OWNER'S MANUAL This manual will show you how to use your FUJIFILM DIGITAL CAMERA. Please follow the instructions carefully.

(BL00088-01001)

BL00088-01001

Warning

To prevent fire or shock hazard, do not expose the unit to rain or moisture.

CAUTION: TO REACH THE BACK OF ELECTRIC SHOCK.
DO NOT HANDEL COVER (OR BACK).
NO USER-SERVICEABLE PARTS INSIDE.
REFER SERVICING TO QUALIFIED SERVICE PERSONNEL.

The graphical symbols are located on the bottom of the case.

CAUTION

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

For customers in the U.S.A.

FCC Statement

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

— Consult the dealer or an experienced radio/TV technician for help.
You are cautioned that any changes or modifications not expressly approved in this manual could void the user's authority to operate the equipment.

Notes on the Back:
To comply with Part 15 of the FCC rules, this product must be used with a Fujilm-specified ferrite-core A/V cable, USB cable, and DC supply cord.

For customers in Canada

CAUTION

This Class B digital apparatus complies with Canadian ICES-003.

Please read the Safety Notes (→P.110) and make sure you understand them before using the camera.

Camera Features and Accessories

- Tint Shots Prior to Photography** For particularly important photographs (such as weddings and overseas trips), always take a test photograph and view the image to make sure that the camera is functioning normally.
- Buy Photo Film Co., Ltd.** cannot accept liability for any incidental losses (such as the costs of photography or the loss of income from photography) incurred as a result of faults with this product.
- Notes on Copyright** Images recorded using your digital camera system cannot be used in ways that infringe copyright laws, unless the consent of the owner, unless intended only for personal use, non-commercial purposes, or editorial comments and reviews, even when the transfer of memory cards containing images or data is prohibited under copyright laws, only permissible when the instructions imposed by those copyright laws.
- Liquid Crystal** If any of the following situations arises, take the urgent actions indicated.
- If liquid crystal comes in contact with your skin: Wash the area with a cloth and then wash thoroughly with soap and running water.
 - If liquid crystal gets into your eye: Flush the affected eye with clean water for at least 15 minutes and then seek medical assistance.
 - If liquid crystal is swallowed:
- Flush your mouth thoroughly with water. Drink large quantities of water and induce vomiting. Then seek medical assistance.
- Notes on Electrical Interference** If the camera is to be used in hospitals or aircrafts, please note that this camera may cause interference to other equipment in the hospital or aircraft. For details, please check with the appropriate organization.
- Holding Your Digital Camera** This camera contains precision electronic components. To ensure that images are recorded correctly, do not subject the camera to impact or shock while an image is being recorded.
- Trademark Information** IJ-PICTA is a registered trademark of International Business Machines Corp. of the U.S.A.
- Mac and Macintosh are registered trademarks of Apple Computer, Inc.
- Windows is a registered trademark of the Microsoft Corporation of the U.S., registered in the U.S.A. and other countries. Windows is an abbreviation item referring to the Microsoft Windows Operating System.
- SmartMedia is a trademark of Toshiba Corporation.
- Other company or product names are trademarks or registered trademarks of the respective companies.
- Explanation of Color Television System** NTSC: National Television System Committee, color television television specifications adopted mainly in the U.S.A., Canada and Japan.
PAL: Phase Alternation by Line, a color television system adopted mainly by European countries and China.

Nomenclature

1 Getting Ready

PREFACE

Selecting the Language

You can use the "SET-UP"-screen on this camera to select ENGLISH or FRENCH as the LANGUAGE used for screen display (► P.81). The screens in this manual are shown in ENGLISH.

Attaching the Strap

- ① Pass the loop of this cord on the end of the strap through the strap mount.
- ② Then pass the other end of the strap through the loop of the thin cord and pull the strap tight.

11

10

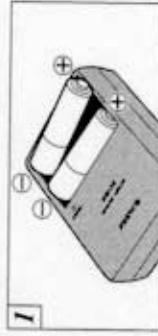

11

CHARGING AND LOADING THE BATTERIES

Batteries that Can Be Charged

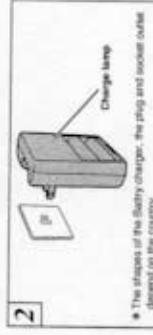

AA-size Ni-MH batteries
Fujifilm HR-3UFC-2 (supplied with the camera or sold separately)

Load the rechargeable batteries into the battery charger as indicated on the label.

- ⌚ Attempting to charge batteries other than those specified for use with the charger (such as manganese, alkaline or lithium batteries) can cause the batteries to burst or leak. This could result in a fire or injury and consequent damage to the surroundings.
* See p.107 for information on the number of available slots during batteries.

*2

Plug the charger into a power outlet to begin charging. Charging ends after about 5 hours and the charging lamp goes off. Unplug the battery charger from the power outlet when it's not in use.

- ⌚ If the terminals of nickel-metal hydride batteries are soiled, it may not be possible to charge them. To avoid possible problems, clean the battery terminals and charger terminals with a clean, dry cloth. (Clean the battery and charger terminals with a clean, dry cloth the first time the batteries are charged. Then insert and remove the batteries from the charger several times prior to charging.)
⌚ Do not use old and new batteries together.

- ⌚ Ni-MH batteries are not fully charged at shipment and must be charged before being used. Newly purchased batteries or batteries that have been left unused for an extended period may not be fully charged (this is indicated by the immediate display of the battery low warning or a low number of available shots). This is a normal characteristic of the batteries and does not indicate a fault. Repeatedly recharging and using the batteries 3 or 4 times will restore them to a normal condition.

- ⌚ If you repeatedly charge a Ni-MH batteries before it is fully discharged, it will suffer from the "memory effect", causing the battery to wear out faster while there is still ample charge remaining in the batteries. You can restore the batteries to normal operation by running the batteries completely flat before charging them.

- ⌚ Memory effect: A phenomenon whereby the batteries properties are such that its capacity is lower than the nominal amount.

*3 See p.94 - 96 for more information on the battery.

- ⌚ Fully discharged Ni-MH batteries take approximately 5 hours (1700 mAh) to recharge. Shorter charging times can be achieved using the Ni-MH Battery Charger BC-H4e (p.91).

13

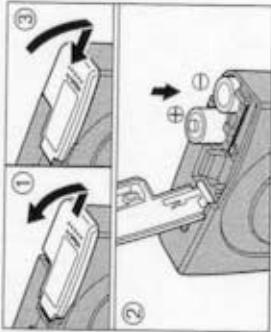

LOADING THE BATTERIES

LOADING THE SmartMedia™

Compatible batteries

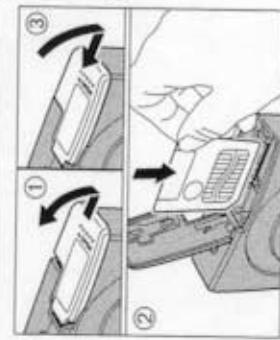

Use AA-size nickel-metal hydride (Ni-MH) batteries (2).
You should carry a spare set of batteries (sold separately) when taking pictures.
Do not use different types of batteries or old and new batteries together.
You cannot use lithium, manganese or nickel-cadmium (Ni-Cd) batteries.

◆ Notes on Handling Batteries ◆
Alkaline batteries should only be used in an emergency. Note the following when using alkaline batteries:
• The battery terminals should be wiped clean with a clean, dry cloth.
• The number of available shots and the audio playback times are limited. The number of available shots and the audio playback times vary depending on the battery brand and the ambient temperature. At temperatures of +5°C (+40°F) and below, it may not be possible to take pictures or play back music.
• Because you are using the FinePix300 with the LCD monitor switched off, the power cuts out without a remaining battery, low warning being displayed.

- ① Slide the battery cover out and lift it open.
② Insert the batteries correctly as indicated by the polarity icons.
③ Close the battery cover.

- ④ Do not apply excessive force to the battery cover.
⑤ Take care not to drop the batteries. When you open or close the battery cover.
⑥ See P.96, 97 for notes on using batteries.

- ① Check that the camera is switched off. Then hold the camera so that the battery cover faces upwards and slide the cover out to open it.
② Push the SmartMedia firmly into the SmartMedia slot as far as it will go.
③ Close the battery cover.
④ If you open the battery cover while the camera is switched on, the camera automatically switches off to protect the data on the SmartMedia.
⑤ If the SmartMedia will not slide fully into the slot if it is inserted during the wrong way, the cover will not apply uniform force to the SmartMedia.

- ⑥ Image files cannot be recorded or erased if a write-protect sticker is attached to the SmartMedia.
⑦ Operation of this camera is only guaranteed when it is used with FUJIFILM SmartMedia.
⑧ Some 3.3V SmartMedia are labelled as "3V" or "DV" cards.
⑨ See P.97 for more information on SmartMedia.
⑩ A SmartMedia with 1D is intended to use the music function.

REMOVING THE SmartMedia™

Grip the SmartMedia and pull it out, taking care that the batteries do not fall out of the camera.

① Check that the indicator in the viewfinder is green.

② Then switch the camera off.

③ Always ensure that the battery cover is facing upwards when you open it.

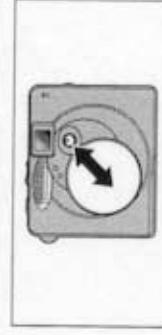

◆ Printing Images and Downloading →
Images to a PC ◆

- See P. 64, 90 for information on printing images.
- See P. 83 – 89 for information on downloading images to a PC.

④ See P. 17 for information on switching the camera on and off.

Never open the battery cover while the camera is still switched on, as this could corrupt the image files on the SmartMedia or damage the SmartMedia itself.

OPENING/CLOSING THE LENS COVER

Open and close the lens cover by sliding it down and up diagonally.

① To turn the camera on or off, slide the Power switch to "POWER".

② Sliding the Power switch to "MUSIC" allows you to use the camera as a music player.

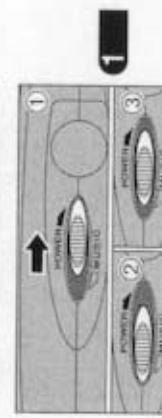

③ When you do not want to listen to music, slide the power switch to the middle position.

◆ Take care not to touch the lens directly while the lens cover is open.

◆ Auto Power Off function ◆

If you leave the camera switched on and unused for 2 minutes, this function automatically switches the camera off. Note that this function does not operate when you are using a USB connection.

SWITCHING ON AND OFF

- ① To turn the camera on or off, slide the Power switch to "POWER".
- ② Sliding the Power switch to "MUSIC" allows you to use the camera as a music player.
- ③ When you do not want to listen to music, slide the power switch to the middle position.

◆ Note that you cannot use the FinePix Z3 as a camera when the Power switch is set to "MUSIC".

◆ Auto Power Off function ◆

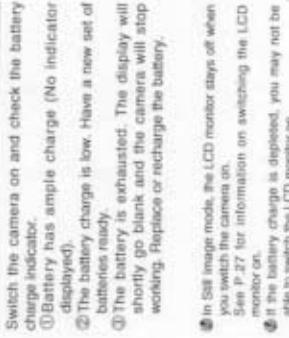

If you leave the camera switched on and unused for 2 minutes, this function automatically switches the camera off. Note that this function does not operate when you are using a USB connection.

SWITCHING ON AND OFF

■ You can switch the camera on in different ways depending on how you want to use it.

	Do This
• To take pictures. • To switch between taking pictures and playing back images	 + 
• To play back images (without taking pictures). • To use the camera for audio recording (→ P.51)	 + 
• To use the camera as a music player (→ P.88)	 + 

1		
Open the lens cover and then slide the power switch to "ON/OFF".		
		If the Auto Power Off function shuts the camera down when you are taking pictures (while the lens cover is open), slide the Power switch to turn the camera back on.
		Switch the camera on without opening the lens cover.
		If you switch the camera on with the Mode switch [A] set to  (Still Mode), the "LENS COVER" warning is displayed. When this occurs, set the Mode switch to  or  .
		Slide the Power switch to "ON/OFF" without opening the lens cover.
		The camera does not switch on unless you connect the remote controller (→ P.20) and play back some music.

2		
Switch the camera on and check the battery charge indicator.		
		① Battery has ample charge (No indicator displayed).
		② The battery charge is low. Have a new set of batteries ready.
		③ The battery is exhausted. The display will shortly go blank and the camera will stop working. Replace or recharge the battery.

3		
In Still image mode, the LCD monitor stays off when you switch the camera on.		
See P.27 for information on switching the LCD monitor on.		
④ If the battery charge is depleted, you may not be able to switch the LCD monitor on.		

SETTING THE DATE AND TIME

① Press the "MENU/OK" button to display the menu screen.

② Use "▲" or "▼" to select "OPTION", and then use "▲" (OK) or "▼" (OK) to select "SET-UP".

③ Press the "MENU/OK" button.

If the date was deleted and you selected "SDC", proceed from step 1. (p.21)

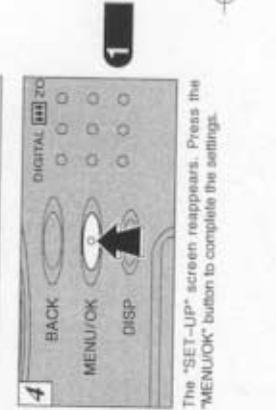

① The "SET-UP" screen appears. Use "▲" (OK) or "▼" (OK) to select "DATE/TIME".

② Press "OK" to select "DATE/TIME".

③ See P.70 for more information on the "OPTION" menu.

④ If at least 10 minutes have passed since the AC power adapter was connected or the battery inserted and date and time set, then those settings will be maintained for roughly 12 hours even when the camera has no power supply (when the AC power adapter is disconnected and the battery is removed).

If the date was deleted and you selected "SDC", proceed from step 1. (p.21)

The "SET-UP" screen reappears. Press the "MENU/OK" button to complete the settings.

① Use "◀" or "▶" to select the desired item and then use "▲" (OK) and "▼" (OK) to correct the setting.

② When you have finished setting the day and time, press the "MENU/OK" button to confirm the setting.

③ If you hold down "▲" (OK) or "▼" (OK), the numbers change continuously.

④ When the time displayed passes "12:00:00", the "AM/PM" setting automatically switches.

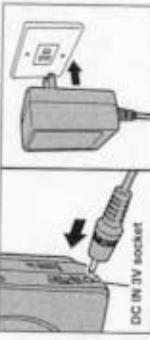

⑤ You cannot set the seconds. To set the time precisely, press the "MENU/OK" button when the time signal reaches zero.

USING THE OPTIONAL AC POWER ADAPTER

2 Basic Photography

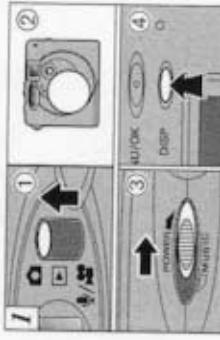

STILL IMAGE MODE

■ TAKING PICTURES (AUTO MODE)

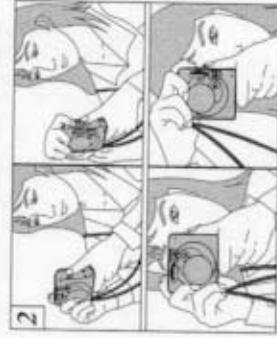

Check that the camera is switched off. Plug the AC power adapter connector into the "DC IN 3V" socket and then plug the AC power adapter into the power outlet.

- ① See P.36 for notes on using the AC power adapter.
- ② Only connect or disconnect the AC power adapter while the camera is switched off.
- ③ Connecting or disconnecting the AC power adapter while the camera is switched on temporarily interrupts the power supply to the camera, so that images or movies being shot at the time are not recorded. Failing to switch the camera off first can also result in damage to the SmartMedia or microdrive during PC connection.

