1 Introduction

The **ECB600** is a high-powered, long-range dual-band concurrent wireless 802.11a/b/g/n access point with six major functional modes. It is designed to operate in numerous environments from large homes, small and medium-sized businesses, multiple-floor offices, hotels and other venues to larger enterprise deployments. Its high-powered, long-range characteristics make it a cost-effective alternative to ordinary access points that don't have the range and reach to connect to a growing number of wireless users who wish to connect to a large home or business network.

The ECB600 supports IEEE 802.11b/g/n standards in the 2.4GHz frequency band while at the same time supporting IEEE 802.11a/n standards in the less congested 5GHz frequency band ideal for streaming or transferring other large files.

The ECB600 delivers up to 6x faster wireless speeds and 7x extended coverage than legacy 802.11a/b/g wireless devices. Even though the ECB600 has been designed and engineered for traffic heavy and demanding business environments it is also quite at home in larger house scenarios because it efficiently extends the wireless range of an existing home router, especially in very architecturally-challenging structures to provide whole home connectivity.

To protect sensitive data during wireless transmissions, the ECB600 offers different encryption settings for wireless transmissions including industry-standard WPA and WPA2 encryption. The ECB600 also includes MAC address filtering to allow network administrators to offer network access only to known computers and other devices based on their MAC addresses.

1.1 Features and Benefits

Features	Benefits
High Speed Data Rate Up to 300 Mbps for each band (2.4GHz / 5GHz)	Capable of handling heavy data payloads such as HD multimedia streaming.
10/100/1000 Gigabit Ethernet	Supports up to 1000Mbps wired networking speed.
IEEE 802.11n Compliant and Backwards Compatible with 802.11 a/b/g devices	Fully compatible with IEEE 802.11 a/b/g/n devices.
Multiple Operation Modes	Allowing users to select any one of the following modes: Access Point, Client Bridge, WDS AP, WDS Bridge, WDS Station and Repeater depending on their specific networking deployment need.
Support Multiple SSIDs in AP mode (up to 8 in each frequency band)	Allows clients to access different networks through a single access point and assign different policies and functions for each SSID through the built-in software.
WPA/WPA2/IEEE 802.1x Support	Supports industry-standard wireless encryption.
MAC Address Filtering in AP Mode	For more secure network connections with known users and devices.
User Isolation Support (AP mode)	Offers an additional layer of protection within the network by isolating specific client users.
Power-over-Ethernet (IEEE802.3at/af)	Allows installers to deploy the ECB600 in locations via a PoE connection (Ethernet cable) where a power outlet may not be available.
Save User Settings	Enables network administrators to save their device settings so firmware upgrades do not permanently delete previous device settings.
SNMP Remote Configuration Management	Allows remote connection to configure or manage the ECB600 easily.
QoS (WMM) support	Prioritizes bandwidth-intensive and sensitive data traffic.

IPv6 Address support	ECB600 supports IPv6, you can use IPv6 address in ECB600.
Band Steering	When Band Steering is activated dual-band client devices are associated to the ECB600 access point on the 5 GHz frequency band.

1.2 Package Contents

The ECB600 package contains the following items (Resellers and dealers require that all items must be in package to issue a refund):

- ECB600 Access Point/Client Bridge
- 12V/2A 100V~240V Power Adapter
- RJ-45 Ethernet LAN Cable
- 2.4 GHz Detachable Antenna x 2
- 5 GHZ Detachable Antenna x 2
- Wall Mount Screw Kit
- CD with User's Manual
- Quick Installation Guide

1.3 System Requirements

The following are the Minimum System Requirements in order configure the device.

- Computer with an Ethernet interface or wireless network capability
- Windows OS (XP, Vista, 7), Mac OS X, or Linux-based operating systems
- Web-Browsing Application (i.e.: Internet Explorer, Firefox, Safari, or other similar browser application)

1.4 Applications

Wireless LAN (WLAN) products are easy to install and highly efficient. The following list describes the benefits of deploying a wireless access point:

a) **Difficult-to-Wire Environments**

There are many situations where wires cannot be installed, deployed easily or cannot be hidden from view. Many older buildings sites, or areas within a building may make the installation of an Ethernet-based LAN impossible, impractical or expensive.

b) **Temporary Workgroups**

A deployed wireless access point or several access points, gives businesses the flexibility to create temporary workgroups/networks in more open areas within a building – auditoriums, amphitheater classrooms, ballrooms, arenas, exhibition centers, and temporary offices.

c) **The Ability to Access Real-Time Information**

Doctors/Nurses, Point-of-Sale Employees, and/or Warehouse Workers can access real-time information on their network via the access point while dealing with patients, serving customers, and/or processing information.

d) **Frequently Changing Environments**

Setting up an access point, like the ECB600, to provide access to a company network or its Internet connection is quick and easy which also makes it ideal for establishing network access in temporary venues like exhibits, special events, or show rooms.

e) **Small Office and Home Office (SOHO) Networks**

A wireless access point, like the ECB600, is ideal for SOHO users who need a cost-effective way to expand their existing network to provide more access for more devices, easy and quick installation of a small network.

f) **Wireless Extensions to Existing Ethernet-based Networks**

Wireless access points, like the ECB600, enable network administrators, installers and end-users to extend the range and reach of an existing Ethernet-based network.

g) Training/Educational Facilities

Training sites at corporations and universities deploy wireless access points to provide connectivity their networks and the Internet connection for their employees and students.

