

GPSMAP® 8000 Series Installation Instructions

Important Safety Information

⚠ WARNING

See the *Important Safety and Product Information* guide in the product box for product warnings and other important information.

When connecting the power cable, do not remove the in-line fuse holder. To prevent the possibility of injury or product damage caused by fire or overheating, the appropriate fuse must be in place as indicated in the product specifications. In addition, connecting the power cable without the appropriate fuse in place will void the product warranty.

⚠ CAUTION

Always wear safety goggles, ear protection, and a dust mask when drilling, cutting, or sanding.

NOTICE

When drilling or cutting, always check what is on the opposite side of the surface.

Registering Your Device

Help us better support you by completing our online registration today.

- Go to <http://my.garmin.com>.
- Keep the original sales receipt, or a photocopy, in a safe place.

Contacting Garmin Product Support

- Go to www.garmin.com/support and click **Contact Support** for in-country support information.
- In the USA, call (913) 397.8200 or (800) 800.1020.
- In the UK, call 0808 2380000.
- In Europe, call +44 (0) 870.8501241.

Tools Needed

- Drill and drill bits
- #2 Phillips screwdriver
- Marine sealant
- Jigsaw
- File and sandpaper

Mounting the Components

Mounting Considerations

NOTICE

This device should be mounted in a location that is not exposed to extreme temperatures or conditions. The temperature range for this device is listed in the product specifications. Extended exposure to temperatures exceeding the specified temperature range, in storage or operating conditions, may cause device failure. Extreme-temperature-induced damage and related consequences are not covered by the warranty.

You can mount the device using one of three methods. You can use the included bracket and hardware to bail mount the device, you can use the included template and hardware to flush mount the device, or you can use the flat-mount kit (sold separately) to

mount the device flat with the dashboard. When selecting a mounting location, observe these considerations.

NOTE: Not all mounting methods are available for all device models. See the specific mounting-type section for more details about your model.

- The location should provide optimal viewing as you operate your boat.
- The location should allow for easy access to all device interfaces, such as the keypad, touchscreen, and card reader, if applicable.
- The location must be strong enough to support the weight of the device and protect it from excessive vibration or shock.
- To avoid interference with a magnetic compass, the device should not be installed closer to a compass than the compass-safe distance value listed in the product specifications.
- The location must allow room for the routing and connection of the cables.

Bail Mounting the Device

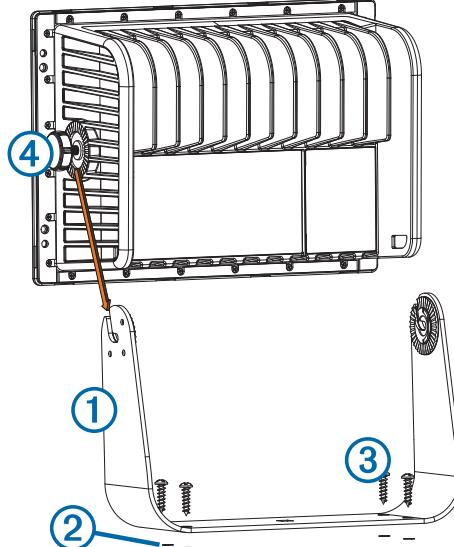

NOTICE

If you are mounting the bracket on fiberglass with screws, it is recommended to use a countersink bit to drill a clearance counterbore through only the top gel-coat layer. This will help to avoid any cracking in the gel-coat layer when the screws are tightened.

The bail-mounting hardware (screws and washers or nuts, washers, and bolts) is not included. The holes on the bail-mount bracket are $5/16$ in. (7.9 mm) in diameter. Before you can bail mount the device, you must choose mounting hardware that fits the holes in the bail-mount bracket and securely attaches it to your specific mounting surface. The size of the pilot hole required depends on the mounting hardware you choose.

You can bail mount only the eight-inch and 12-inch models. Due to the size of the 15-inch models, you must install them using the flush-mount or flat-mount method.