- ① Set the Mode switch to "A".
- ② Open the lens cover (→P.17).
- ③ To use the viewfinder (excluding Macro mode), press the "DISP" button to switch the LCD monitor off (→P.27).
- ④ For close-up shots, use the Macro setting (→P.20).
- ⑤ To minimize power consumption, use the viewfinder (when the LCD monitor off) to take pictures.
- ⑥ The image will be blurred if the camera moves when taking the picture (camera shake). When shooting in low-light conditions, use the flash (→P.36) or a tripod to prevent blurred images due to camera shake.

- ② Loop the shoulder strap over your shoulder, brace your arms against your sides and hold the camera in both hands.
- ③ For close-up shots, use the Macro setting (→P.20).
- ④ To minimize power consumption, use the viewfinder (when the LCD monitor off) to take pictures.
- ⑤ The image will be blurred if the camera moves when taking the picture (camera shake). When shooting in low-light conditions, use the flash (→P.36) or a tripod to prevent blurred images due to camera shake.

23

Be careful to ensure that the lens, flash and flash control sensor are not obscured by your hands or the camera strap.

Use the LCD monitor or viewfinder to locate your subject in the frame.
 ④ To frame your shot precisely, you should take the picture using the LCD monitor.
 ⑤ In some conditions it may be difficult to see your subject clearly on the LCD monitor. (Such as in sunny weather outdoors or when you are shooting dimly lit scenes.) In such situations, use the viewfinder to take the shot.

- ⑥ If the lens, flash or flash control sensor is obscured by your fingers or the camera strap, you may not be able to obtain the correct brightness (exposure) for your shot.
- ⑦ Check that the lens is clean. If it is dirty, clean the lens as described on P.93.

When you press the shutter button, the camera emits a short beep and takes the picture. The data is then recorded.

- ⑧ When you press the shutter button, there is a very short delay before the picture is actually taken.
- ⑨ The viewfinder lamp flashes orange while the flash is charging. If the LCD monitor is switched on, the screen may go dark for a moment. This is normal and does not indicate a fault.
- ⑩ The fan charging noise may increase when the battery charge gets lower.
- ⑪ Since the amount of image data recorded is not fixed and varies depending on the subject (level of image detail, etc.), the number of available shots may not decrease after the image is recorded, or may decrease by 2.
- ⑫ See P.99 – 101 for information on the warning displays.

■ Viewfinder lamp display		
Color	Status	Meaning
Green	Lit	Ready to shoot
Orange	Flashing	Image being recorded onto the SmartMedia.
Red	Flashing	<ul style="list-style-type: none"> • SmartMedia warning No SmartMedia inserted. SmartMedia not formatted, incorrect format, write-protected sticker used, SmartMedia full. SmartMedia error. <p>⑪ When the LCD monitor is switched on, the details of the warning are displayed on the monitor (P.99 – 101).</p>

FRAMING GUIDELINE FUNCTION

Number of Available Shots

The number of available shots appears on the LCD monitor.

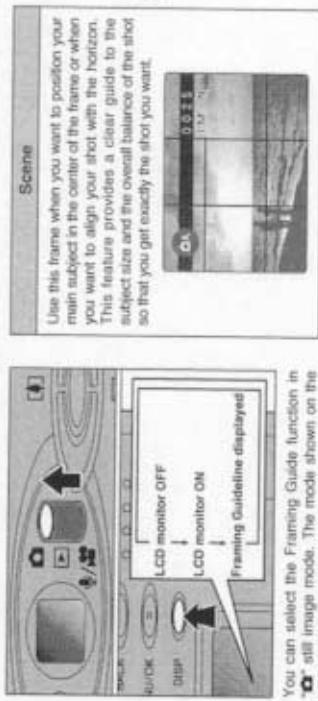

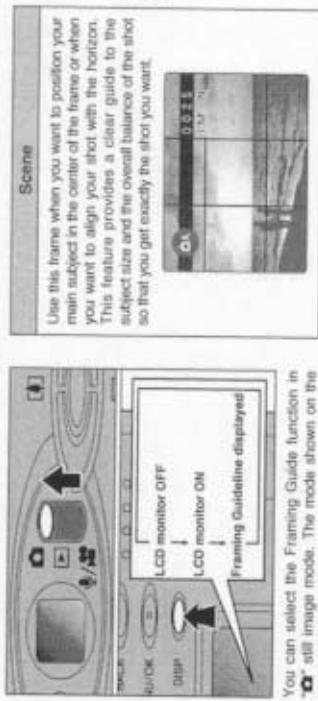

See p.79 for information on changing the File Size and Quality settings.

The factory default settings at shipment are 1M (File Size) and N (Quality: NORMAL).

■ Standard number of shots per SmartMedia
The number of shots may increase or decrease slightly depending on the type of subject. Note also that the larger the SmartMedia capacity, the greater the discrepancy between the standard number of shots and the actual number of shots.

File Size	□ 1M 1600 × 1200			□ 1M 1280 × 960			□ 1M (640 × 480)		
Quality	FINE	NORMAL	BASIC	FINE	NORMAL	BASIC	Aprox. 2000	Aprox. 2000	Aprox. 1200
Image Date Size	Aprox. 7.0MB	Aprox. 3.0MB	Aprox. 2.0MB	Aprox. 2.0MB	Aprox. 1.0MB	Aprox. 0.6MB	4	9	19
MZ-4B (HDMI)	10	19	39	12	25	61	12	25	61
MZ-4B (MM)	20	39	75	25	49	122	20	39	122
MZ-3DS-SW (12MB)	41	79	152	50	99	247	41	79	247
MZ-4DS-SW (16MB)	82	159	306	101	198	497	82	159	497
MZ-12DSW (128MB)	166	319	613	204	398	997	166	319	997

* The number of available shots are shown for standard SmartMedia.

Use this frame when you want to position your main subject in the center of the frame or when you want to align your shot with the horizon. This feature provides a clear guide to the subject size and the overall balance of the shot so that you get exactly the shot you want.

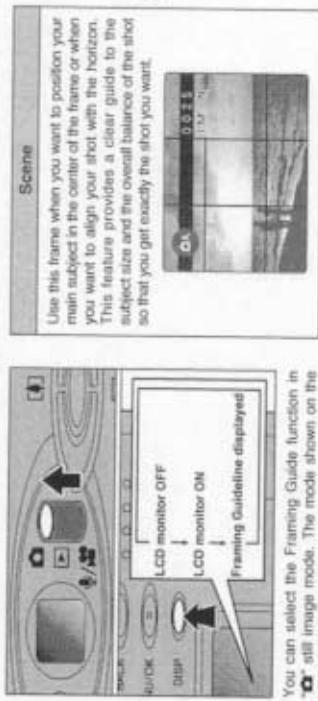

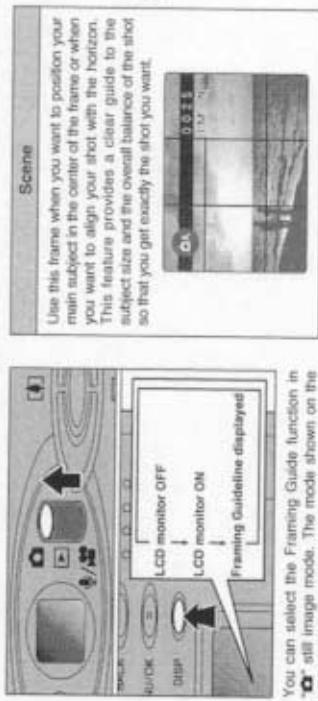

2

You can select the Framing Guide function in still image mode. The mode shown on the LCD monitor switches each time you press the "DISP" button. Press the "DISP" button to display the framing guideline.

① The framing guideline is not recorded on the image.

② The lines in the scene roughly divide the recorded pixels into three equal parts horizontally and vertically. When the image is printed, the resulting print may be shifted slightly from the scene frame.

27

27

MACRO (CLOSE-UP) PHOTOGRAPHY

Selecting Macro mode allows you to take close-up shots. If the flash is set to "AUTO" or "STROBE" (Suppressed Flash mode), it is automatically set to "STROBE".

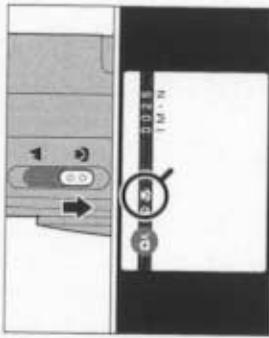

Effective Photography Range:
Approx. 8 cm to 15 cm (3.1 in to 5.9 in).

Using the camera with (about 8.5 cm or 3.3 in) as a guide, ensure that the distance to the subject is between 8 cm and 15 cm (3.1 in to 5.9 in). The camera will not focus on subjects outside this range.

To use the flash, select the "Forced Flash" or "Slow Syncro" setting in the menu screen (=P.38 - 40). However, you may not be able to obtain the correct brightness (exposure) for your shot.

When shooting in dark conditions, use a tripod to prevent camera shake.

If you use the viewfinder to take a picture in Macro mode, the field visible through the viewfinder does not match the field actually photographed because the viewfinder and lens are in different positions. Accordingly, you should use the LCD monitor to take pictures in Macro mode.

To switch to Macro mode, slide the Macro selector switch towards the Macro icon until it stops.

The "M" icon appears on the LCD monitor and you can take close-up shots.

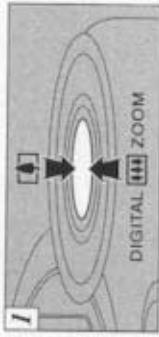

"M" Macro mode is canceled and the camera is ready for normal shooting (=P.23).

The LCD monitor automatically switches on.

You cannot use the digital zoom for macro shots of "M" (=P.27).

See P.79 for information on changing the the size setting.

DIGITAL ZOOM

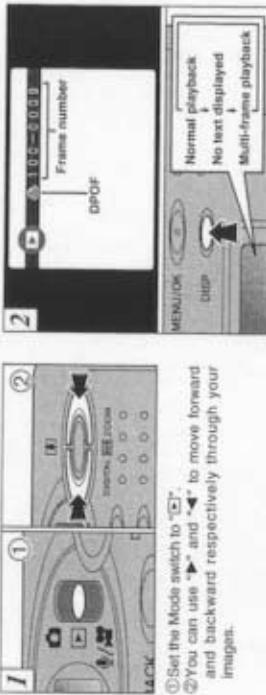

You can use the digital zoom function for only "LCD" (=LCD) Resolution (File Size) settings. Note that the digital zoom only functions when you use the LCD monitor to take shots.

To zoom in on your subject, press "▲" (MTELLE). To zoom out, press "▼" (ISWIDE).

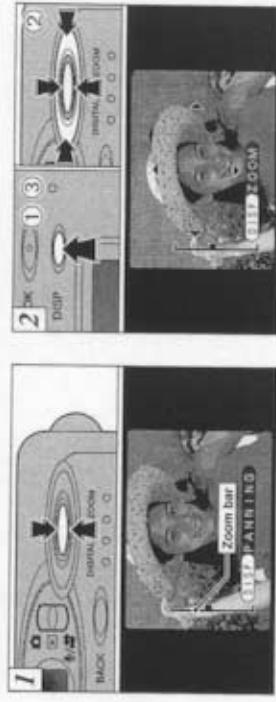

A "Zoom bar" appears on the LCD monitor.
• Digital zoom focal distance [35 mm camera equivalent]
LCD: Equivalent to approx. 38 mm - 49 mm
[1.3x]
CEC: Equivalent to approx. 38 mm - 95 mm
[2.5x]

29

- ① Set the Mode switch to **(2)**.
 ② You can use **▲** and **▼** to move forward and backward respectively through your images.
 ③ When you set the Mode switch to **(2)**, the last image shot is displayed.
 ♦ See P.76 and 80 for more information on adjusting the brightness of the LCD monitor.
- ♦ Images That Can be Viewed on the FinePix101 ◆
- ♦ Images That Can be Viewed on the FinePix101 ◆
- ♦ You can use the camera to view (excluding some uncompRESSED data) images recorded on a FinePix101 or images recorded onto a 3.3V SmartMedia using a FUJIFILM FinePix series, MX series or DX series digital camera.

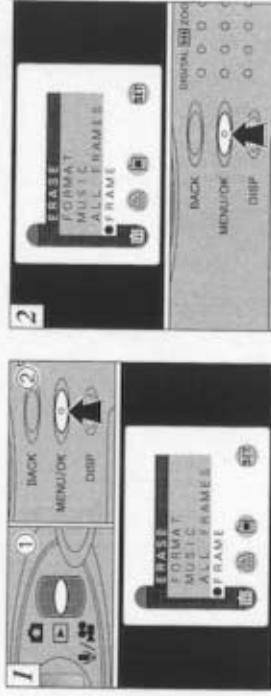

- Pressing **▲** (**[E]**) or **▼** (**[H]**) during single-frame playback zooms in (enlarges) or out on a still image. When you use this function, a zoom bar is displayed.
- Zoom scales:
- 1280 × 960 pixels: Max 4x
 - 640 × 480 pixels: Max 2x
- ④ Pressing **◀** or **▶** during zooming cancels zooming and moves to the next image.

- After you have zoomed in on your image,
- ① Press the **"DISP"** button.
- ② Use **▲** (**[E]**), **▼** (**[H]**), **◀** and **▶** to zoom in on different parts of the image.
- ③ Press the **"DISP"** button again to revert to zoomed display.
- ④ Press the **"BACK"** button to return to normal unscaled display.
- ⑤ You may not be able to use playback zoom for some images shot on other camera models.
- This is useful for such things like checking the focus after you take a shot.

MULTI-FRAME PLAYBACK

ERASING SINGLE FRAME

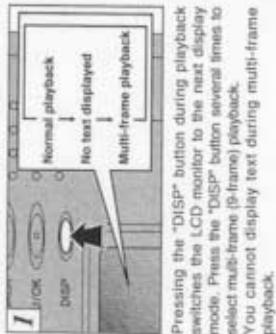

Select "FRAME" in the "ERASE" menu and press the "MENU/OK" button.

- ① Set the Mode switch to "■".
- ② Press the "MENU/OK" button to display the Menu screen on the LCD monitor.

③ See P 60 for more details of the "ERASE" menu.

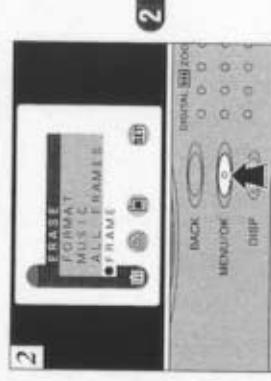

- ① Select a frame by using "◀", "▶", "▲", and "▼" to move the cursor (the orange box) to the desired frame. Press "▲" (①) or "▼" (②) several times to switch to the previous page or the next page.
- ② Press the "DISP" button to view the currently selected image at full size.

Pressing the "DISP" button during playback switches the LCD monitor to the next display mode. Press the "DISP" button several times to select multi-frame (8-frame) playback. You cannot display text during multi-frame playback.

- ④ You cannot use multi-frame playback while a menu is displayed.
⑤ Playback zoom cannot be used with multi-frame playback.

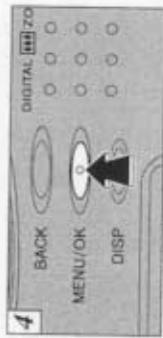

Select "FORMAT" in the "ERASE" menu and press the "MENU/OK" button.

