FURUNO

FA-50
CLASS B AIS TRANSPONDER

FURUNO ELECTRIC CO., LTD.

IMPORTANT NOTICES

- The descriptions in this manual are intended for readers with a solid knowledge of English.

- No part of this manual may be copied or reproduced without written permission.

- If this manual is lost or worn, contact your dealer about replacement.

- The contents of this manual and equipment specifications are subject to change without notice.

- The example screens (or illustrations) shown in this manual may not match the screens you see on your display. The screen you see depends on your system configuration and equipment settings.

- Store this manual in a convenient place for future reference.

- FURUNO will assume no responsibility for the damage caused by improper use or modification of the equipment (including software) by an unauthorized agent or a third party.

- When it is time to discard this product it must be done according to local regulations for disposal of industrial waste. For disposal in the USA, refer to the Electronics Industries Alliance (http://www.eiae.org/).

⚠ SAFETY INSTRUCTIONS

The operator and installer must read the applicable safety instructions before attempting to install or operate the equipment.

⚠ WARNING	Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.
⚠ CAUTION	Indicates a potentially hazardous situation which, if not avoided, can result in minor or moderate injury.

⚠ Warning, Caution	🚫 Prohibitive Action	❗ Mandatory Action

Safety instructions for the operator

⚠ WARNING

Do not open the equipment.

Only qualified personnel should work inside the equipment.

Do not disassemble or modify the equipment.

Fire, electrical shock or serious injury can result.

Immediately turn off the power at the power source if
- water leaks into the equipment
- something is dropped into the equipment
- the equipment is emitting smoke or is on fire
- the equipment is emitting strange noises

Continued use of the equipment can cause fire or electrical shock. Contact a FURUNO dealer or agent for service.

Do not operate the equipment with wet hands.

Electrical shock can result.

Use the proper fuse.

Use of the wrong fuse can cause fire or electrical shock.

⚠ WARNING

Do not place liquid-filled containers on the top of the equipment.

Fire or electrical shock can result if a liquid spills into the equipment.

Make sure no rain or water splash leaks into the equipment.

Fire or electrical shock can result if water leaks into the equipment.

Warning labels are attached to the equipment. Do not remove these labels. If a label is missing or illegible, contact a FURUNO agent or dealer about replacement.

⚠ WARNING ⚠
To avoid electrical shock, do not remove cover. No user-serviceable parts inside.
⚠   ⚠

Name: Warning Label (1)
Type: 86-003-1011-1
Code No.: 100-236-231

⚠ WARNING ⚠
To avoid electrical shock, do not remove cover. No user-serviceable parts inside.

Name: Warning Label (2)
Type: 86-129-1001-1
Code No.: 100-236-741

Safety instructions for the installer

⚠ **WARNING**
🛈 **Turn off the power at the switchboard before beginning the installation.** Fire or electrical shock can result if the power is left on.
🚫 **Do not install the equipment where it may get wet from rain or water splash.** Water in the equipment can result in fire, electrical shock or damage to the equipment.
🛈 **Be sure that the power supply is compatible with the voltage rating of the equipment.** Connecting an incompatible power supply can cause fire or damage the equipment. The voltage rating appears on the inlet of power.

⚠ **CAUTION**
🛈 **Observe the following compass safe distances to prevent interference to a magnetic compass:**

	Standard compass	Steering compass
FA-50	0.30 m	0.30 m

TABLE OF CONTENTS

FOREWORD

A Word to the Owner of the FA-50

Congratulations on your choice of the FURUNO FA-50 AIS Transponder. We are confident you will see why the FURUNO name has become synonymous with quality and reliability.

For over 50 years FURUNO Electric Company has enjoyed an enviable reputation for quality marine electronics equipment. This dedication to excellence is furthered by our extensive global network of agents and dealers.

This equipment is designed and constructed to meet the rigorous demands of the marine environment. However, no machine can perform its intended function unless operated and maintained properly. Please carefully read and follow the recommended procedures for operation and maintenance.

Thank you for considering and purchasing FURUNO equipment.

Features

The FA-50 is a Class B AIS (Automatic Identification System) capable of exchanging navigation and ship data between own ship and other ships or coastal stations. It complies with IMO MSC. 74(69) Annex 3, A.694, ITU-R M.1371-2 and DSC ITU-R M.825.3 It also complies with IEC 62287-1 (Type testing standard), IEC 60945 (EMC and environmental conditions).

FA-50 consists of VHF and GPS antennas, a transponder unit and several associated units. The transponder contains a VHF transmitter, two TDMA receivers on two parallel VHF channels, interface, communication processor, and internal GPS receiver. The internal GPS is a 12-channel all-in-view receiver with a differential capability. It also gives position, COG and SOG when the external GPS wails. FA-50 receives DSC, time-sharing with TDMA receiver.

The main features are

• Safety of navigation by automatically exchanging navigational data

• Static data

-MMSI (Maritime Mobile Service Identity)

-Call sign & name

-Length and beam

-Type of ship

-Location of position-fixing antenna on the ship

- Dynamic data:

-Ship's position with accuracy indication and integrity status

-Universal Time Coordinated (UTC)

-Course over ground (COG)

-Speed over ground (SOG)

-Heading

- Voyage-related data

-Hazardous cargo (type)

- Short safety-related messages, pre-set messages

- Interfaces for radar, PC for future networking expansion

- GPS/VHF combined antenna for easy installation available

- Built-in GPS receiver for position-fixing device

*Usaually FA-50 uses the internal GPS. When connecting the external GPS, use one which satisfies the followings.
1) Outputs DTM sentence (WGS-84 can be chosen.)
2) Outputs GBS sentence.
3) Outputs sentences with the mode indicator;
   GNS: Ver.3.0 and later
   GLL: Ver.2.0 and later
   GGA: Ver.2.0 and later
   RMC: Ver.1.5 and later
4) The measured result of internal and external GPSs should be within 26 m.(These antenna should be located within 6 m.)
We, FURUNO, prepare GPS navigator GP-150 as the equipment meeting with requirements shown above.

SYSTEM OVERVIEW

System overview

The Automatic Identification System (AIS) was originally developed to aid the Vessel Traffic Services (VTS) by use of a VHF transponder working on DIgital Selective Call (DSC) at VHF CH70, and is still in use along the UL coastal areas and others. Some time later the IMO developed a Universal AIS using the new sophisticated technology called Carrier-Sence Time Division Multiple Access (CSTDMA) based on a VHF Data Link (VDL).