- 1 Using the included bail-mount bracket ① as a template, mark the location of the four pilot holes ②.

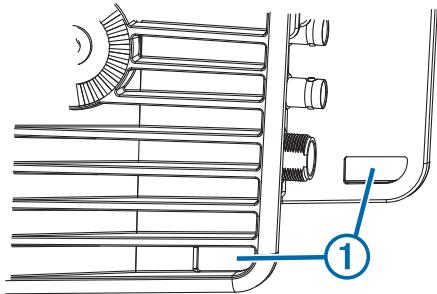

- 2 Using a drill bit appropriate for your mounting hardware, drill the pilot holes.
- 3 Secure the bail-mount bracket to the surface using your mounting hardware ③.
- 4 Install the bail-mount knobs ④ on the sides of the device.

5 Place the device in the bail-mount bracket, and tighten the bail-mount knobs.

Securing the Device

You can lock the device to the structure of your boat for added security (optional).

- 1 Bail-mount the device ([page 1](#)).
- 2 Using a coated braided-steel cable (not included) and a lock (not included), secure the back of the case ① to the structure of the boat.

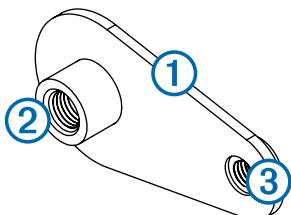

Flush Mounting the Device

NOTICE

Be careful when cutting the hole to flush mount the device. There is only a small amount of clearance between the case and the mounting holes, and cutting the hole too large could compromise the stability of the device after it is mounted.

The included template and hardware can be used to flush mount the device in your dashboard. To mount the device so the screen is flat with the dashboard, you must purchase a flat-mount kit from your Garmin® dealer.

- 1 Trim the template and make sure it fits in the location where you want to flush mount the device.
- 2 Remove the protective liner from the back of the template and adhere it to the location where you want to mount the device.
- 3 Using a $\frac{1}{2}$ in. (13 mm) drill bit, drill one or more of the holes inside the corners of the solid line on the template to prepare the mounting surface for cutting.
- 4 Using a jigsaw, cut the mounting surface along the inside of the solid line indicated on the template.
- 5 Place the device in the cutout to test the fit.
- 6 If necessary, use a file and sandpaper to refine the size of the cutout.
- 7 After the device fits correctly in the cutout, ensure the mounting holes on the device line up with the larger $\frac{9}{32}$ in. (7.2 mm) holes on the template.
- 8 If the mounting holes on the device do not line up, mark the new hole locations.
- 9 Using a $\frac{9}{32}$ in. (7.2 mm) drill bit, drill the larger holes.
- 10 Starting in one corner of the template, place a nut plate ① over the larger hole ② drilled in step 9.

The smaller $\frac{9}{64}$ in. (3.5 mm) hole ③ on the nut plate should line up with the smaller hole on the template.

11 If the smaller $\frac{9}{64}$ in. (3.5 mm) hole on the nut plate does not line up with the smaller hole on the template, mark the new hole location.

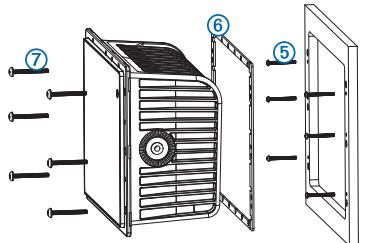

12 Repeat steps 10–11 for each of the nut plates along the sides of the device as indicated on the template.

13 Using a $\frac{9}{64}$ in. (3.5 mm) drill bit, drill the smaller holes.

14 Remove the template from the mounting surface.

15 Starting in one corner of the mounting location, place a nut plate ④ on the back of the mounting surface, lining up the large and small holes.

The raised portion of the nut plate should fit into the larger hole.

16 Secure the nut plate to the mounting surface by fastening an included M3 screw ⑤ through the smaller $\frac{9}{64}$ in. (3.5 mm) hole.

