

Fisher® 8580 Rotary Valve

The Fisher 8580 rotary valve offers excellent throttling performance. An approximately linear flow characteristic provides precise throttling control. The 8580 valve offers high cycle life and rugged reliability.

The valve body meets PN 10 through PN 40, CL150, and CL300 ratings. Face-to-face dimensions meet EN 558, API 609, and MSS-SP68 standards. Line centering clips provide for versatility to mount and align the same wafer style valve body in different piping configurations (ASME and EN ratings).

The 8580 rotary valve features an eccentrically-mounted disk with either soft or metal seal, providing capability for enhanced shutoff. The interchangeable sealing technology allows for the same valve body to accept both soft and metal seals.

The actuator sizing and selection process is improved by simply reading a table for information.

8580 Features

- **Approximately linear flow characteristic**— An approximately linear flow characteristic provides precise throttling control.
- **Global Standards**— The valve meets API, ASME, and EN standards, making it suitable for use in all world areas.
- **PEEK/PTFE bearing as standard**— The PTFE-lined PEEK bearing is a low friction, low wear bearing. It allows the valve to operate under high pressure drops for a high cycle life while maintaining low torque. The “drop-in” bearing design enables fast, easy maintenance.
- **Spline-ended Shaft**— The splined shaft with clamped lever and single-pivot linkage reduces lost motion between the actuator and the valve shaft.
- **Improved shaft-disk pinning**— The improved expansion pin system ensures there is a positive, durable connection between disk and shaft. This connection reduces backlash and wear in the drive system, optimizing long-term performance. It also makes disassembly for maintenance quick and simple with no need for special tools.

W9425-2

WAFFER STYLE

W9498-2

SINGLE FLANGE STYLE

- **New Spring-Loaded Shaft**— The spring in the outboard shaft provides support to the drive train and disk, enabling the shaft to be installed in both horizontal and vertical orientations with no detriment to performance or cycle life. This complements the ability to mount the actuator on the left- or right-hand side, enabling access for any installation.
- **Excellent Emissions Capabilities**— The optional ENVIRO-SEAL™ packing systems, are designed with very smooth shaft surfaces and live-loading to provide improved sealing, guiding, and loading force transmission. The seal of the ENVIRO-SEAL system can control emissions to below 100 ppm (parts per million).
- **Sour Service Capability**— Trim and bolting materials are available for applications involving sour liquids and gases. These constructions comply with NACE MR0175-2002, MR0103, and MR0175 / ISO 15156.
- **Field-Reversible Valve Action**— The actuator/valve assembly action can be converted from push-down-to-open to push-down-to-close, or vice versa, without additional parts.
- **Easy Installation**— Line-centering clips engage the line flange bolts to simplify installation and provide for centering of wafer-style valves in the pipeline. End connections are compatible with EN and ASME standards.
- **Excellent Shutoff**— Both the metal and soft seal rings have pressure-assisting sealing action that ensures tight shutoff regardless of pressure drop.
- **Long Seal Life**— The opening and closing path of the eccentric disk minimizes disk contact with the seal ring, thereby reducing seal wear, undue friction, and seating torque requirements. See figure 2.
- **Reliable Flange Gasketing Surface**— The seal retainer screws and retention clips are outside the gasket surface of the seal retainer. Spiral-wound or flat-sheet gaskets can be installed between the uninterrupted seal retainer face and the pipeline flange.
- **Integral Shaft-to-Valve Body Bonding**— Standard valve construction includes conductive packing to provide electrical bonding for hazardous area applications.
- **Powder paint as standard**— The Emerson Process Management™ powder paint finish offers an excellent corrosion-resistant finish to all steel parts.
- **High Temperature Capability**— The valve will operate at elevated temperatures, with the appropriate trim components.
- **Shaft Retention**— Redundant shaft retention provides added protection. The packing follower, anti-blowout ring, and shaft groove interact to hold the shaft securely in the valve body (see figure 1).
- **Travel Indication**— Additional travel indication can be achieved by using the indication line on the shaft, along with the disk position markings on the packing follower (see figure 4).