2 Before you Begin

This section will guide you through the installation process. Placement of the EnGenius ECB600 is essential to maximize the access point's performance. Avoid placing the ECB600 in an enclosed space such as a closet, cabinet, or stairwell.

2.1 Considerations for Wireless Installation

Generally, the exact operating distance of a wireless device, like the ECB600, cannot be pre-determined due to a number of unknown variables or obstacles in the environment in which the device will be deployed. These could be the number, thickness, and location of walls, ceilings, elevator shafts, stairwells, or other objects that the device's wireless signals must pass through. Here are some key guidelines to allow the ECB600 to have optimal wireless range.

- Keep the number of walls and/or ceilings between the ECB600 and other network devices to a minimum. Each wall and/or ceiling can reduce the signal strength, resulting in lower signal strength.
- Building materials make a difference. A solid metal door and/or aluminum studs may have a significant negative effect on the signal strength of the ECB600. Locate your wireless devices carefully so the signal can pass through drywall and/or open doorways. Materials such as glass, steel, metal, concrete, water (example: fish tanks), mirrors, file cabinets and/or brick can also diminish wireless signal strength.
- Interference from other electrical devices and/or appliances that generate RF noise can also diminish the ECB600's signal strength. The most common types of devices are microwaves or cordless phones.

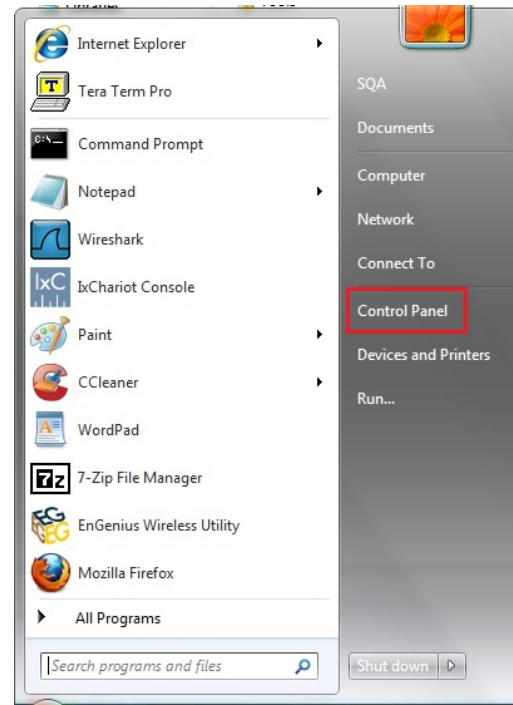

2.2 Computer Settings (in Windows XP/Windows 7)

In order to use the ECB600, you must first configure the TCP/IPv4 connection of your Windows OS computer system.

- Click **Start** button and open **Control Panel**.

Windows XP

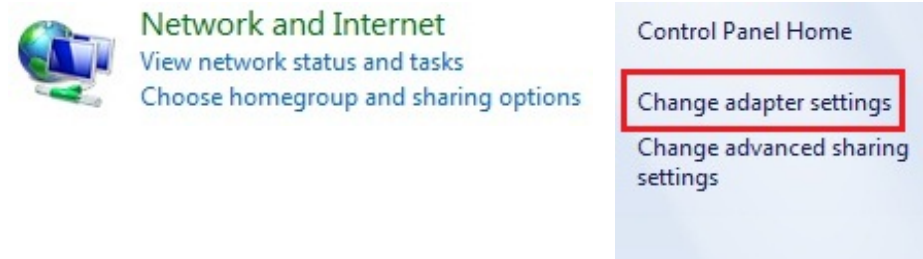

Windows 7

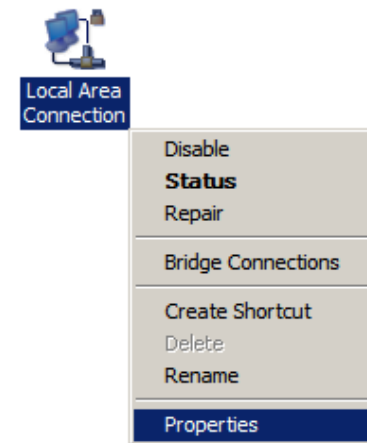

- In **Windows XP**, click **Network Connections**

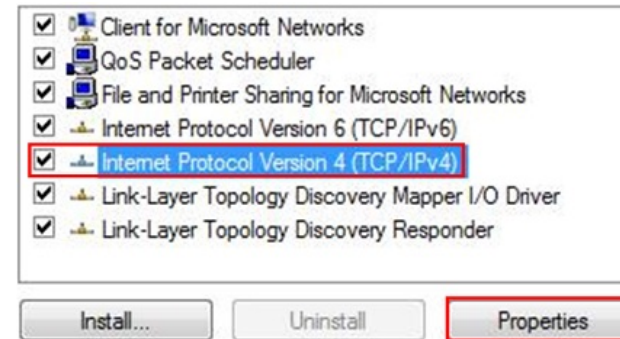

- In **Windows 7**, click **View Network Status and Tasks** in the **Network and Internet** section, then select **Change adapter settings**