17 Repeat steps 15–16 for each of the nut plates along the sides of the device.

18 Install the rubber gasket ⑥ on the back of the device.

The pieces of the rubber gasket have adhesive on the back. Make sure you remove the protective liner before installing them on the device.

19 If you will not have access to the back of the device after you mount it, connect all necessary cables to the device before placing it into the cutout.

NOTE: To prevent corrosion of the metal contacts, cover unused connectors with the attached weather caps.

20 Place the device into the cutout.

21 Secure the device to the mounting surface using the included M4 screws ⑦.

22 Insert the included plugs over each of the M4 screw heads.

23 Install the decorative bezel by snapping it in place around the edges of the device.

Card Reader Mounting Considerations

NOTICE

This device should be mounted in a location that is not exposed to extreme temperatures or conditions. The temperature range for this device is listed in the product specifications. Extended exposure to temperatures exceeding the specified temperature range, in storage or operating conditions, may cause device failure. Extreme-temperature-induced damage and related consequences are not covered by the warranty.

The card reader can be flush mounted in the dashboard using the included hardware. When selecting a mounting location, observe these considerations.

- The card reader should be mounted in an accessible location. You must be able to access the card reader when necessary to insert and remove memory cards containing additional mapping and device updates, and to transfer user data.
- To avoid interference with a magnetic compass, the device should not be installed closer to a compass than the compass-safe distance value listed in the product specifications.

- The location must allow room for the routing and connection of the cables.

Mounting the Card Reader

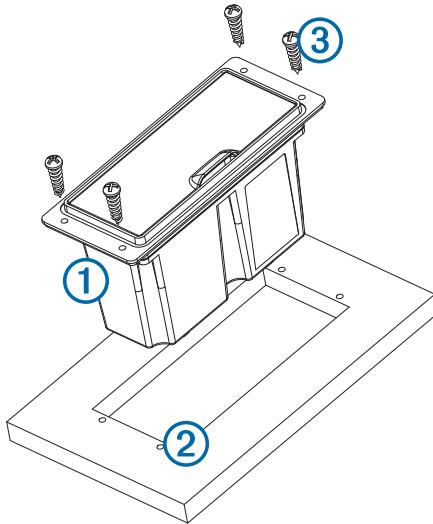

NOTICE

Be careful when cutting the hole to flush mount the device. There is only a small amount of clearance between the case and the mounting holes, and cutting the hole too large could compromise the stability of the device after it is mounted.

If you are mounting the bracket on fiberglass with screws, it is recommended to use a countersink bit to drill a clearance counterbore through only the top gel-coat layer. This will help to avoid any cracking in the gel-coat layer when the screws are tightened.

The included template and hardware can be used to flush mount the device at the selected location.

- Trim the flush-mount template and make sure it fits in the location where you want to mount the device.
- Remove the protective liner from the back of the template and adhere it to the location where you want to mount the device.
- Using a $\frac{1}{4}$ in. (6 mm) drill bit, drill one or more of the holes inside the corners of the solid line on the template to prepare the mounting surface for cutting.
- Using a jigsaw, cut the mounting surface along the inside of the solid line indicated on the template.
- Place the device in the cutout to test the fit.
- If necessary, use a file and sandpaper to refine the size of the cutout.
- After the device ① fits correctly in the cutout, make sure that the mounting holes on the device line up with the pilot holes ② on the template.

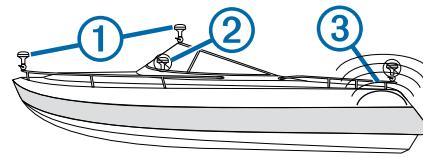

- If the mounting holes on the device do not line up, mark the new pilot-hole locations.
- Using a center punch, indent the pilot holes and drill the clearance counterbore through the gel-coat layer as advised in the notice.
- Remove the template from the mounting surface.
- If you will not have access to the back of the device after you mount it, connect all necessary cables to the device before placing it into the cutout.
- Place the device into the cutout.
- Secure the device to the mounting surface using the included screws ③.

