SIEMENS

RUGGEDCOM RS900G

Installation Guide

10/2013

Disclaimer Of Liability

Siemens has verified the contents of this manual against the hardware and/or software described. However, deviations between the product and the documentation may exist.

Siemens shall not be liable for any errors or omissions contained herein or for consequential damages in connection with the furnishing, performance, or use of this material.

The information given in this document is reviewed regularly and any necessary corrections will be included in subsequent editions. We appreciate any suggested improvements. We reserve the right to make technical improvements without notice.

Registered Trademarks

ROX™, Rugged Operating System On Linux™, CrossBow™ and eLAN™ are trademarks of Siemens AG. ROS® is a registered trademark of Siemens AG.

Other designations in this manual might be trademarks whose use by third parties for their own purposes would infringe the rights of the owner.

Third Party Copyrights

Siemens recognizes the following third party copyrights:

• Copyright © 2004 GoAhead Software, Inc. All Rights Reserved.

Security Information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, machines, equipment and/or networks. They are important components in a holistic industrial security concept. With this in mind, Siemens ' products and solutions undergo continuous development. Siemens recommends strongly that you regularly check for product updates.

For the secure operation of Siemens products and solutions, it is necessary to take suitable preventive action (e.g. cell protection concept) and integrate each component into a holistic, state-of-the-art industrial security concept. Third-party products that may be in use should also be considered. For more information about industrial security, visit http://www.siemens.com/industrialsecurity.

To stay informed about product updates as they occur, sign up for a product-specific newsletter. For more information, visit http://support.automation.siemens.com.

Warranty

Siemens warrants this product for a period of five (5) years from the date of purchase, conditional upon the return to factory for maintenance during the warranty term. This product contains no user-serviceable parts. Attempted service by unauthorized personnel shall render all warranties null and void. The warranties set forth in this article are exclusive and are in lieu of all other warranties, performance guarantees and conditions whether written or oral, statutory, express or implied (including all warranties and conditions of merchantability and fitness for a particular purpose, and all warranties and conditions arising from course of dealing or usage or trade). Correction of nonconformities in the manner and for the period of time provided above shall constitute the Seller's sole liability and the Customer's exclusive remedy for defective or nonconforming goods or services whether claims of the Customer are based in contract (including fundamental breach), in tort (including negligence and strict liability) or otherwise.

For warranty details, visit www.siemens.com/ruggedcom or contact a Siemens customer service representative.

Table of Contents

Preface

This guide describes the RUGGEDCOM RS900G. It describes the major features of the device, installation, commissioning and important technical specifications.

It is intended for use by network technical support personnel who are responsible for the installation, commissioning and maintenance of the device. It is also recommended for use by network and system planners, system programmers, and line technicians.

Alerts

The following types of alerts are used when necessary to highlight important information.

⚠ **DANGER!**
DANGER alerts describe imminently hazardous situations that, if not avoided, will result in death or serious injury.

⚠ **WARNING!**
WARNING alerts describe hazardous situations that, if not avoided, may result in serious injury and/or equipment damage.

⚠ **CAUTION!**
CAUTION alerts describe hazardous situations that, if not avoided, may result in equipment damage.

🛈 **IMPORTANT!**
IMPORTANT alerts provide important information that should be known before performing a procedure or step, or using a feature.

🛈 **NOTE**
NOTE alerts provide additional information, such as facts, tips and details.

Accessing Documentation

The latest Hardware Installation Guides and Software User Guides for most RUGGEDCOM products are available online at www.siemens.com/ruggedcom.

For any questions about the documentation or for assistance finding a specific document, contact a Siemens sales representative.

Training

Siemens offers a wide range of educational services ranging from in-house training of standard courses on networking, Ethernet switches and routers, to on-site customized courses tailored to the customer's needs, experience and application.

Siemens' Educational Services team thrives on providing our customers with the essential practical skills to make sure users have the right knowledge and expertise to understand the various technologies associated with critical communications network infrastructure technologies.

Siemens' unique mix of IT/Telecommunications expertise combined with domain knowledge in the utility, transportation and industrial markets, allows Siemens to provide training specific to the customer's application.

For more information about training services and course availability, visit www.siemens.com/ruggedcom or contact a Siemens sales representative.