- Right click on **Local Area Connection** and select **Properties**

- Select “**Internet Protocol Version 4 (TCP/IPv4)**” and then select **Properties**

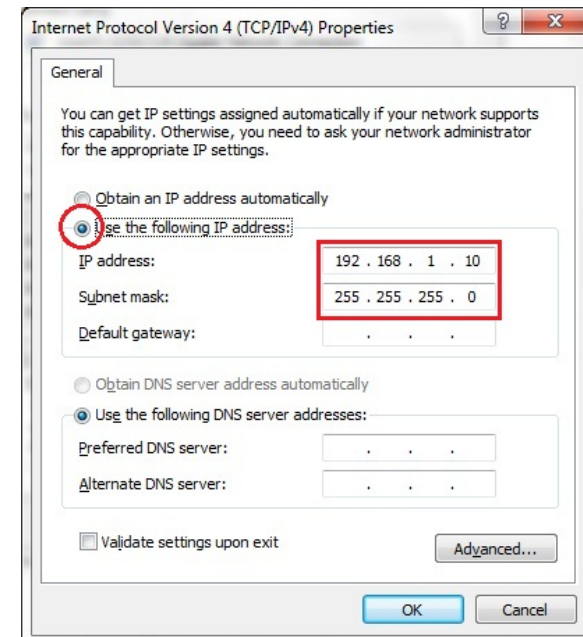

- Select **Use the following IP address** and enter an IP address that is different from the ECB600 and subnet mask then click **OK**.

Note: Ensure that the IP address and subnet mask are on the same subnet as the device.

For example: ECB600 IP address: 192.168.1.1

PC IP address: 192.168.1.2 – 192.168.1.255

PC subnet mask: 255.255.255.0

2.3 Computer Settings in Apple Mac OS X

- Go to **System Preferences** (can be opened in the **Applications** folder or selecting it in the Apple Menu)
- Select **Network** in the **Internet & Network** section
- Highlight **Ethernet**
- In **Configure IPv4**, select **Manually**
- Enter an IP address that is different from the ECB600 and subnet mask then press **OK**

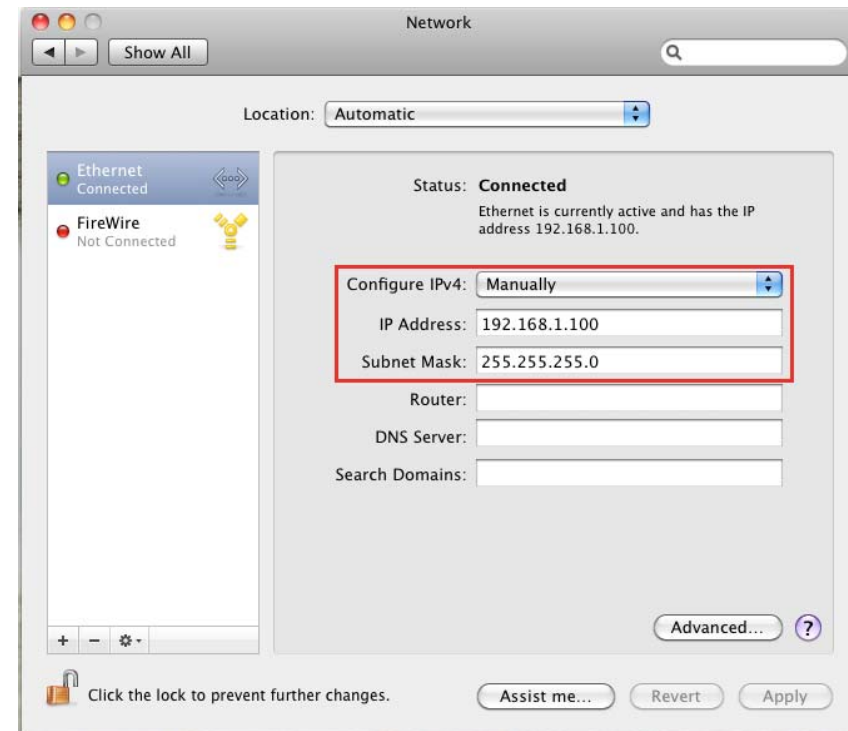

Note: Ensure that the IP address and subnet mask are on the same subnet as the device.

For example: ECB600 IP address: 192.168.1.1

PC IP address: 192.168.1.2 – 192.168.1.255

PC subnet mask: 255.255.255.0

- Click **Apply** when done.

2.4 Hardware Installation

1. Ensure that the computer in use has an available Ethernet (RJ-45) Port. For more information, verify with your computer's user manual.
2. Connect one end of the Category 5e Ethernet cable into the RJ-45 port of the ECB600 and the other end to the RJ-45 port of the computer. Ensure that the cable is securely connected to both the ECB600 and the computer.
3. Connect the Power Adapter DC connector to the DC-IN port of the ECB600 and the Power Adapter to an available electrical outlet. Once both connections are secure, verify the following:
 - a) Ensure that the **POWER** light is on (it will be orange).
 - b) Ensure that the **2.4GHz/5GHz WLAN** light is on (they will be blue).
 - c) Ensure that the **LAN (Computer/ECB600 Connection)** light is on (it will be blue).
 - d) Once all lights are on, proceed to set up the ECB600 using the computer.

This diagram depicts the hardware configuration.

