PCH Strapping

Chief River Schematic Checklist Rev0.72

Name	Schematics Notes
SPKR	**Reboot option at power-up** **Default Mode:** Internal weak Pull-down. **No Reboot Mode with TCO Disabled:** Connect to Vcc3_3 with 8.2-kΩ - 10-kΩ weak pull-up resistor.
INIT3_3V#	Weak internal pull-up. Leave as "No Connect".
GNT3#/GPIO55 GNT2#/GPIO53 GNT1#/GPIO51	GNT[3:0]# functionality is not available on Mobile. Mobile: Used as GPIO only Pull-up resistors are not required on these signals. If pull-ups are used, they should be tied to the Vcc3_3power rail.
SPI_MOSI	**Enable Danbury:** Connect to Vcc3_3 with 8.2-k? weak pull-up resistor. **Disable Danbury:** Left floating, no pull-down required.
NV_ALE	**Enable Danbury:** Connect to +NVRAM_VCCQ with 8.2-kohm weak pull-up resistor [CRB has it pulled up with 1-kohm no-stuff resistor] **Disable Danbury:** Leave floating (internal pull-down)
NC_CLE	DMI termination voltage. Weak internal pull-up. Do not pull low.
HAD_DOCK_EN# /GPIO[33]	Low (0) - Flash Descriptor Security will be overridden. Also, when this signals is sampled on the rising edge of PWROK then it will also disable Intel ME and its features. High (1) - Security measure defined in the Flash Descriptor will be enabled. Platform design should provide appropriate pull-up or pull-down depending on the desired settings. If a jumper option is used to tie this signal to GND as required by the functional strap, the signal should be pulled low through a weak pull-down in order to avoid asserting HDA_DOCK_EN# inadvertently. Note: CRB recommends 1-kohm pull-down for FD Override. There is an internal pull-up of 20 kohm for DA_DOCK_EN# which is only enabled at boot/reset for strapping functions.
HDA_SDO	Weak internal pull-down. Do not pull high. Sampled at rising edge of RSMRST#.
HDA_SYNC	Weak internal pull-down. Do not pull high. Sampled at rising edge of RSMRST#.
GPIO15	Low(0) - Intel ME Crypto Transport Layer Security (TLS) cipher suite with no confidentiality. High(1) - Intel ME Crypto Transport Layer Security (TLS) cipher suite with confidentiality. Note : This is an un-muxed signal. This signal has a weak internal pull-down of 20 kohm which is enabled when PWROK is low. Sampled at rising edge of RSMRST#. CRB has a 1-kohm pull-up on this signal to +3.3VA rail.
GPIO8	GPIO8 on PCH is the Integrated Clock Enable strap and is required to be pulled-down using a 1k +/- 5% resistor. When this signal is sampled high at the rising edge of RSMRST#, Integrated Clocking is enabled, When sampled low, Buffer Through Mode is enabled.
GPIO27	**Default = Do not connect (floating)** High(1) = Enables the internal VccVRM to have a clean supply for analog rails. No need to use on-board filter circuit. Low (0) = Disables the VccVRM. Need to use on-board filter circuits for analog rails.