Customer Support

Customer support is available 24 hours, 7 days a week for all Siemens customers. For technical support or general information, please contact Customer Support at:

1 Introduction

The RUGGEDCOM RS900G is an industrially hardened, fully managed Ethernet switch providing dual fiber optical Gigabit Ethernet ports and eight Fast Ethernet copper ports. Designed to operate reliably in harsh industrial environments, the RS900G provides a high level of immunity to electromagnetic interference and heavy electrical surges typical of environments found in electric utility substations, factory floors or in curb side traffic control cabinets. An operating temperature range of -40 to 85 °C (-40 to 185 °F) coupled with hazardous location certification, a powder coated aluminum enclosure and optional conformal coating allows the RS900G to be placed in almost any location.

The embedded RUGGEDCOM Rugged Operating System (ROS) provides advanced networking features such as Enhanced Rapid Spanning Tree (eRSTP), Port Rate Limiting and a full array of intelligent functionality for high network availability and manageability.

Section 1.1
Feature Highlights

Ethernet Ports

- 2 - Gigabit-Ethernet Ports (1000Base-X)

- 8 - Fast Ethernet Ports (10/100BaseTX)

- Full compliance with IEEE: 802.3, 802.3u and 802.3z

- Non-blocking, store and forward switching

- Full duplex operation and flow control (IEEE 802.3x)

- Industry standard fiber optical connectors: LC, SC, SFP

- Bi-Directional simplex fiber support

- Long haul optics allow Gigabit distances up to 70km

Rated for Reliability in Harsh Environments[1]

- Meets IEEE 1613 (electric utility substations)

- Exceeds IEC 61850-3 (electric utility substations)

- Exceeds IEEE 61800-3 (variable speed drive systems)

- Exceeds IEC 61000-6-2 (generic industrial environment)

- Exceeds NEMA TS-2 (traffic control equipment)

- -40 to 85°C (-40 to 185 °F) operating temperature (no fans)

- Conformal coated circuit boards (optional)

- Rugged powder coated aluminum enclosure

Universal Power Supply Options

- Fully integrated power supply

---

[1]When using a suitable external power supply.

- Universal high-voltage range: 88-300 VDC or 85-264 VAC

- Dual low-voltage DC inputs (12, 24 or 48 VDC)

- CSA/UL 60950-1 safety approved to 85 °C (185 °F)

Simple Plug and Play Operation

- Automatic learning of up to 8192 MAC addresses

- Auto-negotiation on all 10/100BaseTX ports

- Auto-MDI/MDIX (crossover) on all 10/100BaseTX ports

- LED indicators for link, activity and speed

ROS® Advanced Network Management

- Enhanced Rapid Spanning Tree (eRSTPTM)

- Quality of Service (802.1p) for real-time traffic

- Port rate limiting: 128kbps to 8Mbps

- VLAN (802.1q) with double tagging

- IGMP Snooping for multicast filtering

- Port configuration, status, statistics, mirroring, security

- Loss of link management on fiber ports

- Web-based, Telnet, CLI management interfaces

- SNMP v2 and RMON

- Rich set of diagnostics with logging and alarms

Section 1.2
Ports, Controls and Indicator LEDs

The RS900G features various ports, controls and indicator LEDs on the front panel for configuring and troubleshooting the device.

Figure 1: Front Panel

1. Power Indicator LED   **2.** Alarm Indicator LED   **3.** RS232 Serial Console Port
Power Indicator LED	The power indicator LED illuminates when power is being supplied to the device.

Alarm Indicator LED	The alarm indicator LED illuminates when an alarm condition exists.
RS232 Serial Console Port	This port is for interfacing directly with the device and accessing initial management functions.

2 Installing the Device

The following sections describe how to install the device, including mounting the device, installing/removing modules, connecting power, and connecting the device to the network.

> ⚠ **DANGER!**
> *Electrocution hazard – risk of serious personal injury and/or damage to equipment. Before performing any maintenance tasks, make sure all power to the device has been disconnected and wait approximately two minutes for any remaining energy to dissipate.*

> ⓘ **IMPORTANT!**
> *This product contains no user-serviceable parts. Attempted service by unauthorized personnel shall render all warranties null and void.*
>
> *Changes or modifications not expressly approved by RuggedCom Inc. could invalidate specifications, test results, and agency approvals, and void the user's authority to operate the equipment.*

> ⓘ **IMPORTANT!**
> *This product should be installed in a restricted access location where access can only be gained by authorized personnel who have been informed of the restrictions and any precautions that must be taken. Access must only be possible through the use of a tool, lock and key, or other means of security, and controlled by the authority responsible for the location.*

- Section 2.1, "Mounting the Device"
- Section 2.2, "Connecting Power"
- Section 2.3, "Connecting the Failsafe Alarm Relay"
- Section 2.4, "Connecting to the Device"
- Section 2.5, "Cabling Recommendations"

Section 2.1
Mounting the Device

The RS900G is designed for maximum mounting and display flexibility. It can be equipped with connectors that allow it to be installed in a 35 mm (1.4 in) DIN rail or directly on a panel.