Front Panel	
LED Lights	LED lights for Power, Gigabit Ethernet port, WLAN 2.4G and WLAN 5G.
Rear Panel	
Power	DC IN for Power.
Gigabit Ethernet Port	Gigabit Ethernet port for RJ-45 cable.
Reset Button	One click for reset the device. Press over 10 seconds for reset to factory default.

3 Configuring Your ECB600

This section will show you how to configure the device using the web-based configuration interface.

3.1 Default Settings

Please use your Ethernet port or wireless network adapter to connect the ECB600.

Default Settings

IP Address	192.168.1.1
Username / Password	admin / admin
Operation Mode	AP / AP

3.2 Web Configuration

- Open a web browser (Internet Explorer/Firefox/Safari) and enter the IP Address **http://192.168.1.1**

Note: If you have changed the default LAN IP Address of the Access Point, ensure you enter the correct IP Address.

- The default username and password are **admin**. Once you have entered the correct username and password, click the **Login** button to open the web-base configuration page.

A screenshot of the EnGenius login page. The page has a white background with a rounded rectangular border. At the top center, the text "EnGenius" is displayed. Below it, there are two input fields: "Username:" with the text "admin" entered, and "Password:" with five black dots. At the bottom, there are two buttons: "Login" and "Reset".

- If successful, you will be logging in and see the ECB600 User Menu.

4 Building a Wireless Network

The ECB600 has the ability to operate in various modes. This chapter describes the operating modes of the ECB600.

4.1 Access Point Mode

In Access Point Mode, ECB600 behaves like a central connection for stations or clients that support IEEE 802.11a/b/g/n networks. The stations and clients must be configured to use the same SSID (Service Set Identifier) and security password to associate with the ECB600. The ECB600 supports up to eight SSIDs at the same time for secure access.

4.2 Client Bridge Mode

In Client Bridge Mode, the ECB600 essentially acts as a wireless adapter that connects to an access point to allow a system wireless access to the network. This mode requires you to connect the Ethernet port on your PC to the ECB600 LAN port. If you use the client bridge operating mode, use the ECB600 Site Survey feature to scan for Access Points within range. When you find an Access Point, configure the ECB600 to use the same SSID and Security Password as the Access Point to associate with it.

4.3 WDS AP / WDS Station Mode

The ECB600 also supports WDS AP mode. This operating mode allows wireless connections to the ECB600 using WDS technology. In this mode, configure the MAC addresses in both Access Points to enlarge the wireless area by enabling WDS Link settings. WDS supports four AP MAC addresses.

Note: WDS Station Mode does not support Access Point feature.

4.4 WDS Bridge Mode

In WDS Bridge Mode, the ECB600 can wirelessly connect different LANs by configuring the MAC address and security settings of each ECB600 device. Use this mode when two wired LANs located a small distance apart want to communicate with each other. The best solution is to use the ECB600 to wirelessly connect two wired LANs, as shown in the following figure. WDS Bridge Mode can establish four WDS links, creating a star-like network.

Note: WDS Bridge Mode does not act as an Access Point. Access Points linked by WDS are using the same frequency channel. More Access Points connected together may lower throughput. This configuration can be susceptible to generate endless network loops in your network, so it is recommended to enable the Spanning Tree setting (see 6.3 Spanning Tree Setting, below) to prevent this from happening.

4.5 Repeater mode

The Repeater mode is used to regenerate or replicate signals from a wireless router or other access point/station that is unable to reach certain areas in a building. When this mode is activated in the ECB600, the ECB600 receives the wireless signal from an existing router or AP and relays it to other devices within its range so they can join the network.

5 Status

The **Status** section contains the following options: **Main**, **2.4G/5G Wireless Client List**, **2.4G/5G Connection Status**, **2.4G/5G WDS Link List** and **System Log**.

The following sections describe these options.

5.1 Save/Reload

This page lets you save and apply the settings shown under **Unsaved changes list**, or cancel the unsaved changes and revert them to the previous settings that were in effect.

5.3 2.4G/5G Wireless Client List

Clicking the **2.4G/5G Wireless Client List** link under the **Status** menu displays the list of clients associated to the ECB600's 2.4GHz/5GHz, along with the MAC address, TX, RX and signal strength for each client. Clicking **Kick** in the Kick and Ban column removes this client. Clicking **Refresh** updates the client list.

Note: Only applicable in Access Point, WDS AP, and Repeater mode.

5.6 System Log

The ECB600 automatically logs (records) events of possible interest in its internal memory. To view the logged information, click the **System Log** link under the **Status** menu. If there is not enough internal memory to log all events, older events are deleted from the log. When powered down or rebooted, the log will be cleared.

6 System

6.1 Operation Mode

The ECB600 supports six operating modes: Access Point, Client Bridge, WDS AP, WDS Bridge, WDS Station and Repeater.

System Properties

[Home](#)
[Reset](#)

System Properties

Device Name	ECB600 (1 to 32 characters)
Operation Mode	<p>2.4G Wireless Configuration</p> <ul style="list-style-type: none"> <input checked="" type="radio"/> Access Point <input type="radio"/> Client Bridge <input type="radio"/> WDS <input type="radio"/> Repeater <p>5G Wireless Configuration</p> <ul style="list-style-type: none"> <input checked="" type="radio"/> Access Point <input type="radio"/> Client Bridge <input type="radio"/> WDS <input type="radio"/> Repeater

System Properties	
Device Name	Enter a name for the device. The name you type appears in SNMP management. This name is not the SSID and is not broadcast to other devices.
Operation Mode	Use the radio button to select an operating mode.
Accept / Cancel	Click Accept to confirm the changes or Cancel to cancel and return previous settings.