The system operates in three methods - autonomous (continuous operation in all areas), assigned (data transmission interval remotely controlled by authority in traffic monitoring service) and polled (in response to interrorgation from a ship or authority). It is synchronized with GPS time to avoid conflict among multiple users (IMO minimum 2000 reports per minute and IEC requires 4500 reports on two channels). The VHF channels 87B and 88B are commonly used and in addition there are local AIS frequencies. Shipborne AIS transponders exchange various data as specified by the IMO and ITU on either frequency automatically set up by the frequency management telecommand received by the DSC on ship. AIS has Class A and Class B; Class A is the standard for SOLAS ships, Class B is for non-SOLAS. There are two type of transmission method, SOTD MA (Self Organising Time Division Multiple Access) and CSTD MA (Carrier Sence Time Division Multiple Access). Class B is the inexpencive and simple AIS for easy mounting on boats.

AIS-fitted AtoN broadcasts its identification, type of operation, location, displacement, etc. at 3 min intervals or at a reporting rate designated by the Administration authorities.

Transponder

Aids to Navigation (AtoN)

VTS Center transmits TDMA CH management message including code, type, position, etc. of buoys every 3 min, and the AtoN broadcasts these messages for ships.

VTS center

Trans- ponder

The VTS center transmits a command on frequency assignment, slots, report rate, VHF output power, channel spacing, etc. (Assigned mode)

Transponder

Static and Dynamic information incl. MMSI, Name, POSN, HDG, COG, SOG

Interrogation and Response

Own ship

Ship 1

All ships broadcast Static and Dynamic information (autonomous and continuous mode). If OS wants to know information about ship 1, OS shall send an interrogation in polling mode; then ship 1 will transmit her response on the same VHF channel without operator intervention.

Not all ships carry AIS

The Officer of the Watch (OOW) should always be aware that other ships, and in particular leisure craft, fishing boats and warships, and some coastal shore stations (including Vessel Traffic Service centers) might not be fitted with AIS.

The OOW should also be aware that AIS fitted on other ships as a mandatory carriage requirement might be switched off by the master if its use might compromise the security of the vessel. Thus, users are therefore cautioned to always bear in mind that information provided by AIS may not be giving a complete or correct "picture" of shipping traffic in their vicinity.

Use of AIS in collision avoidance

As an anti-collision aid the AIS has the following advantages over radar:

• Information provided in near real-time

• Capable of instant presentation of target course alterations

• Not subject to target swap

• Not subject to target loss in clutter

• Not subject to target loss due to fast maneuvers

• Able to detect ships within VHF/FM coverage, including in some circumstances,

around bends and behind islands.

When using the AIS for anti-collision purposes it is important to remember that the AIS is an additional source of navigation information. It does not replace other navigational systems. The AIS may not be giving a complete or correct "picture" of shipping traffic in its vicinity.

The use of the AIS does not negate the responsibility of the OOW to comply with all collision regulation requirements, especially the maintaining of a proper look-out. The prudent navigator uses all aids available to navigate the ship.

Erroneous information

Erroneous information implies a risk to other ships as well as your own. Poorly configured or improperly calibrated sensors might lead to incorrect information being transmitted. It is the user's responsibility to ensure that all information entered into the system is correct and up to date.

1. INSTALLATION

1.1 Equipment Lists

Standard supply

Name	Type	Code No.	Qty	Remarks
AIS Transponder	FA-50-E	-	1	
GPS/VHF combined antenna	GVA-100	-	1	Select one.

1.2   AIS Transponder FA-50

Mounting considerations, mounting

The FA-50 can be mounted on a desktop, deck or on a bulkhead. When selecting a mounting location, keep the following points in mind:

• The temperature and humidity should be moderate and stable.

• Locate the unit away from exhaust pipes and vents.

• The mounting location should be well ventilated.

• Mount the unit where shock and vibration are minimal.

• Keep the unit away from electromagnetic field-generating equipment such as motors and generators.

• A magnetic compass will be affected if the FA-50 is placed too close to it. Observe the compass safe distances noted in the safety instructions to prevent disturbance to the magnetic compass.

• Fix the unit to the mounting location with 4x20 self-tapping screws (supplied).

All dimensions in millimeters.

2
1.3 Whip Antenna

<u>Location</u>

The location of the AIS VHF-antenna should be carefully considered. Digital communication is more sensitive than analog/voice communication to interference created by reflections in obstructions like masts and booms. It may be necessary to relocate the VHF radiotelephone antenna to minimize interference effects. To minimize interference effects, the following guidelines apply:

- The AIS VHF antenna should be placed in an elevated position that is as free as possible with a minimum of 0.5 meters in the horizontal direction from constructions made of conductive materials. The antenna should not be installed close to any large vertical obstruction. The objective for the AIS VHF antenna is to see the horizon freely through 360 degrees.

- There should not be more than one antenna on the same plane. The AIS VHF antenna should be mounted directly above or below the ship's primary VHF radiotelephone antenna, with no horizontal separation and with a minimum of 2.8 meters vertical separation. If it is located on the same plane as other antennas, the distance apart should be at least 10 meters.

- Install the VHF whip antenna (option) referring to the outline drawing at the back of this manual. Separate this antenna from other VHF radiotelephone antennas as shown below to prevent interference to the FA-50.

Whip antenna for AIS

Other VHF whip antenna

More than 10 m

<u>Horizontal separation distance</u>

More than 2.8 m

More than 0.5 m

<u>Vertical separation distance</u>
<u>Cabling</u>

- Use coaxial cable type 5D-2V or the equivalent.

- The cable should be kept as short as possible to minimize signal attenuation, and the maximum length is 50 meters.

- All outdoor-installed connectors on coaxial cables should be fitted with preventive isolation such as vulcanizing tape to protect against water penetration into the antenna cable.

- Coaxial cables should be installed in separate signal cable channels/tubes and at least 10 cm away from power supply cables. Crossing of cables should be done at right angles (90 degrees). The minimum bend radius of the coaxial cable should be 5 times the cable's outer diameter.

1.4 GPS Antenna

Install the GPS antenna unit referring to the drawing on page D-5 or D-6 at the back of this manual. When selecting a mounting location for the antenna, keep in mind the following points.

- Select a location out of the radar beam. The radar beam will obstruct or prevent reception of the GPS satellite signal.
- There should be no interfering object within the line-of-sight to the satellites. Objects within line-of-sight to a satellite, for example, a mast, may block reception or prolong acquisition time.
- Mount the antenna unit as high as possible to keep it free of interfering objects and water spray, which can interrupt reception of GPS satellite signal if the water freezes.