- Install the decorative bezel by snapping it in place around the edges of the device.

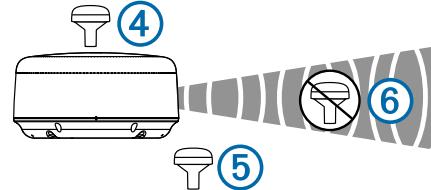

Antenna Mounting Considerations

You can mount the antenna on a flat surface, install it under fiberglass, or attach it to a standard 1 in. OD, 14 threads per inch, pipe-threaded pole (not included). You can route the cable outside of the pole or through the pole. For optimal performance, consider these guidelines when selecting the antenna mounting location.

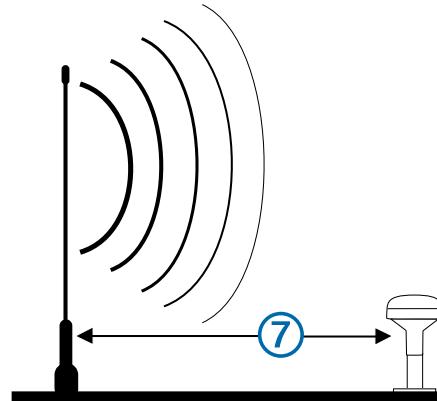

- To avoid interference with a magnetic compass, the antenna should not be mounted closer to a compass than the compass-safe distance value listed in the product specifications.
- To ensure the best reception, the antenna should be mounted in a location that has a clear, unobstructed view of the sky in all directions ①.

- The antenna should not be mounted where it is shaded by the superstructure of the boat ②, a radome antenna, or the mast.
- The antenna should not be mounted near the engine or other sources of Electromagnetic Interference (EMI) ③.
- If a radar is present, the antenna should be mounted above the path of the radar ④. If necessary, the antenna may be mounted below the path of the radar ⑤.

- The antenna should not be mounted directly in the path of the radar ⑥.
- The antenna should be mounted at least 3 ft. (1 m) away from (preferably above) the path of a radar beam or a VHF radio antenna ⑦.

- On a sailboat, to prevent inaccurate speed readings caused by excessive heeling, the antenna should not be mounted high on the mast.
- The antenna provides more-stable readings when located nearer to water level.

Testing the Mounting Location

- 1 Temporarily secure the antenna in the preferred mounting location and test it for correct operation.
- 2 If you experience interference with other electronics, move the antenna to a different location, and test it again.
- 3 Repeat steps 1–2 until the antenna operates correctly.
- 4 Permanently mount the antenna.

Surface Mounting the Antenna

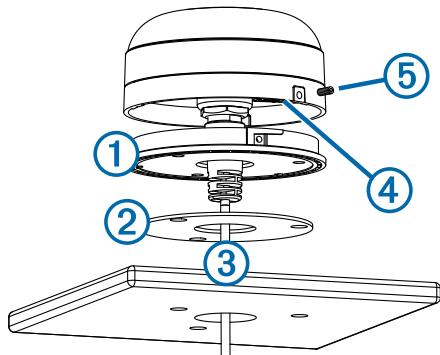

NOTICE

If you are mounting the bracket on fiberglass with screws, it is recommended to use a countersink bit to drill a clearance counterbore through only the top gel-coat layer. This will help to avoid any cracking in the gel-coat layer when the screws are tightened.

Stainless-steel screws may bind when screwed into fiberglass and overtightened. Garmin recommends applying an anti-galling, stainless anti-seize lubricant to the screws before installing them.

Before you permanently mount the antenna, you must test the mounting location for correct operation ([page 3](#)).

- 1 Using the surface-mount bracket ① as your mounting template, mark the three pilot-hole locations and trace the cable-hole in the center of the bracket.