③ See P 60 for more details of the "ERASE" menu.

ERASING SINGLE FRAME

3 Advanced Features Photography

Press the "MENU/OK" button to erase the displayed image. When erasing is complete, the next image appears and the "CLEAR OK" message is displayed.

Press "◀" or "▶" to display the image to be erased.

- ④ "CLEAR" is displayed for frames with DPOF settings and they cannot be erased (P.100).
- ⑤ If the "CLEAR[FRAME]" message appears, you cannot erase the frame. Use the camera on which the frame was protect to unprotect the frame.

To continue erasing images, repeat the procedure from step ④.

34 ④ Press the "FUNC" button to cancel frame erasing.

ADVANCED FEATURES PHOTOGRAPHY

The "Advanced Features Photography" section introduces a range of camera functions that you can access by setting the Mode switch to **■** or **■**.

■ Photography mode specifications

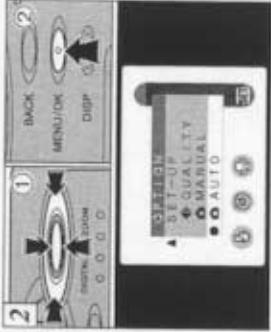

Mode switch	Photography mode	Accessible menu settings	Factory default	Shared menu settings
■	DA AUTO (P.34)	Flash (P.38) Soft-frame (P.41) Sound sync. (P.43) Voice captioning (P.44)	AUTO OFF — OFF	
■	DM MANUAL (P.36)	EV (Exposure Compensation) (P.46) White balance (Selecting the Light Source) (P.47)	AUTO 0 OPTION *See P.28 for more information on each of the settings.	
■	DA Movie (P.39)	This mode allows you to shoot up to 20 seconds of movie at a time.	AUTO	
■	DA AudioMovie	Audio (P.51) This mode allows you to record sound.	—	—

35

STILL IMAGE MODE SELECTING AUTO OR MANUAL

PHOTOGRAPHY MENU

PHOTOGRAPHY MENU OPERATION

- ① Set the Mode switch to .
- ② Press the "MENU/OK" button to display the menu on the LCD monitor.

AUTO

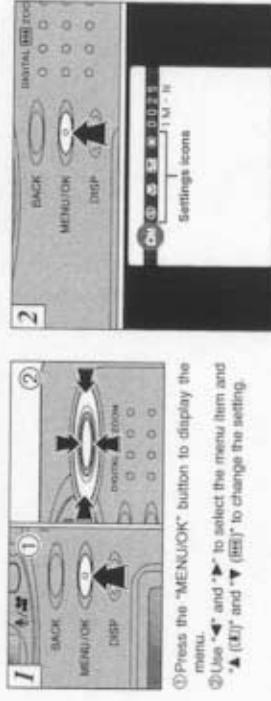

This is the easiest mode for taking pictures and can be used in a wide range of conditions.

MANUAL

This mode allows you to set the "EV" and "White balance" settings.

- ① Use "", "", "", and "" to select " AUTO" or " MANUAL" from the "OPTION" menu.
- ② Press the "MENU/OK" button to confirm the selection.

③ See P.78 - 82 for more information on the "FILE SIZE", "SET-UP", "LCD BRIGHTNESS" settings.

- ① Press the "MENU/OK" button to display the menu.
- ② Use "", "", "", and "" to select the menu item and and .

③ Press the "MENU/OK" button to confirm the selection.

When you validate the settings, the respective icons appear at the top of the screen.

- ④ The settings available in the menu screen differ depending on the still image mode. See P.35 for details.

- ① Press the "MENU/OK" button to display the menu.
- ② Use "", "", "", and "" to select the menu item and and .

③ Press the "MENU/OK" button to confirm the selection.

When you validate the settings, the respective icons appear at the top of the screen.

- ④ The settings available in the menu screen differ depending on the still image mode. See P.35 for details.

This mode can be selected in the "QA • OM" still image modes.
Use the flash mode that best suits your shot.

- 5 modes: "AUTO", **•**, **•**, **•** and **•**
- Effective flash range (in "QA AUTO" mode):
Approx. 0.7 m to 3 m (2.3 ft. to 9.8 ft.)

- When you select a flash mode, you may find that the displayed image disappears and the screen goes dark because the flash is charging. In this event, the viewfinder turns Barnes orange.
- The flash charging time may increase if the charge remaining in the batteries is low.
- If you use the flash in very dusty environments, floating dust particles may appear as glowing white dots on your image.

**AUTO Auto Flash Mode**

Use this mode for ordinary photography. The flash fires automatically as required by the shooting conditions.

• Effective flash range (in "QA AUTO" mode):
Approx. 0.7 m to 3 m (2.3 ft. to 9.8 ft.)

- You cannot use this setting in Macro (close-up) photography.

**• Red-Eye Reduction**

Use this mode to ensure that the subject's eyes appear natural when photographing people in low-light conditions. The flash fires automatically as required by the photography conditions. The flash fires a pre-flash just before the picture is taken and then fires again to take the actual picture.

• You cannot use this setting in Macro (close-up) photography.

◆ Red-Eye Effect ◆

- When you use the flash to photograph people in low-light conditions, their eyes sometimes appear red in the picture. This is caused by the light of the flash reflecting off the inside of the eye. Use Red-Eye Reduction flash to effectively minimize the likelihood of the red-eye effect.
- Take the following measures also to make Red-Eye Reduction more effective:
 - Get as close as possible to the subjects.
 - Get the subjects to look at the camera.

**3 Forced Flash**

Use this mode to photograph backlit scenes, such as a subject against a window or in the shade of a tree, or to obtain the correct colors when you are shooting under lighting such as fluorescent lights. In this mode, the flash fires in bright as well as dark conditions.

• You cannot use this setting in Macro (close-up) photography.

◆ Red-Eye Effect ◆

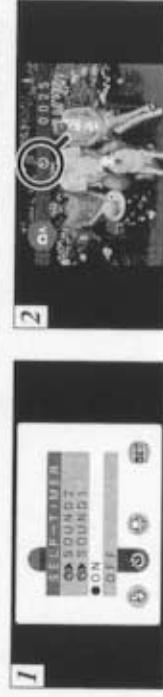

- When you use the flash to photograph people in low-light conditions, their eyes sometimes appear red in the picture. This is caused by the light of the flash reflecting off the inside of the eye. Use Red-Eye Reduction flash to effectively minimize the likelihood of the red-eye effect.
- Take the following measures also to make Red-Eye Reduction more effective:
 - Get as close as possible to the subjects.
 - Get the subjects to look at the camera.

**S Slow Syncro**

This is a flash mode that uses a slow shutter speed. This allows you to take pictures of people at night that clearly show both your subjects and the night time backdrop.

Indoor sporting events where the distance is too great for the flash to be effective. When you use Suppressed Flash, the Automatic White Balance function (P.109) operates so that natural colors are captured along with the ambience of the available light.

- If you are shooting in Suppressed Flash mode in dark conditions, use a tripod to prevent camera shake.
- See P.25, 110 for information on the camera shake warning.

**Suppressed Flash**

Use this mode for photography using indoor lighting, for shots taken through glass, and for photography in venues such as theaters or at indoor sporting events where the distance is too great for the flash to be effective. When you use Suppressed Flash, the Automatic White Balance function (P.109) operates so that natural colors are captured along with the ambience of the available light.

- If you are shooting in Suppressed Flash mode in dark conditions, use a tripod to prevent camera shake.
- See P.25, 110 for information on the camera shake warning.

SELF-TIMER

This mode can be selected in the "OK" still image mode. In this mode, a timer runs for roughly 10 seconds before the shutter is released. Use this mode for shots such as photographs of yourself. See P.43 for more information on "SOUND SYNC".

3
Locate the subject in the LCD monitor or viewfinder and frame the shot. Then press the shutter button to trigger the self-timer.

- The self-timer is automatically cancelled in the following situations:
 - When you take a picture.
 - When you switch between Photography mode and Playback mode.
 - When the camera is switched off.

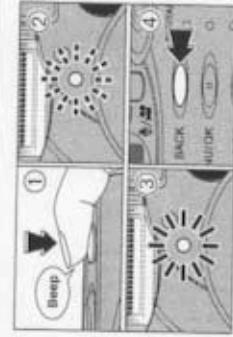

2
Beep
Locate the subject in the LCD monitor or viewfinder and frame the shot. Then press the shutter button to trigger the self-timer.

- Do not stand in front of the camera when you press the shutter button as this will result in an incorrect brightness (exposure) setting for the shot.

The self-timer lamp lights steadily for 5 seconds, then takes the shot for another 5 seconds and then takes the shot.

④ To stop the self-timer once it has started running, press the "BACK" button.

- **SOUND SYNC.**
- This is a self-activated photography mode in which the camera responds automatically to loud sounds such as laughter or singing that might occur during a party.
- **SOUND 1:** The shutter releases in response to the sound of laughter or singing.
- **SOUND 2:** The shutter releases in response to the sound of laughter or singing that continues for longer than in SOUND 1 mode. Try this mode if you find that the shutter releases too frequently in SOUND 1 mode.

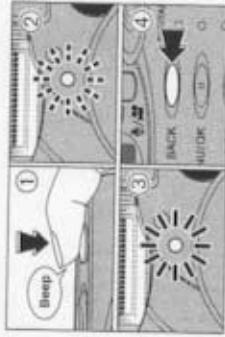

⑤ You cannot select a sound sync. mode when voice capturing is set to "ON".

■ Available time using the battery (when fully charged)

LCD monitor on	Aprox. 79 min.
LCD monitor off	Aprox. 77 min.

* Operation times under FUJIFILM test conditions.

- ① Sound-synchronized photography begins when you press the shutter button.
- ② The self-timer lamp flashes while sound-synchronized photography is running.
- ③ The self-timer lamp stops flashing and stays lit when the shot is taken.
- ④ To end sound-synchronized photography, press the "BACK" button.
- ⑤ If you plan to use sound sync. mode for an extended period, you should switch the LCD monitor off before shooting begins. Press the "DISP" button twice (► p. 27).
- ⑥ If you are getting "noisy" shots due to the photography conditions, set the Back to mid-tone reduction mode (► p. 30). 43

- **SELF-TIMER**
- The LCD monitor counts down the time until the shot is taken.
- Self-timer mode is automatically cancelled after each shot.

④ You cannot select a sound sync. mode when voice capturing is set to "ON".

■ Available time using the battery (when fully charged)

LCD monitor on	Aprox. 79 min.
LCD monitor off	Aprox. 77 min.

* Operation times under FUJIFILM test conditions.

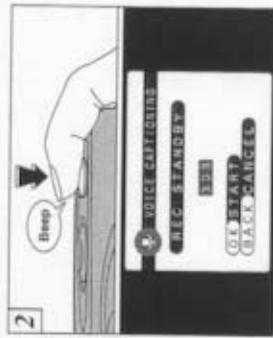

④ To stop the self-timer once it has started running, press the "BACK" button.

PHOTOGRAPHY MENU

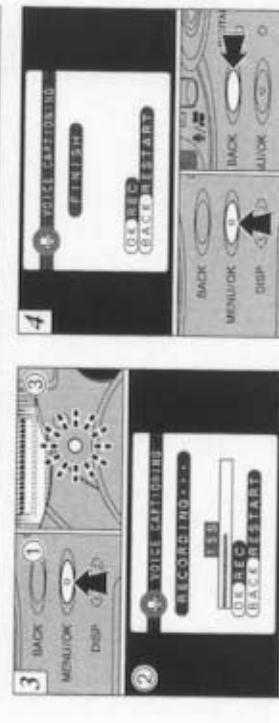

VOICE CAPTIONING

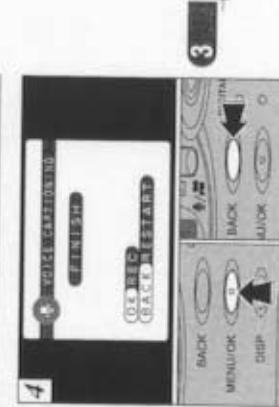

- This mode can be selected in the "PA" still image modes. You can use this function to add a voice caption (comment) up to 30 seconds long to an image immediately after you take the shot.
- Recording format: WAVE (F: 1.09)
 - PCM recording format
 - Audio file size: Approx. 240 KB (for a 30-second voice caption)
 - You cannot select voice capturing when a sound gate mode is set to "OFF".
 - The sound recording time may be shorter than 30 seconds depending on the available space on the SmartMedia.
 - Even if the LCD monitor is switched off, it automatically switches on when you take a picture using the voice capturing function. The LCD monitor switches off again when audio recording ends.

- Take a picture as normal. The "REC STAND BY" message then appears on the LCD monitor.
- If you do not want to record a voice caption, press the "BACK" button. Note that the image will not be recorded.
 - Face the microphone (P8) on the front of the camera to record your comments. Hold the camera roughly 20 cm (7.9 in.) away for the best results.

- ① Press the "MENU/OK" button to start recording the voice caption.
 ② During voice capturing, the remaining time is shown on the LCD monitor and the self-timer lamp blinks.
 ③ When the time remaining reaches 5 seconds, the self-timer lamp starts flashing quickly.
- ④ To end your comment during recording, press the "MENU/OK" button.

- When you have recorded 30 seconds of comment, the "END" message appears on the LCD monitor.
- To finish: Press the "MENU/OK" button.
 To re-record your comment: Press the "BACK" button.

45

46

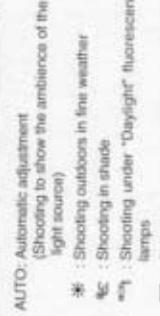

This mode can be selected in the "EV" still image mode.
Use the Brightness setting to obtain the optimum image brightness (exposure) when the subject is much brighter or darker than the background.
• Correction range: 11 steps
• EV range: -1.5 EV to +1.5 EV in 0.3 EV increments
See P.108 for information on EV.

- The Brightness setting is disabled in the following situations:
• When the flash is used in Auto or Red-Eye Reduction mode.
• When dark scenes are shot in FeliCam Flash mode.

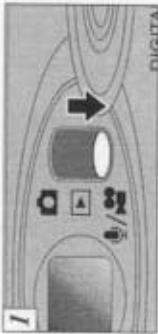

This mode can be selected in the "WB" still image mode.
Subjects for Which Exposure Adjustment is Particularly Effective ♦
◆ Adjustment is particularly effective when the subject is:
Guide to using + (positive) compensation
• Copying of printed text (black characters on white paper) (+1.5 EV)
• Backlit portraits (+0.6 EV to +1.5 EV)
• Very bright scenes (such as snowfields) and highly reflective subjects (+0.9 EV)
• Shots made up predominantly of sky (+0.9 EV)
Guide to using - (negative) compensation
• Spotted subjects, particularly against dark backgrounds (-0.6 EV)
• Copying of printed text (white characters on black paper) (-0.6 EV)
• Scenes with low reflectivity, such as shots of pine trees or dark foliage (-0.6 EV)

This mode can be selected in the "WB" still image mode.
This mode can be selected in the "WB" still image mode.
AUTO: Automatic adjustment
(Shooting to show the ambience of the light source)
*: Shooting outdoors in fine weather
fc: Shooting in shade
fc: Shooting under "Daylight" fluorescent lamps
f2: Shooting under "Warm White" fluorescent lamps
f3: Shooting under "Cool White" fluorescent lamps
f4: Shooting in incandescent light
f5: The white balance setting is ignored when the flash is used. To achieve the desired effect in your shot, set the flash to Suppressed Flash mode (P.40).