Extending antenna cable

Three types of antenna cable extensions are optionally available.

a) Antenna cable set CP20-02700
- Waterproofing connector

Wrap connector with vulcanizing tape and then vinyl tape. Bind the tape end with a cable-tie.
Waterproofing connector

b) Antenna cable set CP20-02710 (8D-FB-CV, 50m)

Connect the cable the same as a) above.

c) Cable type RG-10/UY (shipyard supply)

Note: The length of this cable should be less than 20 m to prevent signal loss. The coax. coupling cable assy.(type: NJ-TP+3DXV-1, code no. 000-123-809), coaxial connector(N-P-8DFB; supplied), vulcanizing tape and vinyl tape are required. Fabricate both ends of the cable as shown in the figure on the next page.

How to attach the connector N-P-8DFB for cable 8D-FB-CV

Outer Sheath   Dimensions in millimeters.
    Armor   Inner Sheath Shield

50   30
Remove outer sheath and armor by the dimensions shown left.
Expose inner sheath and shield by the dimensions shown left.

Cover with heat-shrink tubing and heat.

30   10
Cut off insulator and core by 10mm.

Twist shield end.

Slip on clamp nut, gasket and clamp as shown left.

Aluminum Foil
Trim shield here.

Fold back shield over clamp and trim.

Cut aluminum foil at four places, 90° from one another.

Insulator

Trim aluminum tape foil here.
Fold back aluminum foil onto shield and trim.

1

5
Expose the insulator by 1mm.

Expose the core by 5mm.

Pin

Clamp Nut   Shell

Solder through the hole.
Slip the pin onto the conductor. Solder them together through the hole on the pin.

Insert the pin into the shell. Screw the clamp nut into the shell.
(Tighten by turning the clamp nut. Do not tighten by turning the shell.)

How to attach connector N-P-8DFB

5

1.5   GPS/VHF Combined Antenna

Install the combined antenna unit referring to the outline drawing. When selecting a mounting location for the antenna, keep in mind the following points.

- Select a location out of the radar beam. The radar beam will obstruct or prevent reception of the GPS satellite signal.
- There should be no interfering object within the line-of-sight to the satellites. Objects within line-of-sight to a satellite, for example, a mast, may block reception or prolong acquisition time.
- Mount the antenna unit as high as possible. Mounting it this way keeps it free of interfering objects and water spray, which can interrupt reception of GPS satellite signal if the water freezes.
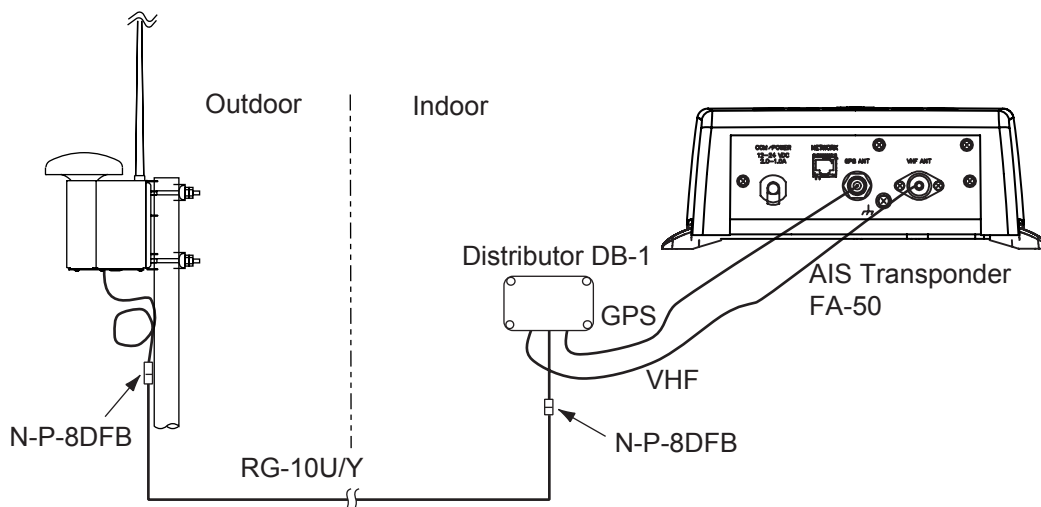

Installation overview of GPS/VHF combined antenna

Mounting procedure

1. Dismount the bottom cover, cut the cable-tie inside the unit and take out the coaxial connector attached to the combined box.
2. Loosen four screws to loosen whip antenna fixture and pull out the coaxial connector coming from the combined box through the hole in the whip antenna fixture.
3. Connect the coaxial connector to the whip antenna base and wrap the junction part of the whip antenna with vulcanizing tape and then vinyl tape for waterproofing.
4. Insert the whip antenna from the top of the combined antenna.
5. Secure the whip antenna with whip antenna fixture.
6. Using a new plastic band (supplied), secure the cables and coaxial connector inside the antenna case.
7. Mount the bottom cover.
8. Fix the GPS/VHF combined antenna to the ship's stanchion (40 to 50 mm diameter) with antenna fixing brackets, flat washers and hex. nuts.

Note: Coat the exposed parts of bolts and nuts with silicon sealant.

Whip antenna fixture

Loosen four screws.

7
Installing distributor unit DB-1

The length of the cable between the distributor unit and transponder unit is 1 m so locate the distributor unit within 1 m from the transponder unit. Fix the distributor unit on the bulkhead, facing the cable entrance downward. Remove the lid of the distributor unit and secure the unit with two self-tapping screws.

Self-tapping screw
(4x30)
Note: Be sure no foreign material or water enters the distributor unit.

1.6   Power Supply (option)

When selecting a mounting location for the unit, keep the following in mind:

- Keep the unit out away from areas subject to water splash.
- Locate the unit away from exhaust pipes and vents.
- The mounting location should be well ventilated.
- Mount the unit where shock and vibration are minimal.
- A magnetic compass will be affected if the unit is placed too close to it. Observe the following compass safe distances to prevent disturbance to the magnetic compass:
  -Steering compass: 0.6 m
  -Standard compass: 0.9 m

Fix the unit with four self-tapping screws (4x16) to a desktop or the deck as shown in the figure below. It is not necessary to open the cover.

1.7   Wiring

Connect power source, LAN cable, VHF antenna and ground wire as shown below.

Attaching coaxial connector (M-P-5) to coaxial cable

The antenna cable (coaxial cable, type 5D-2V) is terminated at the FA-50 with an M-P-5 coaxial connector. Attach the connector to the cable as shown below.
Connection of AIS viewer (FAISPC-MX)

The AIS viewer may be connected to the FA-50 directly, or to both FA-50 and NavNet vx2. See the figure below for connection examples.

