EMC's Policies and Requirements for EMC Support Matrix

EMC's Support Matrix Policies and Requirements

This section describes EMC's policies and requirements for the EMC Support Matrix document.

Purpose and Limitations of this Document

This document is being provided for informational purposes only and may change at any time. This version supersedes and replaces all previous versions. The information is to serve only as a guide for those configurations/products which EMC has qualified. The information in this document is a subset of the information that can be found on the E-Lab Interoperability Navigator tool which is available for all EMC personnel, customers and partners. The E-Lab Interoperability Navigator site may be reached at <http://elabnavigator.emc.com>.

The information included in this document is intended as a guide in the configuration of systems for EMC's products. It is not intended to be the sole resource for system configuration. For more information or answers to questions not found in this document, please see EMC's website, other EMC documentation, such as EMC's Host Connectivity Guides, EMC Networked Storage Topology Guide, EMC CLARiiON Open Systems Configuration Guide, relevant vendor documentation, or contact your EMC Sales or EMC Customer Service representative.

For Symmetrix 4.x support, please look at the Symmetrix 8000 Series section and check the footnotes for model/microcode compatibility. EMC employees can obtain older revisions of ESM containing more Symmetrix 4.x information from the Symmetrix Service Readiness group.

For a complete listing of any known issues with the current support matrix content, please review the ESM Errata on E-Lab Interoperability Navigator. To report any issues with the content contained within the support matrix, follow the steps documented on the Contacts link on E-Lab Interoperability Navigator. E-Lab Interoperability Navigator can be reached at <http://elabnavigator.emc.com>.

Policies for Qualifying Systems

Policies and procedures for support of EMC products are set forth in the customer's applicable agreements. EMC's publication of information relating to system configurations covers only those outlined in this document or by approval from EMC Engineering. Other system configurations not found in this document are not qualified without EMC Engineering approval. EMC has qualified hardware and software provided only by the vendors listed in this document, and host systems, hardware and software from other vendors are not qualified, and may never be. Please contact your EMC Sales or EMC Customer Service representative for updates or information not included in this document.

EMC maintains a large collection of the products listed above as well as third-party application software for qualification with EMC's storage systems and to simulate customer environments, but you must consult the vendors for information about their system internals, such as hardware and associated drivers.

Policy for Future Qualification of Operating System Software Releases

The information in this document is maintained by EMC and EMC strives to update this document with new releases of hardware, operating systems, firmware, BIOS, switch software, etc., as they become available from the vendors. EMC works with the vendors during their development and release processes in order to be fully informed at the time the vendors release new versions. EMC does not announce qualification prior to vendors' General Availability. In some cases, EMC may choose to perform regression testing following the vendors' GA; in these cases and in cases where advance preparation is not possible, EMC may validate and qualify vendors' products as appropriate after they have been released. For early support of such products, including vendor beta participation, contact your EMC Sales or EMC Customer Service representative.

Policy for End-of-Life Support

EMC strives to continue support for any installed platforms, but may remove support from this host matrix for new installations within three months after the vendor has announced that this platform has reached the end of life. EMC will continue support for existing installations of hardware, operating systems, and components that the vendor has officially declared to have reached end of life as long as support is available from the vendor. For the full list of EMC product end of life and end of support, please see the "Release and End of Life Dates" pages on the Support section of Powerlink.

General Information for AX150

Configuration Rules: AX150 Storage Systems

Note: In this document, array means storage system.

- A total of 10 servers are supported per storage system.
- A total of 10 Host Bus Adapters (HBAs) are supported on single-SP AX150 storage systems.
- A total of 20 HBAs are supported on dual-SP AX150 storage systems.
- A total of 4 storage systems per server are supported.
- A total of 256 virtual disks per storage system are supported.
- User installable HBAs are limited to the Emulex and the QLogic E models.
- HBAs from different manufacturers cannot be mixed in the same server.
- User installable switches are limited to the QLogic SB3050-08A-E and the QLogic SANbox SB1404-10AJ-E, the Brocade DS-3250-VL2E and the Brocade DS-220B-FF-D, DS-210B-DEU and the DS-210B-DE. Pre-configured zoning or the Zoning Wizard must be used with these switches to be user installable. All other supported switches are not user installable and require professional installation.
- Switches from different manufacturers cannot be mixed in the same SAN.
- If an AX100 series system is connected to a server, no other type of storage system can be connected to that server.
- A server must be connected to a storage system either directly or through a switch. A server CANNOT be connected to the SAME storage system both directly and through a switch.
- All direct connect configurations are user installable.
 - For example, figures 1 and 2.
- Any switch configuration utilizing an Inter Switch Link (ISL) is not user installable. No more than 2 switches can be connected with an ISL.
 - For example, figures 14 and 15.
- In any supported multiple-server configuration, the servers can run the same operating system or any combination of supported operating systems.
- The snapshot feature requires that the source and secondary servers are connected to the same SP. As a result, the snapshot feature is not supported for figures 4 and 5.
- PowerPath must be installed on all attached servers for all configurations.
- A clustered configuration requires one or more HBAs per server and a single-SP or dual-SP storage system.
- 2 to 8 nodes are supported in a clustered configuration.
- All nodes in a cluster configuration must run the same operating system. Diagrams may show other operating systems, but dissimilar operating systems cannot be clustered.
- All nodes in a cluster configuration must be connected to the same SPs.
 - For example, figures 2, 7 and 8.
- The installation of an operating system on a storage system for the purpose of booting the server from the storage system is not a user installable option.
- Boot from a storage system on clustered servers running Windows 2000 require a dedicated boot HBA.
- Boot from a storage system on clustered servers running Windows 2003 DO NOT require a dedicated boot HBA.