> ⓘ **NOTE**
> *For detailed dimensions of the device with either DIN rail or panel hardware installed, refer to Chapter 5, Dimension Drawings.*

The following sections describe the various methods of mounting the device:

- Section 2.1.1, "Mounting the Device on a DIN Rail"
- Section 2.1.2, "Mounting the Device to a Panel"

Section 2.1.1
Mounting the Device on a DIN Rail

For DIN rail installations, the RS900G can be equipped with a DIN rail bracket pre-installed on the back of the chassis. The bracket allows the device to be slid onto a standard 35 mm (1.4 in) DIN rail.

To mount the device to a DIN rail, do the following:

1. Align the slot in the bracket with the DIN rail.

Figure 2: DIN Rail Mounting

1. DIN Rail   **2.** DIN Rail Bracket

2. Pull the release on the bracket down and slide the device onto the DIN rail. Let go of the release to lock the device in position.

Section 2.1.2
Mounting the Device to a Panel

For panel installations, the RS900G can be equipped with panel adapters pre-installed on the top and bottom of the chassis. The adapters allow the device to be attached to a panel using screws.

To mount the device to a panel, do the following:

1. Place the device against the panel and align the adapters with the mounting holes.
Figure 3: Panel Mounting

1. Screw   **2.** Panel Adaptor

2.   Install the supplied screws to secure the adapters to the panel.

Section 2.2
Connecting Power

The RS900G supports a single integrated high AC/DC or low DC power supply

> **NOTE**
>
> - *For 110/230 VAC rated equipment, an appropriately rated AC circuit breaker must be installed.*
>
> - *For 125/250 VDC rated equipment, an appropriately rated DC circuit breaker must be installed.*
>
> - *Equipment must be installed according to applicable local wiring codes and standards.*
>
> - *All line-to-ground transient energy is shunted to the Surge Ground terminal. In cases where users require the inputs to be isolated from ground, remove the ground braid between Surge and Chassis Ground. Note that all line-to-ground transient protection circuitry will be disabled.*

> **IMPORTANT!**
> *Siemens requires the use of external surge protection in VDSL applications where the line may be subject to surges greater than that for which the device is rated. Use the following specifications as a guide for VDSL external surge protection:*
>
> - *Clamping Voltage: 50 V to 200 V*

> • *Insertion Loss: < 0.1 dB at 10 MHz*
>
> • *Peak Surge Current: 10 kA, 8x20μs waveform*

The following sections describe how to connect power to the device:

- Section 2.2.1, "Connecting High AC/DC Power"

- Section 2.2.2, "Connecting Low DC Power"

Section 2.2.1
Connecting High AC/DC Power

To connect a high AC/DC power supply to the device, do the following:

> ⚠️ **CAUTION!**
> *Electrical hazard – risk of damage to equipment. Do not connect AC power cables to terminals for DC power. Damage to the power supply may occur.*

> ⚠️ **CAUTION!**
> *Electrical hazard – risk of damage to equipment. Before testing the dielectric strength (HIPOT) in the field, remove the braided ground cable connected to the surge ground terminal and chassis ground. This cable connects transient suppression circuitry to chassis ground and must be removed in order to avoid damage to transient suppression circuitry during testing.*

1. Connect the positive wire from the power source to the positive/live (+/L) terminal on the terminal block.

Figure 4: Terminal Block Wiring

1. Positive/Live (+/L) Terminal   **2.** Negative/Neutral (-/N) Terminal   **3.** Surge Ground Terminal   **4.** Braided Ground Cable
2.   Connect the negative wire from the power source to the negative/neutral (-/N) terminal on the terminal block.

3.   Using a braided wire or other appropriate grounding wire, connect the surge ground terminal to the chassis ground connection. The surge ground terminal is used as the ground conductor for all surge and transient suppression circuitry internal to the unit.