DIRECT CONNECTION

NavNet vx2 CONNECTION

NavNet VX2 CONNECTION
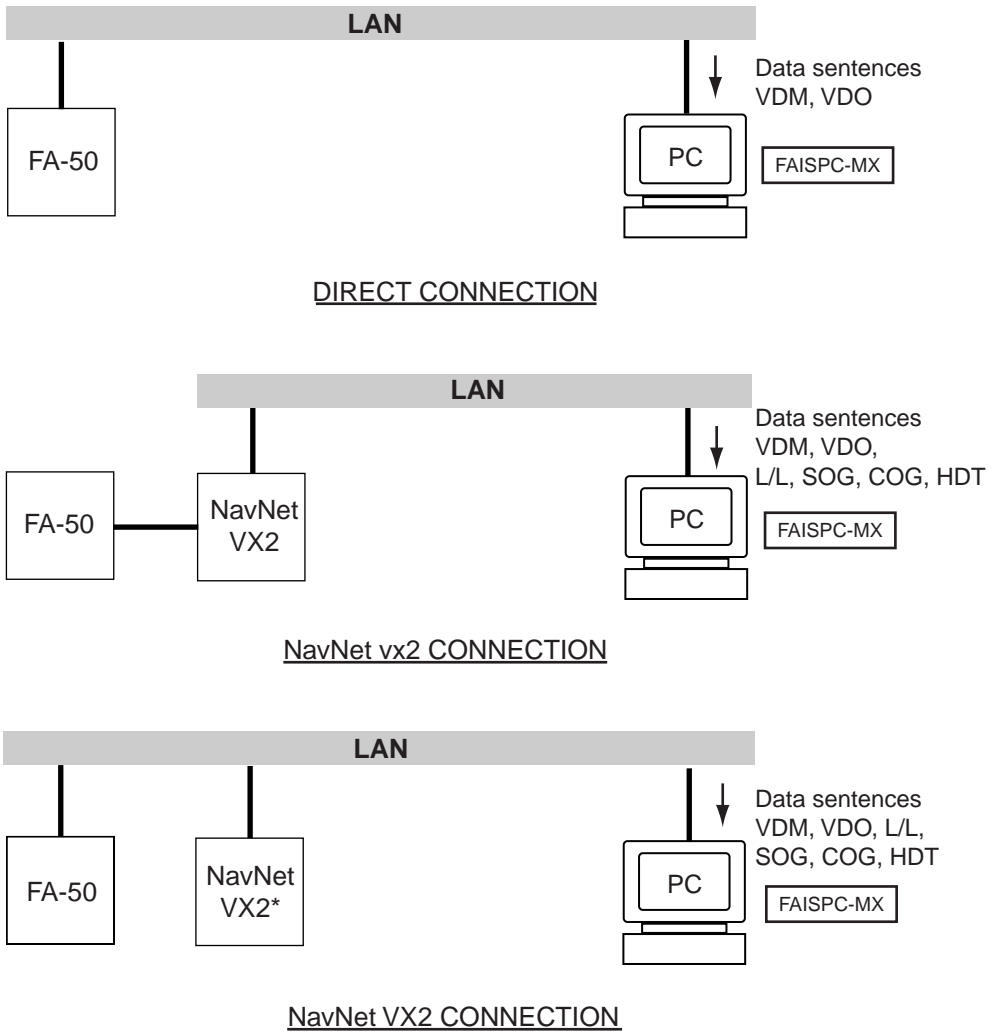

*Required updating software.

1.8 Setting and Adjustments

After installing the equipment, set up the COM port, Network and own ship's static information (MMSI, ship's name, call sign, antenna position and type of ship). The FA-50 is set up from the PC or external display. The procedure below shows how to set up any setting from a PC.

1.8.1 COM Port Setup, Network Setup

NOTICE: Only one FA-50 may be connected to the network.

Start up

1. Start up the PC and enter IP address and subnet mask.

   1) Right-click My Network and Properties.
   2) Right-click Local Area Network and Properties.
   3) Select Internet Protocol and Properties.
   4) Enter IP address 172.31.24.xxx (xxx=any three digits from 1 to 254, except 3).
   5) Enter subnet mask 255.255.0.0.

2. Open Internet Explorer and do the following:

   1) Click Tools on the menu bar.
   2) Click Internet Options.
   3) The General tab is selected. Click Settings at Temporary Internet Files.
   4) Click the radio button "Every visit to the page" at "Check for newer versions of stored page".
   5) Click the OK button.
   6) Click the OK button again.

3. Enter URL as http://172.31.24.3 and press the Enter key.
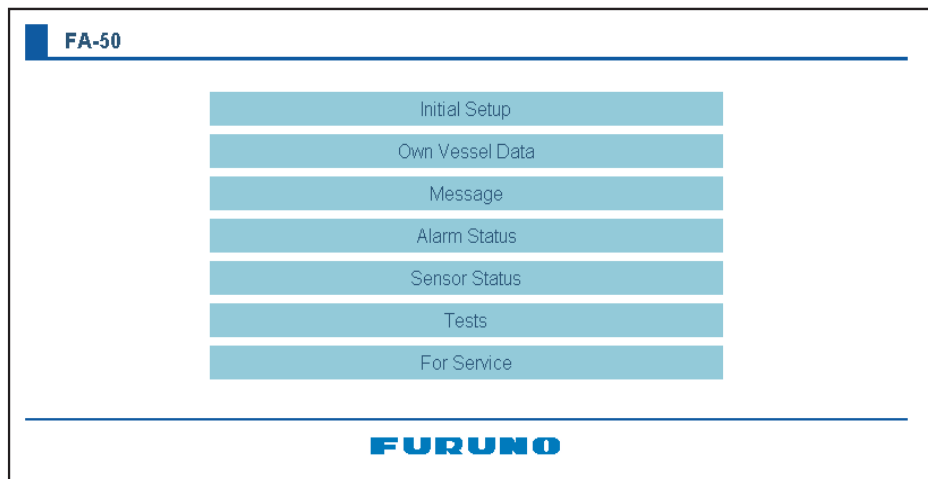

4. Click Initial Setup to show the Initial Setup screen.

FA-50/Initial Setup

Data Type	IEC61162	(default=IEC61162)
TX Speed	38400 bps	
RX Speed	⊙ Auto ○ Manual 4800 bps	(default=Auto)

