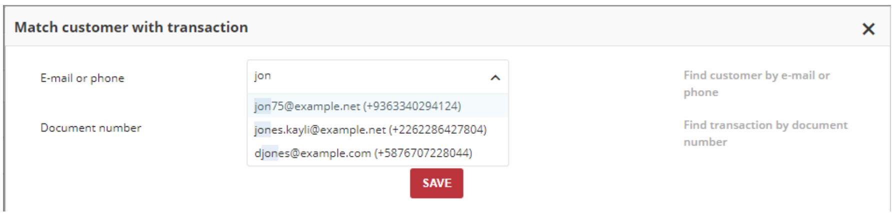
To match transaction with customer:

1. On the Admin sidebar, tap **Transactions**. Then, choose **All transactions.**
2. Tap **Match with customer** at the top of the page. Then, do the following:



Matching Transaction

   a. Enter **E-mail or phone** to find customer, which you want to associate with the transaction



Matching Customer List

b. Enter transaction **Document number** (transaction ID), which you want to associate with the customer

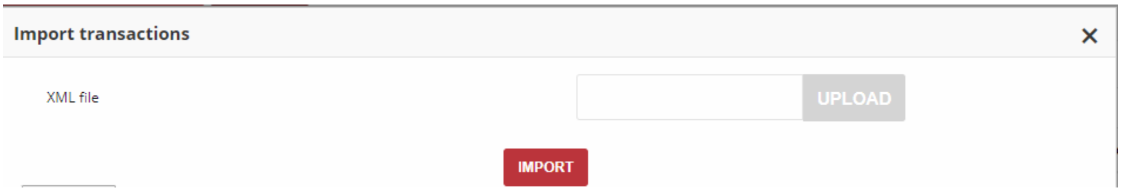
c. In the both fields:

- To find a close match, enter few letters/signs of what you want to find
- To find an exact match, enter the exact word/number you want to find.

3. When complete, tap **Save**

Import transactions

If you have a transaction that you want to add within your Loyalty Program, you can enter it into a transactions XML file and then import it in your Open Loyalty Admin.

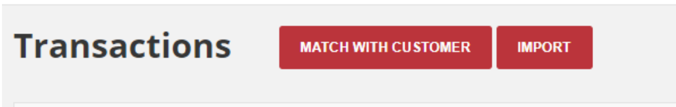


Import Transactions

Importing a XML file will create a transactions for each record in the file.

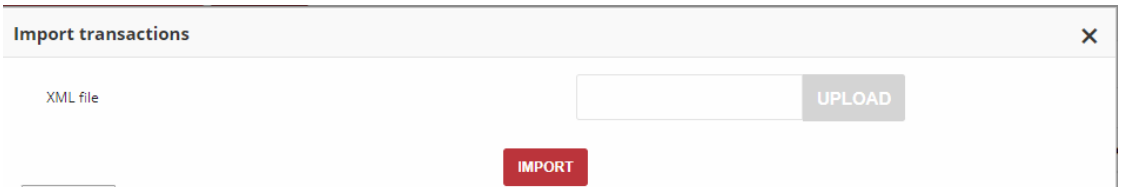
To import a transaction from a file:

1. On the Admin sidebar, tap **Transactions**. Then, choose **All transactions**
2. Click **Import** at the top of the page, next to **Match with customer**



Transactions Import Button

3. In the **Import transactions** dialog, click **Upload** and then choose your customer XML file.



Import Transactions

4. When file selected, click **Import**

The transactions records which you've added to the XML file will appear in the All transactions list in your Open Loyalty admin

XML file structure

Example of Transaction XML file structure below:

TIPS

1. If you don't have or don't want to import all this data, **remove all code line/section instead leave it blank.**

   For example, if you don't want to include posID remove all line from the code. Don't leave it with no value as below:

   ~~<posId>**00000000-0000-474c-1111-b0dd880c07e2**</posId>~~ **OK**

   <posId> </posId> **WRONG**

   Remember that some of them are required, so if you remove it Import will not be possible.