4.   Connect the ground terminal on the power source to the chassis ground terminal on the device.

Section 2.2.2
Connecting Low DC Power

To connect a low DC power supply to the device, do the following:

> **⚠ CAUTION!**
> *Electrical hazard – risk of damage to equipment. Before testing the dielectric strength (HIPOT) in the field, remove the braided ground cable connected to the surge ground terminal and chassis ground. This cable connects transient suppression circuitry to chassis ground and must be removed in order to avoid damage to transient suppression circuitry during testing.*

1.   Connect the positive wire from the power source to the positive terminal on the terminal block.

Figure 5: Terminal Block Wiring

1. Positive Terminal   **2.** Negative Terminal   **3.** Surge Ground Terminal   **4.** Braided Ground Cable

2. Connect the negative wire from the power source to the negative terminal on the terminal block.

3. Using a braided wire or other appropriate grounding wire, connect the surge ground terminal to the chassis ground connection. The surge ground terminal is used as the ground conductor for all surge and transient suppression circuitry internal to the unit.

4. Connect the ground terminal on the power source to the chassis ground terminal on the device.

Section 2.3
Connecting the Failsafe Alarm Relay
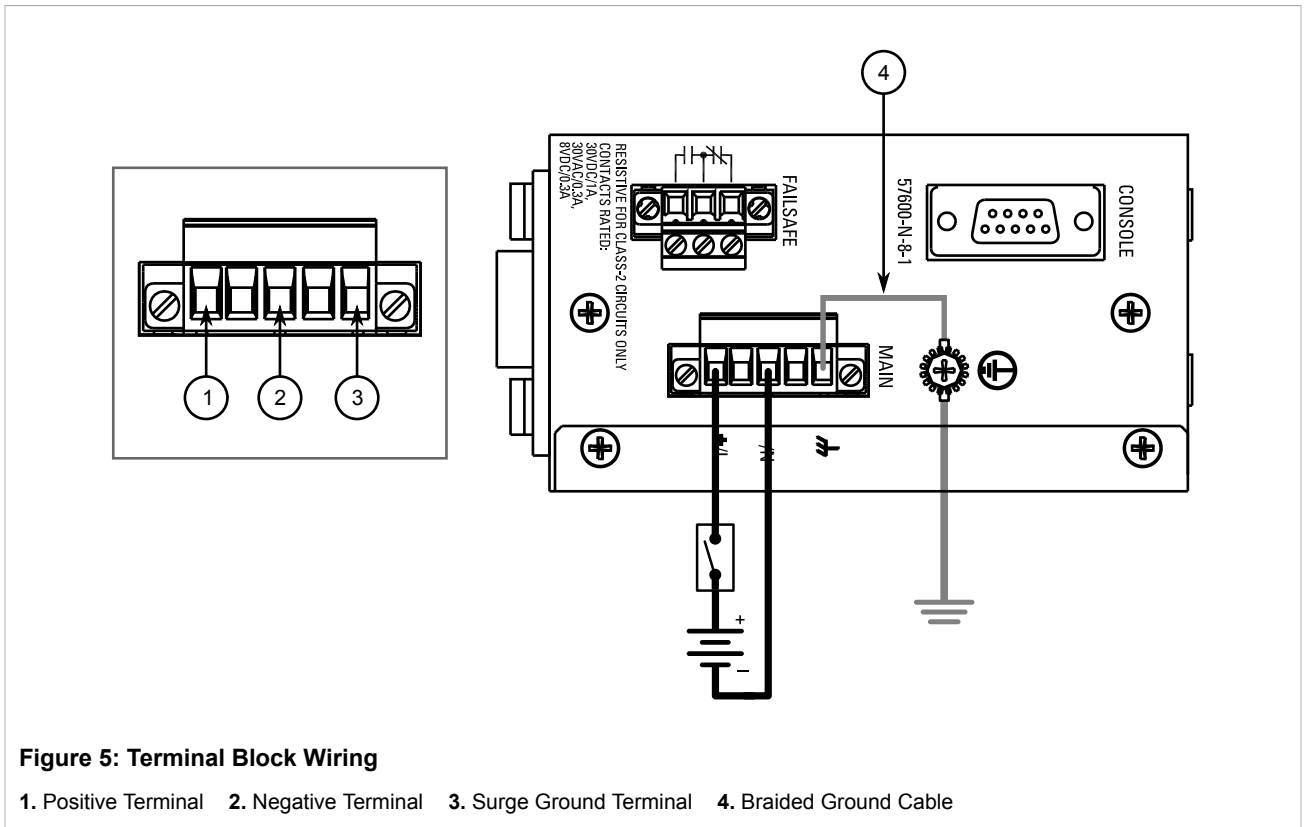

The failsafe relay can be configured to latch based on alarm conditions. The NO (Normally Open) contact is closed when the unit is powered and there are no active alarms. If the device is not powered or if an active alarm is configured, the relay opens the NO contact and closes the NC (Normally Closed) contact.

