Certification

UL/FCC: This equipment complies with UL and FCC

Warnings and Hazards

WARNING! ELECTRIC SHOCK

Opening the BDA (bi-directional amplifier) could result in electric shock and may cause severe injury.

WARNING! EXPOSURE TO RF

Working with the repeater while in operation, may expose the technician to RF electromagnetic fields that exceed FCC rules for human exposure. Visit the FCC website at http://www.fcc.gov/oet/rfsafety to learn more about the effects of exposure to RF electromagnetic fields.

WARNING! DAMAGE TO EQUIPMENT

Operating the BDA with antennas in very close proximity facing each other could lead to severe damage to the repeater.

RF EXPOSURE & ANTENNA PLACEMENT

Actual separation distance is determined upon gain of antenna used.

Please maintain a minimum safe distance of at least 8inch while operating near the donor and the server antennas. Also, the donor antenna needs to be mounted outdoors on a permanent structure.

WARRANTY

Opening or tampering the BDA will void all warranties.

CAUTION: REPEATER SHOULD BE INSTALLED AS CLOSE AS POSSIBLE TO POWER SOURCE.

CAUTION: THIS REPEATER IS FOR INDOOR USE ONLY AND SHOULD BE LOCATED INSIDE OF BUILDING.

CAUTION: RISK OF EXPLOSION IF BATTERY ON CONTROLLER BOARD IS REPLACED WITH AN INCORRECT TYPE.

CAUTION: DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS

Mounting Repeater

Wood-Framed Wall

- It is recommended to first attach a sheet of plywood to the wall. The sheet of plywood should be anchored to the studs in the wall.
- Using a pencil, mark the location for each of the mounting bracket's four mounting holes on the plywood.
- Place the mounting bracket over the four lag screws heads.
- Thread a lag screw at the positions marked in step 2.

• Hang the PSU unit to the mounting bracket.

• Locate the two Mounting Sems Screws (M6 x10mm) underneath the PSU unit. Tighten bolts until secure.

• Hang the rest of the units in the following order: 1900 AMP, DFM, 800/900 AMP.

• Locate the two Mounting Sems Screws (M6 x10mm) underneath each unit. Tighten bolts until secure.

CAUTION

Units must be hung in the following order only: PSU -> 1900 AMP -> DFM -> 800/900 AMP.

<Picture 3> Hanging the Rest of Units.

- Locate the ground lug on the underside (or side) of the bracket.
- Crimp the ground cable to the ground lug.
- Route the free end of the ground cable to an approved (per local code or practice) ground source.

CAUTION

🛕 Gi

Ground cable must be properly grounded to provide both EMI and voltage surge protection for the repeater.

Position Antenna

- After installing 800/900MHz and 1900MHz antennas the installer should make line of site.
- Customer specifications should be followed for positioning the antennas properly.
- Warning: In order to avoid the possibility of exceeding the FCC radio frequency exposure limits,
- human proximity to the antenna should not be less than 25cm during normal operation. The gain of the antenna is 12 dBi.

<Picture 5> An installer is directing Donor Antenna to nearby BTS to receive strong input signal.

RF Cable Connections: Top of The Repeater

- Connect the 800/900 and 1900 Donor Antennas to their corresponding ports.
- Plug in four N(M) to N(M) type RF cables as demonstrated in the picture below.

CAUTION

Do not connect or disconnect cable from ANT port when power is ON.

RF Cable Connections: Front Side

- Take out two SMA (M) to SMA (M) type RF cables.
- Please, pay attention to cable's corresponding number and its color while connecting.
- Connect 1900 AMP and DFM via Band 1, and 800/900 AMP and DFM via Band 2.

<Picture 7> Front View of the Repeater.

RF Cable Connections: Bottom of The Repeater

- Take out three SMA (M) to SMA (M) type RF cables.
- While connecting the PSU and the DFM units underneath, use referenced cable and pay attention to the labels. Plug them into their corresponding outlets.
- User may choose either of the two SMA ports on the bottom of the PSU to connect to the DFM.
- User may choose any two of the four SMA ports on the bottom of the PSU to connect to amplifiers.

