

Fact Sheet

Fujitsu Custom Master File Image (MFI)

Fujitsu Software Image Management Service: New mobile computing rollout – made easy

Why needlessly burden your IT staff with the tedious task of copying a master file image (MFI) to all of your new systems? When you use the Software Image Management Service offered by Fujitsu, your busy IT staff can focus on your important issues. This service configures your systems to “ready-to-go” status out of the box, allowing you increase your team’s productivity while augmenting the return on your hardware investment.

Initial conditions

After the purchases have been agreed on for the software image load process, Fujitsu will provide a project number to use on purchase orders and a Software License Authorization document. This document authorizes Fujitsu to reproduce and load your fully licensed software on the Fujitsu notebooks or tablets.

Building the MFI

Fujitsu will work closely with you in developing a quality customized software image. For example, if you prefer to unburden your own IT staff, Fujitsu will provide qualified systems engineers to develop your custom software image. The Fujitsu systems engineer will work remotely or on-site with your IT team to develop a customized software image based upon your unique requirements. An evaluation unit, a CD, or a DVD can provide the final software image.

QA Testing

Once the MFI is built, pilot testing will identify and correct any issues prior to release. Fujitsu can also perform quality assurance testing on the software image either at our facilities or your site to ensure the image is good prior to volume loading.

Duplication and further testing

After testing Fujitsu loads sample units with the custom software image. Third party product “bundling” can be accommodated at this point as well. Once the image has been loaded, Fujitsu will send target systems to you for final evaluation testing in your work environment. Upon acceptance, the image is “gold.”

Accurate image replication

The Fujitsu factory may then load all units with your final “gold” image. Fujitsu, using strict quality control procedures, provides the assurance your custom MFI operates reliably and effectively out of the box on all of your new Fujitsu systems.

Overview

- Streamlined deployment
- Reduced user impact
- Tested and validated images
- Frees up you IT staff
- Standard images

About Fujitsu America

Fujitsu America, Inc., is a leading ICT solutions provider for organizations in the U.S., Canada and the Caribbean. Fujitsu enables clients to meet their business objectives through integrated offerings and solutions, including consulting, systems integration, managed services, outsourcing and cloud services for infrastructure, platforms and applications; data center and field services; and server, storage, software and mobile/tablet technologies. For more information, please visit: <http://solutions.us.fujitsu.com/> and <http://twitter.com/fujitsuamerica>

Fujitsu platform solutions

In addition to Fujitsu PRIMERGY servers, Fujitsu provides a range of platform solutions. They combine reliable Fujitsu products with the best in services, know-how and worldwide partnerships.

Dynamic Infrastructures

As a global IT infrastructure provider, Fujitsu offers a complete range of servers designed to fill any role in today's business. Whether your business requires affordable entry-level servers, compact and scalable blade systems, or advanced multiprocessor servers capable of handling the most demanding data center applications, the PRIMERGY® line delivers Intel® Architecture servers with the rock-solid reliability and industry-leading performance you need.

PRIMERGY Servers