Since ECB600 is a dual band device, you can use operating modes which marked with • concurrently.

2.4GHz 5GHz	Access Point	Client Bridge	WDS AP	WDS Bridge	WDS Station	Repeater
Access Point	•	•	•	•	•	•
Client Bridge	•	X	•	X	X	X

IP Settings

IP Network Setting

Select whether the device IP address will use the static IP address specified in the IP Address

	field or be obtained automatically when the device connects to a DHCP server.
IP Address	The IP Address of this device.
IP Subnet Mask	The IP Subnet Mask of this device.
Default Gateway	The Default Gateway of this device. Leave it blank if you are unsure of this setting.
Primary / Secondary DNS	The primary / secondary DNS address for this device.
Use Link-Local Address	Check this if you want to use Link-Local Address.
IPv6 IP Address	The IPv6 IP Address of this device.
IPv6 Subnet Prefix Length	The IPv6 Subnet Prefix Length of this device.
IPv6 Default Gateway	The IPv6 Default Gateway of this device. Leave it blank if you are unsure of this setting.
IPv6 Primary / Secondary DNS	The primary / secondary DNS address for this device.

6.3 Spanning Tree Setting

This page allows you to modify the Spanning Tree settings. Enabling Spanning Tree protocol will prevent network loops in your LAN network.

Spanning Tree Settings

[Home](#)
[Reset](#)

Spanning Tree Status	<input type="radio"/> On <input checked="" type="radio"/> Off
Bridge Hello Time	<input type="text" value="2"/> seconds (1-10)
Bridge Max Age	<input type="text" value="20"/> seconds (6-40)
Bridge Forward Delay	<input type="text" value="4"/> seconds (4-30)
Priority	<input type="text" value="32768"/> (0-65535)

[Accept](#)
[Cancel](#)

Spanning Tree	
Spanning Tree Status	Enable or disable the Spanning Tree function.
Bridge Hello Time	Specify Bridge Hello Time, in seconds. This value determines how often the device sends handshake packets to communicate information about the topology throughout the entire Bridged Local Area Network.
Bridge Max Age	Specify Bridge Max Age, in seconds. If another bridge in the spanning tree does not send a hello packet for a long period of time, it is assumed to be dead.
Bridge Forward Delay	Specify Bridge Forward Delay, in seconds. Forwarding delay time is the time spent in each of the Listening and Learning states before the Forwarding state is entered. This delay is provided so that when a new bridge comes onto a busy network, it analyzes data traffic before participating.

Priority	Specify the Priority Number. A smaller number has greater priority.
Accept / Cancel	Click Accept to confirm the changes or Cancel to cancel and return previous settings.

6.4 Band Steering

When Band Steering is activated dual-band client devices are associated to the ECB600 access point on the 5 GHz frequency band. Check **Enable** and then click **Save/Apply** to use band steering.

Band Steer

[Home](#)[Reset](#)

Band Steering

NOTE:

2.4G and 5G must have at least one the same SSID and the SSID of 2.4G can not duplicate.

2.4G/5G Wireless Network (Client Bridge / WDS Station / Repeater mode)	
Wireless Mode	Wireless mode supports 802.11b/g/n mixed mode in 2.4G and 802.11a/n mixed mode in 5G.
SSID	The SSID is a unique named shared amongst all the points of the wireless network. The SSID must be identical on all points of the wireless network and cannot exceed 32 characters. You may specify an SSID or select one from the Site Survey .
Site Survey	Click on Site Survey to search the existing Access Points.
Preferred SSID	Specify the SSID for the repeater. It can be different from Access Point's SSID. (Note: Only in Repeater mode)
Preferred BSSID	Specify the BSSID (Access Point's MAC Address).
Wireless Security	The encryption is using. It must the same as Access Point's encryption.
Accept / Cancel	Click Accept to confirm the changes or Cancel to cancel and return previous settings.

7.2 Wireless Security

The Wireless Security section lets you configure the ECB600's security modes: WEP, WPA-PSK, WPA2-PSK, WPA-PSK Mixed, WPA, WPA2, and WPA Mixed. It is strongly recommend to use WPA2-PSK.

WEP Encryption:

Wireless Security

Security Mode	WEP ▾
Auth Type	Open System ▾
Input Type	Hex ▾
Key Length	40/64-bit (10 hex digits or 5 ASCII char) ▾
Default Key	1 ▾
Key1	1234567890
Key2	
Key3	
Key4	

WEP Encryption	
Auth Type	Select Open System or Shared Key .
Input type	ASCII: Regular Text (recommended) HEX: Hexadecimal Numbers (For advanced users)
Key Length	Select the desired option and ensure the wireless clients use the same setting. Choices are 64, 128, 152-bit password lengths.
Default Key	Select the key you wish to be default. Transmitted data is ALWAYS encrypted using the Default

	Key; the other Keys are for decryption only. You must enter a Key Value for the Default Key .
Encryption Key #	Enter the key value or values you wish to use. Only the Key selected as Default is required. The others are optional.