2. **If you don't know POS ID you can include only POS Identifier**. POS Identifier is provided during POS creation and accessible from POS list.

```

EARNING RULES

This section of the guide provides an overview of the ways for customers to earn points – the engine of your Loyalty Program. You'll learn how to create and manage Earning Rule to accomplish many things, from rewarding high-value customers, to stopping points earning all together.

CHAPTER 11:

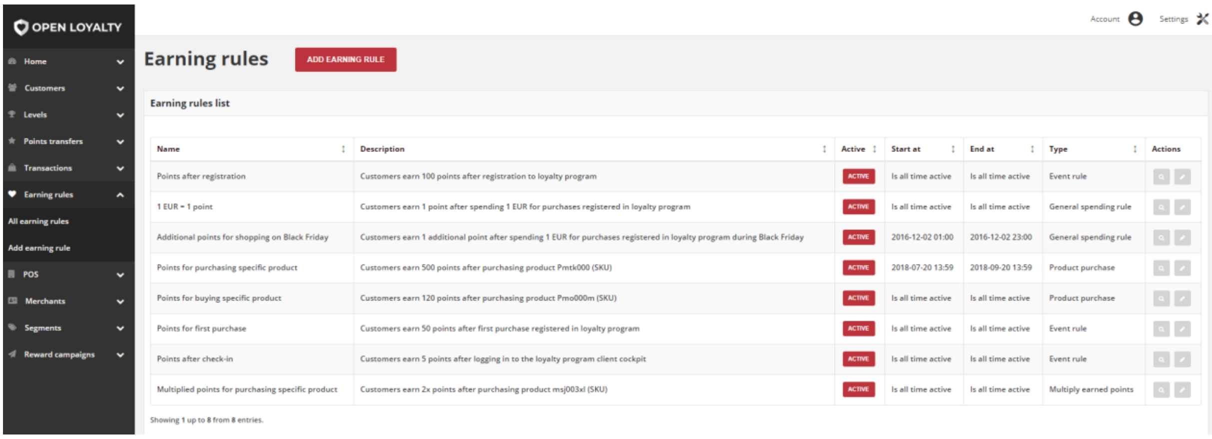
EARNING RULES MENU

Earning define ways and conditions for customers to earn points.

Points can be awarded for a wide range of transaction and customer activities, and the configuration can be set to control the point allotment, balance, and expiration.

You can add point multipliers, eligibility criteria and even exclude certain products or customers.

Customers can redeem points toward rewards, based on the condition (points cost) that you establish.

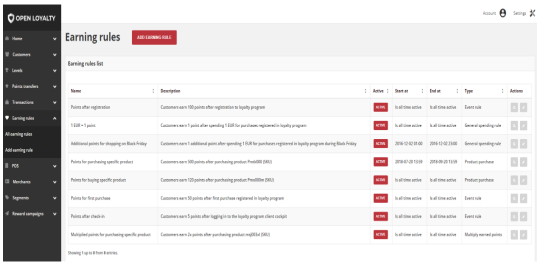


Earning Rules

To display the Earning rules menu:

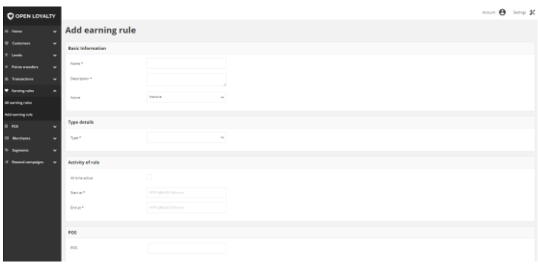
On the Admin sidebar, tap **Earning rules** , then choose **All earning rules**.

Menu options



All earning rules

Lists all Earning Rules within your loyalty program with additional information regarding it's activity, conditions and general information.

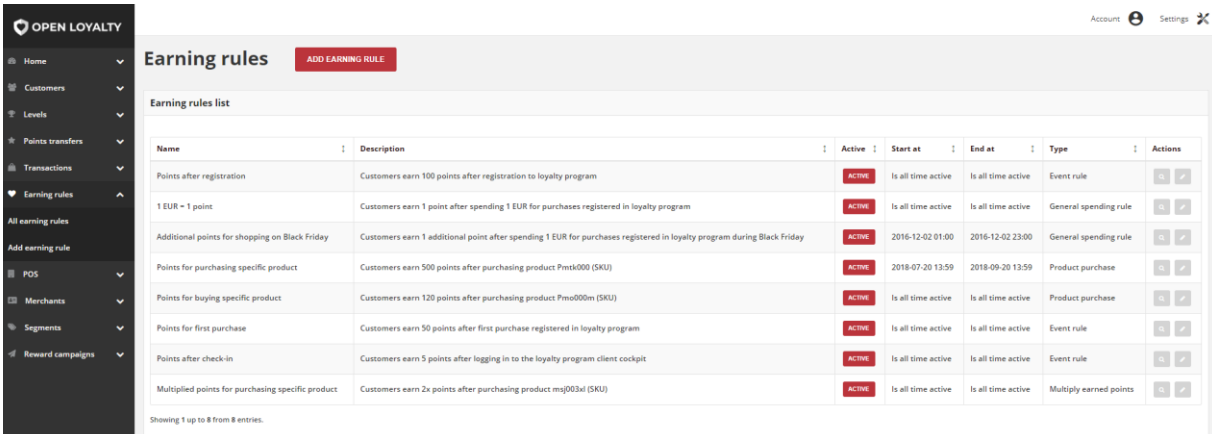


Add earning rule

Lists all data that need to be filled out to add new earning rule

All earning rules

The All earning rules grid provide information about type and activity of all Earning Rules within Loyalty Program. Moreover, list contains brief description about each one and allows to preview and modify rule detail.



Earning Rules List

Use the standard controls to sort the list and apply action (preview and modify) to selected rule records. Pagination controls appear if there are more rule records than fit on the page, and are used to move from one page to the next.

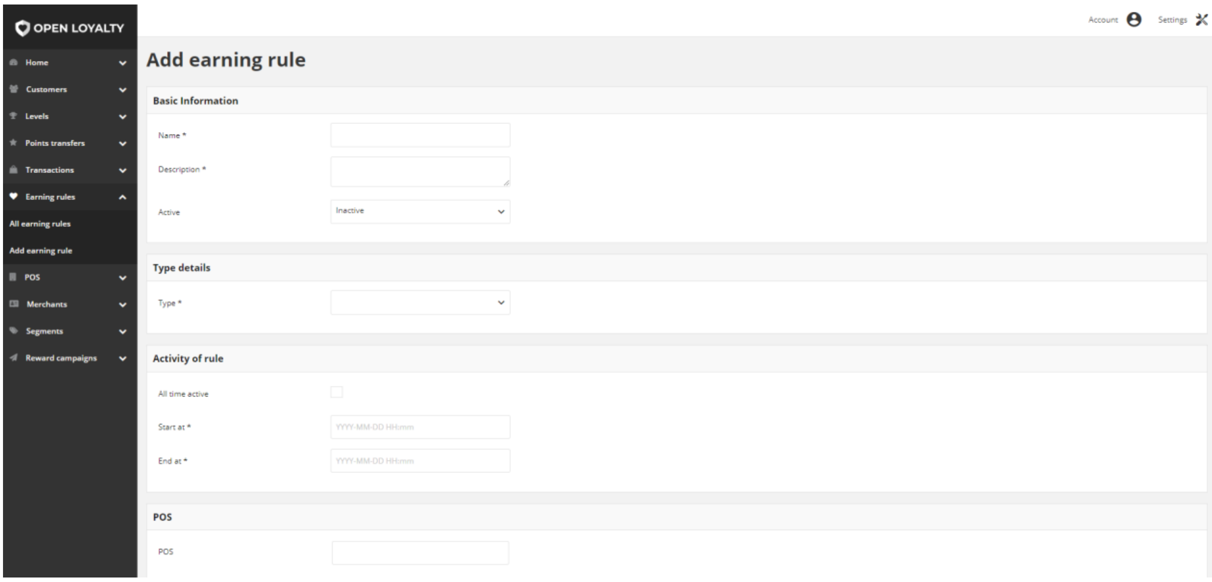
Field description

FIELD	DESCRIPTION
Name	Name of the rule displayed in views
Description	Brief description of rule
Active	Rule current status. Option include: Active/Inactive. Only Active rules are using for calculating earned points
Start at	Start date from which rule is active and can be used to calculate points
End at	End date until rule is active. After that date rule become inactive and can't be used to calculate points.
Type	Rule type. Option include: • Custom event rule • Customer referral • Event rule • General spending rule • Geolocation • Instant reward • Multiple earned points • Multiply earned points by product labels • Product purchase • QRCode To learn more about the rule types, please see **Rule Types**
Actions	The operations that can be applied to selected rule. Options include: • Edit rule data • View rule details information

CHAPTER 12:

CREATING EARNING RULE

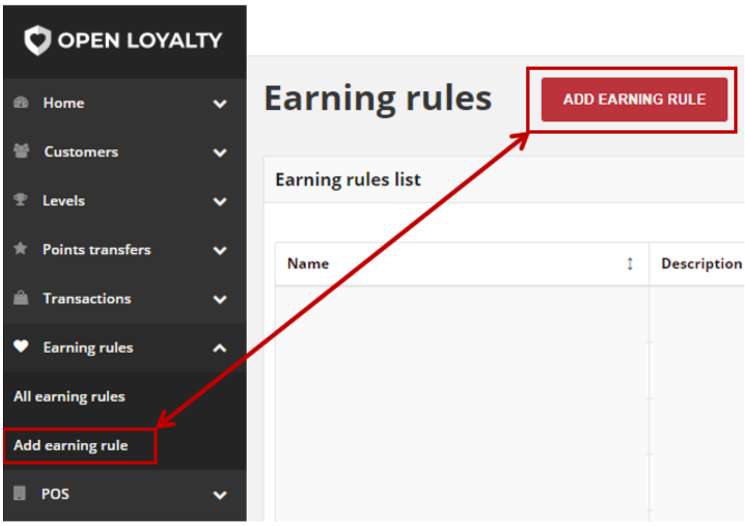
You can create unlimited amount customizable ways for customers to earn points within Loyalty Program based on various conditions.



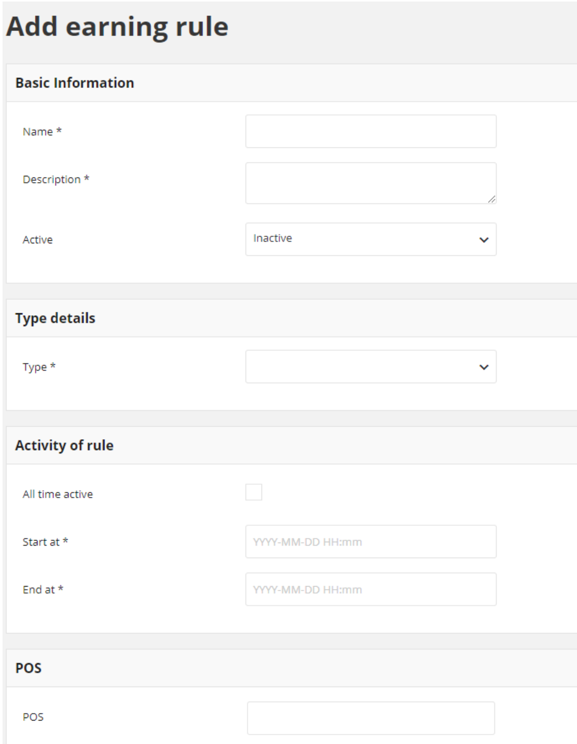
Add Earning Rule

To add new Earning Rule:

1. On the Admin sidebar, tap **Earning rules**. Then, choose **Add earning rule**. You can also add rule directly from **All earning rules** list by clicking **Add earning rule** at the top of the page



Add Rule Options



Add Earning Rule Form

2. In **Basic informations** section, do the following:
   a. Enter **Name** of the rule that will be displayed in views
   b. Provide a brief **Description** of the rule that explains how to award points and information when the rule is active (thereby using to points calculation)
   c. To activate the rule, in **Active** field select “**Active**” from the dropdown list

3. In **Type details** section set rule type. Note, that once selected type can not be changed. See **Rule types** to learn more about Earning rules types.

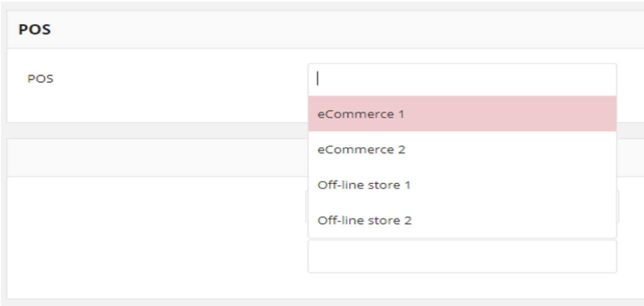
4. In ***Activity of rule*** section specify time boundaries when rule will be active

   - If you want the rule to be active all the time mark **All time active** checkbox

   - If you want the rule to be limited in time in **Start at** and **End at** fields specify dates between rule will be active

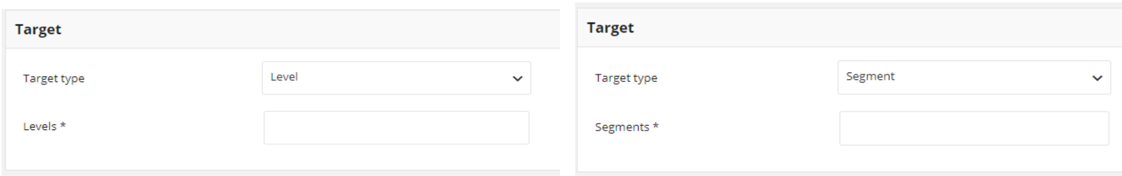
5. In ***POS*** section, as an option you can assign an Earning rule to the existing POS. When a transaction comes from a specific POS, only earning rules assigned to this POS will be used to calculate points.

   To do this, click **POS** field and choose store to which rule will be applied.



Earning rule assignment to POS

6. In ***Target*** section specify group of customers for which rule will be used. For example, Gold members will get 2 times more points than Bronze

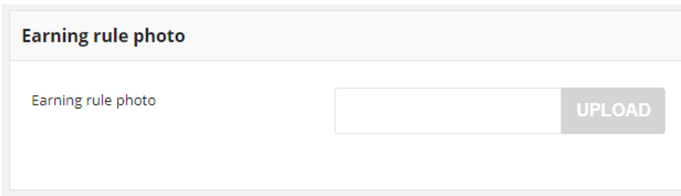


Earning rule target option

   a. In **Target type** choose from dropdown list Level or Segment to specify whether the rule will be active for customers assigned to particular level or segment.

   b. Depending on the **Target type** field **Segments** to specify segments or **Levels** to specify levels appear. You can choose one or more levels/segments to used.

7. If applicable, in **Earning rule photo** section upload image for Earning rule



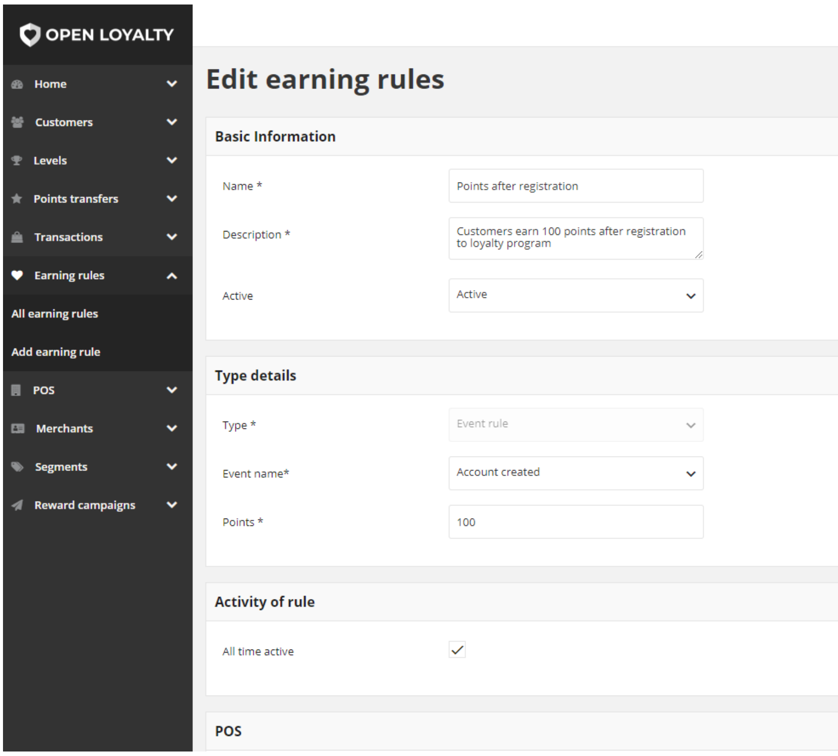
Earning rule photo option

8. When complete, tap **Save**

Image size is limited to 2MB. Image dimensions could not be smaller than 600 x 600 px. Allowed file formats: png, gif, jpg.

Updating Earning rules

You can edit information regarding earning rule used within your Loyalty Program, including all their data provided during rule creation process, **except the rule type.**



Earning Rule editing

To edit an Earning Rule:

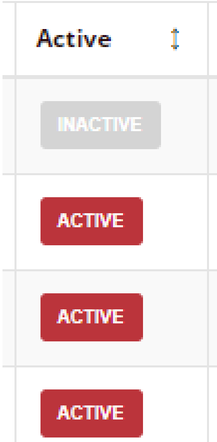
1. On the Admin sidebar, tap **Earning rules**. Then, choose **All earning rules.**
2. In the Earning Rules list,, find the rule to be edited and click **Edit** ( ) icon in the Action column to open the rule in edit mode.
3. Make any necessary changes to the rule.
4. When complete, tap **Save**

Activate/deactivate earning rule

Any rule from the list can be activated and deactivated by Admin user.

To activate/deactivate rule:

1. On the Admin sidebar, tap **Earning Rules**. Then, choose **All earning rules**. You can also deactivate/activate the rule from **Edit mode**
2. In the Earning rules list, find the rule to be deactivated and click **Active** in the **Active** column. The button in the column change to ***Inactive*** and appear as a grey-out.



Active Column

When you deactivate rule, customers' will not earned points based on this rule terms.

3. To activate the rule click **Inactive** in the **Active** column. The button in the column change to ***Active*** and appears as a red.

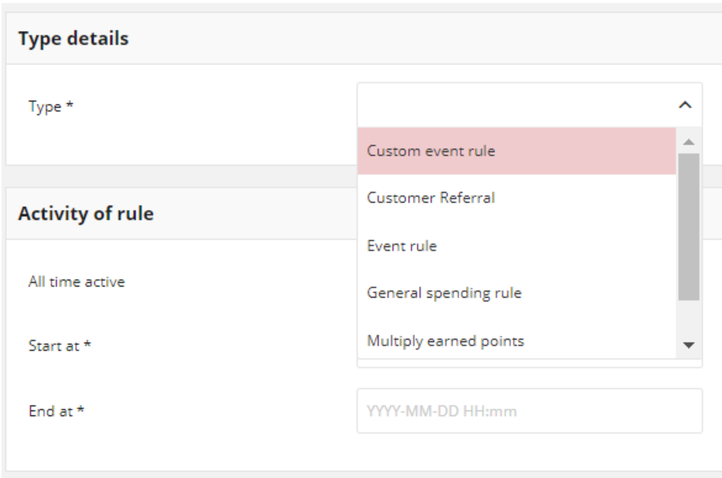
CHAPTER 13:

EARNING RULES TYPES

In general, Earning rules can be divided into two types:

- **Transactional rules** – related to transactions made by customer e.g. transaction total amount, purchased products etc.
- **Non-transactional rules** – related to other customer data and his activity within loyalty program e.g. refer a friend, his friend registration/purchases, newsletter subscription, first purchase, account created etc.

During creation of rule you must specify its type, describing conditions for awarding points. Every rule type has its own required fields (conditions) that must be filled.



Rule Types

Transactional rules

Open Loyalty offer following standard types:

a. **General spending rule** - Customer could receive points for order value

b. **Multiple earned points** - Customer could receive multiple points for product with specified SKU

c. **Multiply earned points by product labels –** Customer could receive multiple points for product with specified labels

d. **Instant reward –** Customer could receive any reward campaign for his transaction registered within Loyalty Program

e. **Product purchase** - Customer could receive given amount of points for specified product

The sequence of points calculation is as following:

- Firstly, if applicable, customer receives points from **General spending rule**
- Secondly, if applicable, points are multiply based on M**ultiply earned points rule**, and based on labels multipliers from **Multiply earned points by product labels.** Also reward is assigned from **Instant reward rule**.
- Finally, if applicable, customer receives points from **Product purchase** rule

Note

Rule from the 2nd step of sequence:

- Multiply earned points,
- Multiply earned points by product labels and
- Instant reward

have the same priority. It means, that to points calculation by default only one of them, the most "current" rule is used. In that case, "current" means edited as the last one.

Set Earning Rule as the last one

If there are more than one Earning Rule to be applied and one of them has a flag "stoppable", then this rule will be applied and stops any further rules according to sequence listed above.

When customer registers a transaction, Open Loyalty checks for Earning Rules that can be applied. Then Open Loyalty starts executing each Earning Rule. When executed Earning Rule has a flag "stoppable" it should be the last Earning Rule executed for that transaction which means any next Earning Rules should be skipped.

Exceptional case

By default only one of rule from second step, the most "current" rule (edited as the last one) is used.

But, if you add a "stoppable" flag to one of them and before points calculation you will also edited any of Multiply points rules or Instant reward (name, description, activity etc.), Open Loyalty recognize the edited one as the most "current" and use it before the rule with stoppable flag. The behavior is also related with more than one this rule type.

In this exceptional case, the sequence of points calculation can be as follow:

1. **If applicable, General spending rule**
2. **Multiply earned points –** *rule edited today, the most "current"*
3. **Multiply earned points by product labels –** *rule edited today, but before Multiply earned points rule edition*
4. **2nd Instant reward –** *rule edited yesterday*
5. **1st Instant reward -** *rule with stoppable flag added day before yesterday*

General spending rule

Reward customer with defined amount of points for his order value. Allows to specify how many points customer can earn from 1 amount of currency. If needed, you can exclude certain products (with define SKUs or labels) and delivery costs from the points calculation.