AUDIO/MOVIE MODE

MOVIE

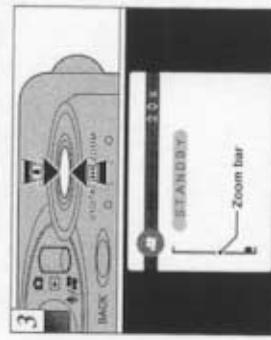

This mode allows you to shoot up to 20 seconds of movie at a time.
• Movie format: Motion JPEG (■P. 108)
320 × 240 pixels
10 frames per second
With sound

- ④ Select Macro mode for close-up shots (■P. 29).
- ⑤ The shooting time per shot may be shorter than 20 seconds, depending on the available space on the SmartMedia.
- ⑥ You cannot switch the LCD monitor off in this mode.
- ⑦ In some cases, playback may not be possible on other camera models.

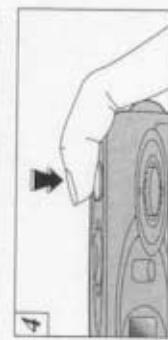

The available shooting time and the "STANDBY" message are shown on the LCD monitor.

SmartMedia standard shooting time

SmartMedia capacity	Available shooting time
MG-45 (4MB)	Approx. 23 sec.
MG-85 (8MB)	Approx. 47 sec.
MG-165/5W (16MB)	Approx. 94 sec.
MG-325/5W (32MB)	Approx. 191 sec.
MG-645/5W (64MB)	Approx. 385 sec.
MG-1285W (128MB)	Approx. 774 sec.

* These movie shooting times are for newly formatted SmartMedia.

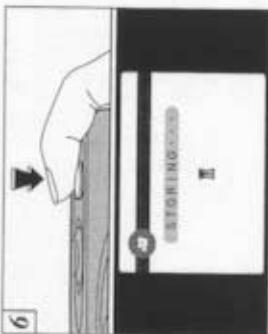

When you press the shutter button, the camera starts shooting.

- ④ When you press the shutter button, there is a very long delay before the camera starts shooting.
- ⑤ You do not need to hold down the shutter button.
- ⑥ The white balance is fixed during shooting, but the exposure varies automatically to suit the scene being shot.

The white balance is set automatically when you press the shutter button.

AUDIO RECORDING

AUDIO/MOVIE MODE

If you press the shutter button during shooting, shooting ends and the movie is stored on the SmartMedia.

① Set the Mode switch to "REC".
② Ensure that the lens cover is closed when you switch the camera on.

■ Audio Recording

This mode allows you to record approximately 4 hours of sound at a time (using a MG-1285).

• Recording format:

PCM recording format

PCM recording format: WAVE (P-109)

③ Take care not to block the microphone (P-1) with your fingers, etc.

■ Available time using the battery (when fully charged)

MG monitor on

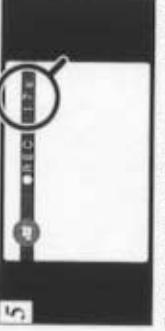

Approx. 60 min.

MG monitor off

Approx. 120 min.

④ To record sound for long periods, you should use the AC Power Adapter AC-3V.

During shooting, "REC" appears on the LCD monitor with a counter showing the remaining time displayed in the top-right corner.

⑤ Once the remaining time runs out, movie recording automatically stops and the movie is stored on the SmartMedia.

⑥ The time required to record a 20 seconds movie (roughly 3 MB) is approximately 3 seconds.

⑦ If you end shooting immediately after you start shooting, only 3 seconds of movie is shot.

3
① The available audio recording time is shown in the top-right corner of the LCD monitor, while the elapsed recording time and the "STANDBY" message are shown in the center of the LCD monitor.

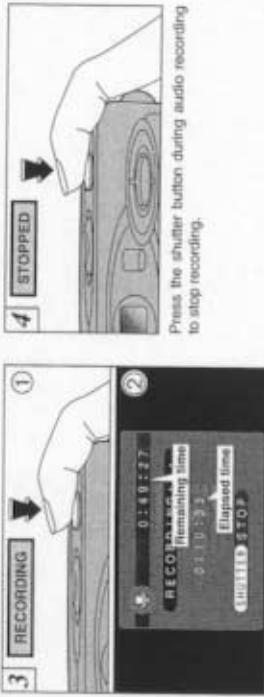

② To switch the LCD monitor off, press the "DISP" button before you begin audio recording.

■ Standard audio recording times for SmartMedia

SmartMedia capacity	Available recording time
MG-45 (4MB)	Approx. 7 min. 30 sec.
MG-85 (8MB)	Approx. 15 min.
MG-170 (17MB)	Approx. 30 min.
MG-320 (32MB)	Approx. 60 min.
MG-640 (64MB)	Approx. 120 min.
MG-1285 (128MB)	Approx. 240 min.

* These audio recording times are for newly formatted SmartMedia.

* The maximum length of the audio recording may be shorter than 4 hours depending on the available space on the SmartMedia.

① Depressing the shutter button starts audio recording.

② During recording, the viewfinder lamp glows orange and counters on the LCD monitor shows the elapsed time and the remaining time.

③ You do not need to hold down the shutter button.

④ Once the remaining time runs out, audio recording automatically stops.

⑤ The Auto Power Off function is disabled during audio recording.

52

Even if you press the shutter button to end audio recording immediately after recording starts, approximately 3 seconds of sound will be recorded.

The "Advanced Features Playback" section introduces a range of playback functions that you can access by setting the Mode switch to "■".

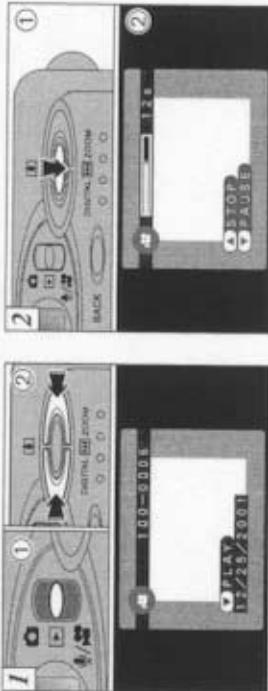

■ Playback mode menu

File to be Played Back	still image	Movie (Video)	Audio Recording
	■ ERASE (P.60) △ DPOF (P.64) ■ OPTION (P.78)	■ ERASE (P.60) — ■ OPTION (P.78)	■ ERASE (P.60) — ■ OPTION (P.78)
Available playback menu settings			

4

53

PLAYING BACK MOVIES

- ① Set the Mode dial to "■".
- ② Use "◀" or "▶" to select the movie file.
- ③ Press ▶ to play the movie.
- ④ The LCD monitor shows the playback time and a playback progress bar.

! Movies cannot be played back using movie frame playback. Use the "DISP" button to revert to normal playback.

! Movies are displayed somewhat smaller than still images.

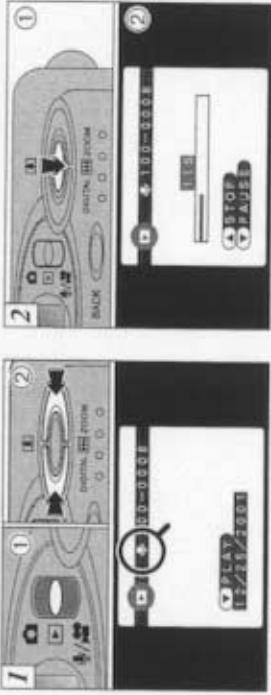

♦ **Compatible movie files** ♦
The FinePix can play back movie files shot on a FinePix3D and movie files up to 20 seconds long that were shot on a FUJIFILM digital camera and stored on a 3.3V SmartMedia. If you attempt to play back a movie that is longer than 20 seconds, the "CREATE 3DFOR 3D" message appears and playback fails.

■ Playing back movies		Control	Description
Playback			The movie automatically stops when playback ends.
Pause/Resume			Pauses the movie. Press this button again to resume playback.
Stop			Stops playback. • Press ▶ or ▶ while movie playback is stopped to go back to the previous file or advance to the next file respectively.
Fast forward/Rewind		Fast forward	Press this during playback to skip forwards or backwards through the movie.
Slow playback		When pressed	Each time you press ▶ or ▶ when the movie is paused: • The movie advances or goes back one frame. • Hold down the button to move through the frames quickly.

♦ **Compatible movie files** ♦
The FinePix can play back movie files shot on a FinePix3D and movie files up to 20 seconds long that were shot on a FUJIFILM digital camera and stored on a 3.3V SmartMedia. If you attempt to play back a movie that is longer than 20 seconds, the "CREATE 3DFOR 3D" message appears and playback fails.

54 55

PLAYING BACK VOICE CAPTIONS

- ① Press "►" to play the voice caption.
② The LCD monitor shows the playback time and a playback progress bar.

① Set the Mode switch to **(2)**.
② Use "▲" or "▼" to select an image file that has a voice caption.

③ You cannot play back voice captions using multi-frame playback. Use the "DISP" button to revert to normal playback.

The "►" icon is displayed.

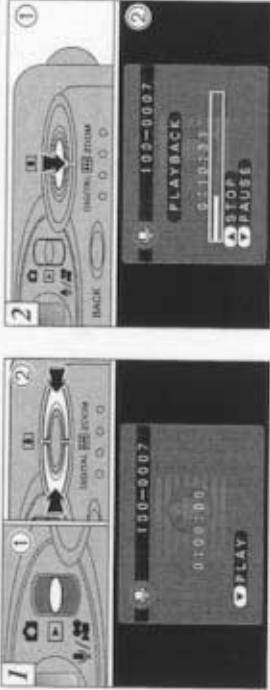

- ④ Take care not to block the speaker.
⑤ If the sound is difficult to hear, adjust the volume. (p.78, 80)

■ Playing back voice captions		Control	Description
Play/Stop			The voice caption automatically stops when playback ends.
Pause/Pause			Pauses the voice caption during playback. Press this button again to resume playback.
Stop			Stops playback. * Press ▲ or ▼ while voice caption playback is stopped to go back to the previous file or advance to the next file respectively.
Fast forward/Rewind			Press these during playback to skip forwards or backwards through the voice caption. * These buttons do not function while playback is paused.

* Refer to the *Schneider Quick Start Guide* [provided] for information on playing back voice captions on your PC.

◆ Compatible voice caption files ◆	
The FinePix30 can play voice caption files recorded on a FinePix30 and voice caption files up to 30 seconds long that were recorded on a FUJIFILM digital camera and stored on a 3.3V SmartMedia.	

PLAYING BACK AUDIO RECORDINGS

- ① Set the Mode switch to "■".
② Use "◀" or "▶" to select a voice file.
③ You cannot play back audio recordings using multi-frame playback. Use the "DISP" button to revert to normal playback.

- Available time using the battery (when fully charged)

LCD monitor on: Approx. 77 min.
LCD monitor off: Approx. 79 min.

58

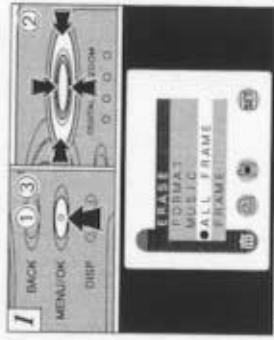

- ◆ Compatible audio files ◆
On the Fluiflash, you can play back voice files that were recorded on the Fluiflash and voice files recorded onto 3.2 V SmartMedia using other FUJIFILM cameras (excluding the Finepix500).

Playing back audio recordings

	Control	Description
Playback		The audio recording automatically stops when playback ends.
Pause/Resume		Pauses the audio recording during playback. Press this button again to resume playback.
Stop		Stops playback. * Press "◀" or "▶" while audio recording playback is stopped to go back to the previous file or advance to the next file respectively.
Fast forward/Rewind		Hold down the responsive button for about a second to fast forward or rewind the recording. * These buttons function in the same way when playback is paused.

* Refer to the Software Quick Start Guide (provided) for information on playing back audio recordings on your PC.

59

The file which "PROTECTED" was displayed cannot be erased. Unprotect the file using the camera on which the protection was first applied. "FILE" is displayed for frames with DPOF settings and they cannot be erased (P. 101).

ALL FRAMES

All files are erased except those that are protected or that have DPOF settings. Copy any files that you want to keep to your hard disk beforehand.

FORMAT

Formatting erases all the files. Take particular care when formatting a SmartMedia as this procedure also erases all protected files and all files with DPOF settings. Copy any files that you want to keep to your hard disk beforehand.

Formatting also erases protected files.

In a "SELECT ERASE?", "DELETE?", "CLEAR IMAGE" or "CLEAR NOT PRINTED" message appears, see P. 99, too.

A confirmation message appears.
In "FRAME" mode, use or to select the file and then press the "MENU/OK" button. When using "ALL FRAMES" or "FORMAT", press the "MENU/OK" button.

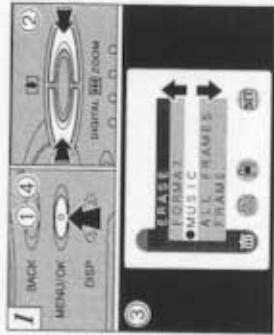

To cancel the frame erase procedure, press the "BACK" button.

① Press the "MENU/OK" button to display the menu.
② Use or to select "ERASE" and then use or to select "ALL FRAMES" or "FORMAT".
③ Press the "MENU/OK" button.
④ Press the "BACK" button to exit the menu.

Formatting erases all the data on the SmartMedia, including protected files.

PLAYBACK MENU

MUSIC TRACK

Erase just the selected music track.

- ① Press the "MENU/OK" button to display the menu on the LCD monitor.
- ② Use ▲ or ▼ to select "ERASE".
- ③ Press "▲(ERASE)" to select "MUSIC".

- ④ Press the "BACK" button to exit the menu.

⑤ If the media contains no music files, "ERASE" cannot be selected in "MUSIC".

62

ALL MUSIC TRACKS

Erase all the music tracks.

- ① Press the "MENU/OK" button to display the menu on the LCD monitor.
- ② Use ▲ or ▼ to select "ERASE".
- ③ Press "▲(ERASE)" to select "MUSIC".
- ④ Press the "MENU/OK" button.

- ⑤ Press the "BACK" button to exit the menu.

Formatting erases all the data on the SmartMedia.

MUSIC

Erase the music track.

- ① Press the "MENU/OK" button to display the menu on the LCD monitor.
- ② Use ▲ or ▼ to select "ERASE".
- ③ Press "▲(ERASE)" to select "MUSIC".
- ④ Press the "BACK" button.

- ⑤ To cancel the music track erase procedure, press the "BACK" button.

63

A confirmation message appears. For "MUSIC TRACK", use "▲(ERASE)" or "▼(ERASE)" to select the track you want to erase and then press the "MENU/OK" button. To use "ALL MUSIC TRACKS", press the "MENU/OK" button.

4

4

DPOF stands for Digital Print Order Format and refers to a format that is used for recording printing specifications for images shot using a digital camera on media such as SmartMedia. The recorded specifications include information on which frames are to be printed.

This section gives a detailed description of how to order your prints with the FinePic®. Note that some printers do not support date and time imprinting or specification of the number of prints.

*Note that the warnings shown below may be displayed while you are specifying the prints.

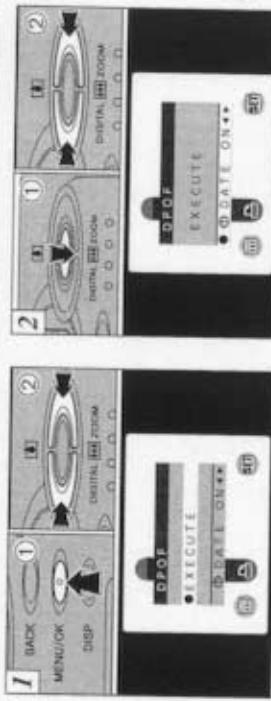

DPOF (►P.100)

If the "CANNOT" message appears, you cannot erase the frame. Cancel the "DPOF" settings and then try again.