WPA-PSK (WPA Pre-Shared Key) Encryption:

Wireless Security

Security Mode	WPA-PSK Mixed ▾
Encryption	Both(TKIP+AES) ▾
Passphrase	12345678 (8 to 63 characters) or (64 Hexadecimal characters)
Group Key Update Interval	3600 seconds(30~3600, 0: disabled)

WPA-PSK (WPA Pre-Shared Key) Encryption	
Encryption	Select the WPA encryption type you would like. Please ensure that your wireless clients use the same settings.
Passphrase	Wireless clients must use the same key to associate the device. If using ASCII format, the Key must be from 8 to 63 characters in length. If using HEX format, the Key must be 64 HEX characters in length.
Group Key Update Interval	Specify how often, in seconds, the group key changes.

WPA Encryption: Only in Access Point / WDS AP mode

Wireless Security

Security Mode	WPA Mixed ▾
Encryption	Both(TKIP+AES) ▾
Radius Server	<input type="text"/> . <input type="text"/> . <input type="text"/> . <input type="text"/>

Accept Cancel

2.4G/5G Wireless Advanced	
Data Rate	Select a data rate from the drop-down list. The data rate affects throughput of data in the ECB600. The lower the data rate, the throughput will be lower, but so will the transmission distance.
RTS/CTS Threshold	Specify the threshold package size for RTC/CTS. A small number causes RTS/CTS packets to be sent more often and consumes more bandwidth.
Distance	Specify the distance between Access Points and clients. Longer distances may drop high-speed connections.

Aggregation	Merges data packets into one packet. This option reduces the number of packets, but increases packet sizes.
WMM Parameters	WMM (Wi-Fi Multimedia) manages the priority of audio, video and voice data over a Wi-Fi network so that data from other applications are less likely to interfere with transmission. The parameters CWmin, CWmax and AIFS together control the priority of the four access categories (AC). Note: Only applicable in Access Point and WDS AP mode.
Client Limit	Check Enable and enter a number to limit the maximum client connection (The maximum is 127). Note: Only applicable in Access Point, WDS AP and Repeater mode.
Accept / Cancel	Click Accept to confirm the changes or Cancel to cancel and return previous settings.

Note: **WMM Parameters** is only applicable in Access Point and WDS AP mode.

Client Limit is only applicable in Access Point, WDS AP and Repeater mode.

7.6 WPS (Wi-Fi Protected Setup)

Wi-Fi Protected Setup (WPS) feature complies with the Wi-Fi Alliance WPS standard and makes it easier to quickly add client devices to an established, security-enabled Wi-Fi network.

WPS reduces the user steps required to configure a network and supports two methods that are familiar to most consumers to configure a network and enable security.

Note: Only applicable in Access Point and WDS AP mode.

WPS	Select to Enable or Disable the WPS feature.
WPS Current Status	Shows whether the WPS function is Configured or unConfigured . When it is Configured, the WPS has been used to authorize connection between the device and wireless clients.
Self Pin Code	The PIN code of this device.
SSID	The SSID (wireless network name) used when connecting using WPS.
Authentication Mode	Shows the encryption method used by the WPS process.
Passphrase Key	This is the passphrase key that is randomly generated during the WPS process. It is required if wireless clients that do not support WPS attempts to connect to the wireless network.
WPS via Push Button	Click this button to initialize WPS feature using the push button method.
WPS via PIN	Enter the PIN code of the wireless device and click this button to initialize WPS feature using the PIN method.

7.7 WDS Link Settings

Using WDS (Wireless Distribution System) will allow a network administrator or installer to connect to Access Points wirelessly. Doing so will extend the wired infrastructure to locations where cabling is not possible or inefficient to implement.

Note: Compatibility between different brands and models of access points is not guaranteed. It is recommended that the WDS network be created using the same models for maximum compatibility.

Also note: All Access Points in the WDS network needs to use the same Channel and Security settings.

To create a WDS network, please enter the MAC addresses of the Access Points that you want included in the WDS. There can be a maximum of four access points.

Note: Only applicable in WDS AP and WDS Bridge mode.

Old Password	Enter the old password for logging in to the Old Password entry box.
New Password	Enter the new password for logging in to the New Password entry box.
Confirm Password	Re-enter the new password in the Confirm Password entry box for confirmation.
Save/Apply / Cancel	Click Save/Apply to apply the changes or Cancel to return previous settings.
Logout	Click Logout to logout.

8.2 Management VLAN Settings

This page allows you to assign a VLAN tag to the packets. A VLAN is a group of computers on a network whose software has been configured so that they behave as if they were on a separate Local Area Network (LAN). Computers on VLAN do not have to be physically located next to one another on the LAN.

Note: Only applicable in Access Point and WDS AP mode.

Caution: If you reconfigure the Management VLAN ID, you may lose connectivity to the access point. Verify that the switch and DHCP server can support the reconfigured VLAN ID, and then re-connect to the new IP address.

Management VLAN ID

No VLAN tag
 Specified VLAN ID (must be in the range 1 ~ 4094.)