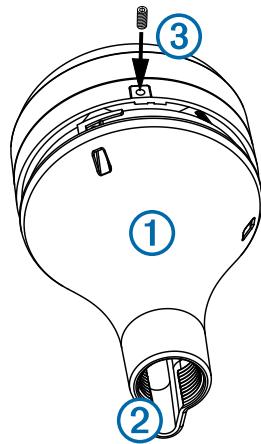

- 2 Set the surface-mount bracket aside.
Do not drill through the bracket.
- 3 Drill the three $\frac{1}{8}$ in. (3.2 mm) pilot holes.
- 4 Use a 1 in. (25 mm) hole saw to cut the cable hole in the center.
- 5 Place the seal pad ② on the bottom of the surface-mount bracket, aligning the screw holes.
- 6 Use the included M4 screws to secure the surface-mount bracket to the mounting surface.
- 7 Route the cable ③ through the 1 in. (25 mm) hole and connect it to the antenna.
- 8 Verify that the large gasket ④ is in place on the bottom of the antenna, place the antenna on the surface-mount bracket, and twist it clockwise to lock it in place.
- 9 Secure the antenna to the mounting bracket with the included M3 set screw ⑤.
- 10 Route the cable away from sources of electronic interference.

Mounting the Antenna with the Cable Routed Outside the Pole

Before you permanently mount the antenna, you must test the mounting location for correct operation ([page 3](#)).

- 1 Route the cable through the pole-mount adapter ①, and place the cable in the vertical slot ② along the base of the pole-mount adapter.

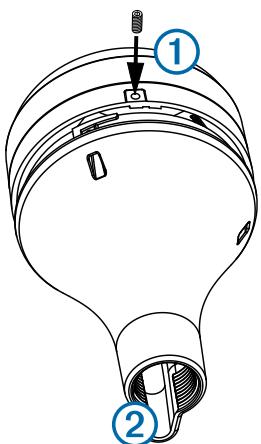

- 2 Screw the pole-mount adapter onto a standard 1 in. OD, 14 threads per inch, pipe-threaded pole (not included).
Do not overtighten the adapter on the pole.
- 3 Connect the cable to the antenna.
- 4 Place the antenna on the pole-mount adapter and twist it clockwise to lock it in place.
- 5 Secure the antenna to the adapter with the included M3 set screw ③.
- 6 With the antenna installed on the pole mount, fill the remaining gap in the vertical cable slot with a marine sealant (optional).
- 7 Attach the pole to the boat if it is not already attached.
- 8 Route the cable away from sources of electronic interference.

Mounting the Antenna with the Cable Routed Through the Pole

Before you permanently mount the antenna, you must test the mounting location for correct operation ([page 3](#)).

- 1 Position a standard 1 in. OD, 14 threads per inch, pipe-threaded pole (not included) in the selected location, and mark the approximate center of the pole.
- 2 Drill a hole using a $\frac{3}{4}$ in. (19 mm) drill bit for the cable to pass through.
- 3 Fasten the pole to the boat.
- 4 Thread the pole-mount adapter onto the pole.
Do not overtighten the adapter.
- 5 Route the cable through the pole and connect it to the antenna.
- 6 Place the antenna on the pole-mount adapter and twist it clockwise to lock it in place.
- 7 Secure the antenna to the adapter with the included M3 set screw ①.

- 8 With the antenna installed on the pole mount, fill the vertical cable slot ② with a marine sealant (optional).
- 9 Route the cable away from sources of electronic interference.

Mounting the Antenna Under the Deck

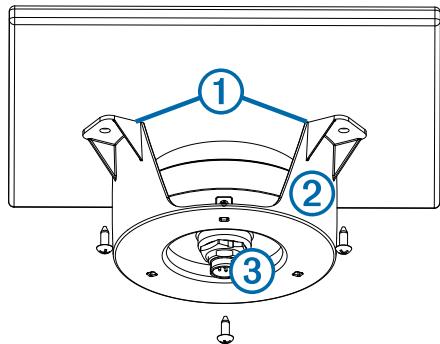

NOTICE

Before attaching the under-deck mounting bracket to the surface, verify that the supplied screws will not penetrate the surface. If the supplied screws are too long, you must purchase surface-appropriate screws to complete the installation.