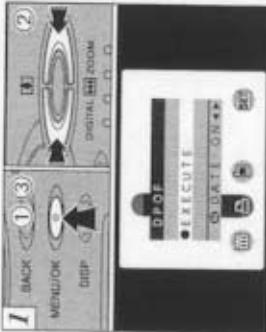

DPOF FILE ERASE (►P.101)

No more than 999 frames can be specified on the same SmartMedia.

- ① Use ▶ (left) to select "DATE".
- ② Use ▲ or ▼ to specify "DATE ON" or "DATE OFF". The selected setting is then valid for all frames with DPOF settings until the camera is switched off. Then specify the DPOF settings (►P.66).
- ③ Use ▶ or ▷ to select "EXECUTE".
- ④ Use ▶ (left) to select "PRINT 1 copy".
- ⑤ Press the "MENU/OK" button to display the menu on the LCD monitor.
- ⑥ Use ▲ or ▼ to select "DPOF".
- ⑦ The DPOF menu is not displayed when a movie or voice file is selected.
- ⑧ You may not be able to specify DPOF settings for some still shots taken on other cameras.
- ⑨ You must specify whether or not the date is included before you specify the DPOF settings. 65

- ① Use ▶ (left) to select "DATE".
- ② Use ▲ or ▼ to specify "DATE ON" or "DATE OFF". The selected setting is then valid for all frames with DPOF settings until the camera is switched off. Then specify the DPOF settings (►P.66).
- ③ Use ▶ or ▷ to select "EXECUTE".
- ④ Use ▶ (left) to select "PRINT 1 copy".
- ⑤ Press the "MENU/OK" button to display the menu on the LCD monitor.
- ⑥ Use ▲ or ▼ to select "DPOF".
- ⑦ The DPOF menu is not displayed when a movie or voice file is selected.
- ⑧ You may not be able to specify DPOF settings for some still shots taken on other cameras.
- ⑨ You must specify whether or not the date is included before you specify the DPOF settings. 65

You can only specify one print per frame (image) in the DPOF settings.

① Press the "MENULOCK" button to display the menu.

② Use ▲ or ▼ to select "DPOF".

③ With "OK" selected, press the "MENULOCK" button.

④ The DPOF menu is not displayed when a movie or voice file is selected.

⑤ You cannot specify printing for more than one print per frame.

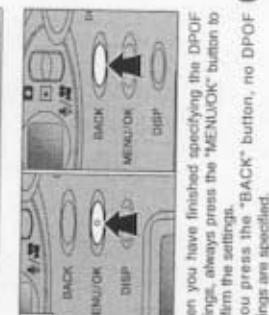

① If you select a frame for which DPOF settings have already been specified, the "BLITZ/TIME" message appears.

② Pressing the "MENULOCK" button erases all the DPOF settings already specified. You must then specify the DPOF settings again.

③ Press the "BACK" button to leave the previous settings unchanged.

④ You can check the previous settings by pressing back the Images (P.30).

① Use ▲ or ▼ to display the frame for which you want to specify DPOF settings.

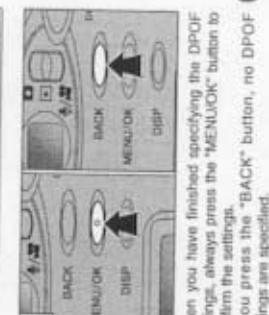

② Use ▲ (HOLD) or ▼ (HOLD) to select the setting for the frame to be printed. If you have selected the date setting, the "TYP" icon is displayed.

③ You can only specify one print per frame in the DPOF settings. Note also that you can specify prints for up to 900 frames on the same SmartMedia.

④ Note that the "TYP" icon is not displayed for movies.

⑤ "TOTAL" shows the total number of frames for which prints have been entered.

⑥ Pressing the "MENULOCK" button confirms all the settings. You cannot reset a portion of the settings without reselecting them all.

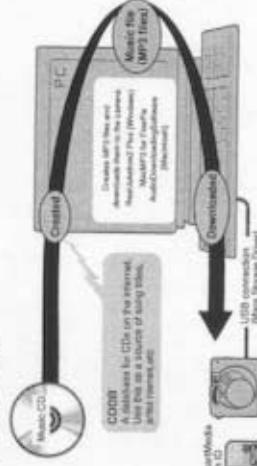

When you have finished specifying the DPOF settings, always press the "MENULOCK" button to confirm the settings. If you press the "BACK" button, no DPOF settings are specified.

5 Music

PLAYING MUSIC

The Music section describes how to use the remote controller to listen to music and also introduces the other functions that can be used from the remote controller.

Schematic diagram

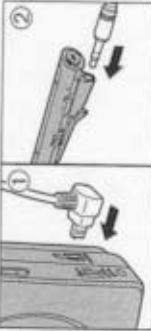

Notes on playing music

- Do not use while moving.
Never attempt to use the headphones or remote controller or look at the LCD display while you are driving a car or other vehicle as the could cause a traffic accident. If you are using the FraisFiDS as a music player while walking, pay close attention to traffic around you and to the pavement surface.
- Do not listen to loud music for long periods and do not turn the volume up high when you first start listening.
Long and continued exposure to loud noises can impair your hearing. Note also that sudden loud noises can damage your ears. Consequently, you should take care to increase the volume gradually.

SELECTING MUSIC MODE

CONNECTING THE REMOTE CONTROLLER

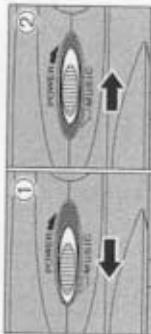

- ① Check that the camera is switched off.
- ② Connect the remote controller unit to the "REMOTE" socket on the camera.
- ③ Connect the headphones (provided) to the remote controller.

◆ The remote controller can only be used with this camera.

◆ Third-party headphones (even 3.5 mm dia. mini plug) can be used in place of the headphones provided.

- ◆ To listen to music ◆
- ◆ You must first download music files (MP3 files) to the camera. Refer to the "Software Quick Start Guide (provided)".

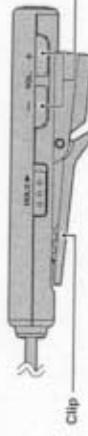

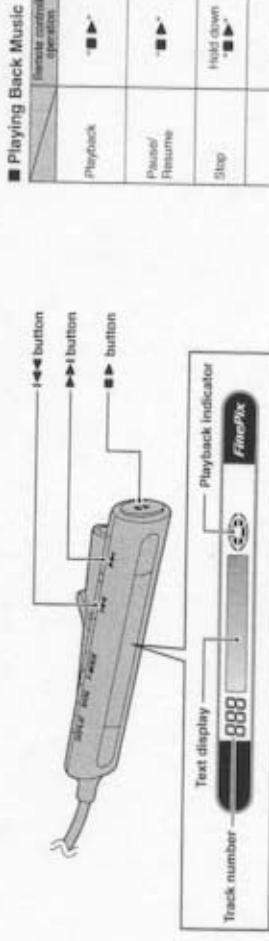

- ① By sliding the Power switch to the "MUSIC" position, you can use the camera as an audio player. The camera switches on when you play back music.
- ② When you do not want to listen to music, slide the power switch to the middle position.

◆ Once you set the Power switch to "MUSIC", the FraisFiDS will not function as a camera.

- ◆ To listen to music ◆
- ◆ You must first download music files (MP3 files) to the camera. Refer to the "Software Quick Start Guide (provided)".

USING MUSIC

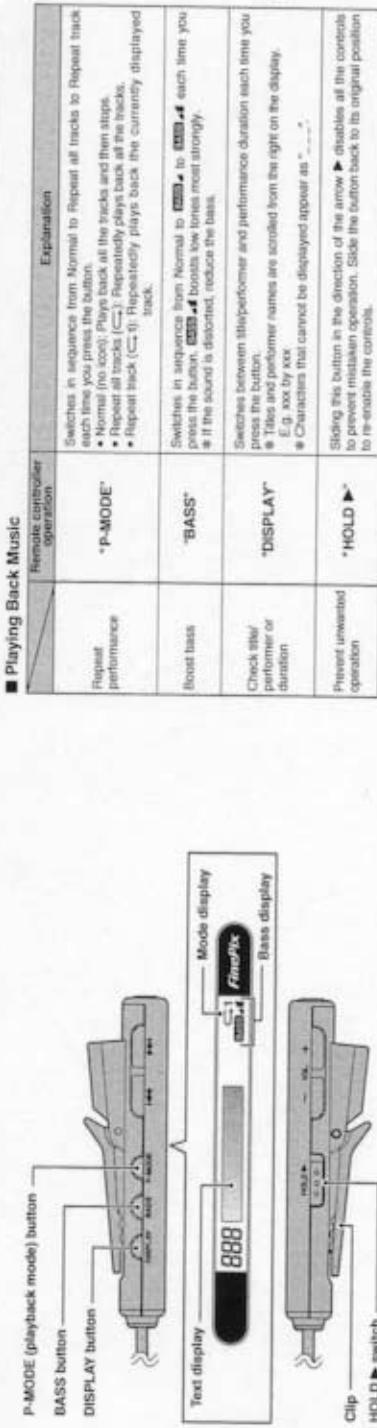

When HOLD is set, none of the buttons function. To use the remote controller, release HOLD.

Due to the nature of the LCD panel on the remote controller, the display may be difficult to see in cold locations or at low temperatures. This is normal and does not indicate a fault.

■ Playing Back Music		
	Remote controller operation	Explanation
Play/stop	◀ →	• Plays back music. • If you stop and then instant playback, playback begins from the beginning of the track that was playing when playback was stopped. • The icon appears on the remote controller.
Pause/ Resume	■	• Presses the track when used during playback. • and are displayed alternately on the remote controller. • Resumes playback if used when playback is paused. • If playback is left paused for 2 minutes, the FinePICK automatically switches itself off.
Stop	Hold down ■ ■ ■	• Hold this button down for approximately 1 second to stop playback. • While playback has been stopped for 5 seconds, the FinePICK automatically switches itself off.
Track advance/ reverse	◀◀◀ or ▶▶▶	• Shift forward or track-backward one track each time it is pressed. • Hold either button down for approximately 1 second or more while playback is stopped to advance or reverse continuously through the recorded tracks. (This is only available for about 5 seconds after playback is stopped.) • Pressing ▶▶▶ once during playback takes you back to the beginning of the current track. Press the button briefly twice in succession to go to the beginning of the previous track.
Volume adjustment adjustment	◀+ or ▶-	• Adjusts the volume each time it is pressed. • Hold the button down for approximately 1 second or longer for continuous volume adjustment. • A volume bar is displayed during volume adjustment.
■ Available time using the battery (when fully charged)		
Continuous music playback: Approx. 3.5 hours		

USING MUSIC

④ Due to the nature of the LCD panel on the remote controller, the display may be difficult to see in cold locations or at low temperatures. This is normal and does not indicate a fault.

⑤ You may hear some static or interference when you are using the remote controller. This is normal and does not indicate a fault.

⑥ Characters that cannot be displayed (symbols, etc.) appear as "—".

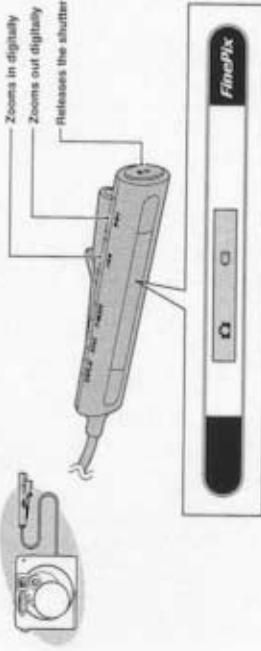

73

■ Playing Back Music

	Remote controller operation	Explanation
Repeat performance	"P-MODE"	Switches in sequence from Normal to Repeat all tracks to Repeat track each time you press the button. • Normal (no icon) Plays back all the tracks and then stops. • Repeat all tracks (C-2) Repeatedly plays back all the tracks. • Repeat track (C-3) Repeat track plays back the currently displayed track.
Bass boost	"BASS"	Switches in sequence from Normal to to each time you press the button. boosts low tones more strongly. • If the sound is distorted, reduce the bass.
Check title/performer or duration	"DISPLAY"	Switches between title/performer and performance duration each time you press the button. • Titles and performer names are scrolled from the left on the display. • E.g. nox by nox • Characters that cannot be displayed appear as "—".
Prevent unwanted operation	"HOLD"	Sliding this button in the direction of the arrow disables all the controls to prevent mistaken operation. Slide the button back to its original position to re-enable the controls.

6 Remote Controller TAKING PHOTOGRAPHS USING THE REMOTE CONTROLLER

- ① Connect the remote controller supplied with the camera (P.69).
② Set the Mode switch to **■**.

When you are taking pictures at night or in Macro mode, using the remote controller and a tripod is an effective way to prevent camera shake.

The remote controller cannot be used to shoot movies or record voice captions.

When HOLD is set, none of the buttons function. To use the remote controller, release HOLD.

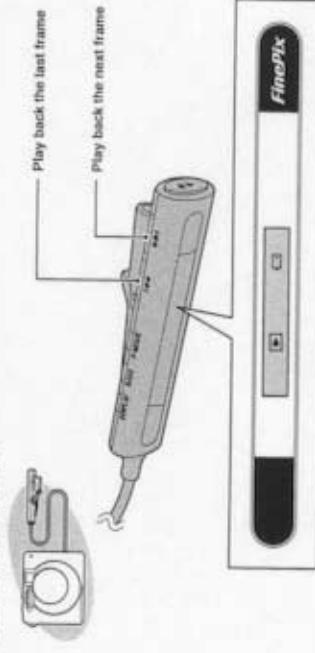

When you switch the FinePixD2 or change the mode, press **▲** or **▼** to switch on the LCD display.

When the LCD panel on the remote controller is switched off, you cannot zoom in or out as the first operation.

Due to the nature of the LCD panel on the remote controller, the display may be difficult to see in cold locations or at low temperatures. This is normal and does not indicate a fault.

PLAYBACK USING THE REMOTE CONTROLLER

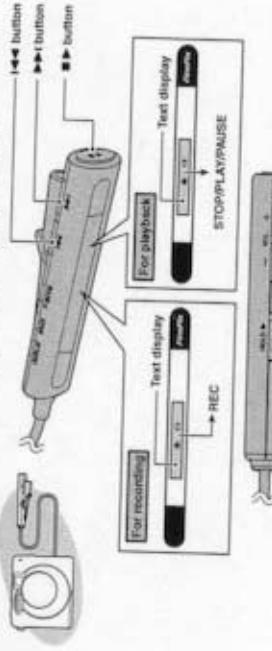

- ① Connect the remote controller supplied with the camera (P.69).
② Set the Mode switch to **□**.

- ③ The remote controller cannot be used to play back movies or voice captions.
④ When HOLD is set, none of the buttons function. To use the remote controller, release HOLD.
⑤ Due to the nature of the LCD panel on the remote controller, the display may be difficult to see in cold locations or at low temperatures. This is normal and does not indicate a fault.

AUDIO RECORDING USING THE REMOTE CONTROLLER

- ① Connect the remote controller suspended with the camera (p.69).
- ② Set the Mode switch to "REC" for recording and to "STOP" for playback.
- ③ Ensure that the lens cover is closed when you switch the camera on (p.17).