If you marked ***Is last executed rule*** checkbox, then you add a “stoppable” flag to this rule. It means, that if more than this transactional rule can be applied, any next transactional Earning Rules will be skipped (other general spending rules, multiply points rules, product purchase rule).

Exceptional case

What if there are only general spending rules to be used and there are more than one?

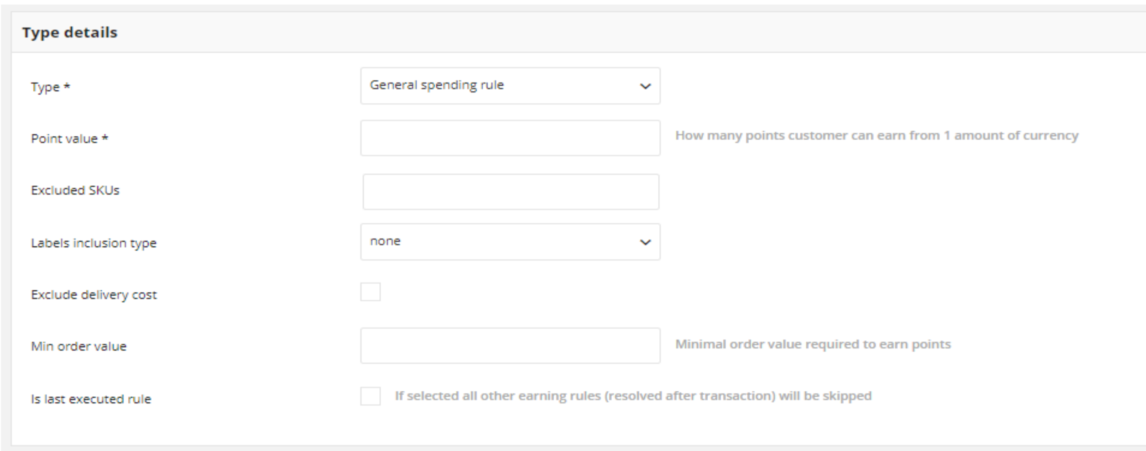
All General spending rules have the same priority. It means, that to points calculation the most “current” rule is used. In that case, “current” means edited as the last one.

So, if you add a “stoppable” flag to 1st rule and before points calculation you will also edited 2nd and 3rd (name, description, activity etc.), Open Loyalty recognize the 2nd and 3rd as the more “current” and use them before the rule with stoppable flag.

Another words, any edited General spending rule will be used before that one with “stoppable” flag, if edition was made after you add a flag to the rule.

<u>In this exceptional case, the sequence of points calculation is as follow:</u>

1. **3rd General spending rule** - *rule edited today, the most “current”*
2. **2nd General spending rule** - *rule edited yesterday*, *more “current” than the flag rule*
3. **1st General spending rule** - *rule with stoppable flag added day before yesterday*



General Spending Rule

Field description

FIELD	DESCRIPTION
Point value	Ratio for calculating earned points based on purchased value. For example, if ratio is 2 then user get 2 points for every 1$ spent.
Excluded SKUs	Product with selected SKUS will not be included in order value used for earned points calculation.
Labels inclusion type	Points can be calculated for the purchase of products with defined labels. Options include: • **None** – product labels are not applicable. Points will be calculated for all purchased products (except excluded SKUs, if applicable) • **Exclude** – points will not be calculated for purchased products with defined labels • **Include** - points will be calculated for purchased products with defined labels
Has labels / Excluded labels	Depending on the option chose in ***Labels inclusion type*** field, appropriate field will be display: • **Has labels** – when ***Include*** is selected in previous step • **Excluded labels** – when ***Exclude*** is selected in previous step • When ***None*** is selected in previous step, any field is not displayed Both fields, **Has labels** and **Excluded labels** are pair of Key, Value.
Excluded delivery cost	When selected, then delivery cost will not be included in order value used for earned points calculation
Min order value	Minimal order value required to earn points. Points will not be calculated for whole purchase if its value will be not provided below
Is last executed rule	If selected, all other transactional earning rules will be skipped, according to sequence. In that case, only General spending rule will be used.

Multiply earned points

Multiple points that customer receive for purchase products with specified SKU. The rule is related to General spending rule. The rule defines for which purchase products, points (defined in General spending rule) are to be multiplied.

If you marked ***Is last executed rule*** checkbox, then you add a “stoppable” flag to this rule. It means, that if more than this transactional rule can be applied, next transactional Earning Rule will be skipped (product purchase, multiply earned points by product labels) and Multiply earned points rule will be used as the last one (according to the sequence).

Another words, only these rules that occur in the sequence before the Multiply earned points rule with a flag and the rule itself will be used – in that case, if applicable, General spending rule, Multiply earned points rules edited after added a flag and rule with a flag itself.

Exceptional case

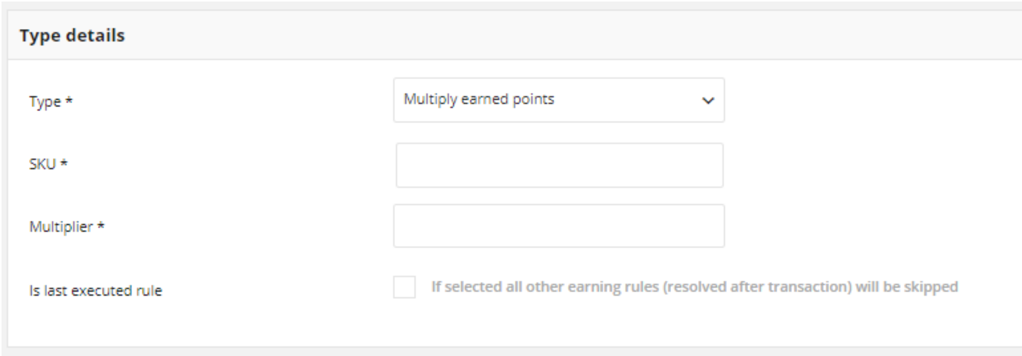
When also Multiply earned points by product labels will be used?

Multiply earned points, Multiply earned points by product labels and Instant reward rules have the same priority. It means, that to points calculation the most “current” rule is used. In that case, “current” means edited as the last one.

So, if you add a “stoppable” flag to this rule and before points calculation you will also edited Multiply earned points by product labels (name, description, activity etc.), Open Loyalty recognize the second one as the most “current” and use it before the rule with stoppable flag.

In this exceptional case, the sequence of points calculation is as follow:

1. **If applicable, General spending rule**
2. **Multiply earned points by product labels** - *edited rule, the most “current”*
3. **Multiply earned points** - *rule with stoppable flag*



Multiple earned points

Field description

FIELD	DESCRIPTION
SKU	Rule will be applied only for listed products with selected SKUs
Multiplier	Points gained for purchase product will be multiplied by this factor
Is last executed rule	If selected, all next transactional earning rules will be skipped, according to sequence. In that case, only General spending rule (if applicable) and Multiply earned points rule will be used. In exceptional case also Multiply earned points by product labels also can be used – please see **Exceptional case** box.

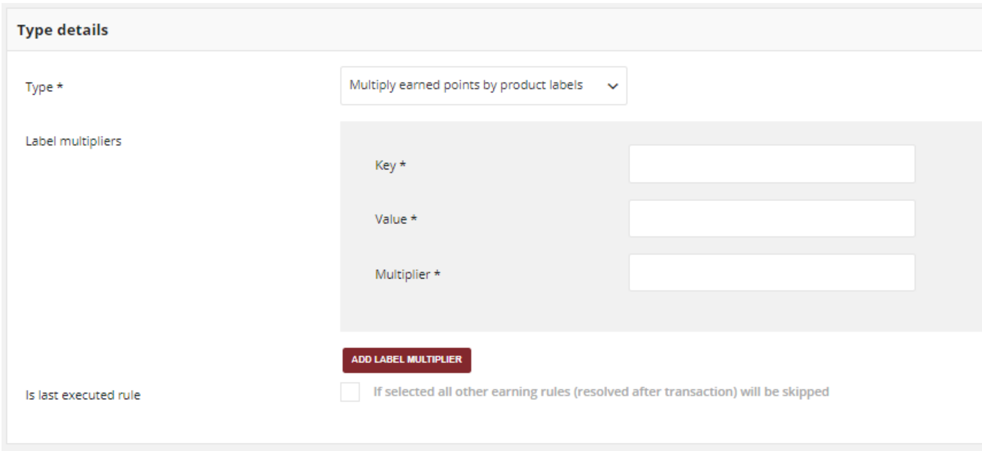
Multiply earned points by product labels

Multiple points that customer receive for purchase products with specified labels. The rule is related to Product purchase, Multiply earned points and General spending rule. The rule defines for which purchased products, points (defined in rules above) are to be multiplied.

Rule can contains more than one product label. Different **Labels** are linked with OR condition - at least one of labels linked with this rule must be true to let customer earn points. If more than one is true, points are multiply in order by all multipliers.

For example, if you have 2 labels assigned to this rule which are true, points gathered from purchases are multiply firstly by multiplier assigned to 1st label, and then again multiply by multiplier assigned to 2nd label.

If you marked ***Is last executed rule*** checkbox, then you add a “stoppable” flag to this rule. The behavior of the flag is the same like in **Multiply earned points rule** - only these rules that occur in the sequence before the Multiply earned points by product labels rule with a flag and the rule itself will be used – in that case, if applicable, General spending rule, Multiply earned points by product labels rule edited after added a flag and rule with a flag itself.



Multiply earned points by product labels

Exceptional case

When also Multiply earned points will be used?

The same case as was described in Multiply earned points rule exception. If you add a "stoppable" flag to this rule and before points calculation you will also edited Multiply earned points (name, description, activity etc.), Open Loyalty recognize the second one as the most "current" and use it before the rule with stoppable flag.

In this exceptional case, the sequence of points calculation is as follow:

1. **If applicable, General spending rule**
2. **Multiply earned points** - *edited rule, the most "current"*
3. **Multiply earned points by product labels** - *rule with stoppable flag*

Field description

FIELD	DESCRIPTION
Key	Product label name e.g. size, color
Value	Value of product label with specified in previous step Key, e.g. M, red
Multiplier	Points gained for purchases product with label key and value from above will be multiplied by this factor
Add label multiplier	Button allowing to add next product label that will be assigned to rule
Is last executed rule	If selected, all next transactional earning rules will be skipped, according to sequence. In that case, only General spending rule (if applicable) and Multiply earned points by product labels rule will be used. In exceptional case also Multiply earned points rule also can be used – please see **Exceptional case** box.

Instant reward

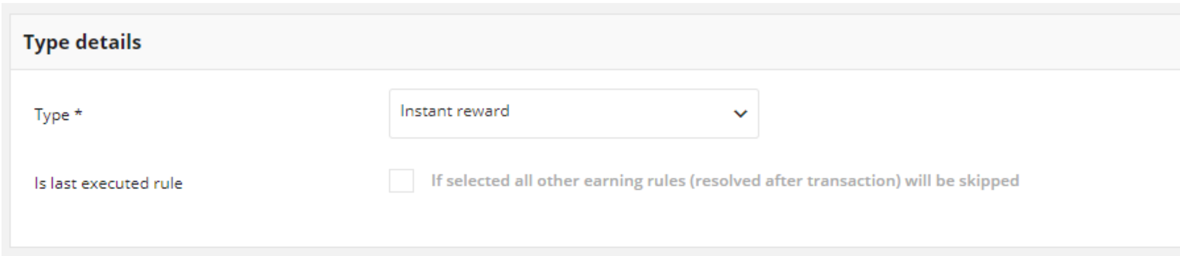
Reward customer with defined reward campaign for his order. Rule can be related with any active Reward campaign, but only one at once.

If you marked ***Is last executed rule*** checkbox, then you add a “stoppable” flag to this rule. The behavior of the flag is the same like in **Multiply earned points rule** - only these rules that occur in the sequence before the Instant reward with a flag and the rule itself will be used – in that case, if applicable, General spending rule, Instant reward rules edited after added a flag and rule with a flag itself.

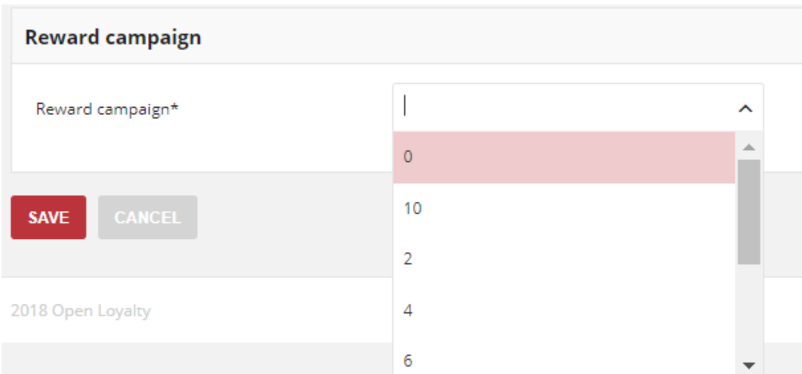
Within rule creation, additional section **Reward campaign** at the bottom of the page appear. Here you need to select from a dropdown active reward to associate with Instant reward rule. Selected reward will appear in Customer Redeemed reward instantly after his transaction will be registered.

Note, that Instant reward rule conditions and associated with it Reward campaign conditions must be met to let customer receive this reward. Another words, after customer transaction registered, Open Loyalty verify e.g. if customer has appropriate level/segment, if transaction date is in defined rule/reward Activity time boundaries etc. If any of conditions is not met, rule is not used and customer doesn’t receive reward.

Please see **Reward campaigns** for more information.



Instant reward



Reward campaign section to be associated with Instant reward

Exceptional case

When also Multiply earned points rules will be used?

The same case as was described in Multiply earned points rule exception. If you add a "stoppable" flag to this rule and before points calculation you will also edited Multiply earned points and Multiply earned points by product labels (name, description, activity etc.), Open Loyalty recognize the edited once as the most "current" and use it before the rule with stoppable flag.

In this exceptional case, the sequence of points calculation is as follow:

1. **If applicable, General spending rule**
2. **Multiply earned points** – *rule edited today, the most "current"*
3. **Multiply earned points by product labels** – *rule edited today, before Multiply earned points rule edition*
4. **Instant reward -** *rule with stoppable flag*

Field description

FIELD	DESCRIPTION
Is last executed rule	If selected, all other transactional earning rules will be skipped, according to sequence. In that case, only General spending rule (if applicable) and Multiply earned points by product labels rule will be used In exceptional case also Multiply earned points rule and Multiply earned points by product labels rule can be used – please see **Exceptional case** box.