Before you permanently mount the antenna, you must test the mounting location for correct operation ([page 3](#)).

Because the antenna cannot acquire signals through metal, it must be mounted under a fiberglass surface only.

- 1 Place the adhesive pads ① on the under-deck mounting bracket ②.

- 2 Place the antenna in the under-deck mounting bracket.
- 3 Adhere the under-deck mounting bracket to the mounting surface.
- 4 Secure the under-deck mounting bracket to the mounting surface with screws.
- 5 Connect the cable to the antenna ③.
- 6 Route the cable away from sources of electronic interference.

Cable and Connection Considerations

NOTICE

A blue rubber seal is included for each DVI port on the device. This seal must be installed between each DVI port and DVI-cable connector to avoid damage to the connectors.

- For easier cable routing, the power, NMEA® 0183, and Garmin Marine Network cables are packaged without the

locking rings installed. You should route the cables before you install the locking rings.

- After connecting a locking ring to a cable, make sure the ring is securely connected and the o-ring is in place so the power or data connection remains secure.
- The device should be connected to the same power source as the card reader. If this is not possible, the devices must be connected to the same ground.

Station Connection Considerations

This device can be set up in conjunction with other compatible Garmin devices to work together as a station. When planning stations on your boat, observe these considerations.

- Devices prior to the GPSMAP 8000 series and GPSMAP 8500 cannot be used in a station.
- Although it is not necessary, it is recommended that you install all of the devices you plan to use in one station near each other.
- No special connections are necessary to create a station, as long as all of the devices are connected to the Garmin Marine Network ([page 6](#)).
- Stations are created and modified using the device software. See the owner's manual provided with the device for more information.

Connecting to Power

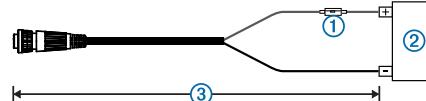

WARNING

When connecting the power cable, do not remove the in-line fuse holder. To prevent the possibility of injury or product damage caused by fire or overheating, the appropriate fuse must be in place as indicated in the product specifications. In addition, connecting the power cable without the appropriate fuse in place will void the product warranty.

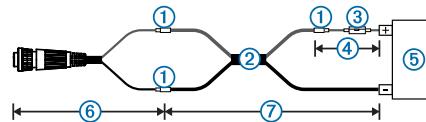

- 1 Route the power cable to the power source and to the device.
- 2 Connect the red wire to the positive (+) battery terminal, and connect the black wire to the negative (-) battery terminal.
- 3 Install the locking ring and o-ring on the end of the power cable.
- 4 Connect the power cable to the device by turning the locking ring clockwise.

Power Cable Extensions

If necessary, the power cable can be extended using the appropriate wire gauge for the length of the extension.

Item	Description
①	Fuse
②	Battery
③	6 ft. (1.8 m) no extension

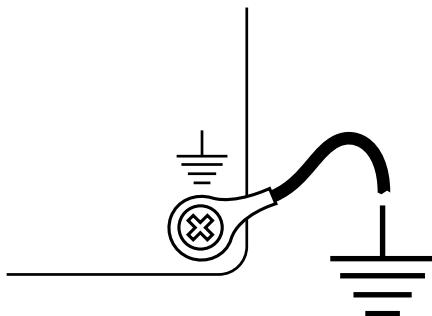

Item	Description
①	Splice
②	<ul style="list-style-type: none"> • 12 AWG (3.31 mm²) extension wire, up to 15 ft. (4.6 m) • 10 AWG (5.26 mm²) extension wire, up to 23 ft. (11 m) • 8 AWG (8.36 mm²) extension wire, up to 36 ft. (11 m)
③	Fuse
④	8 in. (20.3 cm)

Item	Description
⑤	Battery
⑥	8 in. (20.3 cm)
⑦	36 ft. (11 m) maximum extension

Additional Grounding Considerations

This device should not need any additional chassis grounding in most installation situations. If interference is experienced, the grounding screw on the housing can be used to connect the device to the water ground of the boat to help avoid the interference.

