

Data Sheet

vSure™ SLA Manager

Next-Generation Network Performance Management

Configurable SLAs

Name	Conformance Interval	Status	Recurrence type
Hercules Mobile Backhaul Silver	Daily	Active	Occurs every day from 8:0 to 23:59
Hercules Mobile Backhaul Gold	Daily	Active	Occurs every day from 8:0 to 23:59
Hercules Mobile Backhaul Bronze	Daily	Active	Occurs every day from 8:0 to 23:59
7-Mbps Ethernet SLA	Daily	Active	Occurs every day from 1:30 to 23:59
100-Mbps Ethernet 2	Daily	Active	Occurs every day from 8:0 to 23:59
1-Gbps Ethernet 1	Daily	Active	Occurs every day from 8:0 to 23:59
100-Mbps Ethernet	Daily	Active	Occurs every day from 8:0 to 23:59
1-Gbps Ethernet	Daily	Active	Occurs every day from 8:0 to 23:59
100-Mbps Ethernet	Daily	Active	Occurs every day from 8:0 to 23:59

Overview

vSure™ SLA Manager allows service providers to manage the full life cycle of SLAs with the ability to easily define, track and report on contractual SLAs. SLA Manager is an overlay to existing end-to-end service monitoring modules, providing seamless monitoring of the operational performance of customer services to show the impact of network degradation and service outages on agreed-to SLAs.

SLA Manager allows users to define SLAs based on service quality and service availability, define the conformance period as well as configurable levels for warning and violation notifications.

In contrast to solutions that merely provide monthly SLA reports, vSure SLA Manager provides real-time reports on SLA compliance and predicts SLA violations based on current trends. SLA reports can be scheduled and automatically delivered to both users and end customers.

Business Benefits

- **Increases revenue** through differentiated service offerings that guarantee service levels to beat the competition
- **Reduces customer churn**, offering customers views of the service availability and performance, so they will be less likely to change providers based solely on price
- **Reduces operation costs** by making configuring, administering and reporting on SLAs easier and less time-consuming

vSure SLA Advantages

- Configurable timeframes for the active period of the SLA
- Configurable SLA conformance periods
- Flexible warning and violation definitions that automatically trigger notifications
- Ability to exclude periods of time from the conformance calculations and reporting after the fact
- Ability to exclude maintenance periods
- Ability to select an active or historical alarm and exclude time periods from conformance calculations
- Real time performance monitoring and analysis for telecom, cable, wireless, transport, video and IT infrastructure
- Flexible, easy-to-define SLA conformance reports—can be scheduled and automatically delivered
- Scalable, configurable SLA monitoring and processing of service metrics including availability, utilization, response time, jitter, transmitted and dropped traffic, latency, packet loss, SNR, errors in/out and more
- Carrier-class high availability and scalability

Comprehensive Multivendor Performance Assurance and SLA Management

vSure is the next generation in service assurance and service quality management. This modular software suite can dramatically improve network performance, Service-Level Agreement (SLA) conformance, and customer experience. vSure offers a single solution for managing any infrastructure: network, systems, applications, facilities and security.

Low Maintenance, Dynamic, Technology-Independent

vSure deploys rapidly and can be maintained and extended without programming or advanced training. The system also offers unprecedented scalability to manage any size network. End-to-end services can be automatically discovered and kept current to monitor Key Performance Indicators (KPIs) and automate notifications based on configurable thresholds. Network operations technicians can configure a custom service assurance solution to view, monitor and report on network health and performance in real time.

With vSure, service providers experience:

- Dramatically lower solution deployment times
- Reduced ongoing configuration, customization and maintenance workload
- Simplified advanced configuration via unique point-and-click GUI interface
- Easy modification of system rules on-the-fly
- Increased productivity with minimal training
- Standard, no-maintenance Web browser access

vSure Modules

- **SLA Manager** – SLA creation based on service quality and availability; conformance period; and warning and violation notifications
- **Service Vision** – Self-maintaining auto-discovery and mapping of network services topology from a variety of sources, regardless of vendor
- **Ethernet Assurance** – Monitoring and visualization of quality metrics such as availability, delay, jitter, frame loss, and custom-defined metrics
- **Cable Assurance** – Comprehensive monitoring of the cable broadband infrastructure from CMTS to cable modem/MTA with core-to-customer passive network mapping and high-speed polling to identify issues in seconds

- **Performance Management** – Real time configuration of polling, thresholds, automations and notifications to meet the changing needs of today's dynamic networks
- **Fault Management** – Alarm monitoring of every device in the network, regardless of vendor, technology or protocol

Differentiators

- Seamlessly integrated with other vSure modules to leverage service availability and performance data
- Flexible SLA contract definitions based on availability and service quality
- Tracks SLA parameters across systems and networks to monitor and report on SLAs in real time
- SLA conformance reporting can be scheduled and delivered to customers
- Automated notifications of SLA threshold warnings to assist in prioritization of remedial actions
- Customer portals available for SLA conformance reports