- ④ When HOLD is set, none of the buttons function. To use the remote controller, release HOLD.
- ⑤ Due to the nature of the LCD panel on the remote controller, the display may be difficult to see in cold locations or at low temperatures. This is normal and does not indicate a fault.

■ Recording Audio Files

	Remote controller operation	Explanation
Record/Stop	"■"	Functions in the same way as Record/Stop using the shutter button.
■ Playing Back Audio files		
Playback	"◀"	Plays back an audio recording.
Pause/Resume	"■"	<ul style="list-style-type: none"> Pauses the recording when used during playback. Resumes playback if used when playback is paused.
Stop	Hold down "■"	<ul style="list-style-type: none"> Hold this button down for approximately 1 second to stop playback. Pressing "◀" or "▶" when playback is stopped takes forward (or back) to the next (or previous) file.
Advance/Rewind	Hold down "◀" or "▶"	<ul style="list-style-type: none"> Holding one of these buttons down for approximately 1 second or more during playback or while playback is paused advances or rewinds through the audio file.

7 Settings

The "Settings" chapter looks at functions available from "OPTION" in the "still" image, "still" audiomusic and "still" playback.

■ List of settings

Still image mode	Still Movie mode	AutoMovie mode	Playback mode
• AUTO	—	—	—
• MANUAL	—	—	—
• FILE SIZE (P.79)	—	—	SET-UP
SET-UP	—	SET-UP	VOLUME (P.80)
—	—	—	LCD BRIGHTNESS (P.80)
LCD BRIGHTNESS (P.80)	—	—	—

① Press the "MENU/OK" button to display the menu screen.

② Use ▲ or ▼ to select "OPTION" and ▲ (OK) or ▼ (OK) to select the desired setting.

③ Press the "MENU/OK" button to move to the selected setting.

◀ SETTING THE FILE SIZE AND QUALITY (COMPRESSION RATIO)

You can choose any combination of 3 file sizes and 3 image quality settings. Use the table below as a guide to the best settings for your shots.

File size	FINE	NORMAL	BASIC
□ (1600 × 1200)	●	●	●
□ (1280 × 960)	●	●	—
□ (960 × 480)	—	●	—

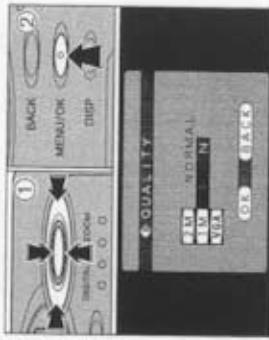

- ① For printing the whole image at A5 size or printing a part of the image at A6 size
② For printing at A6 size
③ For use via the Internet as an e-mail attachment, etc.

Quality (compression ratio)

Select "FINE" for better image quality and "BASIC" to increase the number of available shots. In most cases, the "NORMAL" setting provides more than adequate image quality.

① Use ▲ (OK) or ▼ (OK) to change the file size setting and ▲ or ▼ to change the quality setting.
② Press the "MENU/OK" button to confirm the setting.

③ To exit this procedure without changing the settings, press the "BACK" button.

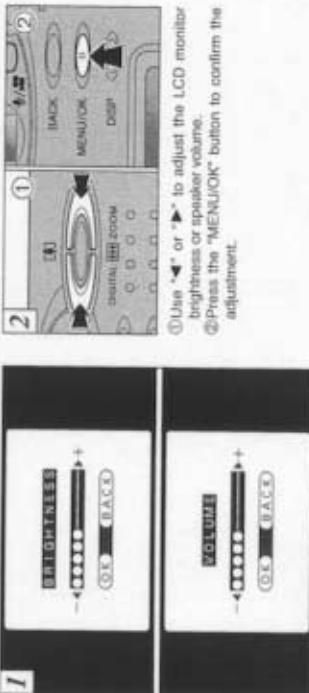

① Use ▲ (OK) or ▼ (OK) to change the file size setting and ▲ or ▼ to change the quality setting.
② Press the "MENU/OK" button to confirm the setting.

③ To exit this procedure without changing the settings, press the "BACK" button.

LCD MONITOR BRIGHTNESS/VOLUME

SET-UP

① The volume can be set when the Mode switch is set to Playback.

- ② To exit this procedure without changing the settings, press the 'BACK' button.
- ③ Use "▲" or "▼" to adjust the LCD monitor brightness or speaker volume.
- ④ Press the "MENU/OK" button to confirm the adjustment.

■ SET-UP menu options			
Settings	Display	Factory default	Explanation
POWER SAVE	CNN OFF	CNN OFF	This is a function that reduces power consumption and then automatically switches the camera off to prevent battery depletion when the camera is not being used. See P.82 for details.
USB MODE	DIGITAL PC CAM	DIGITAL PC CAM	See P.82 for details.
DATE/TIME	SET [] —	—	You can use this to set the date and time. See P.18 for details.
BEEP	LOW HIGH OFF	LOW HIGH OFF	This setting selects the volume of the beep emitted by the camera during operation.
LANGUAGE	ENGLISH FRANÇAIS	ENGLISH FRANÇAIS	Select English or French as the language used for screen display.

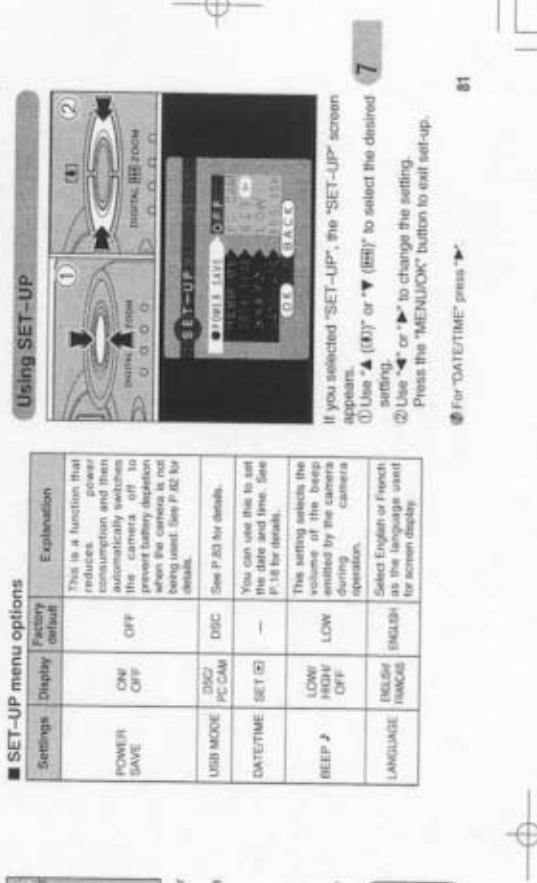

⑤ If you selected "SET-UP", the "SET-UP" screen appears.

- ⑥ Use "▲" or "▼" to select the desired setting.
- ⑦ Use "◀" or "▶" to change the setting.

⑧ Press the "MENU/OK" button to exit set-up.

⑨ For "DATE/TIME" press ▶.

81

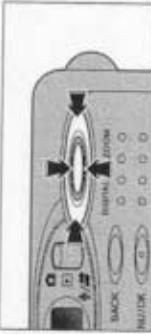

81

POWER SAVE

8 PC Connection

SET-UP

IN PC CONNECTION

PC Connection describes how to set up a USB connection and provides an overview of the functions available using a USB connection. Refer also to the Software Quick-Start Guide booklet.

DSC Mode

This mode provides a simple way to read images from a SmartMedia and store images on to a SmartMedia (→ P.84).

◆ Videoconferencing is not supported on Macintosh computers.

When the Power Save function is operating, press ▲ (Up), ▶ (Right), ▶ (Left) to return the camera to the "ready to shoot" status. This is a useful feature as it allows you to take pictures more quickly than switching the camera off and then on again.

◆ The charging time for the flash increases slightly because the flash charging power is reduced.

Sleep mode does not operate when the LCD monitor is switched off, during playback mode or during SET-UP, but the camera does automatically switch off if it is not used for approximately 2 minutes (AUTO POWER OFF).

Once you enable this function, the LCD monitor is temporarily switched off to save power. If you do not use the camera for 30 seconds, use this function to gain the maximum possible run time from your batteries.

◆ Power Save/Auto Power Off does not function when a USB connection is being used.

◆ Operation can also be resumed by pressing buttons other than ▲ (Up), ▶ (Right), ▶ (Left).

PC CAM (CAMERA) Mode

This function allows you to conduct videoconferencing sessions between PCs connected to the Internet. This function can also be used to record video on a PC (→ P.86).

◆ Videoconferencing is not supported on Macintosh computers.

◆ The First Time You Connect Your Camera to a Computer ◆ You must set up your computer as described below. Refer also to the Software Quick Start Guide booklet.

Windows

- ① Load the enclosed CD-ROM into your PC's CD-ROM drive and install the application software.
- ② With the CD-ROM loaded into your PC, select DSC connection mode and install the driver software.

Macintosh

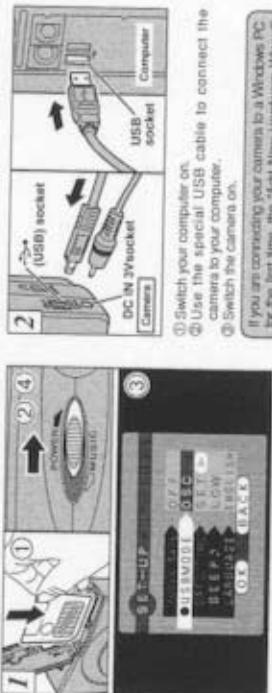

- Load the enclosed CD-ROM into the CD-ROM drive and install all the software.

8

82

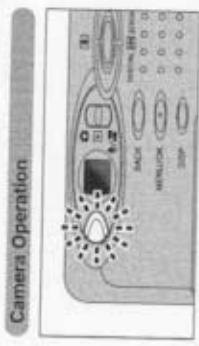

83

CONNECTING AT DSC MODE

-

四

- The viewfinder lamp alternately blinks green and orange while the camera is communicating with your computer.
 - "DSC" appears on the LCD monitor.
 - Power/Save/Auto Power Off does not function when a USB connection is button is used.

- Switch the camera off when you change the SmartMedia (P.17).
- Do not disconnect the USB cable when the camera is communicating with the computer. See p.86 for information on the disconnected resources.

- FinePixViewer automatically starts up

- If the above operations do not work, you do not have the required software programs or drivers. Insert the Start Guide booklet and complete the required computer setup procedures. Then connect the camera to your computer.

10

- 100

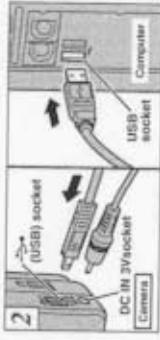

1

- THE JOURNAL OF

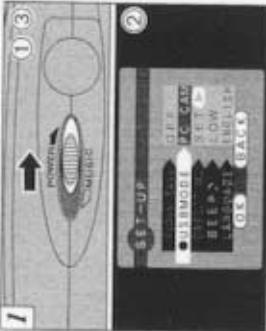

CONNECTING AT PC-CAMERA MODE

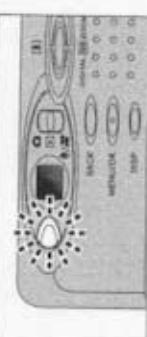

- ① Switch your computer on.
 - ② Use the special USB cable to connect the camera to your computer.
 - ③ Switch the camera on.
- If you are connecting your camera to a Microsoft PC for the first time, the "Add New Hardware Wizard" window opens and driver software installation begins (Software Quick Start Guide booklet).

- Always use the procedure in the following when disconnecting or connecting the camera. (P.80)
- ① Open the lens cover.
 - ② Slide the Power switch sideways to switch the camera on.
 - ③ Set the "USB MODE" setting in the "SET-UP" menu to "PC CAM" (P.78, 81).
 - ④ Slide the Power switch sideways to switch the camera off.
 - ⑤ Remove the USB cable plug from the camera.
- You should use the AC power adapter when the camera is connected to your computer (P.22, 91). Loss of power during data transmission can prevent successful data download.
- Ensure that you insert the USB cable plug into the correct socket.
- Refer to the page fully into the connector socket.

- ① Open the lens cover.
- ② Slide the Power switch sideways to switch the camera on.
- ③ Set the "USB MODE" setting in the "SET-UP" menu to "PC CAM" (P.78, 81).
- ④ Slide the Power switch sideways to switch the camera off.
- ⑤ Remove the USB cable plug from the camera.

Camera Operation

- The viewfinder lamp alternately blinks green and orange while the camera is communicating with your computer.
- The lens is fixed at the wide-angle zoom setting.
- "PC CAM" appears on the LCD monitor.
- Power Save/Auto Power Off does not function when a USB connection is being used.

Computer Operation

- "PictureHello" automatically starts up and the Picture Hello window opens (Windows only).
- You can use software such as Videomotion to view live images.
- You can use software such as Videomotion to view live images.

8

87

86

DISCONNECTING FROM THE PC (Important — always use this procedure!)

1 Perform the steps shown below before you switch the camera off. This procedure differs depending on the operating system software (or PC) you are using:

Windows 98 or 98 SE

No PC operation is needed.

Windows Me

Left-click the Eject icon in the taskbar and eject "USB disk".

① Quit all applications (FinePixViewer, VideoImpression, etc.) that are using the camera.

② Check that the viewfinder lamp is glowing green (that the camera is not communicating with the computer).

For a PC-CAMERA connection, proceed to step **1**.

Even after the "Copying..." message is no longer displayed on your computer, communication with the camera may still be in progress. Always check that the viewfinder lamp on the camera is glowing green and is no longer flashing.

88

2 Perform the steps shown below before you switch the camera off. This procedure differs depending on the operating system software (or PC) you are using:

Windows 2000 Professional

Left-click the Eject icon in the taskbar and eject "USB Mass Storage".

Macintosh

No PC operation is needed.

Windows 2000 Professional

① Switch the camera off.

② Unplug the special USB cable from the camera.

③ Display this message and then click the "OK" button.

④ Even after the "Copying..." message is no longer displayed on your computer, communication with the camera may still be in progress. Always check that the viewfinder lamp on the camera is glowing green and is no longer flashing.

For a PC-CAMERA connection, proceed to step **1**.

Even after the "Copying..." message is no longer displayed on your computer, communication with the camera may still be in progress. Always check that the viewfinder lamp on the camera is glowing green and is no longer flashing.

89

① Switch the camera off.
② Unplug the special USB cable from the camera.
③ Display this message and then click the "OK" button.
④ Even after the "Copying..." message is no longer displayed on your computer, communication with the camera may still be in progress. Always check that the viewfinder lamp on the camera is glowing green and is no longer flashing.

⑤ If you are using Windows, you cannot disconnect the camera by right-clicking the removable disk icon (the camera) and selecting "Eject". Always follow the proper procedure as given above before disconnecting the camera from your PC.

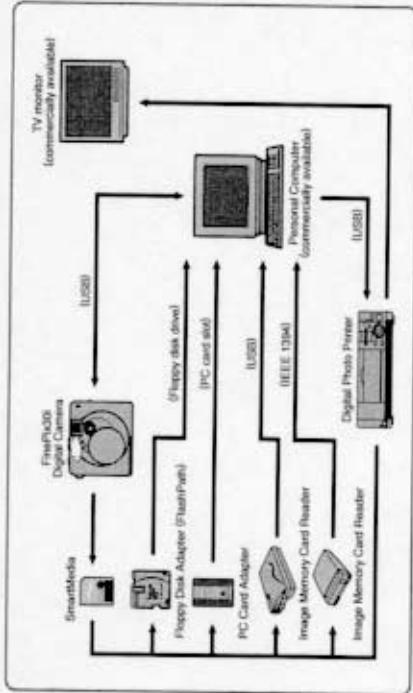

⑥ Display this message and then click the "OK" button.