Garmin Marine Network Considerations

This device can connect to additional Garmin Marine Network devices to share data such as radar, sonar, and detailed mapping. When connecting Garmin Marine Network devices to this device, observe these considerations.

- A Garmin Marine Network cable must be used for all Garmin Marine Network connections.
 - Third-party CAT5 cable and RJ45 connectors must not be used for Garmin Marine Network connections.
 - Additional Garmin Marine Network cables and connectors are available from your Garmin dealer.
- There are four NETWORK ports on the device that each act as a network switch. Any compatible device can be connected to any NETWORK port to share data with all devices on the boat connected by a Garmin Marine Network cable.

NMEA 2000® Considerations

NOTICE

If you have an existing NMEA 2000 network on your boat, it should already be connected to power. Do not connect the included NMEA 2000 power cable to an existing NMEA 2000 network, because only one power source should be connected to a NMEA 2000 network.

If you are installing the included NMEA 2000 power cable, you must connect it to the boat ignition switch or through another in-line switch. NMEA 2000 devices will drain your battery if the NMEA 2000 power cable is connected to the battery directly.

This device can connect to a NMEA 2000 network on your boat to share data from NMEA 2000-compatible devices such as a

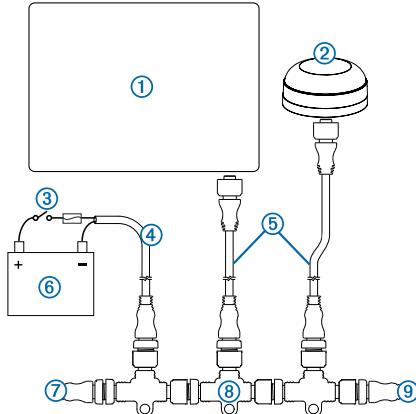

Basic NMEA 0183 Connections

These diagrams illustrate basic NMEA 0183 wiring used to connect your device to NMEA 0183-compliant devices. For more information on the NMEA 0183 capabilities of the device, see [page 8](#).

GPS antenna or a VHF radio. The included NMEA 2000 cables and connectors allows you to either connect the device to your existing NMEA 2000 network or create a basic NMEA 2000 network if needed.

If you are unfamiliar with NMEA 2000, you should read the “NMEA 2000 Network Fundamentals” chapter of the *Technical Reference for NMEA 2000 Products* on the included CD-ROM or click the “Manuals” link on the product page for your device at www.garmin.com.

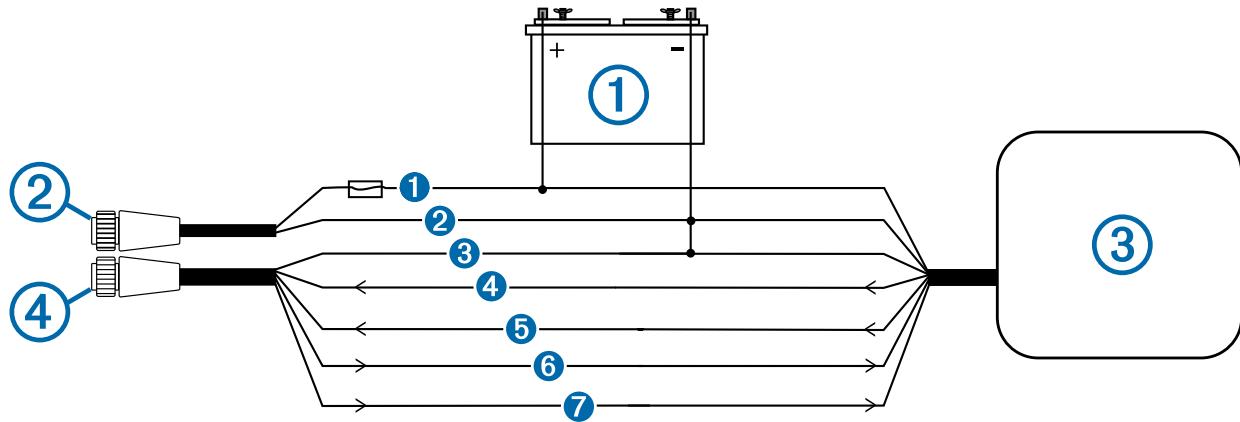

The port labeled NMEA 2000 is used to connect the device to a standard NMEA 2000 network. The ports labeled ENGINE and HOUSE are reserved for future use and should not be connected to a standard NMEA 2000 network.