> **NOTE**
> *Control of the failsafe relay output is configurable through ROS . One common application for this relay is to signal an alarm if a power failure occurs. For more information, refer to the ROS User Guide for the RS900G.*

The following shows the proper relay connections.

Figure 6: Failsafe Alarm Relay Wiring

1. Normally Open   **2.** Common   **3.** Normally Closed

Section 2.4
Connecting to the Device

The following describes the various methods for accessing the ROS console and Web interfaces on the device. For more detailed instructions, refer to the *ROS User Guide* for the RS900G.

Serial Console Port
Connect a PC or terminal directly to the serial console port to access the boot-time control and ROS console interface.

> ⊘ **IMPORTANT!**
> *The serial console port is intended to be used only as temporary connections during initial configuration or troubleshooting.*

The serial console port implements RS232 DCE (Data Communication Equipment) on a DB9 connector. The following is the pin-out for the port:
Figure 7: Serial DB9 Console Port

Pin	Name	Description
1	DCD	Data Carrier Detect
2	RX	Receive Data
3	TX	Transmit Data
4	DTR	Data Terminal Ready
5	GND	Signal Ground
6	DSR	Data Set Ready
7	RTS	Request to Send
8	CTS	Clear To Send
9	Reserved (Do Not Connect)	

Communication Ports

Connect any of the available Ethernet ports on the device to a management switch and access the ROS console and Web interfaces via the device's IP address. For more information about available ports, refer to Chapter 3, *Communication Ports*.

Section 2.5

Cabling Recommendations

Siemens does not recommend the use of copper cabling of any length for critical, real-time substation automation applications. All copper Ethernet ports on RUGGEDCOM products include transient suppression circuitry to protect against damage from electrical transients and conform with IEC 61850-3 and IEEE 1613 Class 1 standards. This means that during a transient electrical event, communications errors or interruptions may occur, but recovery is automatic.

Siemens also does not recommend using copper Ethernet ports to interface with devices in the field across distances that could produce high levels of ground potential rise (i.e. greater than 2500 V), during line-to-ground fault conditions.

3 Communication Ports

The RS900G can be equipped with various types of communication ports to enhance its abilities and performance. To determine which ports are equipped on the device, refer to the factory data file available through ROS . For more information on how to access the factory data file, refer to the *ROS User Guide* for the RS900G.

Each communication port type has a specific place in the RS900G chassis.
Figure 8: Port Assignment

1. Ports 1 to 8   **2.** Ports 9 to 10

Port	Type
1 to 8	Fast Ethernet Ports (10/100/1000Base-TX)
9 to 10	Dual Gigabit SFP Transceivers

The following sections describe the available ports:

• Section 3.1, "Fiber Optic Ethernet Ports"

• Section 3.2, "SFP Optic Ethernet Ports"

Section 3.1
Fiber Optic Ethernet Ports

Fiber optic Ethernet ports are available with either LC (Lucent Connector) and SC (Standard or Subscriber Connector) connectors. Make sure the Transmit (Tx) and Receive (Rx) connections of each port are properly connected and matched to establish a proper link.

Figure 9: SC Port

1. Tx Connector   **2.** Rx Connector

Figure 10: LC Port

1. Tx Connector   **2.** Rx Connector
For specifications on the available fiber optic Ethernet ports, refer to Section 4.3, "Fiber Optic Port Specifications".

Section 3.2
SFP Optic Ethernet Ports

SFP (Small Form-Factor Pluggable) optic Ethernet ports are available with LC (Lucent Connector) connectors. Make sure the Transmit (Tx) and Receive (Rx) connections of each port are properly connected and matched to establish a proper link.