⑦ Drag the "Removable drive" icon on the desktop to the Trash.

⑧ If you are using Macintosh, always follow the proper procedure as given above before disconnecting the camera from your PC.

System Expansion Options

By using the FinePic30i together with other optional FUJIFILM products, your system can be expanded to fit a wide range of uses.

90

Accessories Guide

► The optional accessories (sold separately) can make taking pictures with the FinePic30i even easier. For information on how to attach and use the accessories, refer to the instructions provided with the accessory used.

● SmartMedia™

These are SmartMedia cards sold separately. Use the 9 types listed below.

- MG-45: 4MB, 3.3V
- MG-85: 8MB, 3.3V
- MG-165: 16MB, 3.3V
- MG-325: 32MB, 3.3V
- MG-645: 64MB, 3.3V
- MG-1285: 128MB, 3.3V, ID
- MG-325W: 32MB, 3.3V, ID
- MG-645W: 64MB, 3.3V, ID
- MG-1285W: 128MB, 3.3V, ID

* Some 3.3V SmartMedia are labeled as "3V" cards.
* SmartMedia with ID are labeled as "ID" cards.

● AC Power Adapter AC-3V

Use the AC power adapter when you want to take pictures or play back images for long periods or when the camera is connected to a computer.

* The shape of the AC power adapter, the plug and socket outlet depend on the country.

● Fujifilm Rechargeable Battery 2HR-3UF

The 2HR-3UF includes 2 pieces of high-capacity AA-size Nickel Metal Hydride batteries.

* The BC-NH includes the quick battery charger BC-NH and 2 Ni-MH batteries. The BC-NH can charge 2 Ni-MH batteries in approximately 110 minutes. Up to 4 Ni-MH batteries can be charged simultaneously.

● SC-FX???

This is a spacial case made of polyester that protects the camera against soiling, dust and minor impacts when it is being carried.

91

Notes on Using Your Camera Correctly

- **FD-A2 Floppy Disk Adapter (FlashPath)**
The adapter is the same size and shape as a 3.5-inch floppy disk. You can copy the images on a SmartMedia to your PC simply by loading the SmartMedia into the floppy disk adapter and then inserting the adapter into your floppy disk drive.
- **Places to Avoid**
Do not store or use the camera in the following types of locations:
 - Very humid, dry or dusty places
 - In direct sunlight or in places subject to extreme temperature extremes, such as in a closed car in summer.
 - Places subject to strong vibration
 - Places subject to strong magnetic fields (such as near modern transformers or magnets).
 - In contact with chemicals such as pesticides or need to nature or vinyl products for long periods of time.
- **When the Camera is Unused for Long Periods**
If you do not intend to use the camera for a long period of time remove the batteries and the SmartMedia card before storing the camera.
- **Cleaning Your Camera**
Use a blower brush to remove dust from the lens, LCD monitor screen or viewfinder as these surfaces, and their respective lenses, are very sensitive. If any soiling remains, apply a small amount of lens cleaning liquid to a piece of FUJI film lens cleaning paper and wipe gently.
 - Do not scratch hard objects against the lens, LCD monitor screen or viewfinder as these surfaces are easily damaged.
 - Clean the body of the camera with a soft, dry cloth. Do not use volatile substances such as thinner, benzine or insecticide, as these may react with camera body and cause deformation or remove the coating.
- **Using the Camera Overseas**
When traveling overseas, do not place your camera in the check-in baggage. Baggage handling at airports may subject baggage to violent shocks, and the camera may be damaged internally even when no exterior damage is visible.

93

 FD-A2 Windows 95/98/ME/2000/XP Mac OS 7.4.1 to 1.1 Compatible SmartMedia 5V/3.3V, 2MB to 128MB	 SM-R2 Provides a quick and easy way to transfer images back and forth between your PC and an image memory card (SmartMedia). The SM-R2 uses the USB interface for high-speed file transfer.	 DM-R1 Image Memory Card Reader	 PC-AD3 PC Card Adapter
<p>FD-A2 Floppy Disk Adapter (FlashPath)</p> <p>The adapter is the same size and shape as a 3.5-inch floppy disk. You can copy the images on a SmartMedia to your PC simply by loading the SmartMedia into the floppy disk adapter and then inserting the adapter into your floppy disk drive.</p>

Notes on the Power Supply

Applicable Batteries

- Use AA-size nickel-metal hydride (Ni-MH) batteries in this camera.
- AA-size lithium or manganese batteries cannot be used as they emit heat and can cause camera faults or damage.
- Only use alkaline batteries for emergencies. This camera is capable of rechargeable batteries. For emergencies, this camera and the WU-2 of some bodies, very depending, on the they provide power may be much better than others. You should also switch the LCD monitor off when using alkaline batteries.

Notes on the Batteries

- Incorrect use of the batteries could cause them to leak, become hot, ignite or burst. Always observe the precautions given below.
- Do not heat the batteries or expose them to fire.
 - Do not carry or store a battery with metal objects such as necklaces or hairpins that could come into contact with the metal positive (+) and negative (-) poles of the battery.
 - Do not expose the batteries to fresh or sea water, and when particular care to keep the terminals dry.
 - Do not attempt to deform, disassemble or modify the batteries.
 - Do not attempt to pierce or cut the battery casing.
 - Do not drop, strike or otherwise subject the batteries to strong shocks.
 - Do not use batteries that are leaking, deformed, discolored or exhibit any other abnormality.

If any liquid at all leaks from the batteries, write the number compartment thoroughly and then both new batteries, old batteries, etc. on the terminals of Ni-MH batteries can greatly reduce the number of available shots. When this occurs, clean the terminals carefully with a soft, dry cloth. Then use up the remaining charge in the batteries and exchange them.

Newly purchased batteries or batteries that have been left unused for an extended period may not be fully charged. (This is indicated by the immediate display of the battery low warning or a low number of available shots.) This is a normal characteristic of the batteries and does not indicate a fault. Repeatedly charging and using the batteries 2 or 4 times will return them to a normal condition.

• You repeatedly charge a Ni-Cd battery before it is fully discharged, it will suffer from "memory effect", causing the "battery low" warning to appear when there is still ample charge remaining in the battery. To restore the batteries to their normal condition, use up all the charge in the batteries before recharging them.

• Memory effect. A phenomenon affecting the battery characteristics such that the apparent battery capacity decreases.

Notes on Disposing of Batteries

- When disposing of batteries, do so in accordance with your local waste disposal regulations.
- Notes on using compact rechargeable batteries (Ni-MH batteries)
 - To charge AA-size Ni-MH batteries, follow the correct charging procedure using the special charger provided in the optional flat charger.
 - Do not use the battery charger to charge batteries other than those specified for use with the charger.
 - Note that the batteries may feel warm immediately after being charged.
 - Ni-MH batteries are not charged at all.

The camera may feel warm immediately after being used. Before removing the batteries, switch the camera off and wait until the batteries cool down.

When replacing the batteries, fit 2 new batteries. Here, "new batteries" refers to batteries that were recently fully charged at the same time.

• Battery performance deterioration at low temperatures (a 10°C/50°F or below) and the low air which they can be used shortens. This is particularly true of alkaline batteries. In cold conditions, put the batteries in your pocket or a similar place to warm them before loading them into the camera. If you use a body warmer to warm the batteries, ensure that they are not in direct contact with the warmer.

• So, such as fingerprints, on the battery terminals can significantly reduce the number of available shots. Carefully wipe the battery terminals clean with a soft, dry cloth before loading the batteries.

Notes on Using the Battery Charger

• Rechargeable batteries and the battery charger itself will become warm due to the power absorbed inside the batteries. This is normal and does not indicate a fault. Whenever possible, use the battery charger in a well-ventilated location.

94

95

Notes on the Power Supply

- There may be vibration noise from inside the battery charger during use. This is normal and does not indicate a fault.
- Do not use the battery charger to charge batteries other than FUJIFILM HR-3UF Ni-MH batteries.
- The battery charger could cause interference if placed close to a radio during charging. In this event, move the radio and charger further apart.
- Do not touch the connections or contact points on rechargeable batteries with other metal objects as this can cause a short circuit.
- Do not leave the battery charger in the following locations: Locations subject to strong vibrations, in very dusty locations, or in locations with very high humidity or high temperatures, such as close to a heating appliance or in direct sunlight.
- The battery charger accepts input voltages of 100-240 V AC at 50 or 60 Hz and can be used outside Japan. However, because the shapes of power sockets vary by country and by region, an appropriate plug adapter is also required for each country. Consult your travel agent for details.

Notes on Using the AC Power Adapter

- Always use the AC-3V AC Power Adapter (sold separately) with the Fujipix.
- The use of an AC power adapter other than the AC-3V could result in damage to your camera.
- Ensure that you do not touch the contact areas on the AC power adapter against any other metal object as this could cause a short circuit.
 - Do not plug in the AC power adapter while you are operating the camera using batteries. Switch the camera off first.
 - Do not load the batteries while you are operating the camera using the AC power adapter. Switch the camera off first.
 - If you disconnect the AC power adapter when there are no batteries in the camera, the date and time settings will be lost and must be reset.

BIC-NHS Battery Charger Specifications

Rated Input	100 - 240 V AC, 50/60 Hz
Input capacity	100 - 240 V ~ 0.67 A
Rated output	1.2 V DC, 400 mA × 2
Applicable	FUJIFILM HR-3UF (Ni-MH), 1600 mAh or 1700 mAh
Charging time	HR-3UF: 11600 mAh: Approx. 4.5 hours

Notes on the SmartMedia™

- There may be vibration noise from inside the battery charger during use. This is normal and does not indicate a fault.
- Do not use the battery charger to charge batteries other than FUJIFILM HR-3UF Ni-MH batteries.
- The battery charger could cause interference if placed close to a radio during charging. In this event, move the radio and charger further apart.
- Do not touch the connections or contact points on rechargeable batteries with other metal objects as this can cause a short circuit.
- Do not leave the battery charger in the following locations: Locations subject to strong vibrations, in very dusty locations, or in locations with very high humidity or high temperatures, such as close to a heating appliance or in direct sunlight.
- The battery charger accepts input voltages of 100-240 V AC at 50 or 60 Hz and can be used outside Japan. However, because the shapes of power sockets vary by country and by region, an appropriate plug adapter is also required for each country. Consult your travel agent for details.

- When the SmartMedia cover is opened or the SmartMedia card supplied with your FinePix100 camera is then switched off during data recording, during data erasing (SmartMedia formatting) or during frame advance when images are being played back.
Back up important data onto another medium (MO disk, floppy disk, hard disk, etc.)
- SmartMedia The SmartMedia card supplied with your FinePix100 camera is a new image recording medium developed especially for use in digital cameras. Each SmartMedia card contains a built-in semiconductor memory chip (NAND flash memory) which is used for storing digital image data.
- Because the data is stored electrically, the stored image data can be erased from the card and new data recorded.

Notes on Handling SmartMedia

- Take care to hold the SmartMedia straight when you insert it into your camera.
- Never remove the SmartMedia or switch the camera off during data recording, during data erasing (SmartMedia formatting) or during frame advance when images are being played back. These actions could result in damage to the SmartMedia.
- Use only the SmartMedia supplied for use with the FinePix100. The use of other SmartMedia could damage the camera.
- SmartMedia with IDs The SmartMedia ID is a SmartMedia that has an individually assigned identification number. SmartMedia ID cards can be used with those that use ID numbers for copyright protection or other purposes. This camera accepts SmartMedia ID cards in the same way as conventional SmartMedia cards.
- In the situations listed below, recorded data may be erased (destroyed). Please note that Fuji Photo Film Co., Ltd. accepts no responsibility whatsoever for the loss (infringement) of recorded data.
 - When the SmartMedia is used incorrectly by the owner or a third party
 - When the SmartMedia is exposed to static electricity or electrical noise

Warning Displays

► In Movie mode, nothing is displayed on the LCD monitor.

- Do not use or store SmartMedia in very hot, humid or corrosive environments.
- Take care not to touch the SmartMedia's contact area or allow the area to become soiled. Use a dry, lint-free cloth to wipe away any soiling that does occur.
- To avoid damage caused by static electricity, always use the special static-free case provided during transportation or storage, or keep the SmartMedia in a static case if available.
- Do not carry SmartMedia in locations such as a trouser pocket. This could subject the SmartMedia to excessive force when you sit down, thereby damaging the SmartMedia.
- The SmartMedia may feel warm when it is removed from the camera after extended periods of picture taking or image viewing. This is normal and does not indicate a fault.
- Inserting a SmartMedia that is charged with static electricity into your camera may result in a camera malfunction. If this occurs, switch the camera off and then on again.
- After the label onto the designated area of the card. Do not use third-party labels as this can lead to problems when the card is inserted or removed.
- When you attach this label, take care that it does not cover any of the write protect area.

■ Notes on Using SmartMedia with a PC

- If you intend to take photos using a SmartMedia that has been used on a PC, format the SmartMedia on your camera.
- When you format a SmartMedia in the camera and then shoot and record images, a directory (folder) is automatically created. Image data is then recorded in this directory.
- Do not change or delete the directory (folder) names or file names on the SmartMedia from your PC as this will make it impossible to use the SmartMedia in your camera.
- Always use the camera to erase image data on a SmartMedia.
 - To edit image data, copy the image data to the PC's hard disk and then edit the copied data.
- **Specifications**

Type

Image memory card for digital cameras

(SmartMedia)

Warning Displays

► The table below lists the warnings that are displayed on the LCD monitor.

Warning Displayed	Explanation	Remedy
LCD Monitor LCD Monitor [CAMERA FIELD]	The frame number has reached 1000-0000.	Take the shot using a formatted SmartMedia.
[WHITE SCREEN] TERROR	*The data could not be recorded due to a SmartMedia error or a connection error between the SmartMedia and camera. *The photographed image cannot be recorded as it is too large to fit in the available space on the SmartMedia.	*Re-inset the SmartMedia or switch the camera off and then on again. *Use a new SmartMedia.
[CAMERA] TERROR	*The voice caption file is full. *Camera saturated.	*The voice caption cannot be played back. *Contact your FUJIFILM dealer.
[PROTECT] +SAFE	— There is a strong likelihood of camera shake because the shutter speed is slow.	Use flash photography. However, a tripod should be used for some scenes and motion.
[CBP] —	A protected frame was erased.	Protect this frame if you want. Unprotect the frame using the camera on which the protection was first applied.
[CBP] —	DPOF settings are specified for an image you tried to erase.	To erase the image, specify "RESET" as the DPOF setting.
[CLEAR ALL] TERROR	Photos were specified for more than 1000 frames in the DPOF frame settings.	To erase the image, specify "RESET" as the DPOF setting.

Warning Displayed	Explanation	Remedy
LCD Monitor LCD Monitor [CAMERA FIELD]	The lens cover is closed.	*Open and close the lens cover again.
[CAMERA FIELD]	The lens cover is faulty.	*Switch the camera off and on again.
[CAMERA FIELD]	There is no music file.	*Music playback is not possible. Download some music file.
[CAMERA FIELD]	This music file was downloaded to a different SmartMedia.	*Insert a new SmartMedia into the camera and download the audio file again.

Troubleshooting

► If you think the camera is faulty, check the following once more.