Backup Device Support

EMC's testing and qualification responsibilities only apply to SAN (switch) attached backup devices. SAN attached backup configurations include a backup device connected to a port on the switch. These configurations are not currently user installable. Please refer to the EMC ESM for SAN attached backup supported configurations.

For tape devices connected directly to a backup host, EMC strongly recommends that the component vendors' supported configuration matrices are reviewed (host configuration matrix for compatibility with SCSI or Fibre Channel interface used to connect to tape device, tape device vendor for compatibility with selected SCSI or Fibre Channel interface and backup software vendor for compatibility with the tape device).

Path Definition

A path is a connection between an HBA port and a target SP port in a storage system. Each HBA that is directly connect to, or zoned through, a switch to an SP port is considered an initiator of that SP port. An HBA port can be zoned through different switch ports to the same SP port or to different SP ports, resulting in multiple paths between the HBA port and an SP.

Remote Replication

For customers planning to utilize the AX150 along with CLARiON arrays running EMC SAN Copy software, adding SAN Copy/E software to the AX150 provides the ability to replicate data from the AX150 via Navisphere. For example, using the AX150, SAN Copy/E can be used to replicate data from branch offices back to the data center to provide disaster recovery protection and to consolidate the backup process. The SAN Copy/E application on an AX150 is qualified for connectivity to the CX arrays running SAN Copy (for the SAN Copy application only, not host attach) through professionally installed switches listed on the AX Support Matrix. For cost effective remote replication solutions, as well as low cost DR implementations, the QLogic iSR6142 SAN Router has been qualified.

AX Series EMC Partner Solutions

EMC has a wide variety of distribution partners that offer the AX Series product. The information in this document contains supported components that are 'standard' across our AX Series product solutions. EMC's AX Series partners offer a wider variety of the AX Series solutions to fit your business needs. For a complete listing of current EMC distribution partners and their AX Series specific solutions, please refer to the EMC AX Series website with direct links to these partners. Microsoft Windows 2000

Where replication of boot LUN is supported, any use of the replicated boot LUN other than in original host may lead to hardware/configuration mismatch that render the replicated boot LUN unusable. Any issues that arise in trying to use the boot LUN in a host that is non-identical to the source host is outside of the scope of what EMC can support. Also, in any case due to environment failure where I/O is not written back to the source LUN, or if the source LUN is not left in a stable state by the source host, the replicated LUN is not guaranteed to be any more usable than the source. Also, there may be specific software licensing that needs to be investigated when duplicating the boot LUN.

1. Driver Version 9.1.4.10

2. BIOS 1.23

3. SNIA HBA API Supported.

4. EMC provides in-depth documentation for configurations with QLogic adapters that contains helpful information for installing and configuring QLogic adapters with EMC Storage. This documentation is located in the EMC section of the QLogic website (<http://www.qlogic.com>) along with HBA drivers, and BIOS.