CAUTION

Please, pay attention while connecting PSU and DFM, PSU and 800/900 AMP, 1900 AMP units. The repeater will not work if connection is inappropriate.

Version 1.0 * April 2011

Power Cord Connections

Connecting Power Cable and LED Light Verification

Connect Power Cable

<Picture 10> AC Power Port Connection.

• Turn the switch "ON" on the left side of PSU.

<Picture 11> ON/OFF Switch of SpeedCell Repeater.

• Turn the switch "ON" on the front side of PSU as displayed at the picture 12.

<Picture 12> Verification of LED Lights.

LED Indicators

• The LED's on the repeater will light up and should change to green as displayed at the picture below. Tx and Rx LEDs will be blinking.

RUN LED : Green light ON. ALARM LED : Green light is normal status, Red light is alarm status. SHUT DOWN LED : Green light is normal status, Red light is shutdown status.

1900 AMP

DFM

800/900 AMP

PSU

Input Power Signal

• Please note the number of LED bars for input indicates signal strength level.

The tables below indicate the levels.

Number of LED bars on the front side of Repeater will show input signal level:

Less than ~ -86dBm	LED 1bar
-85dBm~-79dBm	LED 2 bars
-78dBm~-72dBm	LED 3 bars
-71dBm~-65dBm	LED 4 bars
More than -64dBm	LED 5 bars

<Table 1> LED Bars Indication.

Output Power Signal

• Please note the number of LED bars for output indicates signal strength level.

Number of LED bars on the front side of Repeater will show output signal level:

Less than ~ +5dBm	LED 1bar
+6dBm~+10dBm	LED 2 bars
+11dBm~+15dBm	LED 3 bars
+16dBm~+20dBm	LED 4 bars
More than +21dBm	LED 5 bars

<Table 2> LED Bars Indication.

Web UI

- LAN port is used for connection of laptop and repeater.
- WAN 1 port is used for connection of repeater and wireless modem for remote access.
- WAN 2 port is a redundancy port for remote access.

<Picture 12> Ethernet Port.

Configuring Laptop to Connect to Repeater

• Connect Ethernet crossover cable from the LAN port of the repeater to laptop.

Login Screen

Enter IP address by 192.168.2.1, you will be redirected to Login. Default User Name is "admin", and default Password is "admin". You may need to change password as described in the User Management section. Engineering Number and Site Name will initially be blank, you can input Engineering Number and Site Name as described in the Communications Configuration section.

Menu Select

- After you log in, you can see "Menu Select' page.
- To setup the Repeater, click "Initial Installation'.
- To go to menu list, click "Menu Page'.

- After you clicking on "Initial Installation' the following screen will be displayed.
- After typing the Latitude or Longitude numbers, press "Apply' button.
- User may skip this window if it is unnecessary.

(1) Auto Configuration matches amplifier and DFM units automatically.

(2) Manual Configuration matches amplifier and DFM units manually.

- After clicking Auto Configuration, the screen below will be displayed.
- It will take approximately one minute to finish the process.

• User may also setup repeater manually by clicking on "Manual Configuration' button.

• Information about connected amplifiers will be displayed automatically. Nevertheless user may change setting values if it is needed.

.

.

It means that amplifier is mounted and connected.

'SLOT' shows which DFM is connected to the amplifier. And 'Block' shows which block of DFM unit is connected to amplifier.

Manual Setup Wizard for 1900MHz Band (Choosing channels and bands)

· User may choose band according to the specific site circumstances. After checking necessary bands, click "Apply' button.

· Also User may skip this setting if it is not needed.

User may type maximum 50 digits in Cascade Code.

User may choose delete all bands.

User may choose 15MHz block of A band only.

User may choose 5MHz block of E band only.

User may choose channel within the selected band.

User may choose 5MHz block of G band to provide LTE service.

RF Configuration Menu FAQ's

• What is Auto Limit Control (ALC)?

ALC is used for custom installations.

If the repeater is having difficulties with isolation check, or if you want to "power down" the repeater ALC should be manually set. Attenuation may also be added for reducing power levels. ALC also provides optional U/L and D/L settings.

- ALC controls the output power.

