1.1 ICCB Construction

1.2 Button Layout

ICCB has 15 keys which are numeric keys(0-9), *, # , Recall , Redial and ICC key. Each key is used to make call but under specific menu internally, *, #, Redial, Recall and ICC key could be used as function key.

0-9 : Number Button

*,#,Recall,Redial and ICC : Used at not only making call but also operation as follows,

*: The Cancel / Previous key to cancel what a user did or go previous menu.

#: The Store/Confirmation key to store/confirm what a user did like editing in editor.

Recall: The up key for item selection on the menu.

Redial: The down key for item selection on the menu.

ICC: ICC stands for Indian Calling Card and this key has specific number for each region. This key is able to work only under "Insert Coin" status on LCD and don't work at other status.

1.3 Coin Selector

The below picture is shown coin selector structure. The specification of it is as follows.

- Supports 1 Rs and 5 Rs.
- Maximum two coins for 1Rs and 5Rs. Under maximum insertion like two 1Rs and two 5Rs, when a user inserts coin, it will be refunded.
- If a user inserts coins within 1 sec between coins, they will be just refund to avoid coins jam.

1.4 Coin Box

A coin box installed at bottom of ICCB can store 500 coins for 5Rs. internally, whenever coins drop into coin box, Coin Counter increase by one and it let "Box Full" message come out when it would reach 500 coins and a user cannot make a call under this message. At this moment, a shop keeper (an operator) can initial this coin counter with removing coins from coin box. To

initialize coin counter, a operator should go “Programming Mode” menu and make counter zero.

2. Menu Construction

Battery Backup Failure

If you're using the battery, the unit must be connected to AC power for at least 3 hours to fully charge the battery before it will provide back-up power to your SXP-2280. Verify that the battery has been charged for at least 3 hours and that the power source and its corresponding circuit breaker are functioning properly. Then, examine the battery for physical damage and corrosion. Replace the battery if necessary.

Item	Description
Capacity	3.7V Li-ion(Nominal) / 1700mAh
Talk Time Duration	Over 3 Hours (Min) (on SCI = 2)
Standby Time Duration	Over 140 Hours (on SCI = 2)
Charging Time Duration	3 Hours (Max) (on SCI = 2)

GENERAL INFORMATION AND SAFETY

Your SXP-2280 Fixed Wireless Phone (FWP) functions as both a radio transmitter and receiver. When it is ON, the FWP receives and sends out radio frequency (RF) energy. The CDMA 800 unit operates in the frequency range between 824 and 894 MHz. When you use your SXP-2280, the cellular system handling your call controls the power level at which your unit transmits. Nominal power output is 230 mW.

WARNING!

Only Authorized Service Personnel should remove the cover of your SXP-2280. For further assistance, contact your Authorized Sungil Representative. Please have your unit's model and serial number ready.

The duration of your calls and operate your phone in the most power-efficient manner.

Temperature Environment

Operating Temperature: From -20°C to +60°C ; Up to 95% relative humidity (non-condensing).

Storage Temperature: From -25°C to +75°C; Up to 95% relative humidity (non-condensing).

Antenna Care and Replacement

Do not use the SXP-2280 with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Have your antenna replaced by a qualified technician immediately.

Use only a manufacturer-approved antenna. Unauthorized antennas, modifications, or attachments could damage the SXP-2280 .

Driving

Check the laws and regulations on the use of cellular products in the areas where you drive. Some jurisdictions prohibit your using a cellular device while driving a vehicle. Even if your jurisdiction does not have such a law, we strongly suggest that, for safety reasons, the driver use extreme caution when operating the cellular device while the vehicle is in motion. Always obey the law.

Exposure to electronic Devices

Most modern electronic equipment is shielded from RF energy. However, RF energy from cellular devices may affect inadequately shielded electronic equipment.

RF energy may affect improperly installed or inadequately shielded electronic operating and entertainment systems in motor vehicles. Check with the manufacturer or its representative to determine if these systems are adequately shielded from external RF energy. You should also check with the manufacturer of any equipment that has been added to your vehicle.

Consult the manufacturer of any personal medical devices (such as pacemakers, hearing aids, etc.) to determine if they are adequately shielded from external RF energy.

Turn your SXP-2280 OFF in health care facilities when any regulations posted in the areas instruct you to do so. Hospitals or health care facilities may be using equipment that could be sensitive to external RF energy.

Aircraft

Turn OFF your SXP-2280 before boarding any aircraft.

- Use it on the ground only with crew permission.
- Do not use it in the air.

To prevent possible interference with aircraft systems, U.S. Federal Aviation Administration (FAA) regulations require you to have permission from a crew member to use your cellular phone (or any other cellular product) while the plane is on the ground. To prevent interference with aircraft systems, FCC regulations prohibit using your cellular device while the plane is in the air.

Children

Do not allow children to play with your SXP-2280 to prevent damage to the unit.

Blasting Areas

Construction crews often use remote control RF devices to activate off explosives. Therefore, to avoid interfering with blasting operations, turn your SXP-2280 OFF when in a "blasting area" or in areas posted: "Turn off two-way radio."

FCC WARNING

This equipment may generate or use radio frequency energy. Changes or modifications to this equipment may cause harmful interference unless the modifications are expressly approved in the instruction manual. The user could lose the authority to operate this equipment if an unauthorized change or modification is made.

RF Exposure Guidelines

During transmitter operation, in order to meet RF Maximum Permissible Exposure Safety Guidelines, a minimum distance of 20cm shall be maintained between antenna and personnel.