SSID = CPU

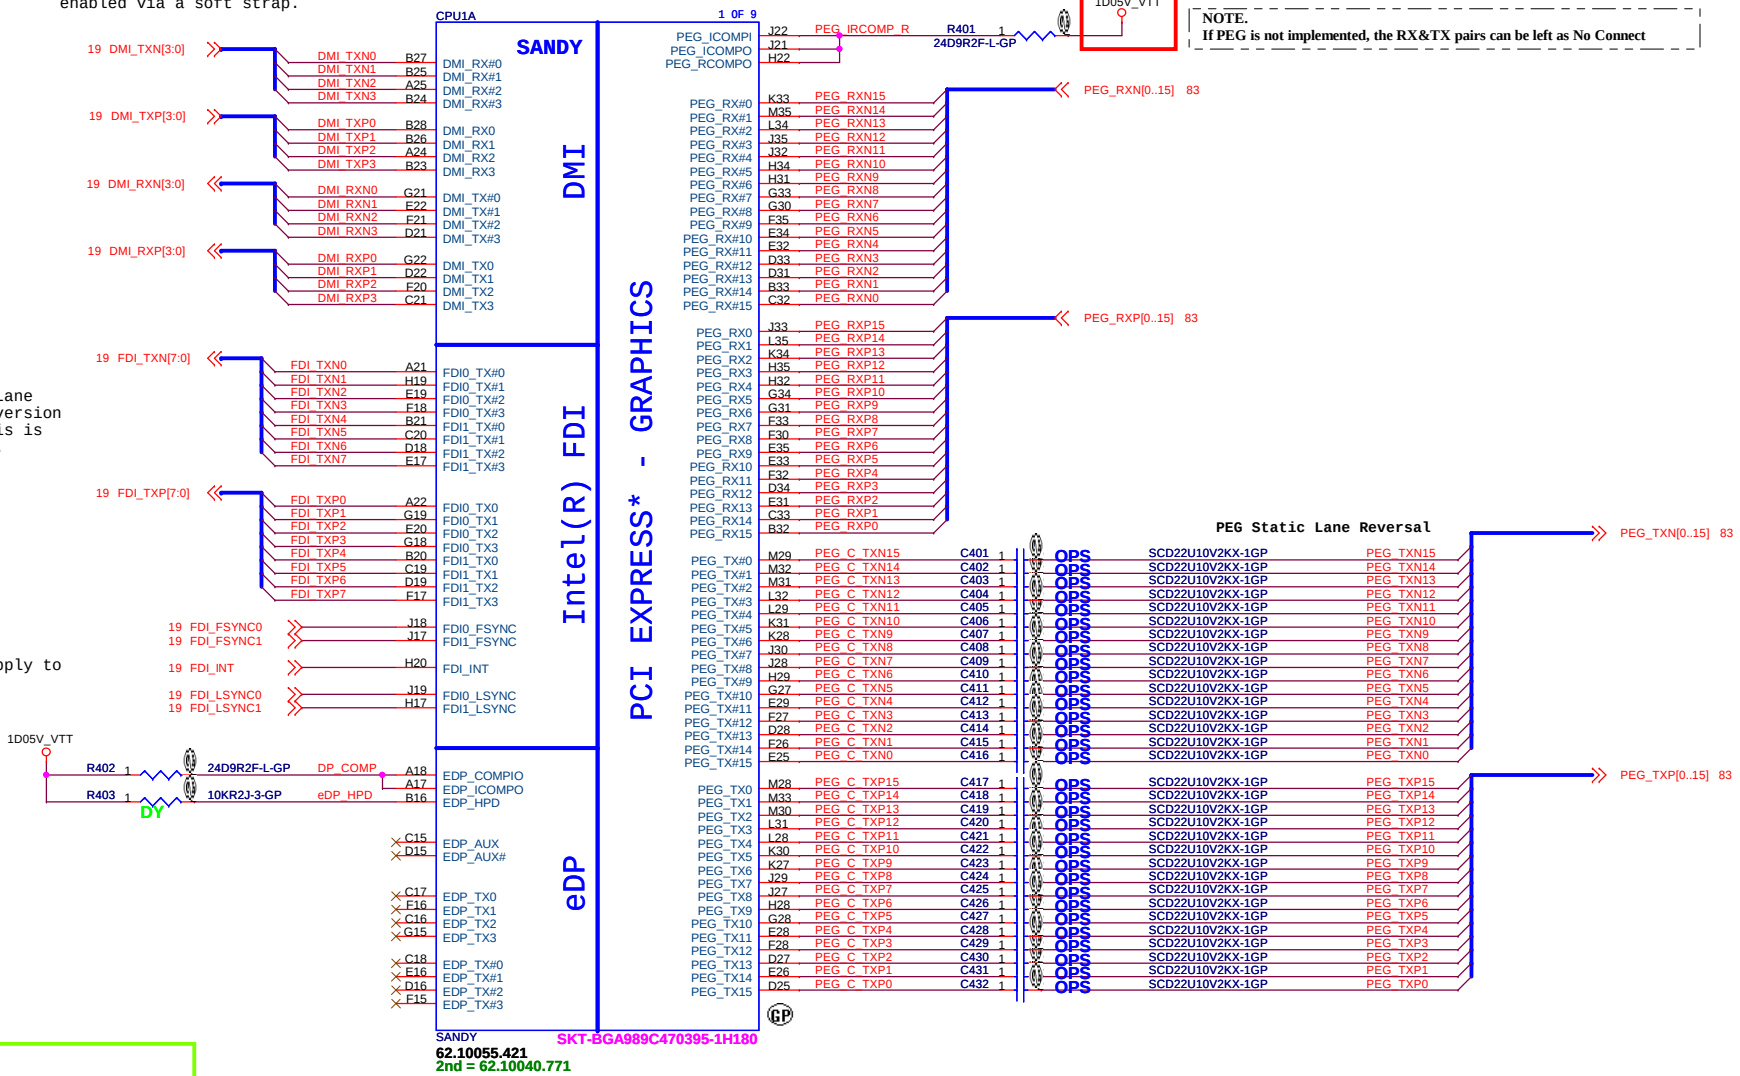
01.00IVY.000 IVY BRIDGE ORCAD SYMBOL.

Note:
Intel DMI supports both Lane Reversal and polarity inversion but only at PCH side. This is enabled via a soft strap.

Signal Routing Guideline:
PEG_ICOMPO keep W/S=12/15 mils and routing length less than 500 mils.
PEG_ICOMPI & PEG_RCOMPO keep W/S=4/15 mils and routing length less than 500 mils.

Note:
Intel FDI supports both Lane Reversal and polarity inversion but only at PCH side. This is enabled via a soft strap.

Note:
Lane reversal does not apply to FDI sideband signals.



NOTE.
If PEG is not implemented, the RX&TX pairs can be left as No Connect

NOTE:
Select a Fast FET similar to 2N7002E whose rise/ fall time is less than 6 ns. If HPD on eDP interface is disabled, connect it to CPU VCCIO via a 10-kΩ pull-Up resistor on the motherboard.

Signal Routing Guideline:
EDP_ICOMPO keep W/S=12/15 mils and routing length less than 500 mils.
EDP_COMPIO keep W/S=4/15 mils and routing length less than 500 mils.

NOTE.
Processor strap CFG[4] should be pulled low to enable Embedded DisplayPort.

Connect EC to PROCHOT# through inverting OD buffer.

If PROCHOT# is not used, then it must be terminated with a 68ohm ±5% pull-up resistor to VTT.

Signal Routing Guideline:
SM_RCOMP keep routing length less than 500 mils.

In order to minimize resistance, use thick traces to route all COMP signals, use 10-mils wide trace for routing less than 500 mils, or 20-mils wide trace for routing between 500 mils and 1000 mils. Keep 20-mils spacing to any other signals in order to minimize crosstalk.

Disabling Guidelines:
If motherboard only supports external graphics:
Connect DPLL_REF_SSCLK on Processor to GND through 1K +/- 5% resistor.
Connect DPLL_REF_SSCLK# on Processor to VCCP through 1K +/- 5% resistorpower (~15 mW) may be wasted.

For platforms not supporting Deep S4/S5
1.VccSUS3_3 and VccDSW3_3 will rise at the same time (connected on board)
2.DPWROK and RSMRST# will rise at the same time (connected on board)
3.SLP_SUS# and SUSACK# are left as 'no connect'
4.SUSWARN# used as SUSPWRDNACK/GPIO30

Signal Routing Guideline:
DMI_ZCOMP keep W=4 mils and routing length less than 500 mils.
DMI_IRCOMP keep W=4 mils and routing length less than 500 mils.

SYS_PWROK: the system is ready to start the exit from reset (de-asserts PLT_RST# to the processor)
PWROK: it indicates to PCH that its CORE well power is stable.
Active Sleep Well (ASW) Power OK
S0_PWR_GOOD after PM_SLP_S3# delay 200 ms
Platforms supporting Deep S4/S5, but not will to participate in the handshake during wake and Deep S4/S5 entry may tie SUSACK# to SUSWARN#.
SUS_ACK#: For non-DWS platforms, this signal can be left unconnected. Due to the internal pull-up on this signal it will be pulled high in order for the boot sequence to proceed.
SUSPWRDNACK : No longer requires a 10-K pull-up to VccSUS (3.3 V).
PCH_WAKE# CRB : 1K CHKLIST: 10K

DSWODVREN - On Die DSW VR Enable	
HIGH	Enabled (DEFAULT)
LOW	Disabled

This signal is used to control power planes to the IntelR ME sub-system. This signal will be asserted in M-off state. If M3 is not supported then SLP_A# will have the same timings as SLP_S3#.

For platforms supporting DEEP S4/S5 state, a low on this signal indicates that PCH is in Deep Sleep state and that EC/platform logic does not need to keep the Suspend Rails ON.
If high means EC must keep SUS rails ON.
If DEEP S4/S5 is not supported, then this pin can be left unconnected.