Accept

Cancel

Management VLAN (Access Point / Repeater mode)	
Profile Isolation	Restricted client to communicate with different VID by selecting the radio button.
VLAN ID	Specify the VLAN tag for each profile.
Management VLAN ID	If your network includes VLANs, you can specify a VLAN ID for packets pass through the Access Point with a tag. Otherwise, select No VLAN tag .
Accept / Cancel	Click Accept to confirm the changes or Cancel to cancel and return previous settings.

Note:

1. If you reconfigure the Management VLAN ID, you may lose your connection to the ECB600. Verify that the DHCP server supports the reconfigured VLAN ID and then reconnect to the ECB600 using the new IP address.
2. Clicking **Accept** does not apply the changes. To apply them, use Status > Save/Load (see section 5.1).

VLAN Setup

Below is a sample network diagram for VLAN.

Please note that in order for the settings to save on this unit you need to click **Save & Apply** under the **Save/Reload** option under **Status**.

Step 1. Setup Operation mode to **Access Point**.

The screenshot displays the EnGenius configuration web interface for a Wireless Access Point/Client Bridge. The main header shows the EnGenius logo and the title "Wireless Access Point/Client Bridge". The left sidebar is titled "API/AP" and contains a navigation menu with sections: "Status" (Save/Reload:0, Main, 2.4G Wireless Client List, 5G Wireless Client List, System Log), "System" (Operation Mode, IP Settings, Spanning Tree Settings), and "2.4G Wireless" (Wireless Network). The "Operation Mode" item in the System section is highlighted with a red box.

The main content area is titled "System Properties" and includes "Home" and "Reset" buttons. Below this, the "System Properties" section contains the following fields:

- Device Name:** ECB600 (1 to 32 characters)
- Country/Region:** Please Select a Country Code
- Operation Mode:** This section is divided into two sub-sections:
 - 2.4G Wireless Configuration:** Includes radio buttons for Access Point (selected and highlighted with a red box), Client Bridge, WDS, and Repeater.
 - 5G Wireless Configuration:** Includes radio buttons for Access Point (selected and highlighted with a red box), Client Bridge, WDS, and Repeater.

At the bottom of the configuration area, there are "Accept" and "Cancel" buttons, with the "Accept" button highlighted by a red box.

Step 2. Click on whichever band you want to configure.

Step 5. Under **Management** > **Management VLAN** is where you configure the SSID to VLAN map.

The screenshot shows the EnGenius web interface for a Wireless Access Point/Client Bridge. The left sidebar contains a navigation menu with sections: Status, System, 2.4G Wireless, 5G Wireless, and Management. The 'Management' section is expanded, and 'Management VLAN' is highlighted. The main content area is titled 'Management VLAN Settings' and includes 'Home' and 'Reset' buttons. It features two tables: '2.4G Current Profiles' and '5G Current Profiles'. Below the tables is a 'Caution' note and a 'Management VLAN ID' configuration section with radio buttons for 'No VLAN tag' and 'Specified VLAN ID' (with a text input field). 'Accept' and 'Cancel' buttons are at the bottom.

Management VLAN Settings Home Reset

EnGenius112234_7-5G	None	<input type="checkbox"/>	57	<input type="checkbox"/>
EnGenius112234_8-5G	None	<input type="checkbox"/>	58	<input type="checkbox"/>

Caution: If you reconfigure the Management VLAN ID, you may lose connectivity to the access point. Verify that the switch and DHCP server can support the reconfigured VLAN ID, and then re-connect to the new IP address.

Management VLAN ID No VLAN tag Specified VLAN ID
(must be in the range 1 ~ 4094.)

Accept Cancel

Step 6. The **Isolation** checkbox tells the unit that you want the SSID to be mapped to a VID specified in the **VID** field. If the Isolation box is not checked the SSID will not be tied to the VLAN that is not tagged off the trunk port. The **Enable** box performs the same as it did in Step 3.

SSID	Security	Isolation	VID	Enable
Untagged SSID	WPA2-PSK AES	<input type="checkbox"/>	1	<input checked="" type="checkbox"/>
Public	WPA2-PSK AES	<input checked="" type="checkbox"/>	10	<input checked="" type="checkbox"/>
Private	WPA2-PSK AES	<input checked="" type="checkbox"/>	20	<input checked="" type="checkbox"/>

Step 7. Please set your unit to be in the subnet that you want to manage the device in, pointing to the proper default gateway and outside of your DHCP scope.

The screenshot shows the EnGenius configuration interface for a Wireless Access Point/Client Bridge. The left sidebar is yellow and contains a menu with 'API/AP' selected. Under 'System', 'IP Settings' is highlighted with a red box. The main content area is titled 'IP Settings' and has 'Home' and 'Reset' buttons. It displays 'System Information' with radio buttons for 'Obtain an IP address automatically (DHCP)' (selected) and 'Specify an IP address'. Below this are fields for IP Address (192.168.1.1), IP Subnet Mask (255.255.255.0), Default Gateway (192.168.1.254), Primary DNS (8.8.8.8), and Secondary DNS (0.0.0.0). At the bottom, 'Accept' and 'Cancel' buttons are visible, with 'Accept' highlighted by a red box.

Optional:

If using a tagged VLAN to manage the unit then please place unit in the proper subnet and set the management VLAN tag to the tagged LAN you want to manage the device from.

Caution: If you reconfigure the Management VLAN ID, you may lose connectivity to the access point. Verify that the switch and DHCP server can support the reconfigured VLAN ID, and then re-connect to the new IP address.

