

BLUETOOTH SPEAKER

Battery Charging:

Fully charge the speaker before use by connecting the speaker to a PC or Mac via USB cable. A solid red LED light will appear, indicating that the speaker battery is charging. The red LED will automatically power off when the unit is fully charged. Charge time is approximately 3 hours with a run time of 4 hours via *Bluetooth*, or 5-6 hours via audio cable.

Low Battery Indicator

The LED light will start to fade and a red LED will flash approximately 15 times.

Initial Set Up via *Bluetooth*:

1. Turn on the *Bluetooth* speaker by pressing the power button.
2. Wait for approximately 20 seconds. The speaker will go into pairing mode and will produce a "beep" tone. The red & blue LED lights will then flash alternately.
3. Turn on a device such as an *ipod*, *iphone* or mp3 device and go to: Settings > General > *Bluetooth*. Click ON the *Bluetooth*. GP-507 will then appear on the device. Click ON the GP-507. The device is now connected and paired with the speaker. If the device prompts for a pair code, enter: "0000"
4. If pairing is not successful within 150 seconds, the system will search for the last paired device and the blue LED will flash slowly. To restart the pairing process, turn off the speaker and repeat step 1. If the initial set up connection is successful, the next time the speaker is turned on, the speaker will automatically pair to the last device it was connected with.
5. Press VOLUME+ for 1 second to increase the volume. When maximum volume has been reached, a tone indicator will sound.
6. Press VOLUME+ for 2 seconds to listen to the next song.
7. Press VOLUME- for 1 second to decrease the volume. When minimal volume has been reached, a tone indicator will sound.
8. Press VOLUME- for 2 seconds to listen to the previous song.

NOTE:

1. The *Bluetooth* speaker only connects to one device at a time. Turn off the *Bluetooth* speaker in order to pair the device with another *Bluetooth* device.
2. The maximum transmission between the *Bluetooth* speaker and a device is 10 meters or 32 feet.
3. Interference may occur during playback when using the *Bluetooth* function near other wireless devices. If playback through *Bluetooth* is problematic, move the *Bluetooth* speaker and the playback device to a different location, or use the 3.5mm audio cable jack instead of the *Bluetooth* function.

Connecting with an Audio Cable:

The *Bluetooth* connection can be switched to a wired connection by plugging in the 3.5mm audio jack. The volume key function will be disabled in the wired connection mode. Simply unplug the 3.5mm audio jack to revert back to the *Bluetooth* connection.

WARNING: The built-in rechargeable battery is not replaceable. Do not remove or replace battery. Dispose of unit properly. Do not dispose unit in trash or fire.

FCC STATEMENT

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

FCC Radiation Exposure Statement

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance 20cm between the radiator & your body