Reward campaign	List of all active reward campaigns to be associated with Instant reward rule. To learn more about rewards please see **Reward campaigns**

Product purchase

Reward customer with defined amount of points for purchase specified products. Rule can be related to Multiply earned points rule.

If you marked ***Is last executed rule*** checkbox, then you add a "stoppable" flag to this rule. It means, that if more than this transactional rule can be applied, next transactional Earning Rule will be skipped and Product purchase will be used as the last one (according to the sequence).

Another words, only these rules that occur in the sequence before the Product purchase rule with a flag and rule itself will be used – in that case, if applicable, General spending rule, both Multiply earned points rules, Product purchase rules edited after added a flag and rule with a flag itself.

Exceptional case

What if there are more than one Product purchase rule to be used?

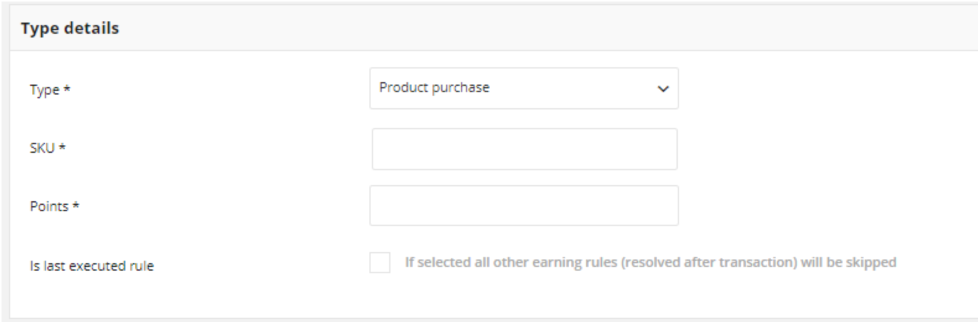
All Product purchase rules have the same priority. It means, that to points calculation the most "current" rule is used. In that case, "current" means edited as the last one.

So, if you add a "stoppable" flag to 1st rule and before points calculation you will also edited 2nd and 3rd (name, description, activity etc.), Open Loyalty recognize the 2nd and 3rd as the more "current" and use them before the rule with stoppable flag.

Another words, any edited Product purchase rule will be used before that one with "stoppable" flag, if edition was made after you add a flag to the rule.

In this exceptional case, the sequence of points calculation is as follow:

1. **If applicable, General spending rule**
2. **If applicable, Multiply earned points rules**
3. **3rd Product purchase rule - ***rule edited today, the most "current"*
4. **2nd Product purchase rule** - *rule edited yesterday***,** *more "current" than the flag rule*
5. **1st Product purchase rule** - *rule with stoppable flag added day before yesterday*



Product Purchase

Field description

FIELD	DESCRIPTION
SKU	Rule will be applied only for listed products with selected SKUs
Points	Predefined amount of points will be earned instead of calculation based on product value
Is last executed rule	If selected, all other transactional earning rules will be skipped, according to sequence. In that case, General spending rule, Multiply earned points, Multiply earned points by product labels (all if applicable) and Product purchase rule will be used.

Non-transactional rules

Open Loyalty offer following standard types:

a. **Custom event rule** – Customer could receive points for external actions

b. **Customer referral** – Referred and/or Referrer customer receive points for his action

c. **Event rule** - Customer could receive points for specified actions

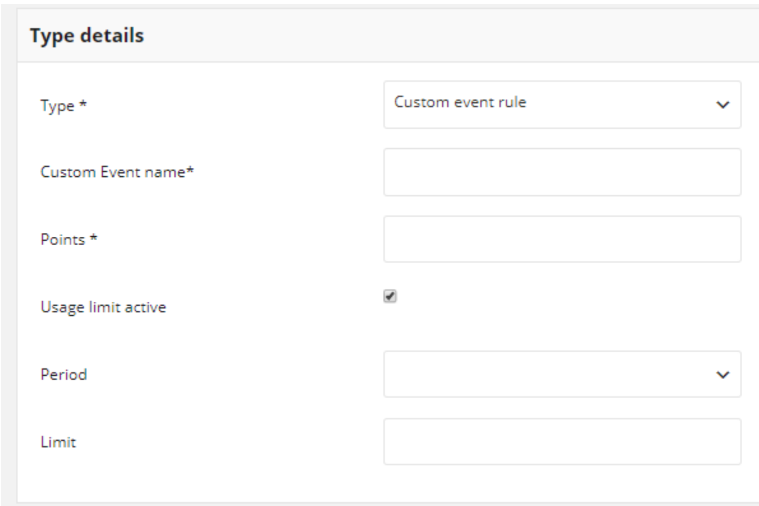
d. **Geolocation –** Customer could receive points for his location

e. **QRcode –** Customer could receive points for scanning define QR codes

Custom event rule

Reward customer with defined amount of points for his action in external system. For example, share account with Facebook, add review for a product etc. If needed, you can also add repeatability limit to this rule type.

This Earning rule could be call only with API. Every run of API function will reward Customer with defined points.



Custom Event Rule

If customer used the limit then rule will not be shown on available rules list in Customer cockpit

Field description

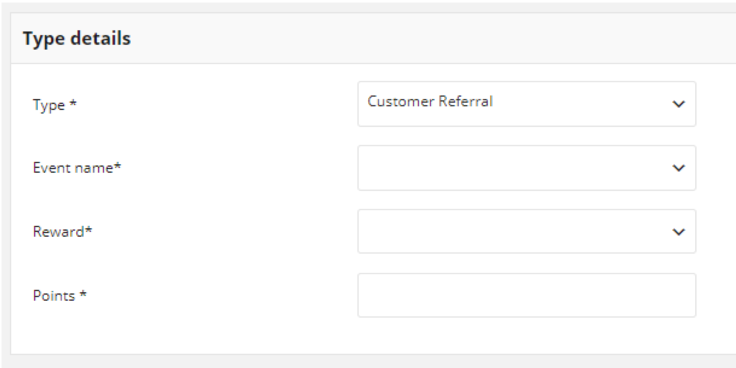
FIELD	DESCRIPTION
Custom Event name	Name of the rule (to be used with calling API function)
Points	Number of points that will be added after earning rule has been called
Usage limit active	Option to limit how many times customer could be rewarded for the same action with the specified period of time. Option include: • Yes – mark checkbox to limit repeatability • No – leave checkbox blank to reward customer for this rule without limits
Period	Visible and required if ***Usage limit active*** is marked. It defines period of time within customer can be rewarded for this rule. Option include: • 1 day • 1 week • 1 month
Limit	Visible and required if ***Usage limit active*** is marked. how many times customer could be rewarded for this rule in specified period of time.

Customer Referral

Referral (refer a friend, member get member) functionality allow to reward Customers for invitation other Customers to Loyalty program. It allow to give prize either referrer (Customer who send invitation) and referred person (Customer who respond with action to invitation).

Functionality allow to reward for actions:

- Referred Customer register new account in OL
- Referred Customer make first purchase in OL (first transaction)
- Referred Customer make purchase in OL (every transaction)



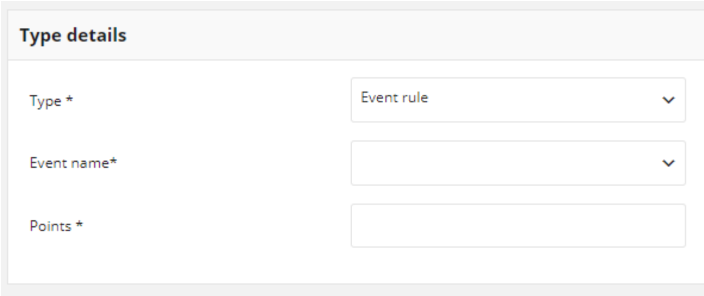
Customer Referral Rule

Field description

FIELD	DESCRIPTION
Event name	Select an event for which the customer will receive points. Options include: • Every purchase • First purchase • Register
Reward	Select who should receive points for this action. Option include: • Referred • Referrer • Both
Points	Amount of points that will be earned for this event rule

Event rule

Reward customer with defined amount of points for his action. Actions for which customer can get points are predefined in the Open Loyalty and related to events of your loyalty program. For example, create an account, first purchase etc.



Event Rule

Field description

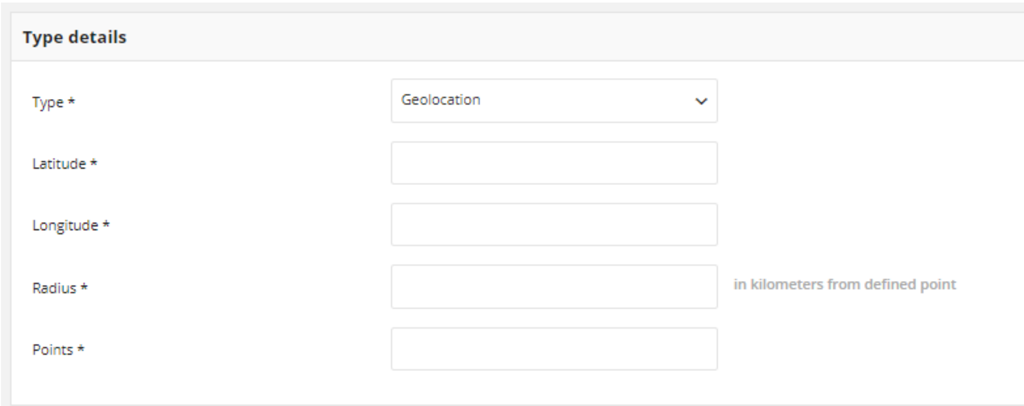
FIELD	DESCRIPTION
Event name	Select an event for which the customer will receive points. Options include: • Account created • Customer logged in • First purchase • Newsletter subscription
Points	Amount of points that will be earned for this event rule

Geolocation

Reward customer with defined amount of points for his location. Locations for which customer can get points are defined in the Open Loyalty and related to radius.

This Earning rule could be call only with API. Every run of API function will reward Customer with defined points.

Rule can be used only when mechanism of getting customer location is implemented.



Geolocation

Field description

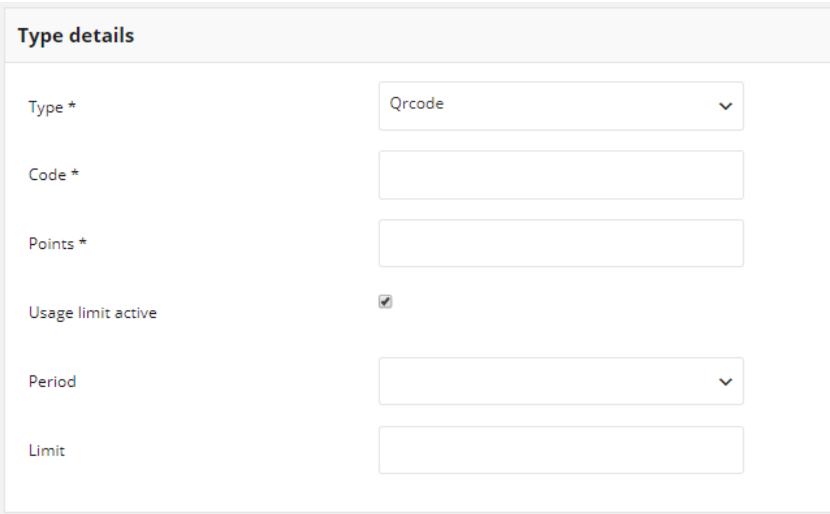
FIELD	DESCRIPTION
Latitude	Latitude defining the central point to which the location applies
Longitude	Longitude defining the central point to which the location applies
Radius	A circular area having an extent determined by the length of the radius from a specified by latitude and longitude central point. Customer can get points only when he is in radius area
Points	Amount of points that will be earned for this event rule

QRcode

Reward customer with defined amount of points for scanning QR code e.g. of product. Code for which customer can get points is defined in the Open Loyalty.

If needed, you can also add repeatability limit to this rule type.

This Earning rule could be call only with API. Every run of API function will reward Customer with defined points.



QR code earning rule

If customer used the limit then rule will not be shown on available rules list in Customer cockpit

Field description

FIELD	DESCRIPTION
Code	QR code (to be used with calling API function)
Points	Number of points that will be added after earning rule has been triggered
Usage limit active	Option to limit how many times customer could be rewarded for the same code with the specified period of time. Option include: • Yes – mark checkbox to limit repeatability • No – leave checkbox blank to reward customer for this rule without limits

Period	Visible and required if ***Usage limit active*** is marked. It defines period of time within customer can be rewarded for this rule. Option include: • 1 day • 1 week • 1 month
Limit	Visible and required if ***Usage limit active*** is marked. how many times customer could be rewarded for this rule in specified period of time.

POS

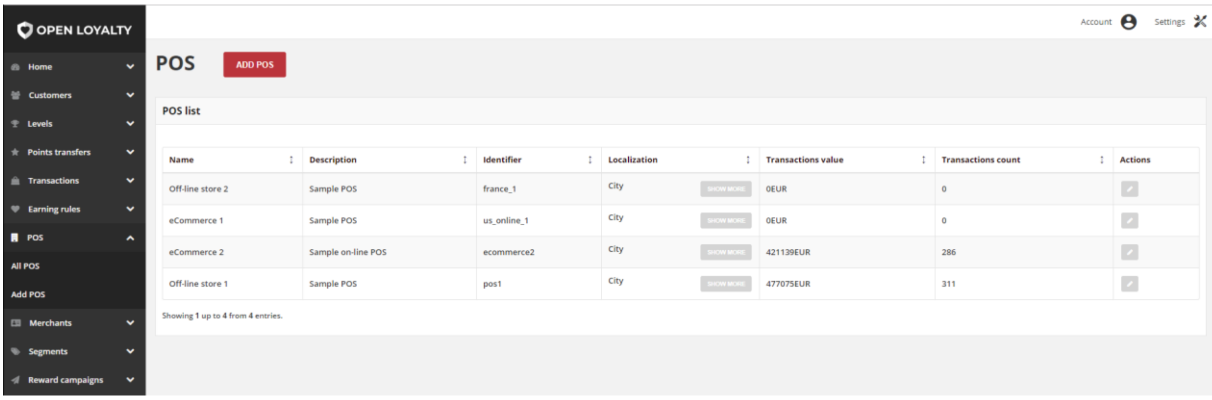
In this section of the guide, you'll learn how to set up a stores – online and offline, and manage their data

CHAPTER 14:

POS MENU

Customers can make transactions not only in the online store but also in offline stores. Both transactions should be count within your Loyalty Program. POS menu allows you to define all stores, that transaction should be included within your Loyalty Program.

You can simply track all stores and theirs transactions details – value and number.



POS

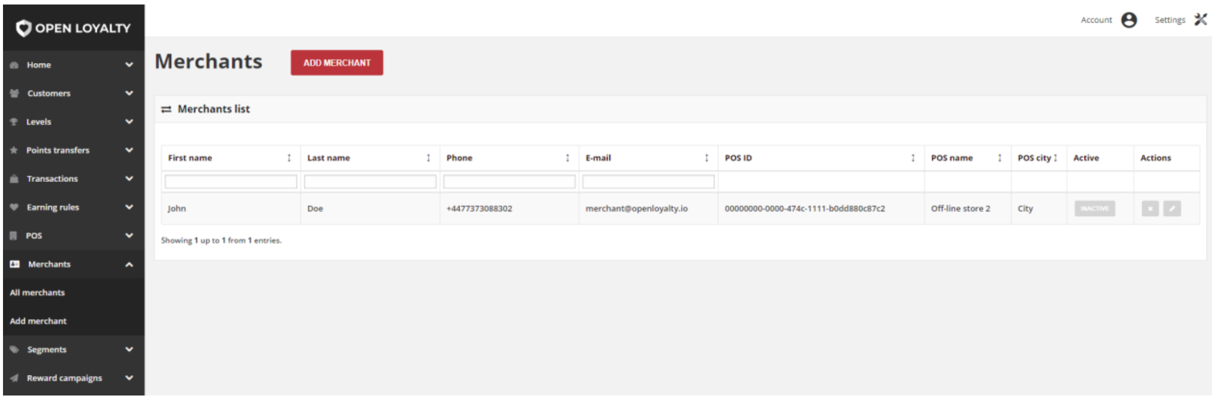
Merchant Account

CHAPTER 16:

MERCHANTS MENU

The Merchant is linked to a store. In Open Loyalty store is called point-of-sale (POS). Merchants menu provide an overview of all merchants and it's assigned to particular POS. You can simply see number of merchants works in particular store. Moreover, you can assigned merchant to customer, who is operated by a given merchant.

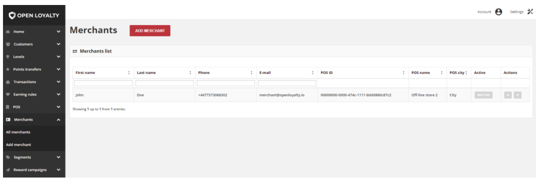


Merchants

To display the Merchant menu:

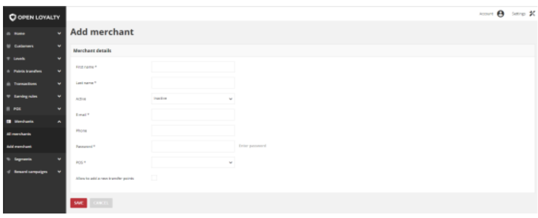
On the Admin sidebar, tap **Merchant**, then choose **All merchants**.

Menu options



All merchants

Lists all Merchant within your loyalty program with additional information regarding his data and assigned POS localization.

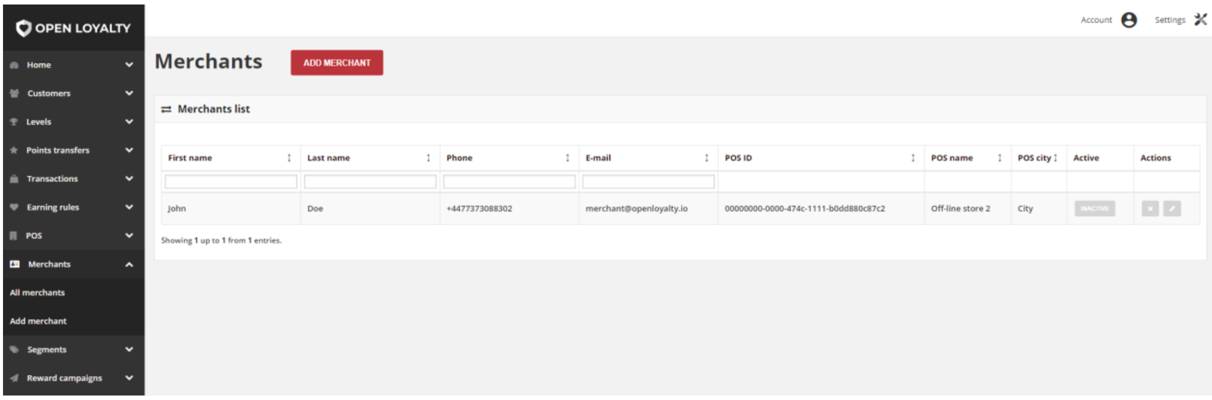


Add merchants

Lists all data that need to be filled out to add new Merchant

All Merchants

The All merchants grid provide information about all merchants and its assigned to a POS, which transactions made by customers will be registered and count within Loyalty Program. Moreover, list contains POS address details and additional information about each one and allows modify merchant data.



All Merchants

Use the standard controls to sort the list, filter and search merchant by typing in the field under column header value you want to find, and apply actions to selected merchants (modify or remove). Pagination controls appear if there are more merchants records than fit on the page, and are used to move from one page to the next.

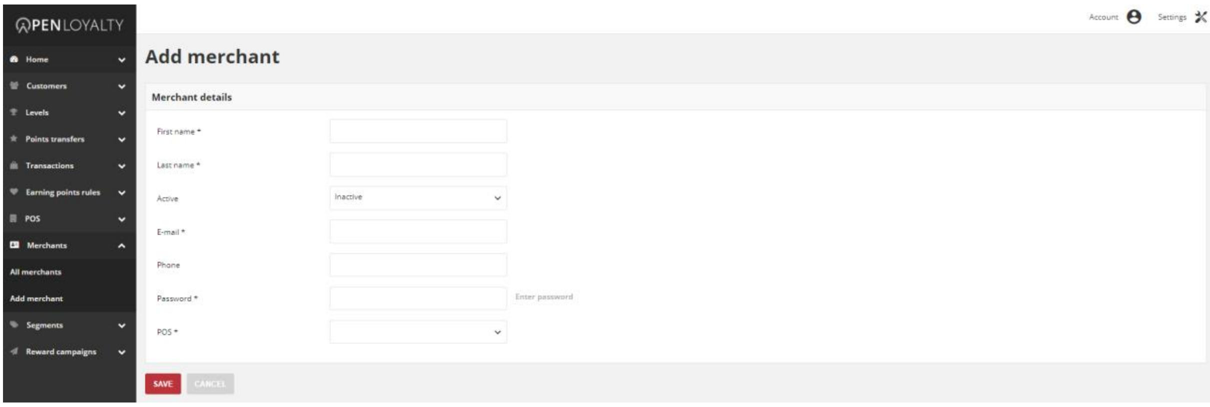
Field description

FIELD	DESCRIPTION
First name	The first name of the merchant
Last name	The last name of the merchant
Phone	The merchant phone number. Can be used as a search/filter option. Formatting is as on follow example: • Country code: +48/48 • Subscriber number: 123456789 • In total: +48123456789 / 123456789 / 48123456789
Email	The merchant email address. Can be used as a login to POS Cockpit or search/filter option.
POS ID	Unique POS ID. Can be used in XML file to import transaction and customer