Figure 11: LC Port

1. Tx Connector   **2.** Rx Connector
> **NOTE**
> *SFP modules, as well as their optical ports, can be safely inserted and removed while the chassis is powered and operating.*

The following sections describe how to install and remove SFP optical ports:

• Section 3.2.1, "Installing an SFP Optical Port"

• Section 3.2.2, "Removing an SFP Optical Port"

Section 3.2.1
Installing an SFP Optical Port

To install an SFP optical port, do the following:

> **CAUTION!**
> *Electrical hazard – risk of damage to equipment. Use only components certified by Siemens with RUGGEDCOM products. Damage to the module and device may occur if compatibility and reliability have not been properly assessed.*

> ⚠ **CAUTION!**
> *Electrical hazard – risk of damage to equipment. Make sure all electrostatic energy is dissipated
> before installing or removing components from the device. An electrostatic discharge (ESD) can cause
> serious damage to the component once it is outside the chassis.*

1. Make sure all potential electrostatic build-up has been properly discharged to prevent electrostatic
   discharges (ESD). This can be accomplished by wearing an ESD wrist strap or by touching Earth or the
   chassis ground.
2. Remove the dust cover from the port opening in the module.

> ⚠ **CAUTION!**
> *Mechanical hazard – risk of component damage. SFP optical ports are designed to insert in only
> one orientation. Do not force the port into the module.*

3. Remove the port from its packaging.
4. Insert the port into the module and swing the bail-latch up to lock it in place.
Figure 12: Installing an SFP Optical Port (Typical)

1. SFP Optical Port   **2.** Metal Bail-Latch

5. Remove the dust cover from the port.
6. Connect a cable to the port and test the connection.

Section 3.2.2
Removing an SFP Optical Port

To remove an SFP optical port, do the following:

> ⚠ **CAUTION!**
> *Electrical hazard – risk of damage to equipment. Make sure all electrostatic energy is dissipated before
> performing installing or removing components from the device. An electrostatic discharge (ESD) can
> cause serious damage to the component once it is outside the chassis.*

1. Make sure all potential electrostatic build-up has been properly discharged to prevent electrostatic
   discharges (ESD). This can be accomplished by wearing an ESD wrist strap or by touching Earth or the
   chassis ground.
2. Disconnect the cable from the port.
3. Swing the metal bail-latch down and pull the port from the module.

Figure 13: Removing an SFP Optical Port (Typical)

1. SFP Optical Port   **2.** Metal Bail-Latch

4. Store the port in an ESD-safe bag or other suitable ESD-safe environment, free from moisture and stored at the proper temperature (-40 to 85 °C or -40 to 185 °F).

5. Insert a plug in the empty port opening to prevent the ingress of dust and dirt.

4 Technical Specifications

The following sections provide important technical specifications related to the device and available modules:

- Section 4.1, "Power Supply Specifications"
- Section 4.2, "Failsafe Relay Specifications"
- Section 4.3, "Fiber Optic Port Specifications"
- Section 4.4, "Operating Environment"
- Section 4.5, "Mechanical Specifications"

Section 4.1
Power Supply Specifications

Power Supply Type	Minimum Input	Maximum Input	Fuse Rating	Isolation	Maximum Power Consumption
12-24 VDC	10 VDC	36 VDC	3.15A (T) [a]	1.5 kVDC	
24 VDC	18 VDC	36 VDC	3.15A (T) [a]	1.5 kVDC	
48 VDC	36 VDC	72VDC	3.15A (T) [a]	1.5 kVDC	10 W
HI (125/250 VDC)[b] HI (110/230 VAC)[b]	88 VDC 85 VAC	300 VDC 265 VAC	3.15A (T) [a]	4 kVAC 5.5 kVDC	

[a] *(T) denotes time-delay fuse*

[b] *This is the same power supply for both AC and DC.*

Section 4.2
Failsafe Relay Specifications

> **NOTE**
> *The following specifications are for Class-2 circuits only.*

Parameter	Value (Resistive Load)
Max Switching Voltage	30 VAC, 80 VDC
Rated Switching Current	0.3A @ 30 VAC 1A @ 30 VDC, 0.3 A @ 80 VDC

Section 4.3
Fiber Optic Port Specifications

The following details the specifications for fiber Ethernet ports that can be ordered with the RS900G.

> **i** **NOTE**
> - All optical power numbers are listed as dBm averages. To convert from average to peak add 3 dBm. To convert from peak to average, subtract 3 dBm.
> - Maximum segment length is greatly dependent on factors such as fiber quality, and the number of patches and splices. Consult a Siemens sales associate when determining maximum segment distances.