- If you want to use the ALC function, Gain Balance Control should be turned off.

- ALC will reduce max gain by the set value even if the input signal decreases.

- ALC should be used if the repeater is connected to a DAS system.

• What does the Shutdown ON/OFF control?

- An internal wave-detection is checking the noise level. If the repeater cannot secure isolation it will go through a process of turning itself off, and turning back on while doing isolation checking.

- If it is impossible for the repeater to secure isolation after 30 minutes, the repeater will shut down and stay shutdown.

The items that may automatically require the repeater to shut down are:

-> VSWR Alarm, Over Power Alarm, Over Input Alarm, and Temperature Alarm.

• What is Gain Balance Control?

- Gain Balance Control will always keep the UL and DL ATT the same while using AGC.

GBC should always be left on to prevent damage to BTS while using AGC.

- This is used for BTS to cell phone power control.

Version 1.0 * April 2011

Communication Configuration Menu

- On this page you can change various values related to IP network.
- Changes will not take effect until you click "Apply" button.
- In case that screen resolution is 1024 x 768, you may need to use scroll bar to view all.

In the line <Obtain IP address automatically> "Static" means connection using a fixed IP.

"DHCP" means connection using DHCP, where If "DHCP Client" is "ON", then the repeater will run as a DHCP client.

If "DHCP Client" is "OFF", then the repeater will get a Static IP.

"DHCP" means connection using DHCP, where If "DHCP Server" is "ON", then the repeater will run as a DHCP server.

Alarm Logs

- Click on the Alarm Logs link.
- You can see a history of reported and reset Alarms.

When an alarm is reported, the name and time of the alarm is displayed along with it's current status.

Red color means that the alarm is reported, and green color means that the alarm has returned to normal status.

• After an Alarm condition lasts for the "Delay Alarm Reporting Minutes" set in RF Configuration page, the Alarm will be reported.

Troubleshooting

• Click on the Troubleshooting link.

• You can refer to this page for GST's technical support.

Software Upgrade

- Click on the Remote Software Upgrade link.
- In case that software upgrade is needed, you should use this page.
- Click Browse button to select the file to upgrade from the laptop.
- Choose the file to upgrade provided by GST. After you choose the file, you should click
- "upload" to send the file from your laptop to the Repeater.
- Provided files are three, need to download each of them.
- The files are,
- 1 SC_SNMP.MCU
- 2 SC_AMP.AMP
- ③ SC_DFM.SDR SC_DFM.SDS

CAUTION

Be careful not to unplug the crossover Ethernet cable during software upgrade.

Software Upgrade

SpeedCell SYSTEM WEB GUI ::: - Microsoft Internet Explorer • After uploading is finished, verify that the File File Edit View Favorites Tools Help Name and the File Size is correct, then click 2 × Search 📌 Favorites 🚱 1 38 "Upgrade System' button. Command Line Interface (CLI)

• In case that you cannot reach Web UI, you should use CLI. You should connect the equipment's CLI port to your laptop's serial port using RS-232 cable. In case that your laptop does not have a serial port, you may need to use USB to Serial conversion cable.

• To open HyperTerminal, click "Start", then "Accessories", then "Communications", then "HyperTerminal".

CAUTION

RS-232 cable or USB to Serial conversion cable is not provided with the equipment. After connection, you can access CLI using HyperTerminal.

• To verify and/or change port number, open "Control Panel", then "System", then "Hardware Tab", then "Device Manager". Double click "Ports", then double click "Serial Cable" then click "Port Settings" tab, click "Advanced", in the COM Port drop down menu, select "COM 1", click "OK".

- After verification of port number, open HyperTerminal.
- Enter CLI.
- Click "OK".

- In the "Connect using" drop-down menu, select "COM1".Click "OK".

Warning: Exposure to Radio Frequency Radiation The radiated output power of this device is far below the FCC radio frequency exposure limits. Nevertheless, the device should be used in such a manner that the potential for human contact during normal operation is minimized. In order to avoid the possibility of exceeding the FCC radio frequency exposure limits, human proximity to the antenna should not be less than 25cm during normal operation. The gain of the antenna is 12 dBi. The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.