POS name	Name of the store
POS city	City where store is located
Active	Merchant account current status. Option include: Active/Inactive. Only Active merchants account are using for login to POS Cockpit.
Actions	The operations that can be applied to selected merchant account. Options include: • Edit merchant data • Remove merchant account

CHAPTER 17:

CREATING MERCHANT ACCOUNT

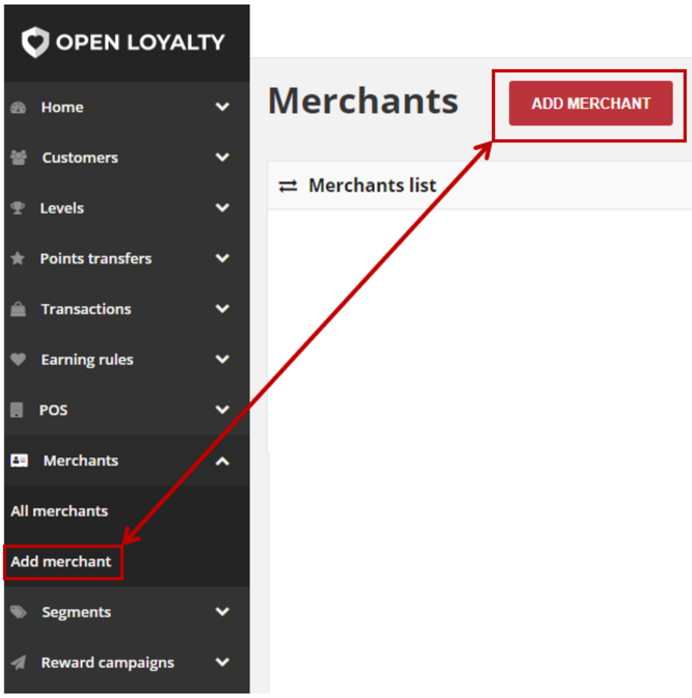
You can create from Admin unlimited amount of merchants account and assigned them with particular store (POS). Merchant account is needed to log in to POS Cockpit.



Add Merchant Account

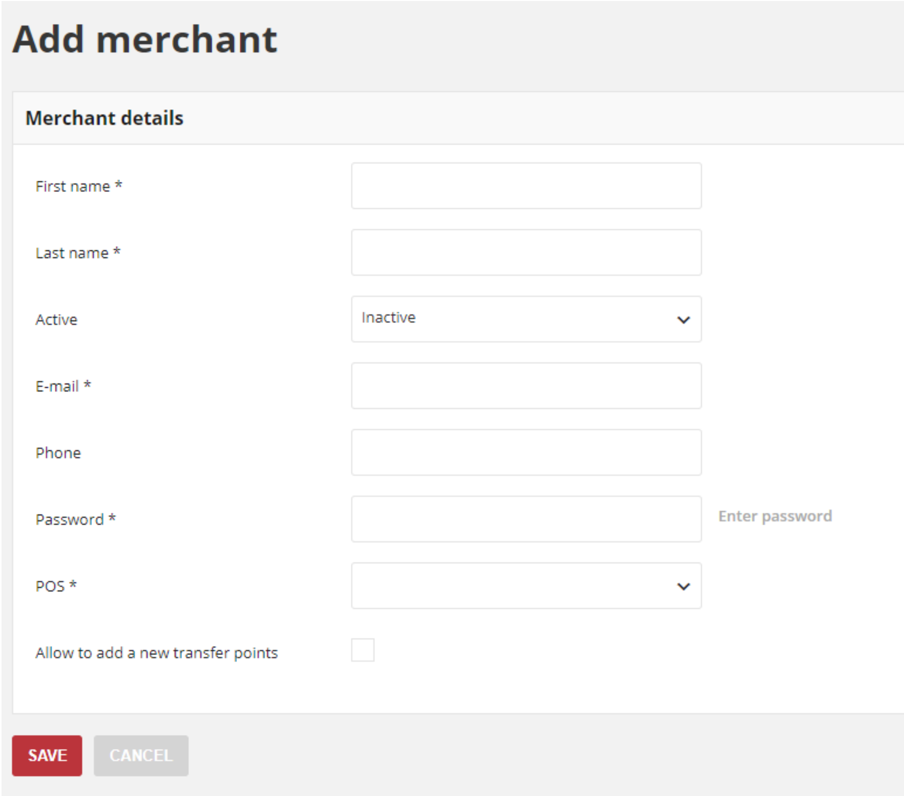
To add new merchant account:

1. On the Admin sidebar, tap **Merchants**. Then, choose **Add merchant**. You can also add merchant directly from **All merchants** list by clicking **Add Merchant** at the top of the page.



Add Merchant Options

2. In the **Merchant details** section, do the following:



Add Merchant Form

a. Enter merchant **First name** and **Last name**

b. To activate the merchant account, in **Active** field select "**Active**" from the dropdown list

c. Enter merchant **E-mail** address, which will be used as a login credential to merchant account in POS Cockpit.

d. Provide merchant **Phone** number (in one of the acceptable format)

e. Enter **Password** to merchant account, which will be used as a login credential to account in POS Cockpit. Merchant <u>will not receive</u> password to his account automatically via email/sms message. You have to give it to him "in person".

f. Assign **POS** to merchant by selecting from the dropdown list POS name

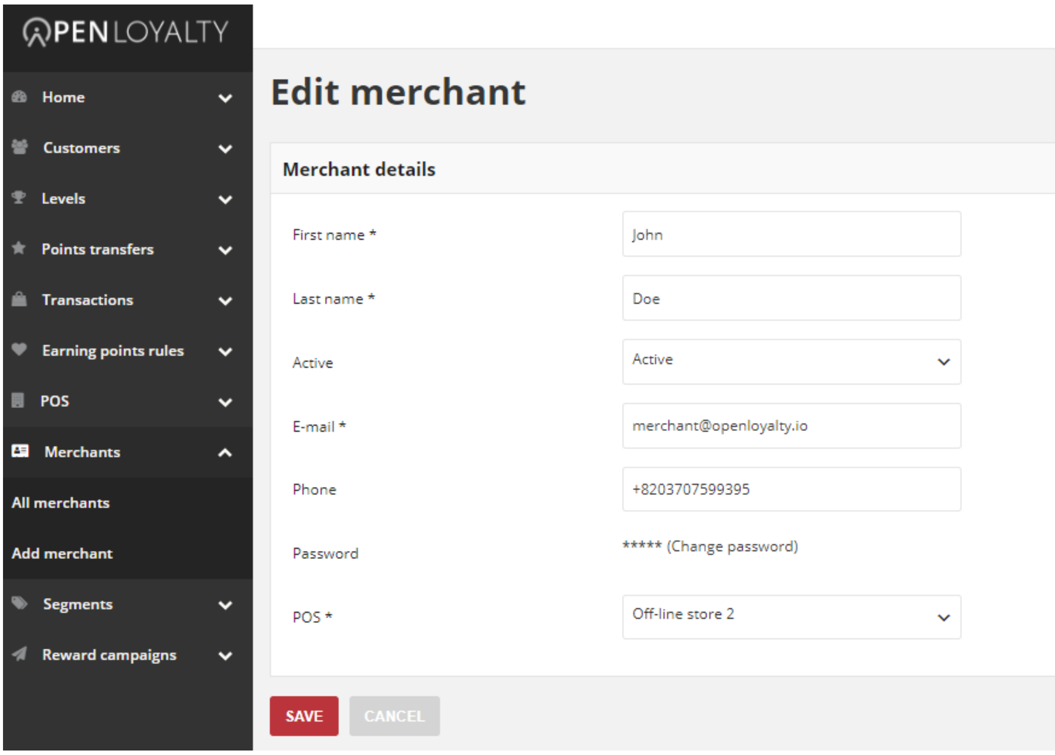
g. Mark **Allow to add a new transfer points** checkbox to allow merchant to manage customers points transfers (add, spend, cancel, deduct points amount etc.) from the POS Cockpit

3. When complete, tap **Save**

Your password must be eight or more characters long, and contains at least one upper case letters, one numeric character and one special character

Updating Merchant account

You can edit information about your merchants, including all their data provided during account creation process and password. Obviously Merchant can also edited all listed data (including password) from his account in POS Cockpit.



Merchant Account Editing

To edit a merchant account:

1. On the Admin sidebar, tap **Merchants** Then, choose **All merchants.**
2. In the Merchants list, find the record to be edited and click **Edit** ( ) icon in the Action column to open the merchant in edit mode.
3. Make any necessary changes to the merchant account.
4. When complete, tap **Save**

To change a password to merchant account:

1. On the Admin sidebar, tap **Merchants** Then, choose **All merchants.**
2. In the Merchants list, find the record to be edited and click **Edit** ( ) icon in the Action column to open the merchant in edit mode.

3. In **Password** field click **Change password** link. After clicking the field will be blank.
4. Provide a new password in blank **Password** field
5. When complete, tap **Save**

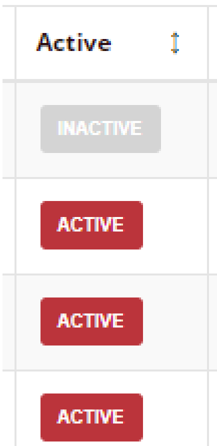
The same like during merchant account creation, merchant will not receive password to his account automatically via email/sms message. You have to give it to him "in person".

Activate/deactivate merchant account

Any merchant account from the list can be activated and deactivated by Admin user.

To activate/deactivate level:

1. On the Admin sidebar, tap **Merchants**. Then, choose **All merchants**. You can also deactivate/activate merchant account from **Edit mode**.
2. In the Merchants list, find the merchants to be deactivated and click **Active** in the **Active** column. The button in the column change to ***Inactive*** and appear as a grey-out.



Active Column

When you deactivate account, merchant will not be able to login to his account in POS Cockpit.

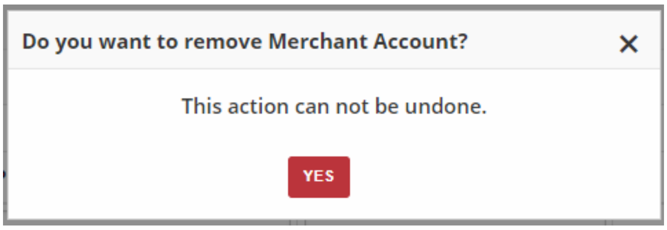
3. To activate the merchant account click **Inactive** in the **Active** column. The button in the column change to ***Active*** and appears as a red.

Remove merchant account

You can also delete merchant account from the Admin.

To delete a merchant account:

1. On the Admin sidebar, tap **Merchants** Then, choose **All merchants.**
2. In the Merchants list, find the record to be edited and click **Remove** ( ) icon in the Action column to delete the merchant account.
3. System display a message asked you to confirm the action. To confirm tap Yes

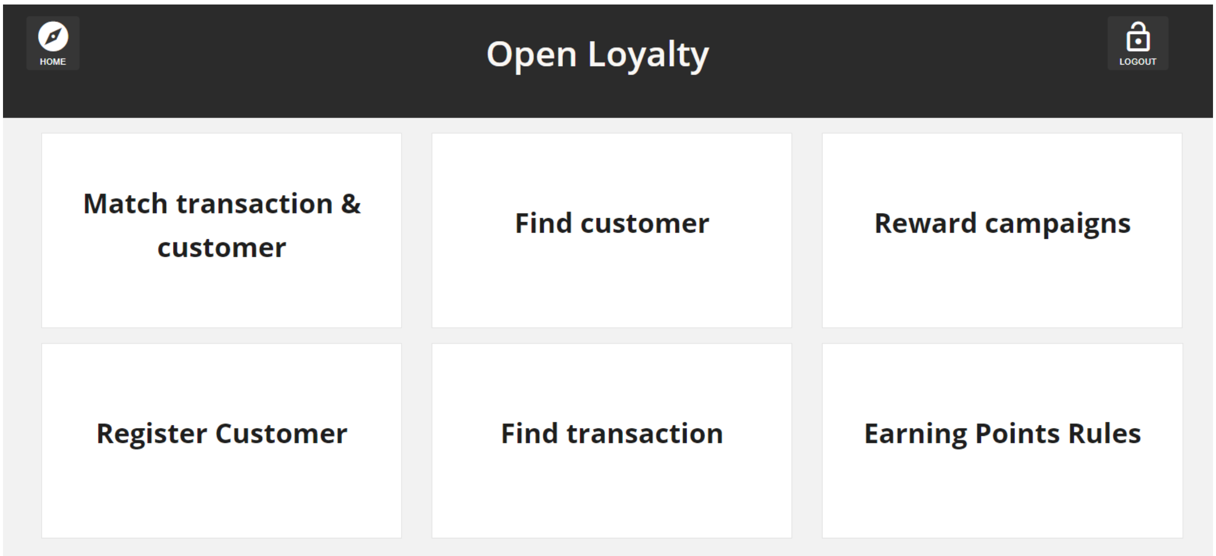


Removing Merchant Action

CHAPTER 18:

POS COCKPIT

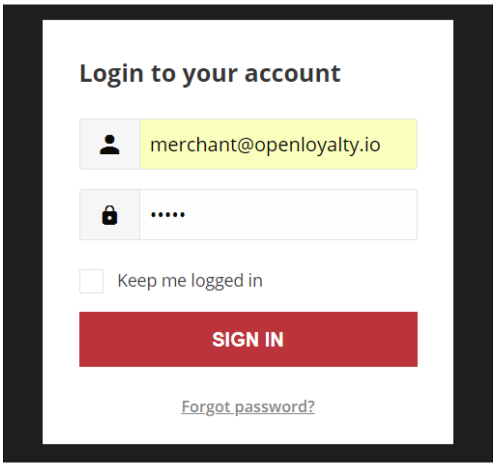
Merchants are linked with a store and Point of Sale (POS) device. PoS device play an important role in implementation of the Loyalty Program. The sale can be done by webshop or stationary by retailers to customers – but in that case only through PoS devices. This chapter gives an overview of the use of PoS Cockpit.



POS Cockpit Home Page

POS Cockpit Sign In

Merchants have easy access to their account from their POS. Merchants can be redirected to POS cockpit as loyalty module within your POS.



Sign In to POS Merchant Account

When merchants forgot their passwords, a reset link is sent to the email address that is associated with the account.

To sign in to your merchant account:

1. Click a link on the POS to open Login page
2. When prompted, enter the **Email Address** that is associated with customer account, and **Password**. Then, tap **Sign In**

To reset your merchant account password:

1. On the Login page, tap **Forgot password?**
2. When prompted, enter the **Email Address** that is associated with your account, and tap **Recover Password**

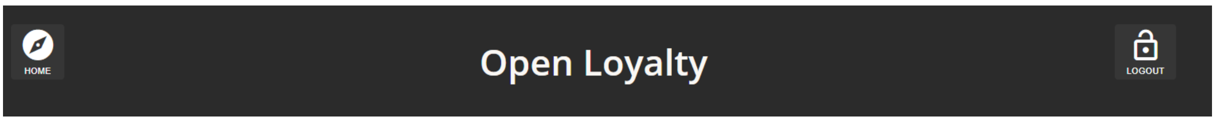
   If the email address you entered matches the one that is associated with the account, you will receive a "Password reset requested" email with a link to reset your password
3. Click the **Reset Password link** in the email and enter your **New Password**. Enter it again to confirm.

Your password must be eight or more characters long, and contains at least one upper case letters, one numeric character and one special character

When you receive confirmation that the password is updated, you can use the new password to log in to your account.

To sign out of the merchant account:

In the upper-right corner, tap the **Logout** (LOGOUT) icon.



Logout

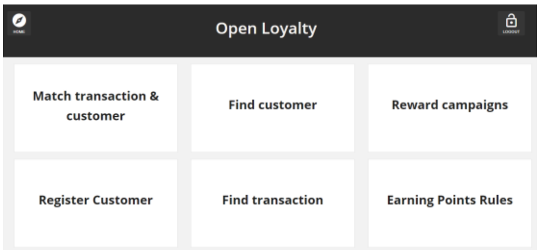
When merchant logout, the Sign-In page returns.

Merchant Account

Merchant through theirs account can view basic customer data and activity within Loyalty Program, and manage their own personal information.

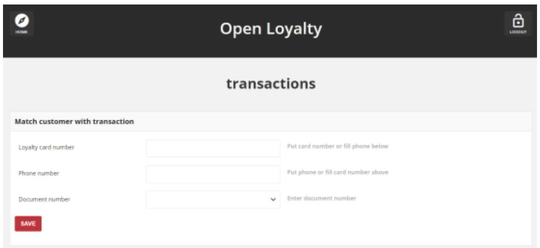
Your till is equipped with a touchscreen displaying the Open Loyalty POS Cockpit. Touch a control element (e.g. buttons, entry fields, etc.) displayed on the screen using your finger or a blunt object. The control element is activated and the function requested is executed.

The general elements described below provide you with transaction details, loyalty program operations and allow you to enter information or select functions displayed.



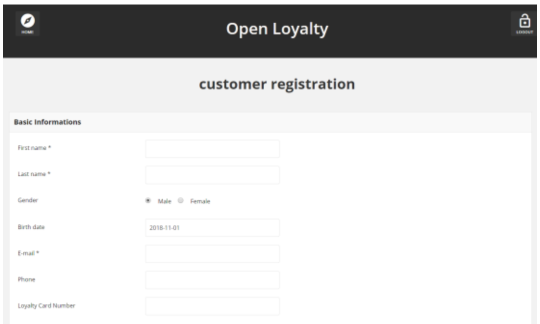
Home Page

The POS Cockpit Home page provides button links to main details of loyalty activities: transactions, customers, Earning Rules and Reward Campaigns.



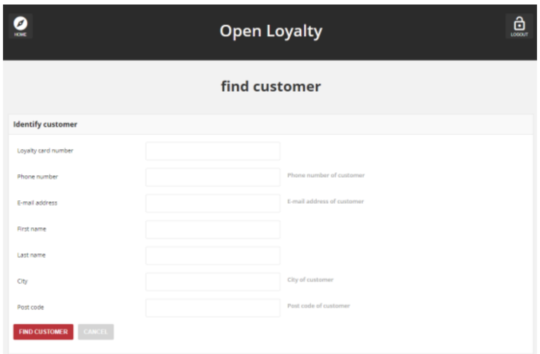
Match transaction & customer

Allows to link transaction with Customer Account directly from the POS. Based on matching transaction with customer identification factors priority (set up in Configuration. To remain about identification factors please see **Configuration.** Useful when only transactions are sent to Open Loyalty



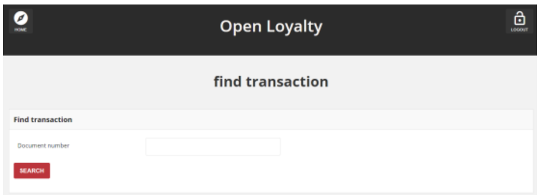
Register customer

Allows to register new customer directly from the POS. Useful when new customer want to register to Loyalty Program during his shopping in a store.



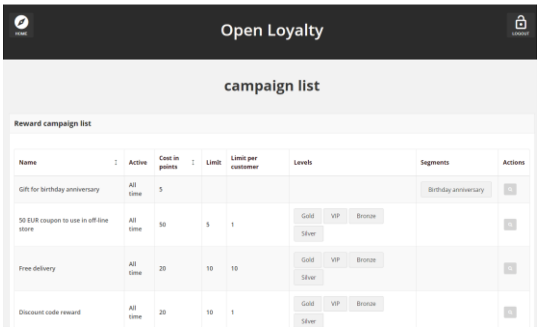
Find customer

Allows to find specify customer with a link to each to preview his profile details directly from the POS.



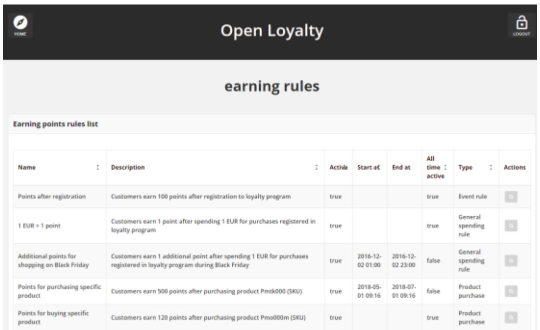
Find transaction

Allows to find specify transactions and preview its details directly from the POS with a link to each to see more information.



Reward campaigns

Lists all available rewards with details about target, limits, cost in points and status with a link to each to see more information.



Earning Rules

Lists all available rewards with description and details about type, time boundaries when rule is active and status with a link to each to see more information.

SEGMENTS

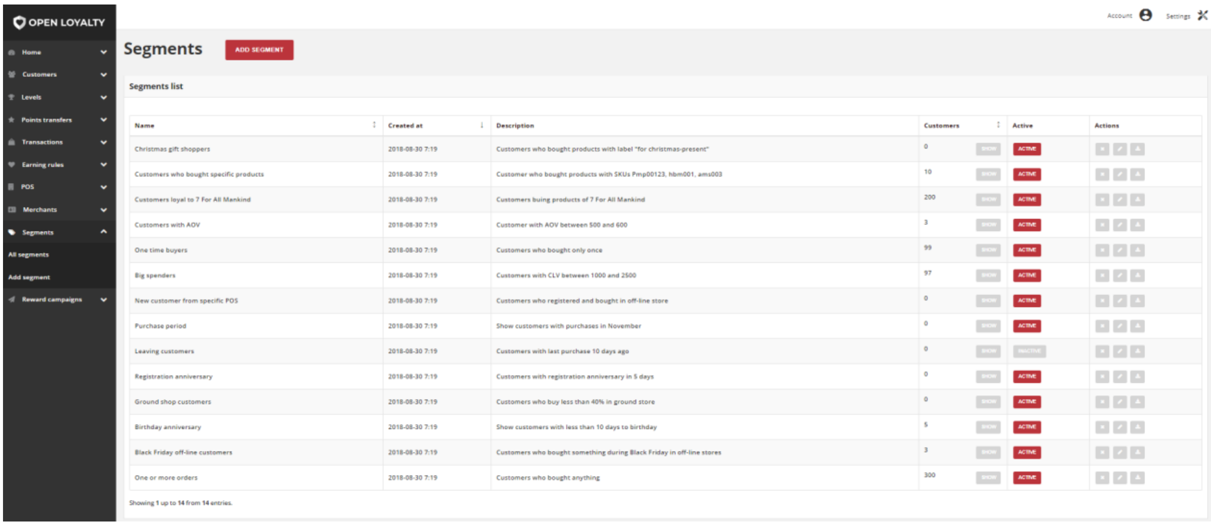
In this section of the guide you will become familiar with the customer segmentation feature, and learn to configure customer segments according to your preference. You will also learn how to create and assigned customers to segments, that can be referenced in rewards, earning rules, levels etc.

CHAPTER 19:

SEGMENTS MENU

Customer segments allow you to e.g. dynamically count points, levels and display rewards to specific customers, based on properties such as system events, transactions history, purchasing activity, and so on. Customer can be assigned to several segments.

You can optimize marketing initiatives based on targeted segments. You can also preview and export the list of targeted customers. Because customer segment information is constantly refreshed, customers can become associated and disassociated from a segment as they shop in your store.

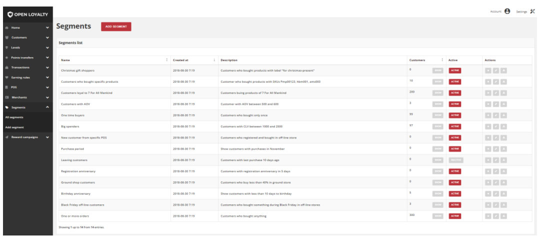


Segments

To display the Segments menu:

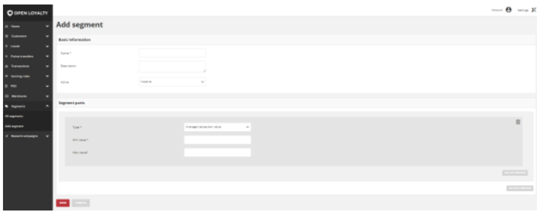
On the Admin sidebar, tap **Segments**, then choose **All segments**.

Menu options



All segments

Lists all customer segments within your loyalty program with brief description of each and additional information regarding assigned customers. There is also possibility to preview and export the list of targeted customers

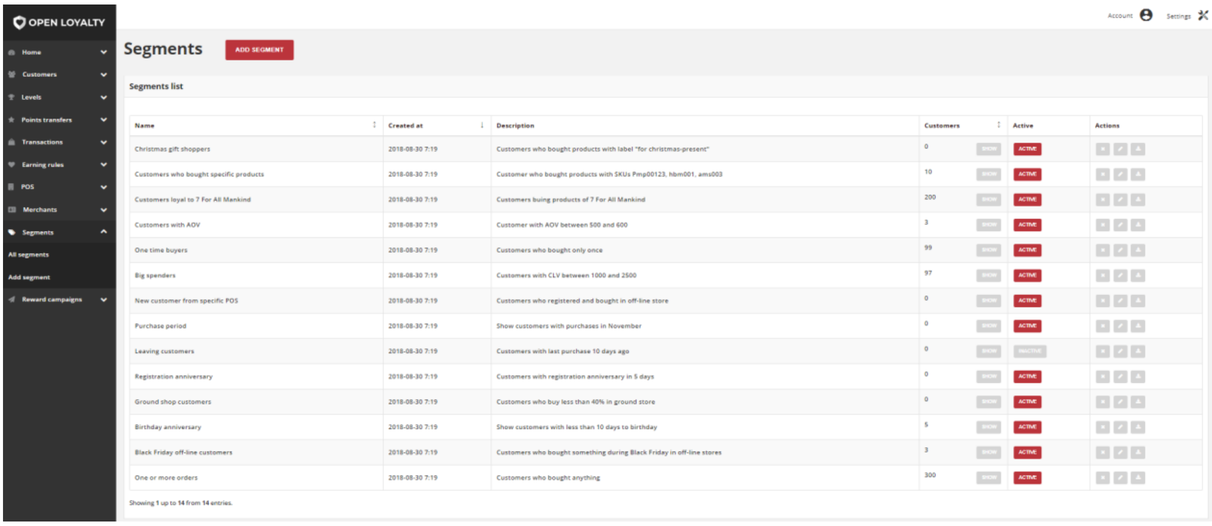


Add segment

Lists all data that need to be filled out to create new segment

All Segments

The All segments grid provide information about all segments within your Loyalty Program with information about assigned customers. Moreover, you can also export the list of targeted customers.



All Segments

Use the standard controls to sort the list and apply actions to selected segments (modify, remove, active/inactive, export customer list). Pagination controls appear if there are more segments records than fit on the page, and are used to move from one page to the next.

Field description

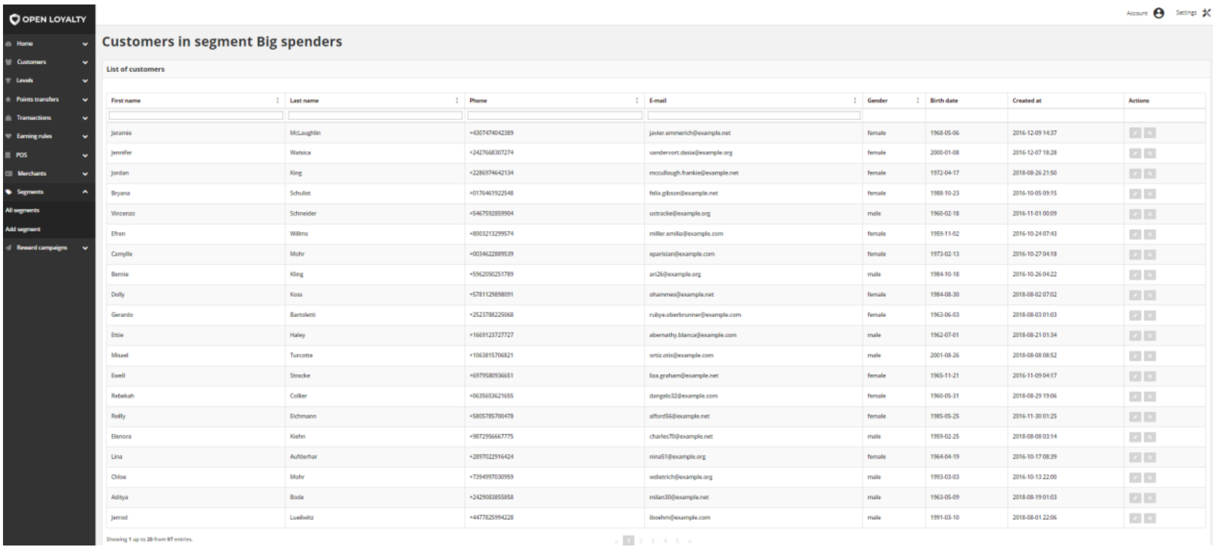
