Introduction

FD-800 GSM 2G Sync Station is a compact and lightweight wireless electronic data reception and transmission device in box form. It serves as a gateway between Activity Trackers and the web server. This device is plugged on the wall and is used to synchronize and uploads the user's activities (for example: steps activity) to the cloud service in the background. Unlike the Sync Mobile Apps (iOS and Android) and Desktop Apps (Windows PC, Mac), FD-800 synchronizes data without user intervention, silently in the background. Target customers are the elderly population in the United States of America.

Package Content

Check the product box for the following item:

- GSM 2G Sync Station

Device Layout

Unboxing of the Device

1. Open the box cover.
2. Remove the polyethylene foam (3).
3. Remove the device from the plastic tray (4).

Charging Port

WARNING It is only intended for Trio[®] Trackers. No other devices should be connected other than these as this might damage the internal circuits if drawing more current than it can provide.

Plugging of the Device

1. Plug the device to the wall socket (1).
2. Once plugged, the Green LED starts to blink.
3. After successful initialization (20-30 seconds), the Blue LED turns on which means it is now ready to sync any supported Trackers (2).
4. All Trio[®] Tracker Models are now supported and can be synced to the FD800 Sync Station (3).

FCC Notice

This device complies with part 15 of the FCC Rules.

Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

WARNING Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. End-users and installers must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance.