5. Driver Version 9.1.2.11 Minimum supported driver due to compatibility reasons.
6. EMC does not support booting from external arrays if the boot LUN uses a FAT32 file system and Powerpath is installed. For Powerpath/Boot support, NTFS must be used.
7. EMC provides documentation for boot configurations that contains helpful information for systems booting from EMC storage. Visit EMC Powerlink and download part number 300-00-603 for the Windows Host Connectivity Guide.
8. EMC recommends upgrading to the most recent, EMC-Approved, HBA driver.
9. BIOS 2.02a1
10. Driver Version 2.42a0
11. Driver Version 2.41a1 SCSI FC Port driver
12. Firmware Version 1.92a1
13. EMC provides in-depth documentation for configurations with Emulex adapters that contains helpful information for installing and configuring Emulex adapters with EMC Storage. Visit the EMC driver page on the Emulex website (<http://www.emulex.com/ts/docoem/emc/index.html>) and download part number 300-001-157 for guide "EMC Host Connectivity with Emulex Fibre Channel Host Bus Adapters (HBAs) and Converged Network Adapters (CNAs) in the Windows Environment."
14. Windows 2000 hosts running less than SP4 could be susceptible to data loss during LUN expansion operations. This issue is corrected by Microsoft in SP4, or by applying hotfix 327020. See EMC Solution IS emc73538 and Microsoft Knowledge Base article 327020 for more information.
15. Driver Version 9.1.2.11
16. BIOS 2.02
17. Firmware Version 2.80a4
18. BIOS 2.01a2
19. BIOS 1.54
20. Firmware Version 2.70a5
21. BIOS 1.70a3
22. Driver Version 2.22a8
23. Driver Version 9.1.4.10 SCSI FC Port driver
24. Driver Version 2.41a1 As of 2.40a2 Microsoft will no longer allow the Emulex Port Driver to be used in any HCT LOGO solution or block submissions. The Port driver is still digitally signed, but STORPort drivers will be required for all new HCT LOGO solution and block submissions. END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003.
25. Firmware Version 2.72a2
26. Driver Version 2.42a0 SCSI FC Port driver
27. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
28. When booting from an external storage array, press F1 during server POST and set BIOS Start Options to point to the bus slot containing the SAN boot adapter (Default is Planar SCSI.)

32. Driver Version 9.1.2.11 SCSI FC Port driver
33. Driver Version 9.1.2.11 This driver requires Microsoft SCSIPort hotfix Q883114. Please see [http://support.microsoft.com/default.aspx?scid=kb;\[LN\];883114](http://support.microsoft.com/default.aspx?scid=kb;[LN];883114)
34. BIOS 1.05
35. PowerPath supported. ATF/CDE not supported.
36. PowerEdge 2550 and PowerVault 775N support a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
37. Emulex PCI-X and PCI-Express adapters including Qlogic 4Gb PCI-X and PCI-Express adapters are supported in the x346 (8840) only when IBM ServerRAID-7K (71P8642 or 30R8800) is installed with most current firmware and BIOS.
38. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
39. For IBM xSeries Servers running Windows 2000 with IBM ServerRaid controller 4M, the ServerRaid Driver must be 6.00 or above for use with EMC PowerPath 3.0 and above. IBM driver can be downloaded at: <http://www-3.ibm.com/pc/support/site.wss/document.do?Indocid=MIGR-39723>
40. Includes both Pentium PRO and XEON models
41. This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
42. Dual port PCI-X fibre channel mezzanine card option is embedded. No PCI/PCI-X slots available.
43. For external boot configurations running EMC Powerpath on Windows 2000, HP Proliant BL30p & BL35p require a minimum of Powerpath version 4.4.1.
44. BIOS 1.48
45. Not supported with Emulex LP8000-EMC HBA.
46. For AX100 configurations, only Dell PowerVault systems with dual CPUs are supported.
47. Due to the HS20's embedded FC-SW design, array lun masking is required to assign LUNS to each individual blade server.
48. **FSC Fibre Channel module. Dual channel 2GBit/s HBA for BX6xx-series blade servers only.**
49. BIOS 1.47
50. BX6xx-series systems use an embedded fibre channel controller. Contact Fujitsu Siemens to acquire the proper BIOS for the embedded fibre channel controller.
51. Support for 4GB fibre channel HBAs requires an IBM SPORE to be submitted to IBM with a request of system BIOS 56A.
52. BIOS 1.71a0
53. Firmware Version 1.91a5
54. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LP1050-E.
55. BIOS 1.43
56. This HBA is equivalent to the QLogic QLA2340.
57. Firmware Version 1.91a1
58. Dual-port FC switch module. Can be used in place of Optical PassThru Module (OPM.)
59. Refer to EMC Knowledgebase ID emc105679 for any special HBA drivers that may be required.
60. BIOS 1.26
61. Please see the HP website for supported BL c-Class model numbers. The supported model numbers are available in the quickspecs documents available for each BL c-Class blade.
62. BIOS Multiboot v6.00a5 (3.00a4/4.00a1)
63. Requires minimum BIOS v4.01 rev A (5/17/2002) for use with Emulex HBAs.
64. HPQ Proliant ML350 (1GHz) : D04,F04 (11/13/2000) , HPQ Proliant ML350(600,733,800,866,933 MHz) : D02, F04 (11/13/2000).
65. Internal port(s) on QLogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
66. Internal port(s) on QLogic or McData 4Gb FC switch module(s) must be set to 4Gb to SAN boot.
67. BIOS 3.02a6
68. If using Dell PERC Controller, requires PERC 2 or PERC 3 with OpenManager 3.0 and Array Manager 3.1. The afamgt.sys must be version 2.6.0.3486 (or above).
69. Dell PowerEdge 6450 does not support Emulex LP9802/DC HBAs.
70. BIOS 1.52
71. Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
72. Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix. By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks. By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases. The workaround is to perform "symcfg discover" after rebooting.
73. Supports Stratus OS 1.3.X through 2.1.X.
74. QLogic SANSurfer/SANBlade Manager is not supported. Use QLogic SANCLI utility.
75. QLogic SanBlade Manager is not supported.
76. Supports Stratus OS 2.0.X through 2.1.X.
77. This dual port HBA is only supported on DELL PE 6850 in the right-most slot (seen from the rear of the server chassis) marked "FC"
78. BIOS 1.06
79. **This HBA is equivalent to the QLogic QLA2310.**
80. Host must be offline for interfamily Symmetrix microcode upgrade.
81. Update Rollup 1 for Windows 2000 SP4 is supported. For more information on this Rollup and to download the necessary software, please see <http://support.microsoft.com/default.aspx?scid=kb;en-us;891861>
82. This server only supports 5 Volt HBAs: QLogic 22XX family (if applicable), QLogic 23XX family, Emulex LP8000, and Emulex LP850 (if applicable).
83. Proliant DL360 G4 servers with a BIOS prior to P52 may not be running a fully ACPI-compliant BIOS. Emulex 4gb HBAs require the latest ACPI-compliant BIOS and your server may require Windows 2000 to be reinstalled. You do not need to reinstall Windows 2000 if you had an ACPI-compliant BIOS and then upgraded to a newer ACPI-compliant BIOS. You only need to reinstall Windows 2000 if you did not have an ACPI BIOS or an ACPI-compliant BIOS before you upgraded the BIOS. Refer to Microsoft knowledge base article 256841 for more information. (<http://support.microsoft.com/?kbid=256841&sd=RMVP>)