FIELD	DESCRIPTION
Name	Name of the segment
Created at	The date when segment was created
Description	Brief description of the segment
Customers	Show customers account number assigned to this segment. After **Show** click, list of these customer details will be shown.
Active	Segment current status. Option include: Active/Inactive. Customer could be assigned only to Active segment.
Actions	The operations that can be applied to selected segments. Options include: • Edit segment data • Delete segment • Download list of customers details assigned to this segment

Customers assigned to segment list

You can simply view not only the number but also the list of customers with details assigned to particular segment.

To display the list of customers:

1. On the Admin sidebar, tap **Segments**. Then, choose **All segments**.
2. In the Segments list, find the segment that you want to see customers list and click **Show** in the **Customers** column. After clicking, the list of customers will be opened, filtered according to the assigned segment.



List of Customers in Big Spenders Segment

Use the standard controls to sort the list, filter and search customer by typing in the field under column header value you want to find, and apply actions to selected customers (edit and view detail). Pagination controls appear if there are more customer records than fit on the page, and are used to move from one page to the next.

Download the Customers list

There is also possibility to download a list of customers to a CSV file.

To download the list of customers assigned to a segment:

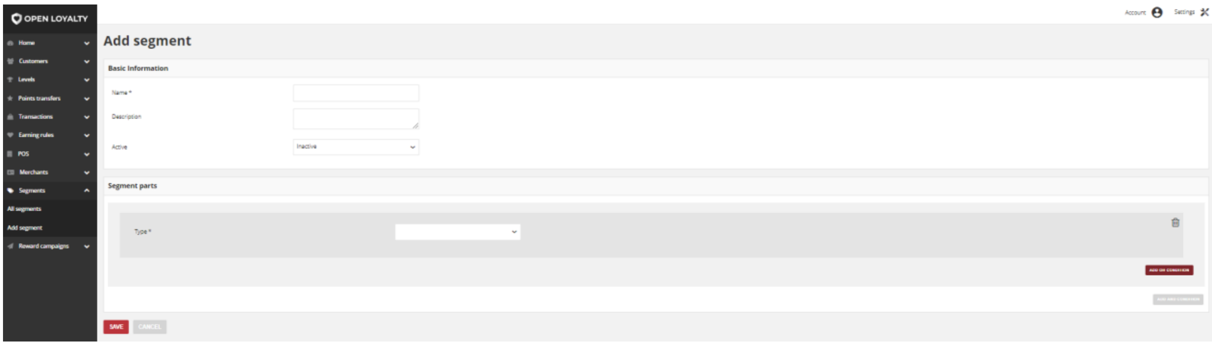
1. On the Admin sidebar, tap **Segments**. Then, choose **All segments**
2. In the Segment list, find the segment that you want download customers list and click **Download** ( ) icon in the **Action** column.

   After clicking, the list of customers will be download in .CSV format.

CHAPTER 20:

CREATING CUSTOMER SEGMENT

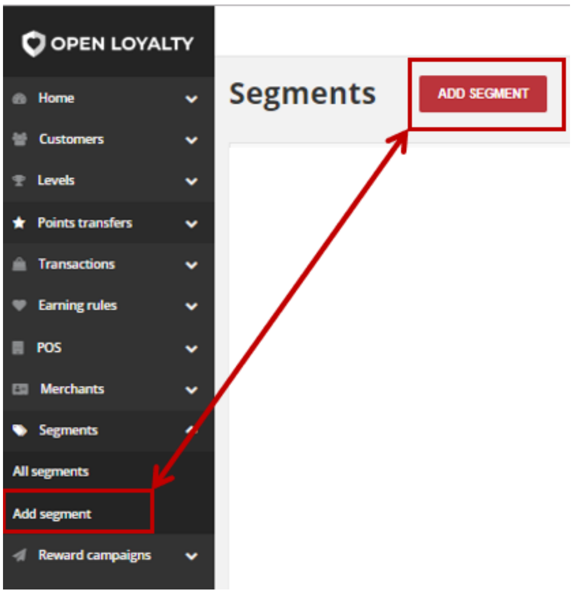
You can create unlimited amount customizable customers segments for your loyalty program based on various criteria's.



Add New Segment

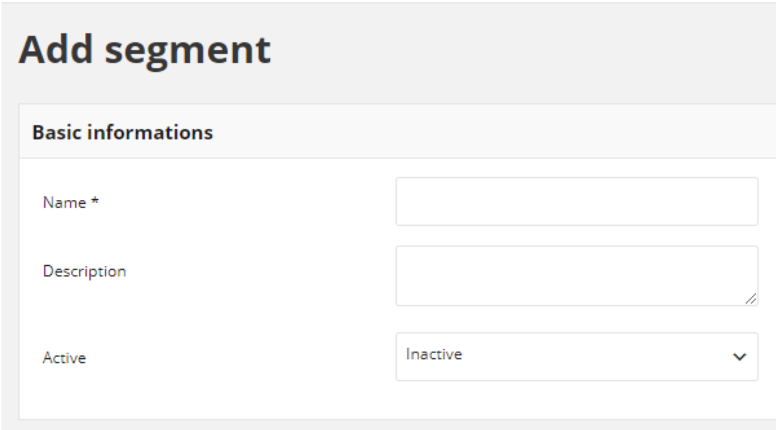
To create a New Customer Segment:

1. On the Admin sidebar, tap **Segments**. Then, choose **Add segment**. You can also add segment directly from **All segments** list by clicking **Add segment** at the top of the page.



Add Segment Options

2. In the **Basic informations** section, do the following:



Basic Informations Section

a. Enter a unique segment **Name** to identify the customer segment when working in the Admin

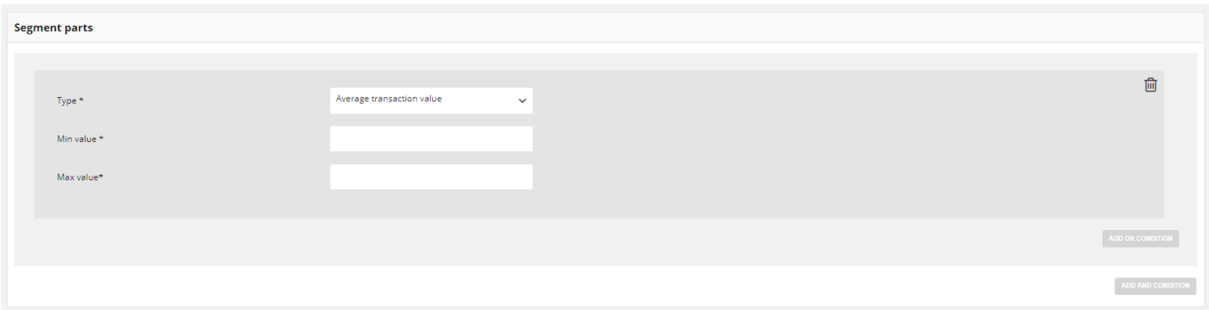
b. Enter a brief **Description** that explain purpose of the segment for internal reference

c. To activate the customer segment, in **Active** field select “**Active**” from the dropdown list

3. In **Segment Parts** set the conditions that must be met to assign the customer to this segment. One Segment consists of one or more conditions. Conditions can be combined through AND and OR logical operators.

a. **AND Condition** is used to perform a logical conjuction on two conditions. Both conditions linked with this operator must be true. For example, you can create segment with a list of customers who made purchase in specific POS and bought specific SKU. The list will contain customer who met both, 1st and 2nd condition.

b. **OR Condition** is used to perform a logical disjunction on two conditions. At least one of conditions linked with this operator must be true. For example you can create segment with a list of customers who made purchase in specific POS or bought specific SKU. List will contain customer who met only the 1st condition, who met only the 2nd condition and met both conditions.



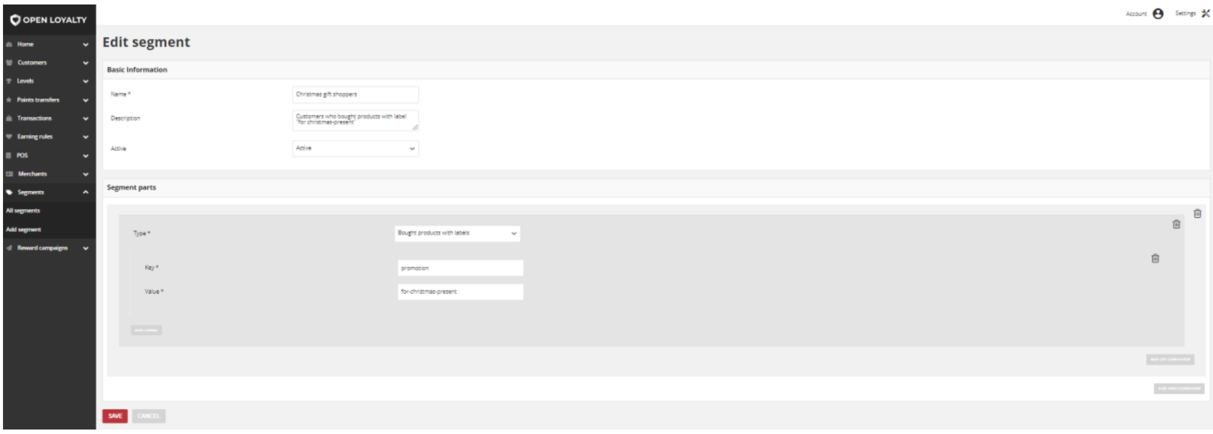
Segment Parts Section

To learn more about conditions type, see **Segment parts types**

4. You can simply remove condition by clicking bin ( ) icon in a particular row.
5. When complete, tap **Save**

Updating segments data

You can edit all data provided during segment creation process. You can update segment data by selecting it's record from **All segments** list.



Segment Edition

To edit a Segment:

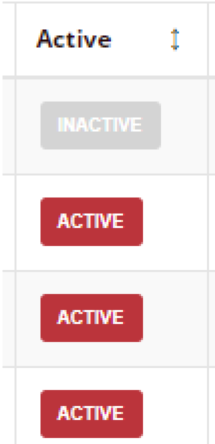
1. On the Admin sidebar, tap **Segments**. Then, choose **All segments**.
2. In the Segments list, find the record to be edited and click **Edit** ( ) icon in the Action column to open the segment in edit mode.
3. Make any necessary changes to the segment data
4. When complete, tap **Save**

Activate/deactivate Segment

Any Segments from the list can be activated and deactivated by Admin user.

To activate/deactivate Segment:

1. On the Admin sidebar, tap **Segments**. Then, choose **All segments**. You can also deactivate/activate segment from **Edit mode**
2. In the Segments list, find the segment to be deactivated and click **Active** in the **Active** column. The button in the column change to ***Inactive*** and appear as a grey-out.



Active Column

When you deactivate segments, customers accounts assigned to this level will not be refreshed and new customers will not be associated to it.

3. To activate the segment click **Inactive** in the **Active** column. The button in the column change to ***Active*** and appears as a red.

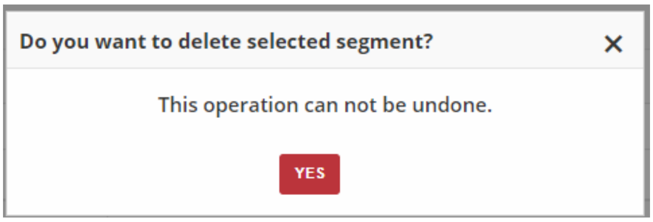
Customer can be assigned only to Active segments

Remove Segment

You can also delete Segment from the Admin.

To delete a Segment:

1. On the Admin sidebar, tap **Segments** Then, choose **All segments.**
2. In the Segments list, find the record to be deleted and click **Remove** ( ) icon in the Action column to delete the segment.
3. System display a message asked you to confirm the action. To confirm tap **Yes**



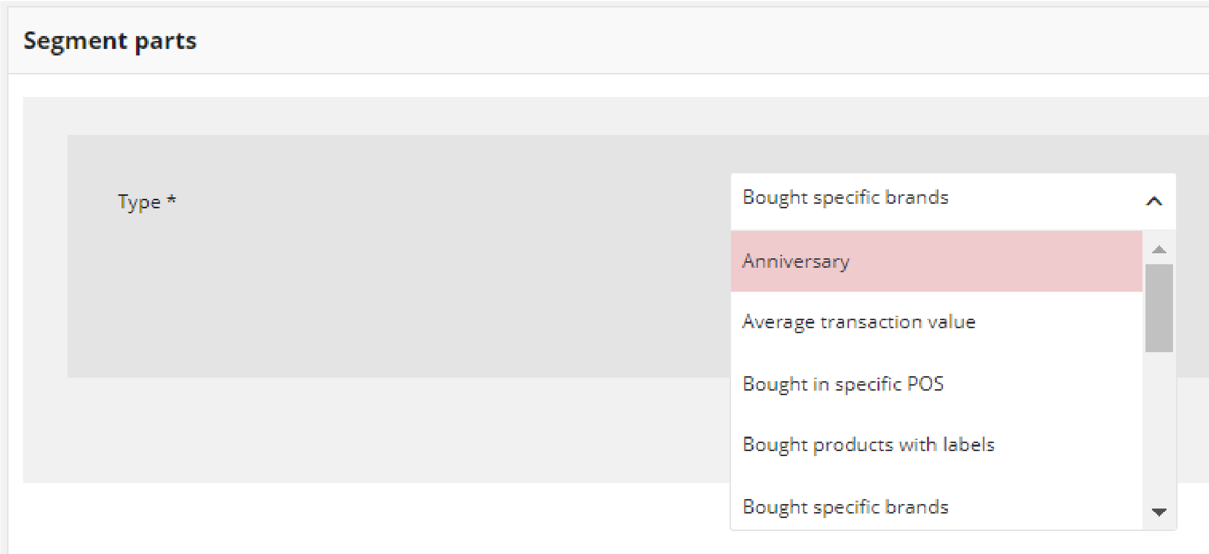
Removing Segment Action

CHAPTER 21:

SEGMENT PARTS TYPES

The assignment process is carried out by the application based on defined rules. Customers who meet all criteria will be assigned to the segment. The criteria consist of conditions that can be combined through AND (conjuction of sets) and OR (disjunction of sets) logical operators.

During creation of Segment you must specify Segment parts type, describing conditions for assigning customer. Every type has its own required fields that must be filled, to specified condition.



Segment Parts Types

Open Loyalty offer following standard types:

a. **Anniversary** – Customers who have registration/birthday anniversary in specify number of days

b. **Average transaction amount** – Customers whose average transaction value is between the limits

c. **Bought in specific POS** - Customers who made purchase in selected POS

d. **Bought products with labels** - Customers who bought products where label on product is one of the list

e. **Bought specific brands** – Customers who bought products of a given brand

f. **Bought specific SKU** – Customers who bought specific products (on the basis of selected SKU)

g. **Custom customer list** – Any Customers selected by admin

h. **Customer who has such labels** – Customers whose label on is one of the list

i. **Customers who has such labels value** – Customers whose labels value on is one of the list

j. **Last purchase was n days ago** – Customers who have made their last purchase n-days ago

k. **Purchase period** – Customers who made purchase (at least one) between the specified days

l. **Transaction count** – Customers whose number of purchases is within the defined range

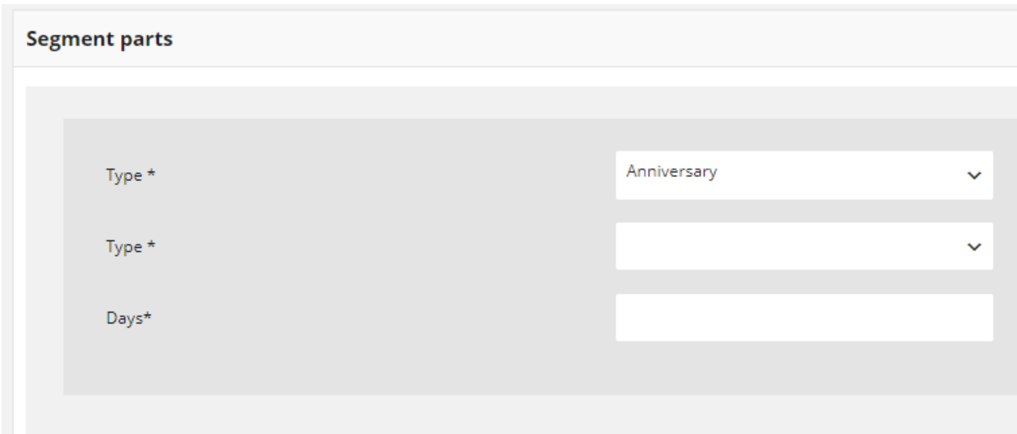
Anniversary

Segment of customers who have registration or birthday anniversary in specify number of days . During creation, you need to specify whether to include dates of birth or registration dates and number of **days** before anniversary occurs.

For example, you can create segment of customers who have birthday within 14 days from today.



Anniversary Type

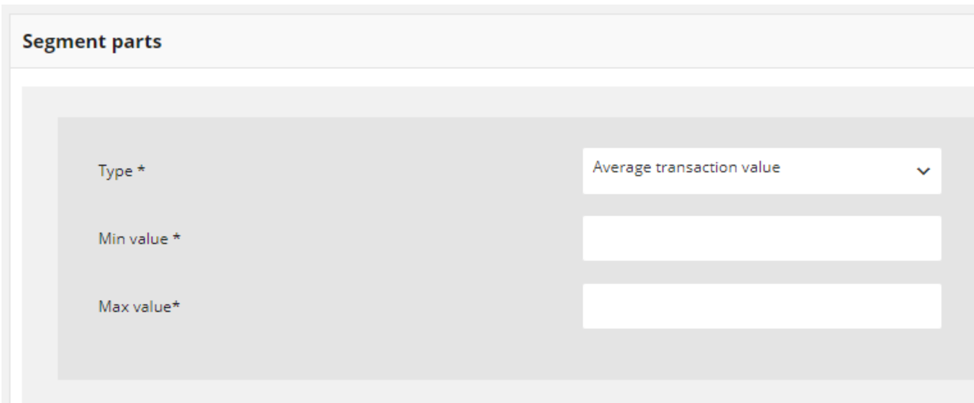
Field description

FIELD	DESCRIPTION
Type	Anniversary type. Options include: • Birthday • Registration

Days	Number of days before anniversary occurs For example, if **Days is equal 1** then all customers who e.g. have birthday today or register account today or at the same date like today but in previous years will be assign to this segment. If **Days** is equal 5 then all customers who e.g. have birthday within 5 days (including today) or registered account within 5 days in previous years (including today) will be assign to the segment.

Average transaction value

Segment of customers whose average transaction value is within the defined range. During creation, you need to specify **Minimum** and **Maximum** value to define the range in which the average transaction amount must be found.



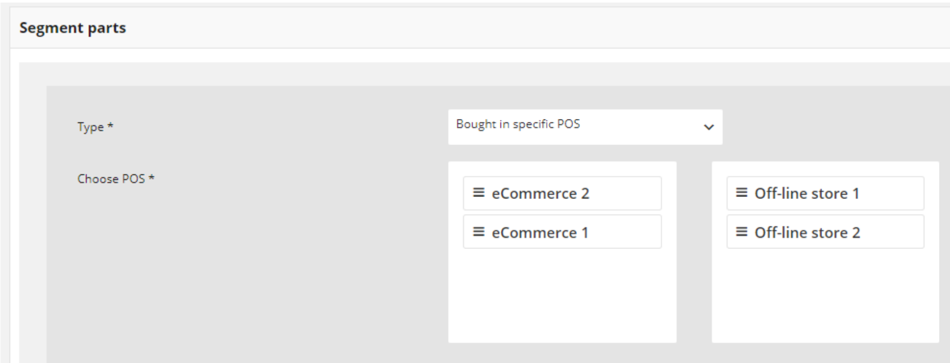
Average Transaction Value Type

Field description

FIELD	DESCRIPTION
Min value	Determines the minimum value of the average transaction amount of customer account
Max value	Determines the maximum value of the average transaction amount of customer account

Bought in specific POS

Segment of customers who have made purchase (at least one) in selected POS. During creation, you need to specify list of one or more stores (POS) that will be included. You create the list by drag the selected POS name from left column to the right one.



Bought in POS Type

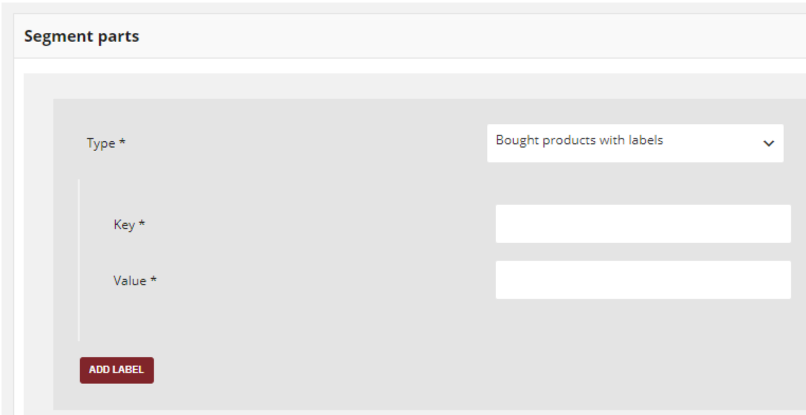
Field description

FIELD	DESCRIPTION
Choose POS	First column list all available POS within your Loyalty Program. Second column list all selected POS which transaction will be included. To choose POS drag the POS name to the second column.

Bought products with labels

Segment of customers who bought products where label on product is one of the list. Labels are key-value pairs that you can attach to a products. Each of list element has two values – **Key**, which is a label name, and **Value,** which is a label value. Both field need to be filled out.

Enter your key and value to add a product label. To apply additional labels, click **Add label**



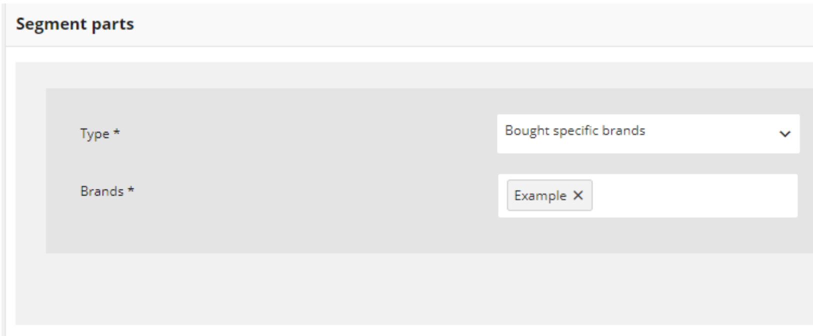
Bought Labels Type

Field description

FIELD	DESCRIPTION
Key	Product label name
Value	Value of product label with specified in previous step **Key**

Bought specific brands

Segment of customers who bought product or products of a given brand. During creation, you need to specify one or more **Brands** that will be included.



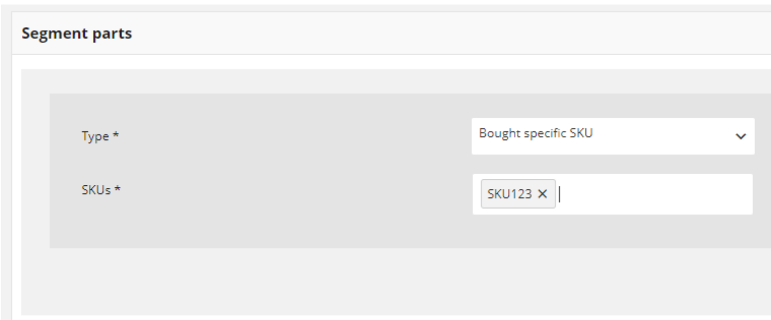
Bought Brands Type

Field description

FIELD	DESCRIPTION
Brands	Selected Brands

Bought specific SKU

Segment of customers who bought specific products (on the basis of selected SKU). During creation, you need to specify one or more **SKUs** that will be included.