Table 1. Fisher 8580 Valve Specifications

Specifications		EN	ASME
Valve Body Size		DN 50, 80, 100, 150, 200, 250, and 300	NPS 2, 3, 4, 6, 8, 10, and 12
Pressure Rating		PN 10 to 40 per EN 12516-1	CL150 / 300 per ASME B16.34
Valve Body Materials		EN 1.0619 steel	WCC steel
		EN 1.4409 stainless steel	CF3M (316L) stainless steel
		LCC	LCC
		CW2M ⁽¹⁾	CW2M ⁽¹⁾
		M35-2 ⁽²⁾	M35-2
Disk Materials	PTFE or RPTFE ⁽⁴⁾ Seal	EN 1.4409 stainless steel	CF3M stainless steel
		CW2M	CW2M
		M35-2	M35-2
		Metal or UHMWPE ⁽³⁾ Seal	Chrome-plated EN 1.4409 Stainless Steel
End Connections		Mates with raised-face flanges per EN 1092-1	Mates with raised-face flanges per ASME B16.5
Valve Body Style		Wafer (flangeless) and single flange with tapped or through holes ⁽⁵⁾	
Face-to-Face Dimensions		Meets MSS SP68, API 609, and EN 558 standards	
Shutoff		PTFE, RPTFE, or UHMWPE seal ring - Class VI per ANSI/FCI 70-2 and IEC 60534-4	
		S31600 (316 SST) seal ring - 1% of Class IV per ANSI/FCI 70-2 and IEC 60534-4	
Flow Coefficients		See Fisher Catalog 12	
Flow Direction		Standard (forward flow) is with the seal retainer facing upstream; reverse flow is permissible for soft seals only	
Flow Characteristic		Approximately linear	
Disk Rotation		Counterclockwise to open (when viewed from actuator side of valve body) through 90 degrees of disk rotation	
Shaft Diameters and Approximate Weights		See table 8	
1. This material is not listed in EN 12516-1 or ASME B16.34. See figure 6 for pressure/temperature ratings. 2. This material is not listed in EN 12516-1. See figure 6 for pressure/temperature ratings. 3. UHMWPE stands for ultra high molecular weight polyethylene. 4. RPTFE is a reinforced PTFE seal. 5. LCC construction is standard in wafer style only. Consult your Emerson Process Management sales office for single flange valve body style information.			

Table 2. Materials (Other Valve Components)

Component	Material
Shafts and Pins	S17400 (17-4PH) stainless steel, S20910 (XM-19) stainless steel, N10276, N05500
Anti-blowout Ring	N07718
Seal	PTFE, RPTFE, or UHMWPE with S31600 (316 stainless steel) or R30003 spring. Metal seal is 316 stainless steel with graphite gaskets
Bearings	PEEK/PTFE, R30006 (Alloy 6), S31600 Nitride
Packing	PTFE/carbon-filled PTFE (standard), graphite die-molded ribbon, ENVIRO-SEAL PTFE packing, ENVIRO-SEAL graphite packing
Follower Spring	N07718 with carbon-filled PEEK or S31600 spring seats
Bolting	B8M Class 2, B7M, N05500, N07718
Nuts	8M, 2HM, N04400, N10276

2052 Actuator Specifications and Materials of Construction

Table 10. Fisher 2052 Actuator Specifications

Specifications	
Actuator Mounting Connections	Splined shaft connection, ISO 5211 actuator-to-bracket connection Size 1: F07, Size 2: F10, Size 3: F14
Actuator Sizes	See bulletin 61.1:2052
Operating Pressure ⁽¹⁾	See bulletin 61.1:2052
Maximum Diaphragm Casing Pressure	Size 1, 2, and 3 Actuators: 5 barg (73 psig)
Pressure Connection	See bulletin 61.1:2052
Torque Output	See bulletin 61.1:2052
Actuator Temperature Capabilities ⁽¹⁾	-46 to 80°C (-50 to 176°F)
Operation	Field reversible between PDTC and PDTO; right- and left-hand mounting, any angle of orientation
Approximate Weight	Size 1: 22.2 kg (49 lb) Size 2: 54.4 kg (120 lb) Size 3: 113 kg (250 lb)
Controller/Positioners Available	DVC2000, DVC6200, 3610J, 3620J, 4190, C1
Accessories Available	846, 646, 2625, and 67C Series, switches, i2P-100, VBL, DXP, GO™
Handwheel	Top-mounted handwheel: Optional on Size 1 and 2 actuators only Dec clutchable handwheel: Optional on Size 1, 2, and 3 actuators
Operational Lockout	Available for customer-supplied padlock to lock the actuator in the spring-fail position
1. The pressure/temperature limits in this bulletin and any applicable standard or code limitation for valve should not be exceeded.	