> **i** **NOTE**
> Order codes are contained within each product when assembled and configured at the factory. Refer to the ROS User Guide for the RS900G for information on how to obtain the factory configuration data.

Order Code	Mode/ Connector	Tx λ (nm)	Cable Type 1. [c]	Tx Pwr (dBm) (Min/Max) [d]	Rx Sensitivity (dBm)[d]	Rx Saturation (dBm)[d]	Typical Distance (km) [e]
2LCMM	MM/LC	850	50µ/125	-9.5/-4	-20	0	0.5
2LC10	SM/LC	1310	9µ/125	-9.5/-3	-22	-3	10
2LC25	SM/LC	1310	9µ/125	-5/0	-22	-3	25
2SC10	SM/SC	1310	9µ/125	-10/-3	-22	-3	10
2SC25	SM/SC	1310	9µ/125	-7/-3	-24	-3	25
SFP	MM/LC	850	50µ/125	-8.5/-4	-22	-3	0.5
SFP	SM/LC	1310	9µ/125	-9/-3	-24	0	10
SFP	SM/LC	1310	9µ/125	-7/-3	-26	-3	25
SFP[f]	SM/LC	1550	9µ/125	-5/0	-26	0	50
SFP[f]	SM/LC	1550	9µ/125	0/5	-26	0	80
SFP	SM/SC Simplex	1310	9µ/125	-9/-3	-22	-3	10
SFP[f]	SM/SC Simplex	1490	9µ/125	-9/-3	-22	-3	10

[c] All cabling is duplex type unless otherwise specified.

[d] All optical power numbers are listed as dBm averages.

[e] Maximum segment length is greatly dependent on factors such as fiber quality, and number of patches and splices. Please consult RuggedCom sales associates when determining maximum segment distances.

[f] These transceivers utilize a distributed feedback (DFB) type laser and are rated for -20 to 85 °C (-4 to 185 °F) operation only.

Section 4.4
Operating Environment

Parameter	Range	Comments
Ambient Operating Temperature	-40 to 85 °C (-40 to 185 °F)	Measured from a 30 cm (12 in) radius surrounding the center of the RS900G enclosure.
Ambient Relative Humidity	5% to 95%	Non-condensing
Ambient Storage Temperature	-40 to 85 °C (-40 to 185 °F)	
Operating Altitude	0 to 15240 m (0 to 50000 ft)	Over temperature range of -40 to 85 °C (-40 to 185 °F)

Section 4.5
Mechanical Specifications

Parameter	Value
Dimensions	Refer to Chapter 5, *Dimension Drawings*
Weight	1.2 kg (2.7 lbs)
Enclosure	20 AWG Galvanized Steel

6 Certification

The RS900G device has been thoroughly tested to guarantee its conformance with recognized standards and has received approval from recognized regulatory agencies.

- Section 6.1, "Agency Approvals"
- Section 6.2, "FCC Compliance"
- Section 6.3, "Industry Canada Compliance"
- Section 6.4, "EMI and Environmental Type Tests"

Section 6.1

Agency Approvals

Agency	Standards	Comments
CSA	CSA C22.2 No. 60950-1, UL 60950-1	Approved
	CSA C22.2 No. 142-M1987, CSA C22.2 No. 213-M1987, UL Std No. 916, UL Std No. 1604	Approved Hazardous Locations Class 1, Division 2, Groups A, B, C, and D T6 rating at 40 °C (104 °F), T4A rating at 85 °C (185 °F)
CE	EN 60950-1, EN 61000-6-2, EN 55022 Class A, EN 60825-1, EN 50581	CE Compliance is claimed via Declaration of Self Conformity Route
FCC	FCC Part 15, Class A	Approved
FDA/CDRH	21 CFR Chapter I, Sub-chapter J	Approved

Section 6.2

FCC Compliance

This equipment has been tested and found to comply with the limits for a Class A digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference on his own expense.

Section 6.3
Industry Canada Compliance

CAN ICES-3 (A) / NMB-3 (A)

Section 6.4
EMI and Environmental Type Tests

The RS900G has passed the following EMI and environmental tests.