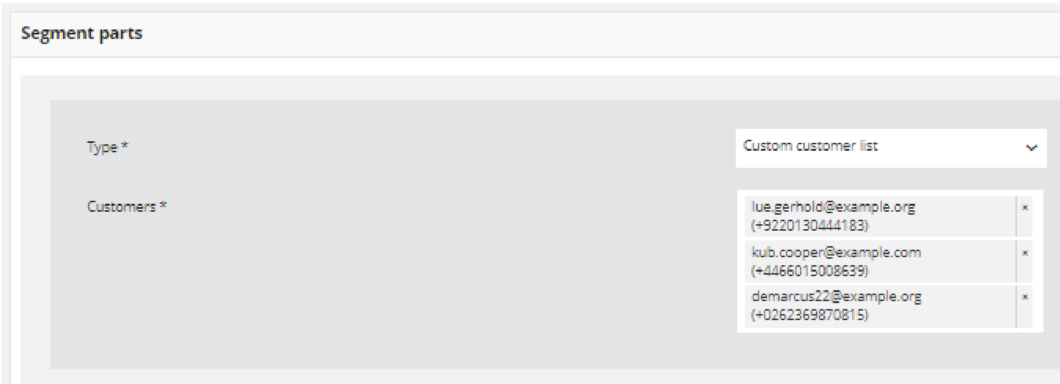
Bought SKUs Type

Field description

FIELD	DESCRIPTION
SKUs	Selected products

Custom customer list

Segment of customers chose by admin user on demand. During creation, you need to specify email address or phone number of every customer that you want to add.



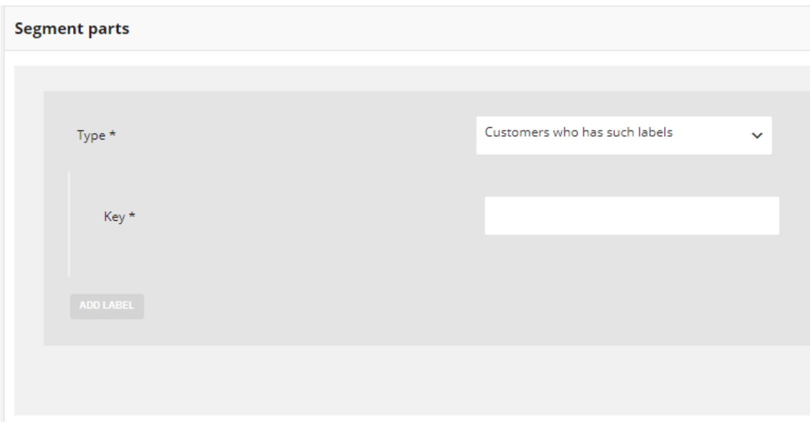
Custom customer list

FIELD	DESCRIPTION
Customers	Selected Customers

Customers who has such labels

Segment of customers whose label value on is one of the list. Labels are key-value pairs that you can attach to a customer during **customer account creation**.

Enter your label **Key** to add a customer label that will be included. To apply additional labels, click **Add label**



Customers Labels Type

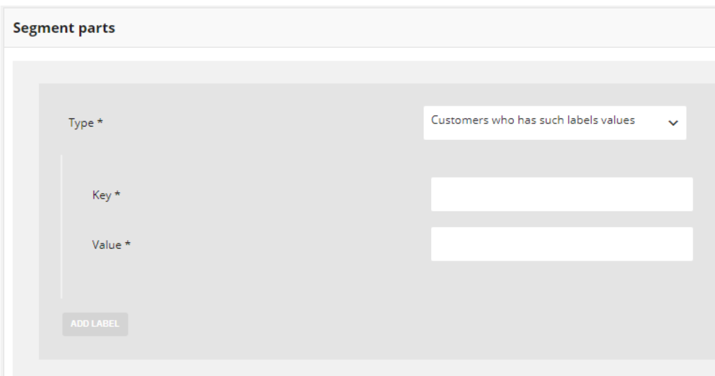
Field description

FIELD	DESCRIPTION
Key	Customer label name

Customers who has such labels value

Segment of customers whose label value on is one of the list. Labels are key-value pairs that you can attach to a customer during **customer account creation**. Each of list element has two values – **Key**, which is a label name, and **Value,** which is a label value. Both field need to be filled out.

Enter your key and value to add a customer label that will be included. To apply additional labels, click **Add label**



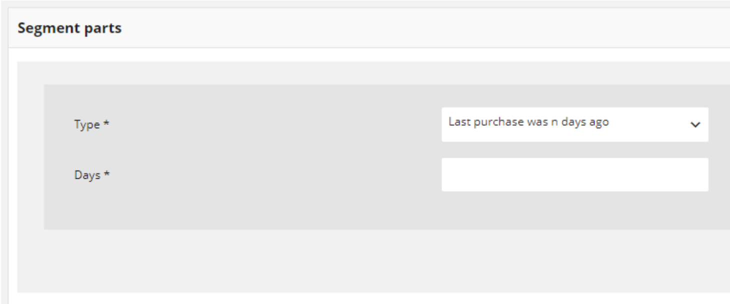
Customer Labels Value Type

Field description

FIELD	DESCRIPTION
Key	Customer label name
Value	Value of customer label with specified in previous step **Key**

Last purchase was n days ago

Segment of customers who have made their last purchase n-days ago. During creation, you need to specify number of **Days** back, that will be included.



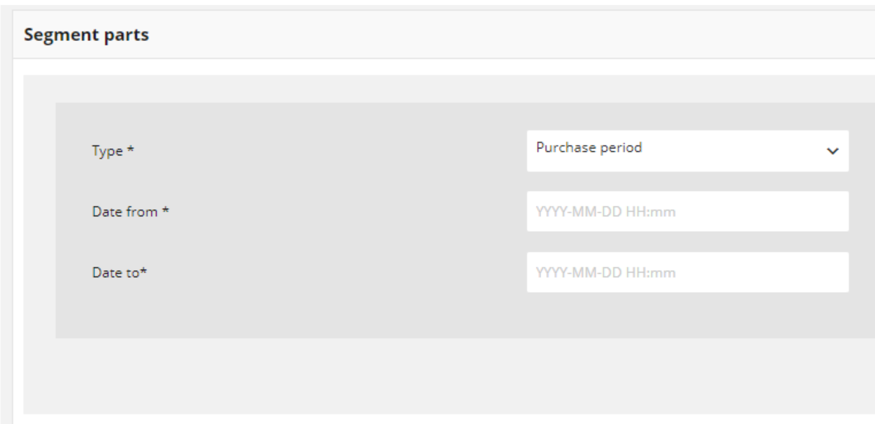
Last Purchase Type

Field description

FIELD	DESCRIPTION
Days	Number of days back For example, if **Days** is equal to 7 then all customers, who made their last purchase within 7 days back from today will be assigned to segment

Purchase period

Segment of customers who made purchase (at least one) between the specified date range. During creation, you need to specify the start and end date that will create a time boundaries from which purchases will be included.

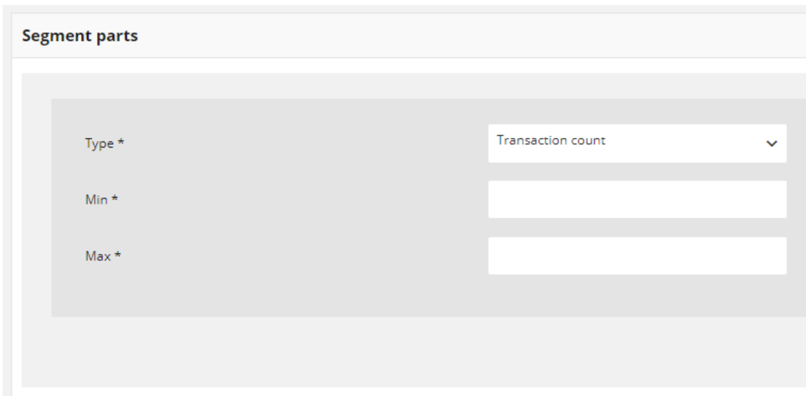


Purchase Period Type

FIELD	DESCRIPTION
Date from	Start date from which customers purchases will be included
Date to	End date until which customers purchases will be included

Transaction count

Segment of customers whose number of purchases is within the defined range. During creation, you need to specify **Minimum** and **Maximum** number to define the range in which the number of transactions must be found.



Transaction Number Type

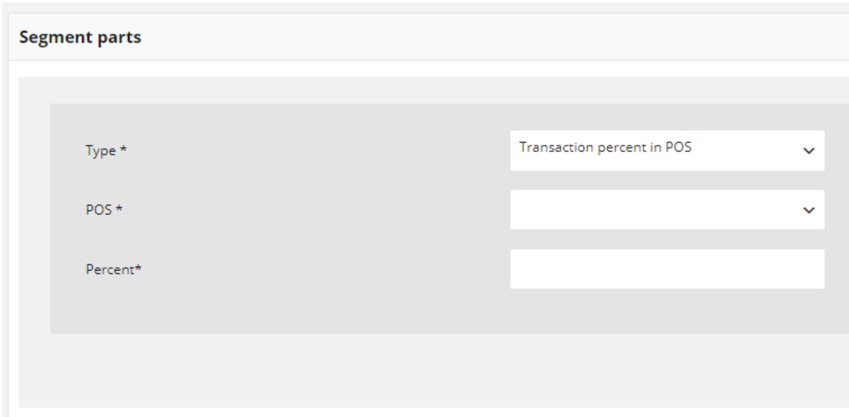
Field description

FIELD	DESCRIPTION
Min	Determines the minimum number of transactions of customer account
Max	Determines the maximum number of transactions of customer account

Transaction percent in POS

Segment of customers whose number of purchases in a specified POS is within defined percent amount. During creation, you must specify one **POS** (store) that will be included and transaction percentage to be analyzed within that POS.

For example, you can create a segment of customers whose 20% of all transactions are transactions in a given POS.



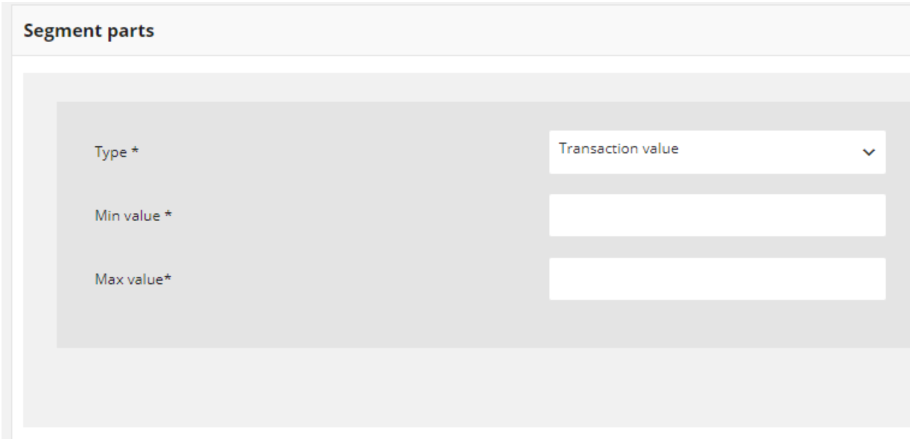
Transaction Percent Type

Field description

FIELD	DESCRIPTION
POS	Store which transaction will be included. To choose store select POS name from a dropdown list
Percent	Percent amount of transaction in a selected POS

Transaction value

Segment of customers whose overall amount of purchases is between the limits. During creation, you need to specify **Minimum** and **Maximum** value to define the range in which the value of all transactions must be found.



Transaction Value Type

Field description

FIELD	DESCRIPTION
Min value	Determines the minimum value of all transactions value of customer account
Max value	Determines the maximum value of all transactions value of customer account

REWARD CAMPAIGNS

In this section of the guide you will be familiar with creating and managing rewards available within your Loyalty Program. You will learn what type of rewards can be choose, how to assigned reward to specify customers, define activity time and manage reward details. You will also learn how to verify which rewards have been already redeemed and by which customers.

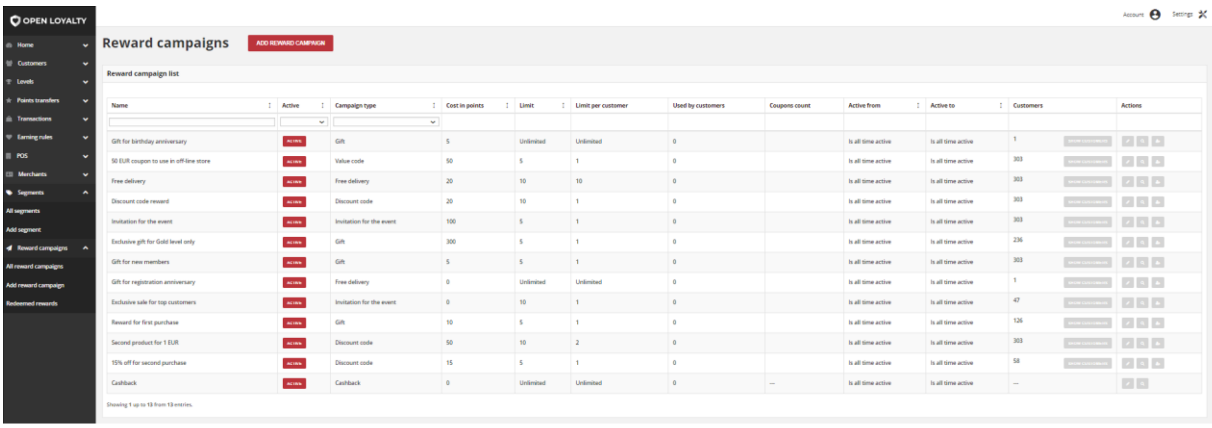
CHAPTER 22:

REWARD CAMPAIGNS MENU

Customers can redeem points toward various rewards, based on the cost in points of each that you establish during reward creation. When customer reaches the defined amount of points, points can be spent for a reward. Redeemed reward appears automatically in Redeemed rewards menu. During creation you can specify for each reward e.g.:

- How many points customer need to spent to get reward
- How many times rewards can be used by one customer
- How many times reward can be used during all campaign
- To which customer reward will be visible and ready to use
- Time boundaries when reward will be active
- Reward value & taxes information
- Category to which reward belongs
- Reward brand information

For example, a coupon code can be created for a specific customer group, or for anyone who makes a purchase over a certain amount (segment). To apply the coupon to a purchase, the customer can enter the coupon code in your online store, or possibly at the cash register of your offline store.

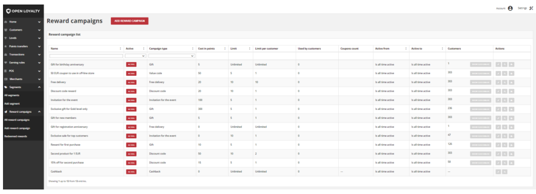


Reward Campaign Menu

To display the Reward campaigns menu:

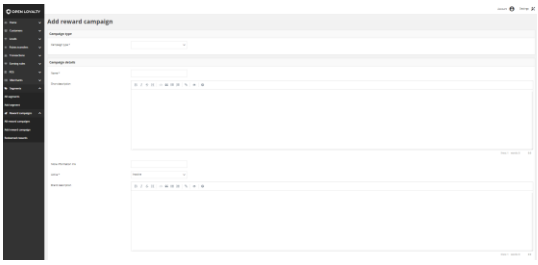
On the Admin sidebar, tap **Reward campaigns** , then choose **All reward campaigns**.

Menu options



All reward campaigns

Lists all rewards within your loyalty program, with additional information about its type, activity, limits, points costs and customers who can redeem each reward.

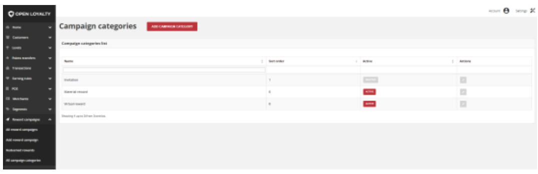


Add reward campaign

Lists all data that need to be filled out to add new reward to your Loyalty Program

Redeemed rewards

Lists all redeemed rewards with additional information who and when redeemed reward and it’s status – delivered or used.

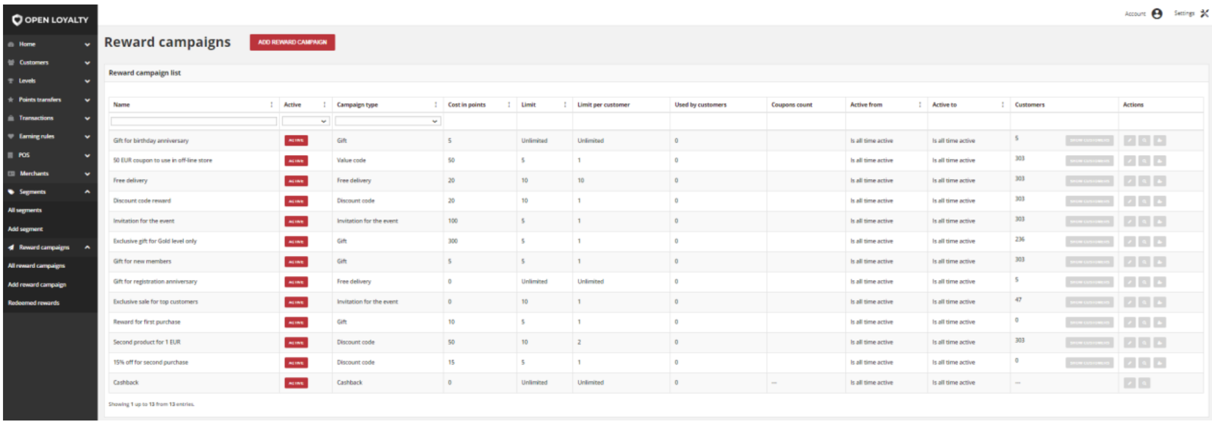


All campaign categories

Lists all reward campaign categories within your loyalty program, with additional information about its status and sort order

All reward campaigns

The All reward campaigns grid provide information about all rewards within your Loyalty Program with information about type, status, cost in points, limits of use, if and how many times reward has been used by customers and time boundaries of activity. Moreover, you can also see how many customers could use reward and preview theirs details.



All Reward Campaigns

Use the standard controls to sort the list, filter and search rewards by typing in the field under Name column header value you want to find, and apply actions to selected rewards record (modify, preview details). Pagination controls appear if there are more rewards records than fit on the page, and are used to move from one page to the next.

Field description

FIELD	DESCRIPTION
Name	Name of the reward
Active	Reward campaign current status. It has higher priority than time ***Activity*** Option include: Active/Inactive. Customer can redeem only Active reward.
Campaign type	Reward type. Option include: • Percentage discount code • Cashback • Discount code • Free delivery • Gift • Invitation for the event • Value code • Custom campaign
Cost in points	How many points Customer must spend to redeem reward
Limit	Information about limit the redeem of rewards globally.

Limit per customer	Information about limit the redeem of rewards by one customer
Used by customers	Information how many times reward has been redeemed

Public	Define if the reward has an public attribute. Options include: true/false
Brand name	Reward brand name

Buy Reward campaign for Customer

Any active **Reward campaign** (except Cashback) can be assign manually by Admin user to selected customer account.

Admin user can create new or use existing reward campaign from ***All reward campaigns list*** to "buy" a reward for a customer using his points or just add it for free.

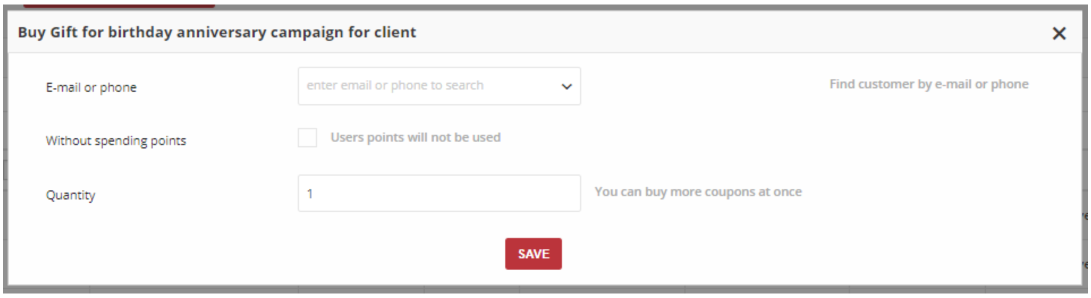
As an admin you can "buy" more than one coupon within one campaign at once. Note, that quantity is limited by Reward campaign limits (define during creation – Limit & Limit per customer)

To assign a Reward campaign to Customer:

1. On the Admin sidebar, tap **Reward campaigns**. Then, choose **All reward campaigns**.
2. In the ***Reward campaign list***, find the active reward campaign to be bought and click **Assign** ( ) icon in the Action column.

   Depending on the selected **Campaign type**, a window will display different fields to filled in. Different fields are required for Percentage discount code, than for other types i.e. discount code, free delivery etc.

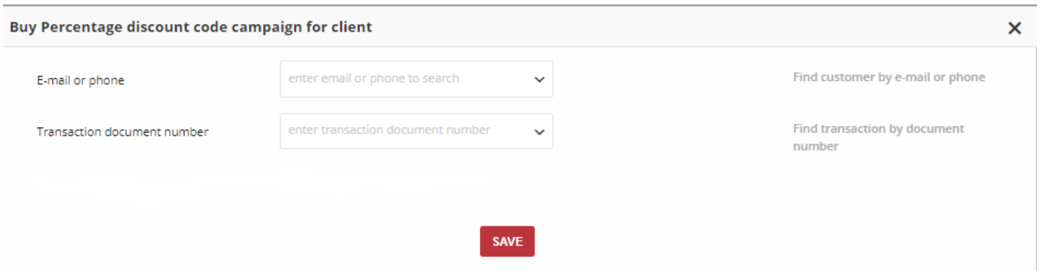
3. When you choose any other than ***Percentage discount code***, in the opened window do the following:



Buy reward campaign for client

   a. Provide **E-mail or phone** number of the customer to whom you want to assign the reward
   b. Mark **Without spending points** checkbox to give reward to a customer for free (without using his points). When unmarked, defined in Reward campaign details points amount (Cost in points) will be deducted from customer Active points pool
   c. In **Quantity** filed provide number of coupons to be assign to customer (remember about the reward campaign limits)
   d. When complete, tap **Save**

4. When you <u>choose</u> ***Percentage discount code***, additional field to assign it with transaction will be displayed instead ***Quantity***. In the opened window do the following:



Buy Percentage discount code for Client

   a. Provide **E-mail or phone** number of the customer to whom you want to assign the reward
   b. Ener **Transaction document number** belonging to selected in previous step customer. Value of this transaction will be a base to calculate percentage discount that customer receive.
   c. When complete, tap **Save**

5. Bought reward campaign appears on Redeemed rewards list.

Redeemed rewards

Redeemed reward is an instance of reward that Customer has bought with Points or earned for performing specified action.

There is possibility to get:

- virtual reward - as a Discount or Value Code, free delivery
- physical reward - which will be send to Customer, e.g. printed coupon, gift, etc.
- cashback