Management VLAN ID	<input type="radio"/> No VLAN tag
	<input checked="" type="radio"/> Specified VLAN ID <input type="text" value="100"/>
	(must be in the range 1 ~ 4094.)

8.4 SNMP Settings

This page allows you to assign the Contact Details, Location, Community Name, and Trap Settings for Simple Network Management Protocol (SNMP). This is a networking management protocol used to monitor network attached devices. SNMP allows messages (called protocol data units) to be sent to various parts of the network. Upon receiving these messages, SNMP compatible devices (called agents) return the data stored in their Management Information Bases.

Click [**Logout**] in **Management** menu to logout.

8.15 Reset

In some circumstances, it may be required to force the device to reboot. Click on **Reboot the Device** to reboot the ECB600.

Reset

[Home](#)[Reset](#)

The System Settings section allows you to reboot the device, or restore the device to the factory default settings. Restoring the unit to the factory default settings will erase all settings, including any rules you have created.

System Commands

Reboot the Device

Restore to Factory Defaults

Appendix A – FCC Interference Statement

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Operations in the 5.15-5.25GHz band are restricted to indoor usage only.

IMPORTANT NOTE:

FCC Radiation Exposure Statement:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 32cm between the radiator & your body.

Appendix B – IC Interference Statement

Industry Canada statement:

This device complies with RSS-210 of the Industry Canada Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This device has been designed to operate with a Dipole antenna have a maximum gain of 5 dB. Antenna having a higher gain is strictly prohibited per regulations of Industry Canada. The required antenna impedance is 50 ohms.

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

This radio transmitter (IC: 10103A-ECB600 / Model: ECB600) has been approved by Industry Canada to operate with the antenna type, maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this user's manual, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Ce dispositif est conforme à la norme CNR-210 d'Industrie Canada applicable aux appareils radio exempts de licence. Son fonctionnement est sujet aux deux conditions suivantes: (1) le dispositif ne doit pas produire de brouillage préjudiciable, et (2) ce dispositif doit accepter tout brouillage reçu, y compris un brouillage susceptible de provoquer un fonctionnement indésirable.

Ce dispositif a été conçu pour fonctionner avec une antenne ayant un gain maximal de Dipole antenne avec dB 5. Une antenne à gain plus élevé est strictement interdite par les règlements d'Industrie Canada. L'impédance d'antenne requise est de 50 ohms.

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

Le présent émetteur radio (IC: 10103A-ECB600 / Modèle: ECB600) a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés ci-dessous et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

Caution:

- (i) the device for operation in the band 5150-5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems;
- (ii) high-power radars are allocated as primary users (i.e. priority users) of the bands 5250-5350 MHz and 5650-5850 MHz and that these radars could cause interference and/or damage to LE-LAN devices.

Avertissement:

- (i) les dispositifs fonctionnant dans la bande 5150-5250 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;
- (ii) De plus, les utilisateurs devraient aussi être avisés que les utilisateurs de radars de haute puissance sont désignés utilisateurs principaux (c.-à-d., qu'ils ont la priorité) pour les bandes 5250-5350 MHz et 5650-5850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.

IMPORTANT NOTE:**Radiation Exposure Statement:**

This equipment complies with IC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 32cm between the radiator & your body.

NOTE IMPORTANTE:**Déclaration d'exposition aux radiations:**

Cet équipement est conforme aux limites d'exposition aux rayonnements IC établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 32cm de distance entre la source de rayonnement et votre corps.

Appendix C – CE Interference Statement

Europe – EU Declaration of Conformity

This device complies with the essential requirements of the R&TTE Directive 1999/5/EC. The following test methods have been applied in order to prove presumption of conformity with the essential requirements of the R&TTE Directive 1999/5/EC:

- EN60950-1
- Safety of Information Technology Equipment

- EN50385
- Generic standard to demonstrate the compliance of electronic and electrical apparatus with the basic restrictions related to human exposure to electromagnetic fields (0 Hz - 300 GHz)

- EN 300 328
- Electromagnetic compatibility and Radio spectrum Matters (ERM); Wideband Transmission systems; Data transmission equipment operating in the 2,4 GHz ISM band and using spread spectrum modulation techniques; Harmonized EN covering essential requirements under article 3.2 of the R&TTE Directive

- EN 301 893
- Broadband Radio Access Networks (BRAN); 5 GHz high performance RLAN; Harmonized EN covering essential requirements of article 3.2 of the R&TTE Directive

- EN 301 489-1
- Electromagnetic compatibility and Radio Spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements

- EN 301 489-17
- Electromagnetic compatibility and Radio spectrum Matters (ERM); ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 17: Specific conditions for 2,4 GHz wideband transmission systems and 5 GHz high performance RLAN equipment

This device is a 5GHz wideband transmission system (transceiver), intended for use in all EU member states and EFTA countries, except in France and Italy where restrictive use applies.

In Italy the end-user should apply for a license at the national spectrum authorities in order to obtain authorization to use the device for setting up outdoor radio links and/or for supplying public access to telecommunications and/or network services.

This device may not be used for setting up outdoor radio links in France and in some areas the RF output power may be limited to 10 mW EIRP in the frequency range of 2454 – 2483.5 MHz. For detailed information the end-user should contact the national spectrum authority in France.