OK   Cancel

<<Initial Setup

FURUNO
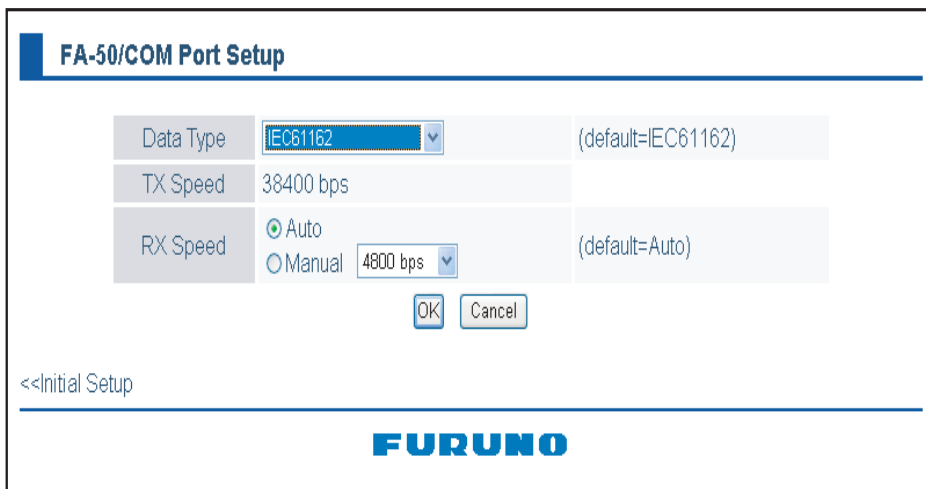

6. The default setting for Data Type is IEC61162, which is suitable for most installations. If change is necessary, click the Data Type drop-down list and choose data type as applicable, among the following choices.

IEC61162
IEC61162
IEC61162+P-sentence
Off
IEC61162: Transmit and receive IEC61162 format data via COM port. (P sentences are received but not transmitted.)
IEC61162+ P-sentence: Transmit and receive IEC61162+P sentences format data via COM port.
Off: FA-50 transmits no data.

With the radio buttons at RX Speed, choose how RX speed is regulated, Auto or Manual. For manual, choose speed from the drop-down list.

4800 bps
4800 bps
38400 bps
Note: Tx speed is fixed at 38400 bps.

7. Click OK to confirm setting.

8. Click "<<Port Setup" to return to the Port Setup menu.

NETWORK setup

9. Click Network Setup to show the Network Setup screen.

10. Enter the IP address assigned to the FA-50.

11. Enter subnet mask for the network.

12. Enter gateway address.

13. For NavNet connection, enter NavNet port number at NavNet Port Number. Enter ten-thousandths and one-thousandths places

14. At Host Name, enter host name to be used in NavNet, AIS0 - AIS9.

15. At AIS Data Output, select how to output AIS data.
    Auto: Auto-detect of where to output AIS data.
    Continuous: Output data continuously. Select if interfaced with FAISPC_MX.

    Note: It is not necessary to change the settings of NavNet Port Number, Host Name and AIS Data Output. Connection is available without adjusting them.

16. Click the OK button to finish.

17. If you changed a setting, the message below appears.

> You must restart your FA-50
> before the new settings take effect.
> Do you want to restart your FA-50 now?
> (It will take about 1 minute to restart your FA-50).

18. Click the Yes button to restart. "ER" LED on the FA-50 lights. After the LED goes off access is given.

19. The message "Please close the window." appears. Close the browser.

After restart is completed, it is necessary to access the FA-50 using new values. For example, if you changed the IP address, use the new address to access the FA-50.

Ship static edit

20. Click Ship Static Edit to show the Network Setup menu.

22. Enter ship's MMSI (Maritime Mobile Service Identity) in nine digits.

23. Enter ship's name, using up to 20 alphanumeric characters.

24. Enter call sign, using seven alphanumeric characters.

25. Set Internal/External antenna positions as follows:

  1) Enter distance for for location "A" of FA-50 GPS antenna.
    A: Distance from bow to GPS antenna position, setting range: 0-511 m

  2) Enter distance for location B, C and D similar to how you did for "A" above.
    B: Distance from stern to GPS antenna position, setting range: 0-511 m
    C: Distance from port to GPS antenna position, setting range: 0-63 m
    D: Distance from starboard to GPS antenna position, setting range: 0-63 m

  3) Enter distance for location of an external GPS antenna (if connected) similar to how you did for the internal GPS antenna.

26.Click the down-allow button for Ship Type to show the option window, and then choose a ship type. (WOIG: Wing in ground, HSC: High speed craft)
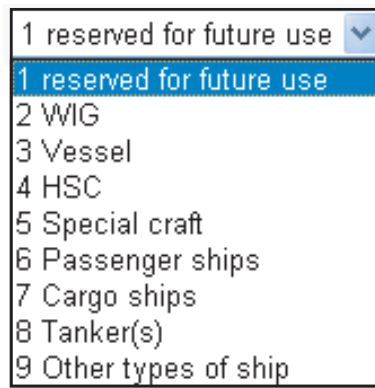

27.After finishing all settings, Click the OK button.

2. OPERATION

2.1 AIS Transponder FA-50

The FA-50 has no power switch. Power is fed from the ship's switchboard, and a power switch on the switchboard turns the FA-50 on or off. When powered, the PWR LED (green) on the cover lights. The three other LEDs on the cover flash or light with equipment state. The ER LED (red) lights while the equipment is being initialized, and flashes when equipment error is found. The RX LED (orange) lights when receiving.The TX LED lights blue when transmitting, orange when TX time out is occurs.

PWR (Power) LED
Lights (in green) when power is on.

ER (Error) LED
Flashes (in red) for RAM, ROM, RX1+RX2 error.

TX LED
-Lights (in blue) when channel TX1/TX2 is transmitting.
-Lights (in orange) when TX1/TX2 cannot be transmitted continuously (Tx time out*.)

*Lights also when not registering MMSI.

RX LED
Lights (in orange) 50 ms when channel RX1/RX2 is receiving.
Sending/receiving Messages

You may send and receive messages via the VHF link, to a specified destination (MMSI) or all ships in the area. Messages can be sent to wan of safety of navigation; for example, an iceberg sighted. Routine messages are also permitted.

Short safety-related messages are only an additional means to broadcast safety information. they do not remove the requirements of the GMDSS.

The contents of the message may be viewed on the receive message log.

2.2 Messages

2.2.1 Sending a message

14 pre-difined messages (maximum 16 characters for each message) are stored in the Send Message screen. You can send a message among from these once in a minute.

1. Click Message on the main menu.
2. Click the Send Message.

3. Choose the message to be sent, among from No.1 to 10 pre-set.
4. Click the Send button.

2.2.2 Confirming receiving messages

You can confirm the received messsages on the RX Log screen. Click "RX Log" on the main menu.

For detailed information about a messgae, click appropriate "Detail" to show the RX Log Detail screen.

FA-50/RX Log Detail

FURUNO

Description of own vessel data

MMSI: MMSI number (nine-digit number).
Ship Name: Ship's name (20 characters)
Call Sign: Call signe (7 characters)
Internal/External Antenna Position: Shows antenna posiiton.
Ship Type: The ship type is shown by a digit number.
Cargo Type: Choose the cargo type as below.
1) Click the Cargo Type Edit button to show the Cargo Type screen.
2) Choose a type, and then click the OK button.

RX1: Channel (four digits) received over RX1. Channel type (International, Local) is shown in parentheses.
RX2: Channel (four digits) received over RX2. Channel type (International, Local) is shown in parentheses.
Power: Shows the power (2W).
Region List: Click this button to shwo the region list

"Detail" button shows the detailed information of the desired region.

Time: Time to enter the region
Lat NE: Latitude for the right-upper corner (North-East) of the region
Lon NE: Longitude for the right-upper corner (North-East) of the region
Lat SW: Latitude for the left-lower corner (Soutgh-West) of the region
Lon SW: Longitude for the left-lower corner (North-East) of the region
Ch A/Band, Ch B/Band: Channel No./Band
TRX Mode: TRX mode
Zone/Power: Trans zone/Power
Enter: Registered route;
High Sea (Default), MSG22 (Adr) (Message 22 for individual),
MSG 22 (Message 22 for all ships), DSC (DSC)

19

2.4 Alarm Status

The alarm status log shows the latest 25 dates and times alarms were violated. Click "Alarm Status" on the main menu to show the alarm status log.
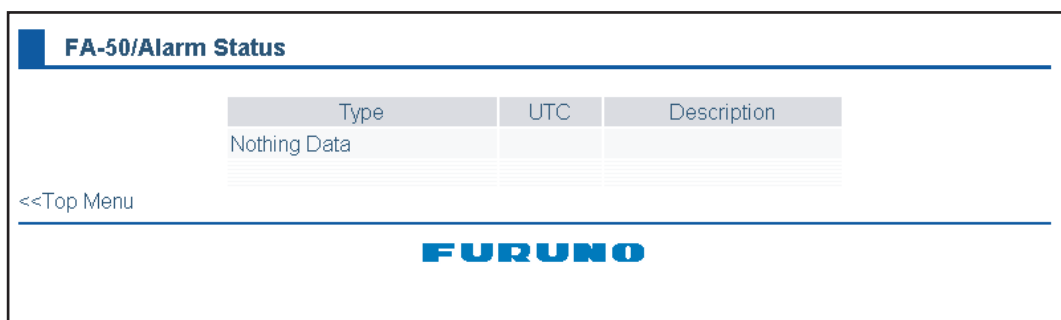

Description of Alarm Status indications

Alarm Status Indication	Meaning
TX	TX malfunction (and Error LED lights.)
CH1	TDMA RX1 Board trouble. TX stopped on corresponding TX channel.
CH2	TDMA RX2 Board trouble. TX stopped on corresponding TX channel
COG	Invalid COG data.
EPFS	No data from external navigator. Continued operation possible.
HDG	Invalid/nonexistent HDG data
L/L	No L/L data
SOG	Invalid SOG data

Note: When the transmitting is contuned more than one second, the equipment cut it off.

2.5 Sensor Status

The sensor status display provides information about sensors connected to the FA-50.

1. Show the main menu.

2. Click Sensor Status. The illustration below shows typical sensor status indications.

FA-50/Sensor Status

Internal GPS in Use
Internal SOG/COG in Use

<<Top Menu

FURUNO
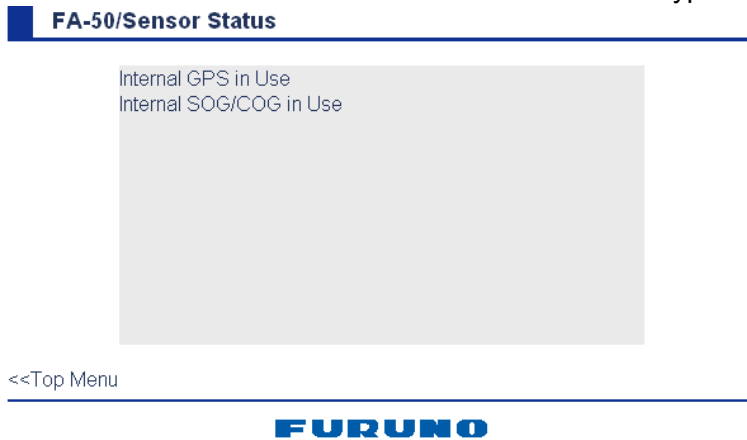

Description of sensor status indications

Indication	Meaning	Remarks
DGPS in use (Internal/external)	DGPS currently in use	See [1]
GPS in use (Internal/External)	GPS currently in use	See [1]
SOG/COG in use (Internal/External)	SOG/COG currently in use	
Heading valid	Valid heading data	
Channel Management Parameters Changed	Channel parameters have been changed.	See [2]

[1] Whichever navigator is in use.

[2] Displayed for 30 seconds after changing channel parameters. (It is necessary to update the display.)

3 MAINTENANCE, TROUBLESHOOTING

⚠ WARNING	NOTICE
Do not open the equipment unless totally familiar with electrical circuits and service manual. Only qualified personnel should work inside the equipment.	**Do not apply paint, anti-corrosive sealant or contact spray to coating or plastic parts of the equipment.** Those items contain organic solvents that can damage coating and plastic parts, especially plastic connectors.

3.1 Maintenance

Regular maintenance helps maintain good performance. Check the items listed below at least monthly to help keep your equipment in good working order.

Maintenance table

Item	Check point, remedy
Wiring	Check that each cable and wire are securely fastened. Refasten if necessary.
Ground	Check ground point for rust. Clean if necessary.
VHF antenna	Check VHF antenna and its cabling for damage. Replace if necessary.
Cabinet	Dust and dirt should be removed from the cabinet with a soft, dry cloth. Do not use chemical-based cleaners; they can remove paint and markings.

3.2 Replacing the Fuse

The fuse (4A) inside the FA-50 protects it from overcurrent and equipment fault. If the unit cannot be powered, that is, the PWR (power) LED is off, the fuse may have blown. If this happens, turn off the power to the FA-50, open the cover and check the fuse. If the fuse has blown, find out the reason before replacing it. If it blows again after replacement, contact a FURUNO agent or dealer for advice.

Part	Type	Code No.
Fuse (4A)	FGMB AC125V 4A PBF	000-157-482-10

⚠ WARNING

Use the proper fuse.

Use of a wrong fuse can result in damage to the equipment and cause fire.

3.3 Troubleshooting

The troubleshooting table below provides typical operating problems and the means to restore normal operation. If you cannot restore normal operation, do not attempt to check inside the receiver; there are no user serviceable parts inside the receiver.

Troubleshooting table

Symptom	Problem	Remedy
Receiver cannot be powered.	Fuse inside the receiver may have blown.	Replace the fuse.
Cannot receive.	• VHF antenna may have loosened. • Antenna or its cabling may be damaged. • Rx channel is malfunctioning.	• Check if the antenna is firmly fastened. • Check the antenna and its cabling for damage. • Confirm the channel setting.

3.4　Diagnostics

The built-in diagnostic facility displays program version no. and checks RAM, ROM, RX channels and GPS antenna for proper operation.

1. Open Internet Explorer and show the main menu.

2. Click Test to show the Test display.
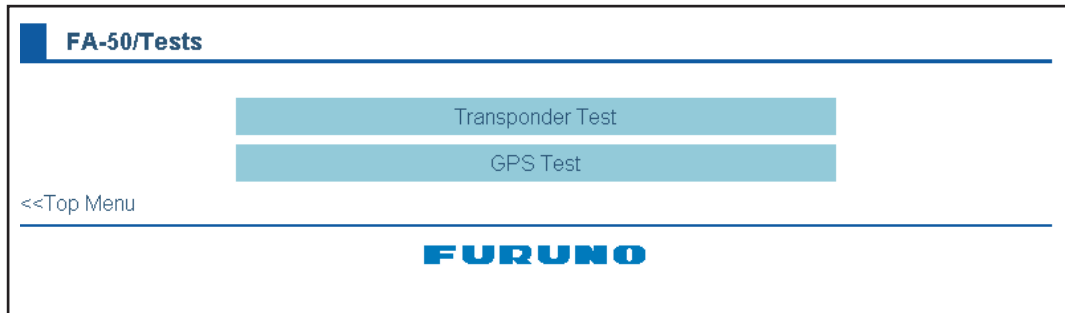

3. Click "Transponder Test" or "GPS Test" to show the appropriate test screen.

Transponder test: The program version number appears on the first line. The CPU1 RAM and CPU2 RAM, ROM and the two RX channels and TX are checked for proper operation, and the results are displayed as OK or NG (No Good). For any NG, try resetting the power and checking connections. If NG condition persists, contact your dealer for advice.
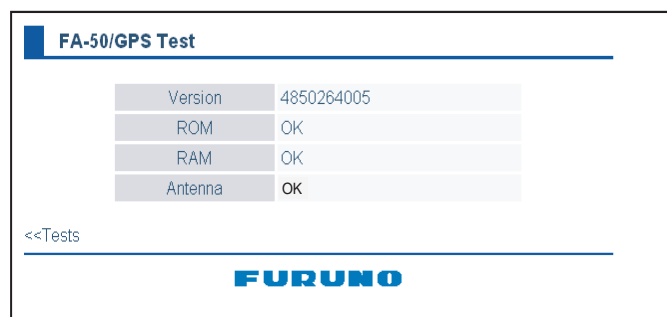

GPS test: The program version number appears on the first line. The ROM, RAM and connection with antenna (including power line), and the results are displayed as OK or NG (No Good). For any NG, try resetting the power and checking connections. If NG condition persists, contact your dealer for advice.

(CH16 operates on 1W)

AP-3

Parts List

This equipment contains complex modules in which fault diagnosis and repair down to component level are not practical (IMO A.694(17)/8.3.1). Only some discrete components are used. FURUNO Electric Co., Ltd. believes identifying these components is of no value for shipboard maintenance; therefore, they are not listed in the manual. Major modules can be located on the parts location photo on page AP-5.

Digital Interface

Sentence data

Input sentences

ACK, AIQ, BBM, DSC, DSE, DTM, GBS, GGA, GLL, GNS, HDT, OSD, RMC, SSD, VBW, VSD, VTG

Output sentences

ABK, ACA, ACS, ALR, TXT, VDM, VDO

Transmission interval

ABK: With each event
ACA, ACS: At RX/Switch information ion the region
ALR: 25 s during alarm, 2 min normally no alarm
TXT: Status is changed.
VDM: At RX VHF
VDO: 1 s

Load requirements as listener

Isolation: opto coupler
Input Impedance: 470 ohms
Max. Voltage: ±15 V
Threshold: 3 mA (In case of FURUNO device talker connection)

Output drive capability

Differential driver output
R=54 ohm 1.1 v min.
R=60 ohm 1.1 V min.

Driver short-circuit current
250 mA max.

Data transmission

Data format and protocol are transmitted in serial asynchronous form in accordance with the standard referenced in 2.1 of IEC 61162-1. The first bit is a start bit and is followed by data bits, least-significant-bit as illustrated below.

The following parameters are used:
Baud rate: 38.4 Kbps /4800 bps
Data bits: 8 (D7 = 0), parity none
Stop bits: 1

	D0	D1	D2	D3	D4	D5	D6	D7	

Start bit ←———— Data bits ————→ Stop bit

Sentence description

<u>**Input sentences**</u>

ACK - Acknowledge alarm

```
$--ACK,xxx*hh<CR><LF>
        |    +-------------------- 2
        +----------------------- 1
```

    1. Local alarm number(identifier)
    2. Checksum

AIQ – AIS query

```
$--AIQ,ccc,*hh<CR><LF>
          |    |
          |    |
          |    +---------------------------- 2
          +---------------------------------- 1
```

    1. Query data
    2. Checksum

BBM - UAIS broadcast binary message.

```
!--BBM,x,x,x,x,x.x,s--s,x*hh<CR><LF>
        || | | |    | | |
        || | | |    | |  +--- 8
        || | | |    |  +------ 7
        || | | |    +--------- 6
        || | | +------------ 5
        || | +--------------- 4
        || +----------------- 3
        | +------------------- 2
        +--------------------- 1
```

    1. Total number of sentences needed to transfer the message, 1 to 9
    2. Message sentence number, 1 to 9
    3. Sequential Message identifier, 0 to 9
    4. AIS channel for broadcast of the radio message
    5. VDL message number(8 or 14), see ITU-R M.1371
    6. Binary data
    7. Number of fill-bits, 0 to 5
    8. Checksum

DSC – Digital selective calling information

```
$--DSC,xxxxxxxxxx,xx,xx,xx,xx,xx,x*hh<CR><LF>
               |    | | | | | |||
               |    | | | | | ||+------- 8
               |    | | | | | |+--------- 7
               |    | | | | | +---------- 6
               |    | | | +------------- 5
               |    | | +---------------- 4
               |    | +------------------ 3
               |    +--------------------- 2
               +---------------------------- 1
```

1. Maritime mobile service identity(MMSI)
   (see note 3)
2. Format specifier(see note 2)
3. Categry(see note 2)
4. Nature of distress(see note 2)
5. First telecommand(see note 2)
6. Second telecommand(see note 2)
7. Acknowledgement type(see note 1)
8. Checksum

NOTES
1 Acknowledgement type:R - Acknowledge RQ
                        B - Acknowledge BQ
                        S - End of sequence of EOS
2 Last two digits of symbol number described in ITU-R M.493-6, Table 3.
3 MMSI of the called station for a DSC call to be initiated; MMSI of the
   calling station in a received DSC call.

DSE – Expanded digital selective calling

```
$--DSE,x,x,a,xxxxxxxxxx,xx,c--c,........,xx,c--c*hh<CR><LF>
        |||    |    | |    |     | | |
        |||    |    | |    |     | | +------- 8
        |||    |    | |    |    +--+----------- 7
        |||    |    | |    +-------------------- 6
        |||    |    +--+------------------------ 5
        |||    +---------------------------------- 4
        || +----------------------------------------- 3
        | +------------------------------------------- 2
        +--------------------------------------------- 1
```
1. Total number of messages
2. Message number
3. Query/reply flag
4. Vessel MMSI
5. Data set '1'
6. Additional data sets
7. Data set 'n'
8. Checksum

DTM - Datum reference

```
$--DTM,ccc,a,x.x,a,x.x,a,x.x,ccc*hh<CR><LF>

SPECIFICATIONS OF CLASS B AIS TRANSPONDER
FA-50

1   GENERAL

1.1	Type	Class B AIS Transponder
1.2	RX capacity	2250 report/minute, 1channel
		4500 report/minute, 2channel
1.3	RX system	CSTDMA dual wave simultaneous reception
1.4	Synchronous framing	Indirect synchronize from external oscillator
1.5	Operating mode	Autonomous, Assigned, polled/interrogation response
1.6	Frequency switching	Automatic
1.7	Prevention of abnormal TX	Auto-suspend for detecting TX more than 1 second
1.8	Regulations	IMO MSC.140 (76), IEC 62287-1, ITU-R M.1371-2,
		DSC ITU R M.825-3, IEC 60945 ed.4 adopted

2   TRANSMITTER

2.1	Frequency range	156.025 MHz to 162.025 MHz (F1D)
2.2	Output power	1W/2W
2.3	Channel interval	25 kHz
2.4	Frequency deviation	±3 ppm or less
2.5	Transmit speed	9600 bps ± 50 ppm
2.6	Spurious Emission	9 kHz to 1 GHz, -36 dBm or less
		1 GHz to 4 GHz, -30 dBm or less

3   AIS RECEIVER

3.1	Frequency range	156.025 MHz to 162.025 MHz (DSC: 156.525 MHz)
3.2	Oscillator frequency	1^{st} local oscillator: f + (51.136/51.236 MHz)
		2^{nd} local oscillator: 51.1/51.2 MHz
3.3	Intermediate frequency	1^{st}: 51.136/51.236 MHz, 2^{nd}: 36 kHz
3.4	Receiving system	Double-conversion superheterodyne
3.5	Sensitivity	-107 dBm (PER 20% or less)
3.6	Error at high input level	-7 dBm
3.7	Co-channel rejection	10 dB
3.8	Adjacent channel selectivity	70 dB
3.9	Spurious response	70 dB (50 MHz to 520 MHz)
3.10	Inter-modulation	65 dB
3.11	Sensitivity suppression	86 dB (±5 MHz, ±10 MHz)

4   DSC RECEIVER (TIMESHARING SYSTEM)

4.1	Frequency	156.525 MHz (CH70)
4.2	Sensitivity	-107 dBm or less
4.3	Error at high input level	-7 dBm

4.4 Co-channel rejection 10 dB

4.5 Adjacent channel selectivity 70 dB

4.6 Spurious response 70 dB

4.7 Inter-modulation 65 dB

4.8 Sensitivity suppression 84 dB

4 GPS RECEIVER

4.1 Receiving frequency 1575.42 MHz

4.2 Tracking code C/A code

4.3 Number of channel 12 channels parallel, 12 satellites

4.4 Position fixing method All in view, 8-state Kalman filter

4.5 Position accuracy 10 m approx., 95% of the time, (HDOP ≤ 4)

DGPS: 5m approx., 95% of the time

4.6 Tracking velocity 900 kts

4.7 Position fixing time Warm start: 36 s typical, Cold start: 43 s typical

4.8 Geoids WGS84

4.9 Position update interval 1 s

4.10 DGPS data correcting By AIS information

5 INTERFACE

5.1 COM I/O

Input: RS-422 (38.4kbps) / IEC61162-1 (4800bps)

ACK, BBM, DTM, GBS, GGA, GLL, GNS, HDT, OSD, RMC, SSD, VBW, VSD, VTG, AIQ, DSC, DSE, PFEC

Output: RS-422 (38.4kbps)

ABK, ACA, ACS, ALR, VDM, VDO, TXT, PFEC

5.2 NETWORK Ethernet 10BASE-T/100BASE-TX

Input: ACK, BBM, DTM, GBS, GGA, GLL, GNS, HDT, OSD, RMC, SSD, VBW, VSD, VTG, AIQ, DSC, DSE, PFEC

Output: ABK, ACA, ACS, ALR, VDM, VDO, TXT, PFEC

5.3 Function alarm LED indication, series data output

6 POWER SUPPLY

12-24 VDC: 2.0-1.0 A

7 ENVIRONMENTAL CONDITIONS

7.1 Ambient temperature

Antenna unit -30°C to +70°C

Transponder -15°C to +55°C

7.2 Relative humidity 93% at +40°C

7.3 Degree of protection

Antenna unit IPX6

	Transponder	IP20
7.4	Bearing vibration	IEC 60945

8   COATING COLOR

8.1	GPS antenna unit	N9.5
8.2	Transponder	N2.5