Not enough points

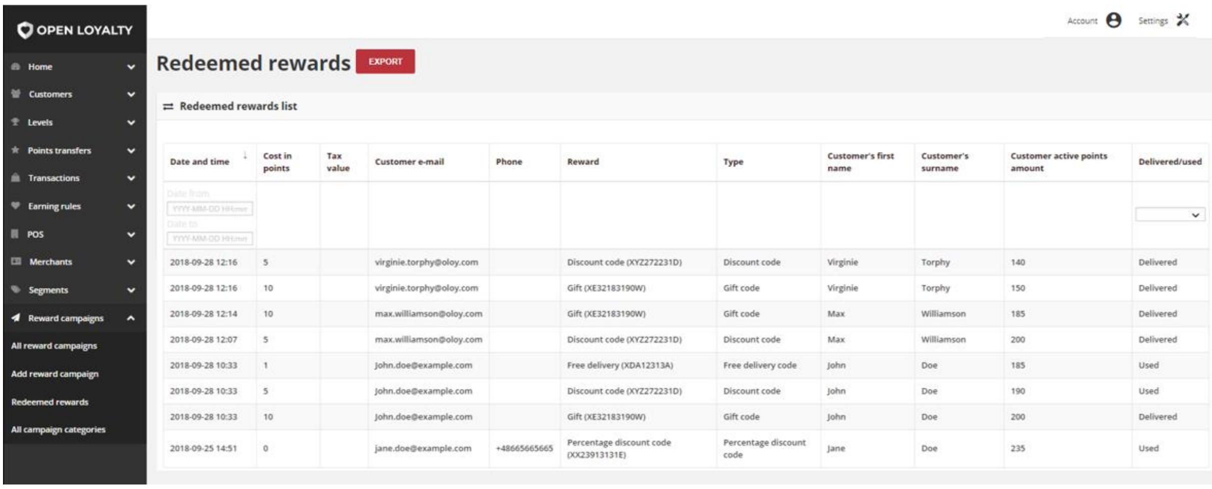
If Customer does not have enough points to redeem reward then Redeem reward button will be disabled (greyed out).

When mouse hover over disabled button then tooltip will show "You must have <<reward cost - customer active points>> more points to get reward.".

Redeemed reward from Admin perspective

Redeemed reward management could be performed only from Administrator Cockpit by user who has Admin privileges.

Redeemed rewards list grid provide an information about which customer and when redeemed given reward. Moreover, you can check whether reward is **Delivered** (customer choose reward and spent points but he has not used it yet) or **Used** (customer used coupon code during purchase, gift was sent to customer etc.)



Redeemed Rewards

Use the standard controls to sort the list by ***Date and time*** and filter list to get a register of reward that are ***Delivered*** or ***Used***. By default Redeemed rewards grid show both – delivered and used reward. Pagination controls appear if there are more redeemed rewards records than fit on the page, and are used to move from one page to the next

To see all Redeemed rewards:

1. On the Admin sidebar, tap **Reward campaigns**. Then choose **Redeemed rewards.**

Field description

FIELD	DESCRIPTION
Date and time	Date when reward was redeemed
Cost in points	Number of points that customer spent for this reward
Tax value	Value of tax for reward
Customer e-mail	Email address of customer who redeemed reward. E-mail address is used as an identification factor to verify which customer choose particular reward.
Phone	The customer's phone number. Can be used also as an identification factor.
Reward	Name of the reward with coupon code number in round brackets
Type	Reward type. Option include: • Cashback • Discount code • Custom campaign • Free delivery • Gift • Invitation for the event • Percentage discount code • Value code
Customer's first name	First name of customer who redeemed reward
Customer's surname	Last name of customer who redeemed reward

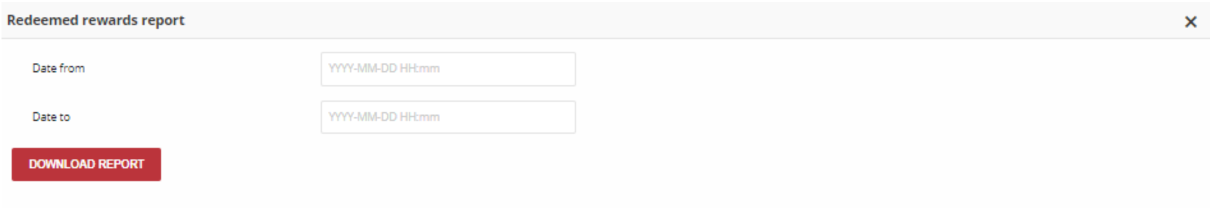
Delivered/Used	Redeemed reward statuses. Options include: • Delivered • Used To learn how to select reward as a used, see **Redeemed rewards** in profile detail section

Download redeemed rewards report

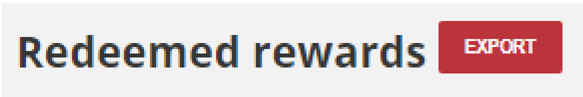
There is also possibility to download a report of redeemed rewards into a CSV file.



Redeemed rewards report

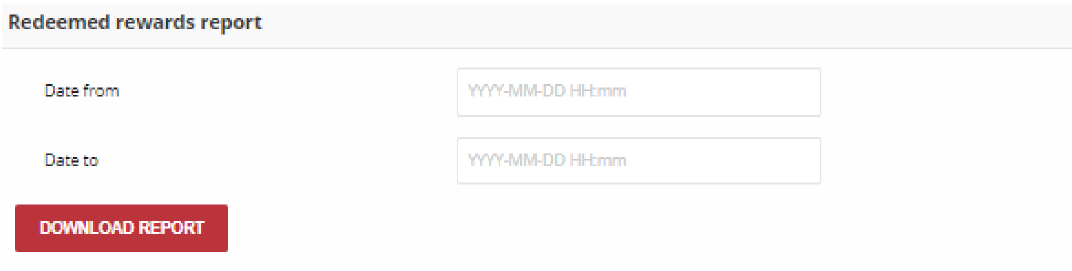
To download the redeemed reward report:

1. On the Admin sidebar, tap **Reward campaigns**. Then, choose **All reward campaign**
2. Click **Export** at the top of the page



Redeemed rewards export Button

2. In the **Redeemed rewards report** dialog, do the following:



Redeemed rewards export

   a. In **Date from** field choose start date from which redeemed rewards data will be included in a report (base on Date and time)

   b. In **Date to** field choose end date until which redeemed rewards data will be included (base on Date and time)

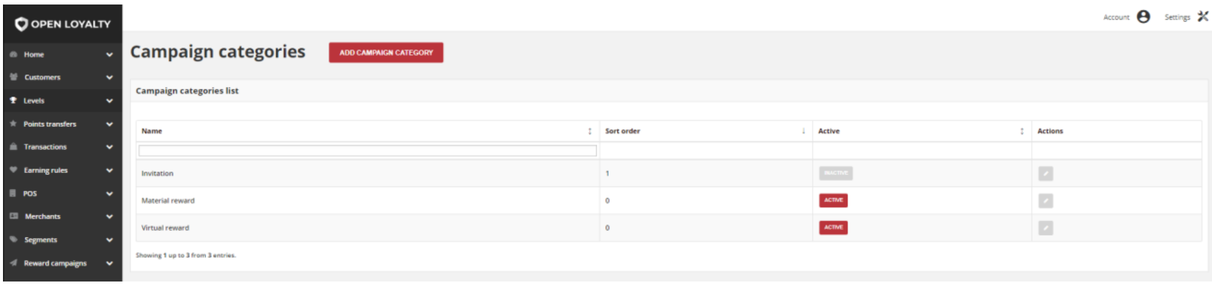
3. When complete, tap **Download report** . After clicking, the list of redeemed rewards will be download in .CSV format

All campaign categories

The All campaign categories grid allows you to manage reward campaign category to facilitate their identification.

Grid provide information about all categories that can be assign to particular reward (during it's creation/edition) with information about status.

Depending on the Translations settings, **Basic information's** can be provided in different language versions (listed in **Translations**). Information from that section can be display on a Client cockpit depending on a chosen from the admin cockpit default language version. For example, when default language is English, information are display in English, but when we change it on polish as a default language, all basic information will be displayed in polish (if provided).



All Campaign categories

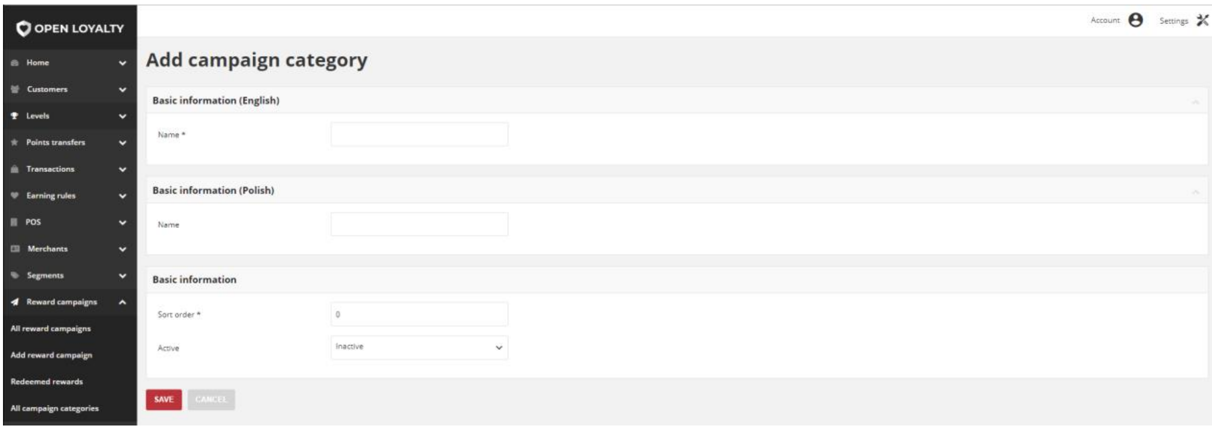
Use the standard controls to sort the list in Sort order column, filter and search categories by typing in the field under Name column header value you want to find, and apply actions to selected rewards record (modify). Pagination controls appear if there are more campaign categories records than fit on the page, and are used to move from one page to the next.

Field description

FIELD	DESCRIPTION
Name	Name of the campaign category
Sort order	Column is used to sort campaign category. Number determine order in which category will be listed after sorting in ascending (from high to low) and descending (from low to high) order.
Active	Category status. Options include: Active/Inactive. Regardless of the status, each category can be assigned to the reward campaign
Actions	The operations that can be applied to selected category. Option include: • Edit category details

Creating new campaign category

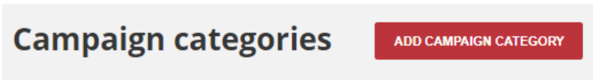
You can create unlimited amount of category that can be assign to the reward campaign.



Add Campaign Category

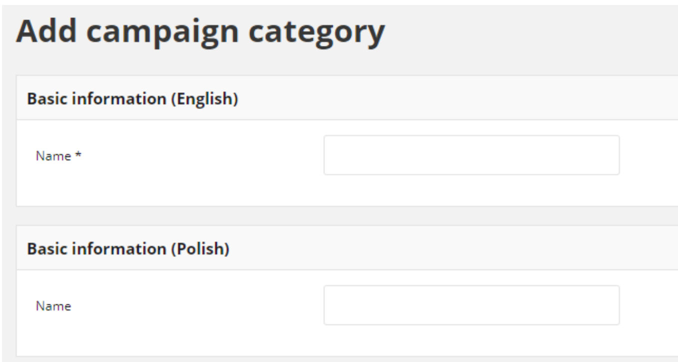
To add new campaign category:

1. On the Admin sidebar, tap **Reward campaigns**. Then, choose **All campaign categories**
2. Click **Add campaign category** at the top of the page



Category add Button

3. In the first **Basic information** section, related to the default language version do the following:

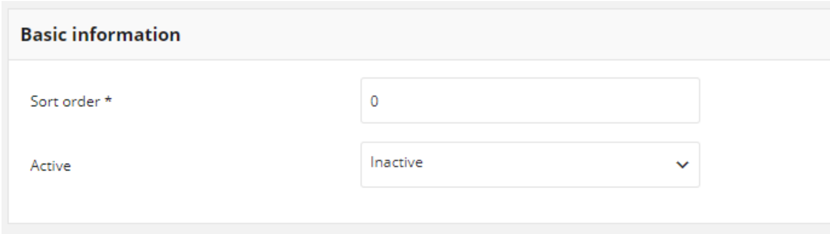


General basic information

   a. Enter the **Name** of the category

   b. If applicable, fulfill the same fields in other language version e.g. polish as on a screen above

4. In next Basic information section provide as follow:



Detail Basic information

   a. In **Sort order** field enter the number, determine order in which category will be listed after sorting

   b. To activate the rule, in **Active** field select “**Active**” from the dropdown list

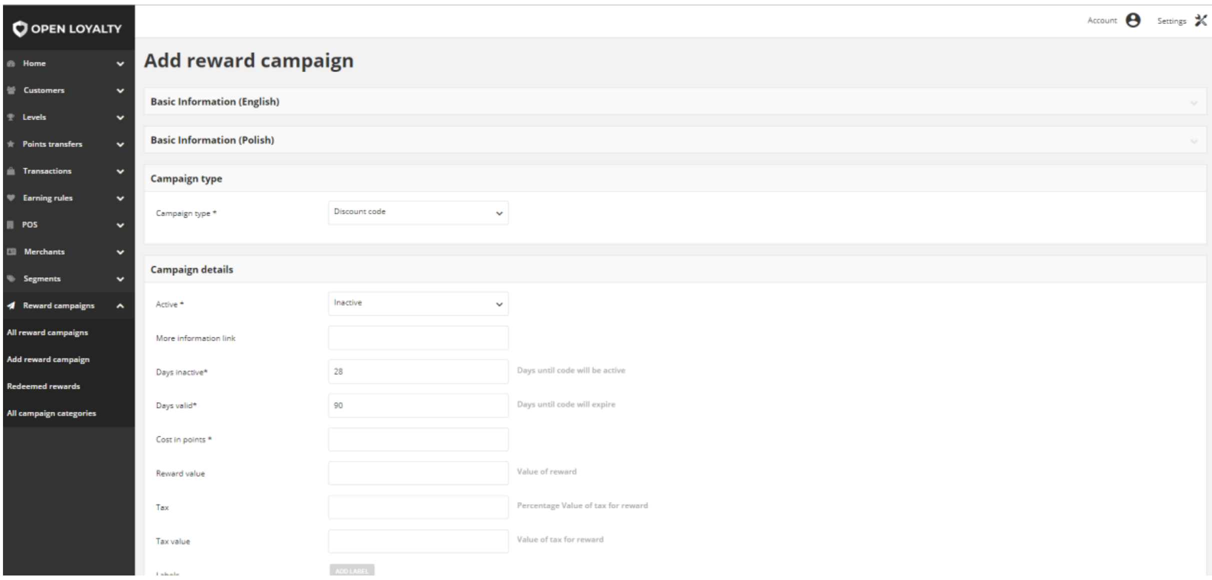
5. When complete, tap **Save**

CHAPTER 23:

CREATING REWARD CAMPAIGN

Open Loyalty Reward campaigns gives you the ability to create unique rewards that customer can be awarded for a wide range of transaction and activities within your loyalty program. During creation you determine time boundaries, when reward is available for customer, customers groups for whom the reward is available and defines the basic operating parameters.

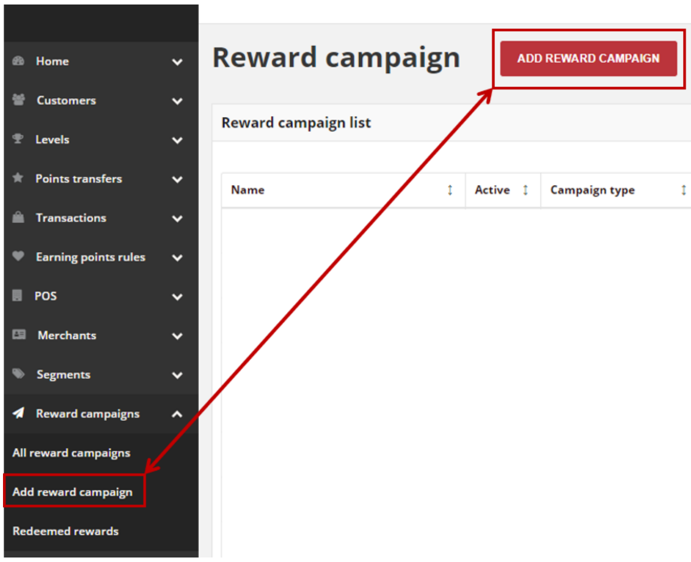
Depending on the Translations settings, **Basic information's** can be provided in different language versions (listed in **Translations**). Information from that section can be display on a Client cockpit depending on a chosen from the admin cockpit default language version. For example, when default language is English, information are display in English, but when we change it on polish as a default language, all basic information will be displayed in polish (if provided).



Add New Reward

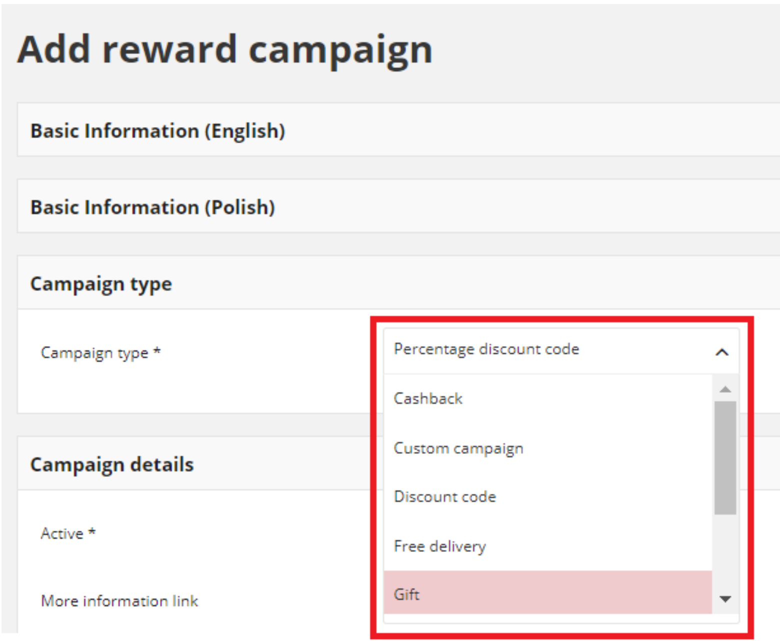
To create a New Reward Campaign:

1. On the Admin sidebar, tap **Reward campaigns**. Then, choose **Add reward campaign**. You can also add new reward directly from **All reward campaigns** list by clicking **Add reward campaign** at the top of the page.



Add Reward Options

2. In the **Campaign type** section, select a reward type from a dropdown list, to one of the following (by default Discount code is displaying):



Campaign Type

Cashback	during purchase customer can exchange earned points for value discount and reduce order amount
Custom campaign	possibility to link with geolocation or QRcode earning rule. Information about that connection will be accessible via API and in reward details.

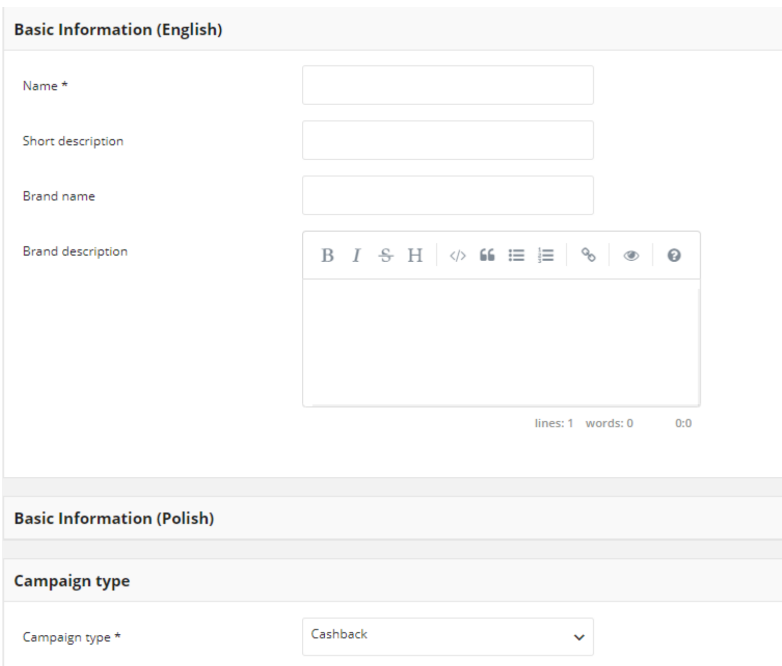
Discount code	percentage discount applied to reduce order amount, e.g. 25% off for next purchase
Free delivery	free shipping promotion
Gift	material article offer as a present (without payment), e.g. book
Invitation for the event	invitation for business & corporate events or other depending on your business, e.g. conference
Percentage discount code	percentage discount of registered order amount
Value code	value discount applied to reduce order amount, e.g. 25 EUR off for next purchase

Depending on the selected **Campaign type**, a ***Basic information*** and next section - ***Campaign details*** will display different fields to filled in. Different fields are required for Cashback, Custom reward and Percentage discount code , than for other types i.e. discount code, free delivery etc.

Percentage discount code, Custom campaign and Cashback are not visible for a customer in Available rewards section

CASHBACK

3. When you choose ***Cashback***, in the Basic information section related to the default language version do the following:



Cashback Basic Information

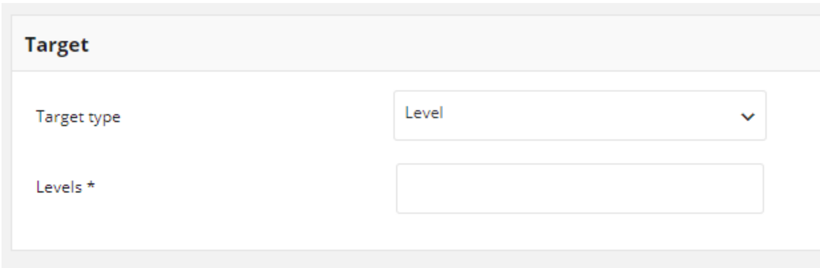
Brand info

6. A reward can be extended to members of a specific customer group. In the **Target** section identify the customer group that qualifies to receive the reward:

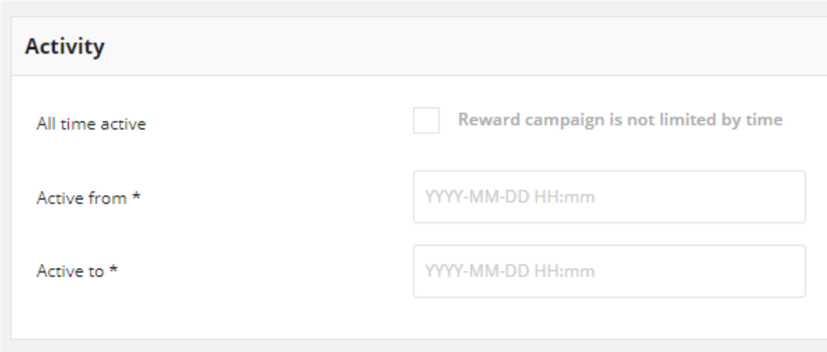


Target

a. In **Target type** field, select from dropdown list Level or Segment to specify whether the reward will be available for customers assigned to particular level or segment

b. Depending on selected ***Target type***, field **Segments** to specify segments or **Levels** to specify levels appear. You can choose one or more levels/segments to used

7. **Activity** section define time boundaries when reward can be used by customers. To make the reward available for a limited period of time, complete the From and To dates in **Activity** section:



Activity

a. In **Active from** field set the first date the reward is available. You can either enter the date or select it from the calendar.

b. In **Active to** field set the last date the reward is available. You can either enter the date or select it from the calendar.

   Active to and ***Active from*** fields are available only when reward activity (availability) is limited.

c. If you want the reward to be active all the time mark **All time active** checkbox. When you choose that option ***Active from*** and ***Active to*** fields will not be available.

Status of the Reward campaign (Active/Inactive) has higher priority than time boundaries from Active section.

Even if time boundaries from Activity section will be valid, changing Status to Inactive means that reward will not be available to customers.

PERCENTAGE DISCOUNT CODE

8. When you choose ***Percentage discount code***, in the Basic information section repeat steps **a-e** from point **3**, and provide reward:
