LifeWorks Technology Group LLC
1412 Broadway, New York, NY 10018

Non-specific short range device. RF output power meets all SRD requirements.

Wireless Devices

Remove the batteries from any wireless device, or turn it off, before boarding an aircraft or packing the device in luggage that will be checked. Wireless devices can transmit radio frequency (RF) energy whenever batteries are installed and the device is turned on.

Keyboard and Mouse Devices: Health Warning

Use of a keyboard or mouse may be linked to serious injuries or disorders. As in many activities, when using a computer you may experience occasional discomfort in various parts of your body. However, do not ignore symptoms such as persistent or recurring discomfort, pain, throbbing, aching, tingling, numbness, burning sensation or stiffness. Promptly see a qualified doctor, even if symptoms occur when you are not working at your computer.

There is general consensus among researchers that there may be many factors linked to the occurrence of these symptoms, including overall health, stress, physical condition and how a person positions and uses his or her body during work and other activities (including the use of a keyboard or mouse). The amount of time a person spends performing an activity may also be a factor.

If you have questions about how your own lifestyle, activities or physical condition may be related to these symptoms, see a qualified health professional.

Battery-Powered Devices

Use of rechargeable or disposable batteries in an improper manner may result in battery fluid leakage, overheating or explosion. Battery fluid is corrosive, may be toxic, can cause skin and eye burns, and is harmful if swallowed.

Radio Frequency Technical Specifications: 2.4 GHz Devices