Table 11. Materials of Construction

Component	Material
Top Casing	Steel
Housing	Cast Iron
Diaphragm	Nitrile and nylon standard
Lever	Ductile iron
Diaphragm Plate	Cast iron
OPTIONAL TOP-MOUNTED HANDWHEEL ASSEMBLY	
Component	Material
Handwheel	Cast iron
Handwheel Stem	Aluminum-Bronze
Top Casing Assembly	Steel
O-ring	Nitrile
Pusher Plate	Steel

2052 Actuator Features

- **Compact design, smaller actuators**— Ensures reduced valve/actuator envelope dimensions leading to greater mounting versatility for both skids and process plants, where space is at a premium.
- **Compatible with DVC6200 and DVC2000 digital valve controllers; and 3610J and 3620J positioners**— The new actuator allows linkage-less feedback via a contact-less magnetic array, from the lever to the window-mounted DVC6200 or end-mounted DVC2000. Integral window mounting of the 3610J and 3620J is also available.
- **Clamped lever to reduce lost motion**— The clamping of the lever onto a splined valve shaft, coupled with the single pivot linkage, reduces lost motion between the actuator and the valve. The typical cumulative deadband for a Fisher rotary control valve assembly results in 0.5% or less variability.
- **No bench set required**— The new nested spring design requires no bench set. This also simplifies the actuator selection process, see bulletin 61.1:2052, D103295X012.
- **ISO 5211 mounting with optional insert**— The actuator can now be mounted directly onto non-spline shafts, such as Square and Double D. This allows the actuator, with its enhanced control, to mount on a wider range of valves conforming to ISO 5211.
- **Adjustable travel stops standard with optional lockout feature**— Provides the ability to adjust or change the travel range without removing the actuator or the addition of extra parts. The optional lockout feature locks the lever in the spring-fail position.
- **Fail-safe mechanism contains no aluminum**— All parts in the fail-safe mechanism (made of steel, cast iron, and ductile iron) ensure the actuator will maintain safety integrity in the event of a fire.
- **Powder paint as standard**— The Emerson Process Management powder paint finish offers an excellent corrosion-resistant finish to all external steel and cast iron parts.
- **NAMUR VDE/VDI 3845 for accessory mounting**— Meeting the global standard ensures compatibility for most accessories, enabling quick and easy mounting.
- **Field reversible, right- or left-hand mounting**— The actuator/valve assembly action can be converted from push-down-to-open to push-down-to-close, or vice-versa, without additional parts.
- **Declutchable and top-mounted handwheels**— Available (except top-mounted not available for size 3 actuator).

Options

Top-Mounted Handwheel: For infrequent use as a manual actuator (see bulletin 61.1:2052, D103295X012). For repeated or daily manual operation, the unit should be equipped with a declutchable handwheel actuator.

Declutchable Handwheel Actuator: An end-mounted manual actuator can be used to provide on-site control and to provide override capabilities. See bulletin 61.8:1078 for handwheel actuator specifications.

Limit Switches: ■ Micro-Switch or NAMCO switches for one or two single-pole, double-throw contacts, or ■ GO proximity switches for one or two single-pole, double-throw contacts are available. See separate bulletins for limit switch information.

Position Indicating Switch: TopWorx™ DXP M21GNEB switch for one through six single pole, double throw switch contacts are available. See separate bulletin for position indicating switch information.

Positioner: For precise positioning of the valve control element, the actuator should be equipped with a positioner. For additional information, contact your Emerson Process Management sales office with complete service conditions.

Actuator Locking Mechanism: An actuator locking mechanism is available, which can be used to keep the actuator in a locked position (the same as the spring-fail position) during maintenance. The padlock is customer supplied.