IEC 61850-3 Type Tests

Test	Description		Test Levels	Severity Levels
IEC 61000-4-2	ESD	Enclosure Contact	+/- 8 kV	4
Enclosure Air	+/- 15 kV	4		
IEC 61000-4-3	Radiated RFI	Enclosure ports	20 V/m	x
IEC 61000-4-4	Burst (Fast Transient)	Signal ports	+/- 2 kV @ 2.5 kHz	x
		DC Power ports	+/- 4 kV	4
		AC Power ports	+/- 4 kV	4
		Earth ground ports	+/- 4 kV	4
IEC 61000-4-5	Surge	Signal ports	+/- 4 kV line-to-earth, +/- 2 kV line-to-line	4
		DC Power ports	+/- 2 kV line-to-earth, +/- 1 kV line-to-line	3
		AC Power ports	+/- 4 kV line-to-earth, +/- 2 kV line-to-line	4
IEC 61000-4-6	Induced (Conducted) RFI	Signal ports	10 V	3
		D.C Power ports	10 V	3
		AC Power ports	10 V	3
		Earth ground ports	10 V	3
IEC 61000-4-8	Magnetic Field	Enclosure ports	40 A/m continuous, 1000 A/m for 1 s	
IEC 61000-4-29	Voltage Dips and Interrupts	DC Power ports	30% for 0.1 s, 60% for 0.1 s, 100% for 0.05 s	
		AC Power ports	30% for 1 period, 60% for 50 periods	
IEC 61000-4-11	Voltage Dips and Interrupts	AC Power ports	100% for 5 periods, 100% for 50 periods	
IEC 61000-4-12	Damped Oscillatory	Signal ports	2.5 kV common, 1 kV differential mode @ 1 MHz	3

Test	Description		Test Levels	Severity Levels
		DC Power ports	2.5 kV common, 1 kV differential mode @ 1 MHz	3
		AC Power ports	2.5 kV common, 1 kV differential mode @ 1 MHz	3
IEC 61000-4-16	Mains Frequency Voltage	Signal ports	30 V Continuous, 300 V for 1s	4
		DC Power ports	30 V Continuous, 300 V for 1s	4
IEC 61000-4-17	Ripple on DC Power Supply	DC Power ports	10%	3
IEC 60255-5	Dielectric Strength	Signal ports	2 kVAC (Fail-Safe Relay output)	
		DC Power ports	1.5 kVDC	
		AC Power ports	2 kVAC	
IEC 60255-5	H. V. Impulse	Signal ports	5 kV (Fail-Safe Relay output)	
		DC Power ports	5 kV	
		AC Power ports	5 kV	

IEEE 1613 (C37.90.x) EMI Immunity Type Tests

> **NOTE**
> *The RS900G meets Class 2 requirements for an all-fiber configuration and Class 1 requirements for copper ports.*

IEEE Test	IEEE 1613 Clause	Description		Test Levels
C37.90.3	9	ESD	Enclosure Contact	+/- 8 kV
Enclosure Air	+/- 15 kV			
C37.90.2	8	Radiated RFI	Enclosure ports	35 V/m
C37.90.1	7	Fast Transient	Signal ports	+/- 4 kV @ 2.5 kHz
			DC Power ports	+/- 4 kV
			AC Power ports	+/- 4 kV
			Earth ground ports	+/- 4 kV
C37.90.1	7	Oscillatory	Signal ports	2.5 kV common mode @ 1 MHz
			DC Power ports	2.5 kV common and differential mode @ 1 MHz
			AC Power ports	2.5 kV common and differential mode @ 1 MHz
C37.90	6	H. V. Impulse	Signal ports	5 kV (Failsafe Relay)
			DC Power ports	5 kV
			AC Power ports	5 kV
C37.90	6	Dielectric Strength	Signal ports	2 kVAC (Failsafe Relay)
			DC Power ports	1.5 kVDC

IEEE Test	IEEE 1613 Clause		Description	Test Levels
			AC Power ports	2 kVAC

Environmental Type Tests

Test	Description		Test Levels	Severity Levels
IEC 60068-2-1	Cold Temperature	Test Ad	-40 °C (-40 °F), 16 Hours	
IEC 60068-2-2	Dry Heat	Test Bd	85 °C (185 °F), 16 Hours	
IEC 60068-2-30	Humidity (Damp Heat, Cyclic)	Test Db	95% (non-condensing), 55 °C (131 °F), 6 cycles	
IEC 60255-21-1	Vibration		2g @ 10-150 Hz	Class 2
IEC 60255-21-2	Shock		30g @ 11 ms	Class 2