Problem	Cause	Remedy
No power:	<ul style="list-style-type: none"> The battery is exhausted. The AC power adapter plug has come out of the power outlet. 	<ul style="list-style-type: none"> Load a fully charged battery. Plug the adapter back in.
Power cuts out during operation.	The battery is exhausted.	Load a fully charged battery.
Battery runs out quickly.	<ul style="list-style-type: none"> You are using the camera in extremely cold conditions. The terminals are soiled. The battery has reached the end of its operating life. 	<ul style="list-style-type: none"> Put the battery in your pocket or another warm place to heat it and then load it into the camera just before you take a picture. Wipe the battery terminals with a clean, dry cloth. Load a new fully charged battery.
No photograph is taken when the shutter button is pressed.	<ul style="list-style-type: none"> No SmartMedia is inserted. The SmartMedia is write-protected. The SmartMedia contact area is soiled. The SmartMedia is damaged. The Auto Power Off function has switched the camera off. The battery is exhausted. 	<ul style="list-style-type: none"> Load a new SmartMedia or erase some unwanted frames. Remove the write-protection. Format the SmartMedia. Wipe the SmartMedia contact area with a clean dry cloth. Load a new SmartMedia. Switch the camera on. Load a fully charged battery.

Problem	Cause	Remedy
I can't use the flash to take pictures.	The flash is set to Suppressed Flash mode.	<ul style="list-style-type: none"> Set the flash to Auto, Red-Eye Reduction or Forced Flash mode (the flash cannot be used in some modes).
I can't use the flash to take pictures.	<ul style="list-style-type: none"> You pressed the shutter button while the flash was charging. The battery is exhausted. 	<ul style="list-style-type: none"> Wait until charging is completed before pressing the shutter button. Load a fully charged battery.
The photograph and image is dark even though I used the flash.	<ul style="list-style-type: none"> The subject is too far away. Your finger was covering the flash/both capacitors area. 	<ul style="list-style-type: none"> Move closer to the subject. Hold the camera correctly.
The image is blurred.	<ul style="list-style-type: none"> This lens is dirty. You photographed a distant subject with the macro selector switch set to . You took a close-up shot with the macro selector switch set to . 	<ul style="list-style-type: none"> Clean the lens. Cancel Macro mode. Set the camera to Macro mode.
There is speckling on the image.	<ul style="list-style-type: none"> The shot was taken with a slow shutter speed (long exposure) in a high-temperature environment. 	<ul style="list-style-type: none"> This is a characteristic of CCDs and does not indicate a camera fault.
I can't format the SmartMedia.	<ul style="list-style-type: none"> The SmartMedia is write-protected. 	<ul style="list-style-type: none"> Remove the write-protection.

Troubleshooting

If you think the camera is faulty, check the following once more.

Specifications

Problem	Cause	Remedy
The ERASE ALL function does not erase all the frames.	• The frame is protected. • DPOF settings are specified for some frames.	• Unprotect the frame using the camera or • Which the protection was first applied. • Cancel the DPOF settings for the frame and try again.
Frame erase does not erase the frame.	• The frame is protected. • DPOF settings are specified for same frames.	• Unprotect the frame using the camera on which the protection was first applied. • Cancel the DPOF settings for the frame and try again.
Nothing happens when I use the camera switches.	• Camera malfunction. • The battery is exhausted.	• Remove the battery briefly and then reinsert the battery and try again. • Long a fully charged battery.
The camera does not emit any sound.	• The camera volume is set too low. • The microphone was blocked during shooting/recording.	• Adjust the volume. • Take care not to block the microphone during shooting/recording.
When the camera is connected to a personal computer (PC), the image appears on the camera's LCD monitor.	• The USB cable is not connected correctly to the PC or camera. • The PC is not switched on.	• Set up the camera and USB cable correctly. • Switch the PC on.
The camera no longer works correctly.	• The camera has suffered an unanticipated problem.	• Remove the battery briefly and then reinsert the battery and try again.

* The numbers of available shots are shown for formatted SmartMedia™.

System					
• Sensitivity: Equivalent to ISO 100	• Lens: Fujinon optical fixed-focus lens				
• Storage media: SmartMedia (3.3V)	• Focus distance: f = 0.3 m (Equivalent to 38 mm on a 35 mm camera)				
• File format:	• Viewfinder: Inverted Galilean (binocular)				
• Still image: Dullng view for Camera File System compliant	• Exposure control: TTL 64-zone metering, Program AE, exposure compensation available in Manual and image mode				
• Movie: AVI format, Motion JPEG	• White balance: Auto (in Manual mode, 7 positions can be selected)				
• Audio: WAV format, Ear View 2.1 audio file standard-compliant	• Focal range: Normal: Approx. 60 cm (2.6 ft) to infinity Macro: Approx. 8 cm (0.3 ft) to 0.5 ft				
• Image file size: 1024 × 1280 pixels / 1280 × 960 pixels / 640 × 480 pixels: 1.7-7 inch Super CCD (with primary color filter) 2.4 million pixels in an interlaced pattern.	• CCD sensor: 1/1.7-inch Super CCD (with primary color filter)				
■ Standard number of shots per SmartMedia™					
File Size	□ 1024 × 1280	□ 1280 × 960	□ 640 × 480	Movie (Widescreen)	Audio recording

* The numbers of available shots are shown for formatted SmartMedia™.

* The numbers of available shots are shown for formatted SmartMedia™.

Specifications

- Shutter: Variable speed, 1/6 sec. to 1/1000 sec. (using AE)
- Aperture: F4.6 (or F11 automatically selected)
- Bell-Timer: 10 sec., timer clock
- Flash modes: E1/E2, FRAME ERASE, ALL FRAMES, MOTRIC TRACKS, ALL MOTRIC TRACKS, *FORBAT (integrated)
- LCD monitor: 1.8 inches, 70,000 pixels TFT
- Flash: Auto flash, using built control sensor Effective range: Approx. 0.7 m to 2.2 m. to 9.8 ft. Suppressed Flash, Slow Syncro
- Video output: NTSC (U.S.A./Canada model)/PAL (Europe model)

MUSIC

- Recording media: SmartMedia with D (0.3 V)
- Playback system: MP3
- Encryption method: Initiated
- Continuous playback time: Approx. 3 hours (with fully charged batteries)
- Bass boost: 2 levels
- Playtrack model: NORMAL, REPEAT, ALL TRACKS, REPEAT TRACK
- Output: 5 mm x 2

Standard recording times for SmartMedia with ID		
Bit rate	128kbytes	112kbytes
SmartMedia	Approx. 11 sec.	Approx. 10 sec.
MC-Media	Approx. 11 sec.	Approx. 20 min.
MC-Media (2GB)	Approx. 36 sec.	Approx. 40 min.
Memory Sticks	Approx. 10 sec.	Approx. 10 sec.
Memory Stick PRO	Approx. 10 sec.	Approx. 10 sec.
Memory Stick PRO-HG	Approx. 10 sec.	Approx. 10 sec.

Input/Output Terminals

- <Camera>
 - REMOTE (remote controller) socket:
 - For connection to remote controller pack
 - (RS-232C) socket
 - Little (1) or large data input with a personal computer
 - DC IN-IV (Power input) socket
 - Socket for specified AC power adapter

* The recording times shown are for a formatted SmartMedia.

Power Supply and Others

- These specifications are subject to change without notice. **ELMELIA** does not hold itself responsible for damage resulting from use in other's hands.
- The LCD monitor on most digital cameras is manufactured using advanced liquid-crystallized technology. Even with small bright points, and anomalous colors, there is no guarantee that they may appear on the monitor. These are normal display characteristics and do not indicate a fault with the monitor. This phenomenon will not appear on the recorded image.
- The operation error may be caused in a digital camera by the strong radio interference (e.g. static electricity, low noise, etc.).

* Power supply: Use one of the following:

- +2AA-size Ni-MH (nickel metal hydride) batteries (included)
- +AC-DC Power Adapter (sold separately)

Explanation of Terms

EV:

A number that denotes exposure. The EV is determined by the brightness of the subject and sensitivity (speed) of the film or CCD. The number is larger for bright subjects and smaller for dark subjects. As the brightness of the subject changes, a digital camera maintains the amount of light hitting the CCD at a constant level by adjusting the aperture and shutter speed.

When the amount of light striking the CCD doubles, the EV increases by 1. Likewise, when the light is halved, the EV decreases by 1.

JPEG:

Joint Photographic Experts Group

A file format used for compressing and saving color images. The compression ratio can be selected, but the higher the compression ratio, the poorer the quality of the expanded image.

Motion JPEG:

A type of AVI (Audio Video Interleave) file format that handles images and sound as a single file. Images in the file are recorded in JPEG format. Motion JPEG can be played back by QuickTime 3.0 or later.

MP3:

An acronym for MPEG 1 Audio Layer 3. Denotes an audio compression format included in the MPEG video and audio compression standard. The MP3 format compresses audio data to approximately 1/10 of its original size by excluding all audio information that is not audible to humans.

PC Card:

A generic term for cards that meet the PC Card Standard.

PC Card Standard:

A standard for PC cards determined by the PCMCIA.

PCMcia:

Personal Computer Memory Card International Association (U.S.).

VGA:

A graphics standard for personal computers that indicates an image size of 640x480 pixels.

WAVE:

A standard format used on Windows systems for saving audio data. WAVE files have the ".WAV" file extension and the data can be saved in either compressed or uncompressed format.

Uncompressed:

Used for movies (video) and voice capturing.

Compressed:

Used for audio recording (MIDI, ADPCM format).

WAVE files can be played back on a personal computer using the following software: Windows, MediaPlayer

Macintosh: QuickTime Player

or later

White Balance:

Whatever the kind of the light, the human eye adapts to it so that a white object still looks white. On the other hand, devices such as digital cameras see a white subject as white by first adjusting the color balance to suit the color of the ambient light around the subject. This adjustment is called matching the white balance. A function that automatically matches the white balance is called an **Automatic White Balance function**.

AF/AE Lock:

On the FinePixS10, pressing the shutter button down halfway locks the focus and exposure settings (AF and AE lock). If you want to focus on a subject that is not centered in the frame or change the picture composition after the exposure is set, you can obtain good results by changing the composition after the AF- and AE settings are locked.

Auto Power Off Function: If the camera is not used in any way for 2 minutes or more, the Auto Power Off function switches the camera off. This is to prevent battery depletion and to avoid wasting power when the camera is connected to the AC power adapter. The function can be set to either 2 minutes or 5 minutes on this camera.

- The Auto Power Off function does not operate in PC mode, during automatic playback, or if it is disabled during setup.

DPOF:

Digital Print Order Format

DPOF is a format used for recording information on a storage media (image memory card, etc.) that allows you to specify which of the frames shot using a digital camera are printed and how many prints are made of each image.

Safety Notes

- To ensure that you use your FinePix301 camera correctly, read these Safety Notes and your Owner's Manual carefully beforehand.
- After reading these Safety Notes, store them in a safe place.

About the Icons

The icons shown below are used in this document to indicate the severity of the injury or damage that can result if the information indicated by the icon is ignored and the product is used incorrectly as a result.

This icon indicates that death or serious injury can result if the information is ignored.

CAUTION This icon indicates that personal injury or material damage can result if the information is ignored.

The icons shown below are used to indicate the nature of the information which is to be observed.

Triangle icons notify the user of information requiring attention ("Important").

Circular icons with a diagonal bar notify the user that the action indicated is prohibited ("Prohibited").

Filled circles with an exclamation mark notify the user of an action that must be performed ("Required").

WARNING

If a problem arises, switch the camera off, remove the battery and disconnect and unplug the AC power adapter.

Continued use of the camera when it is emitting smoke, is smoking any unusual odor, or is in any other abnormal state can cause a fire or electric shock.

• Contact your FUJIFILM dealer.

Do not allow water or foreign objects to enter the camera.

If water or foreign objects get inside the camera, switch the camera off, remove the battery and disconnect and unplug the AC power adapter.

Continued use of the camera can cause a fire or electric shock.

• Contact your FUJIFILM dealer.

This icon indicates that death or serious injury can result if the information is ignored.

CAUTION This icon indicates that personal injury or material damage can result if the information is ignored.

The icons shown below are used to indicate the nature of the information which is to be observed.

Triangle icons notify the user of information requiring attention ("Important").

Circular icons with a diagonal bar notify the user that the action indicated is prohibited ("Prohibited").

Filled circles with an exclamation mark notify the user of an action that must be performed ("Required").

WARNING

Never attempt to modify or disassemble the camera. (Never open the casing.)

Do not use the camera when it has been dropped or the casing is damaged.

This can cause a fire or electric shock.

• Contact your FUJIFILM dealer.

Do not use the camera in the bathroom or shower.

This can cause a fire or electric shock.

Unauthorised use of a television or other device.

Do not use the camera while you are walking or operating a moving car or other vehicle.

This can result in you falling down or being involved in a traffic accident.

Do not touch any metal parts of the camera during a thunderstorm.

This can cause an electric shock due to induced current from the lightning discharge.

WARNING

Do not modify, heat or similarly treat or pull the connection end and do not place heavy objects on the connection cord.

These actions could damage the cord and cause a fire or electric shock.

• If the cord is damaged, contact your FUJIFILM dealer.

Do not use the batteries except as specified.

Load the batteries with the poles positioned as indicated by the (+) and (-) marks.

Do not heat, modify or attempt to disassemble the batteries.

Do not drop or subject the batteries to impacts.

Do not recharge lithium or alkaline batteries.

Do not store the batteries with metallic products.

Do not use chargers other than the specified model to charge the battery.

Any of these actions can cause the batteries to burst or leak and cause fire or injury as a result.

⚠ WARNING	Use only the batteries or AC power adapter specified for use with this camera. Do not use voltages other than the power supply voltage shown. The use of other power sources can cause a fire.	
⚠ CAUTION	Do not use this camera in locations severely affected by oil fumes, steam, humidity or dust. This can cause a fire or electric shock.	
⚠ CAUTION	Do not move the camera while the AC power adapter is still connected. Do not pull on the connection cord to disconnect the AC power adapter. This can damage the power cord or cables and cause a fire or electric shock.	
⚠ CAUTION	Do not cover or wrap the camera or the AC power adapter in a cloth or quilt. This can cause heat to build up and damage the camera or cause a fire.	
⚠ CAUTION	Do not leave the camera in locations such as a sealed vehicle or in direct sunlight. This can cause a fire.	
⚠ CAUTION	Keep out of the reach of small children. This product could cause injury in the hands of a child.	
⚠ CAUTION	Do not place heavy objects on the camera. This can cause the heavy object to tip over or fall and cause injury.	
⚠ CAUTION	Using a flash too close to a person's eyes may temporarily affect the eyesight. Take particular care when photographing infants and young children.	

112

113

⚠ CAUTION	Do not use the AC power adapter when the plug is damaged or the plug socket connection is loose. This could cause a fire or electric shock.	
⚠ CAUTION	Request regular internal testing and cleaning for your camera. Build-up of dust in your camera can cause a fire or electric shock. • Contact your FUJIFILM dealer to request internal cleaning every 2 years.	
⚠ CAUTION	Do not listen to music at high volumes for long periods and do not set the audio volume to high at the outlet. This could cause impaired hearing.	
⚠ CAUTION	When you are cleaning the camera or you do not plan to use the camera for an extended period, remove the battery and disconnect and unplug the AC power adapter. Failure to do so can cause a fire or electric shock.	
⚠ CAUTION	Do not use the camera while you are walking or operating a moving car or other vehicle. This can result in you tiring down or being involved in a traffic accident.