84. PCI-X slots in this server only support low-profile hbas with low-profile brackets. Please ensure your HBA vendor has included the proper bracket to fit this server.

- Novell OES is supported on this kernel.
- SNIA HBA API Supported.
- FC-SW environments using Brocade 2800 or EMC DS-16B require switch firmware 2.5.0d or greater.
- DOS boot device maximum accessible capacity is 2GB. Netware SYS volume must be in LUN 0.
- NetWare boot support is contingent on migration of the DOS boot partition to an NSS partition. NetWare will warn you of the possibility of data corruption if you convert the DOS boot partition to an NSS partition. The risk of data corruption is during I/O to the C: drive while in the NetWare debugger, or while writing reboot log files during an "Auto Restart After Abend". When you load DOSFAT, please set "Auto Restart After Abend" to 0 to avoid the possibility of data corruption.
- Remote boot not supported with PERC controllers enabled in system BIOS.
- No MirrorView or SnapView used on boot LUNs.
- Requires "SCAN ALL LUNs" in AUTOEXEC.NCF just before the "Mount All" statement.
- For any CLARiON SP port configured to a host for booting, the maximum number of logical volumes allowed on that port is 32.
- Edit config.sys with the following: Files=100, Buffers=99
- Previous versions of the HBA and boot installation guides contained restrictions for boot configurations. All boot configuration information is now listed here and supersedes any found in previous boot documentation.
- To enable failover with fabric boot DOSFAT.NSS must be loaded from the autoexec.ncf. In a failed condition the c:\ partition will not failover correctly but the DOSFAT_C: partition will.
- Access Logic required, direct connect or fabric, (no booting through switch inter-switch links)
- Novell Storage Services supported.
- Supports eight (8) hosts per array.
- Driver Version 6.90d Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- BIOS 1.23 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
- Certain HBA models may be too large to fit into this server's PCI or PCI-X slots. A low-profile HBA may be required. Consult your server owner's guide before purchasing HBAs for this server.**
- Support for 4GB fibre channel HBAs requires an IBM SPORE to be submitted to IBM with a request of system BIOS 56A.
- HP Netserver LH3000 U3 is supported in the same configurations as the standard LH 3000.
- Must use standard PCI 32bit/33MHz slot for SCSI
- PowerPath is not supported in conjunction with host-based mirroring.
- Requires BIOS 1.05 available from the EMC-approved section of the QLogic website at <http://www.qlogic.com>
- BIOS 1.05 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- BIOS 1.24
- Driver Version 6.90m
- This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
- Includes both Pentium PRO and XEON models
- PowerEdge 2550 and PowerVault 775N support a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
- BIOS 1.52 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- Driver Version 6.90m Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
- BIOS 1.24 Available in the EMC-approved section of the QLogic website. <http://www.qlogic.com>