Item	Description
①	NMEA 2000-compatible Garmin device
②	GPS antenna
③	Ignition or in-line switch
④	NMEA 2000 power cable
⑤	NMEA 2000 drop cable
⑥	12 Vdc power source
⑦	NMEA 2000 terminator or backbone cable
⑧	NMEA 2000 T-connector
⑨	NMEA 2000 terminator or backbone cable

NMEA 0183 Connection Considerations

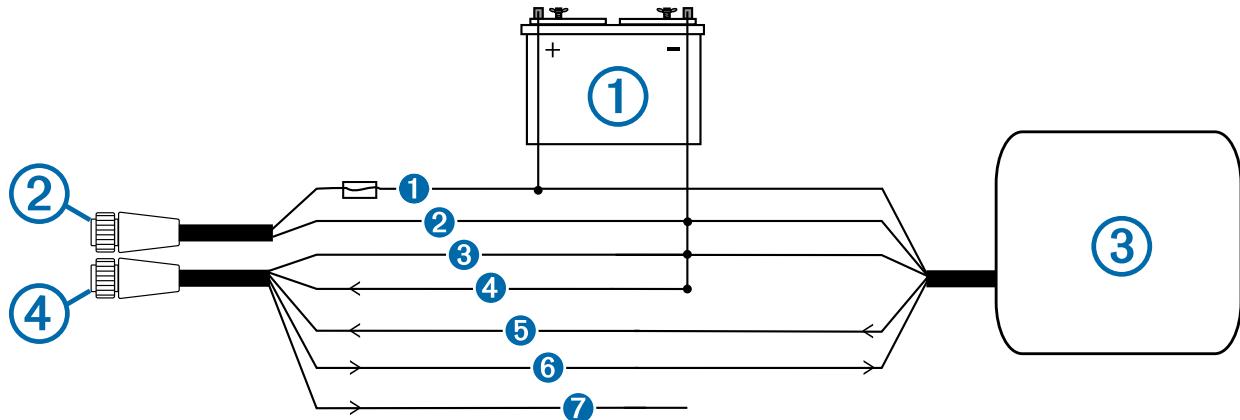

- The installation instructions provided with your NMEA 0183-compatible device should contain the information you need to identify the transmitting (Tx) and receiving (Rx) A (+) and B (-) wires.
- When connecting NMEA 0183 devices with two transmitting and two receiving wires, it is not necessary for the NMEA 2000 bus and the NMEA 0183 device to connect to a common ground.
- When connecting a NMEA 0183 device with only one transmitting (Tx) wire or with only one receiving (Rx) wire, the NMEA 2000 bus and the NMEA 0183 device must be connected to a common ground.

Standard NMEA 0183-Compliant Device

Item	Description
①	12 Vdc power source
②	Power cable
③	NMEA 0183-compliant device
④	NMEA 0183 cable

Item	Garmin Wire Function	Garmin Wire Color	NMEA 0183 Device Wire Function
①	Power	Red	Power
②	Power ground	Black	Power ground
③	Data ground	Black	Data ground
④	Receive A (+)	White	Transmit A (+)
⑤	Receive B (-)	Orange/white	Transmit B (-)
⑥	Transmit A (+)	Gray	Receive A (+)
⑦	Transmit B (-)	Pink	Receive B (-)

Single-Ended NMEA 0183-Compliant Device

Item	Description
①	12 Vdc power source
②	Power cable
③	NMEA 0183-compliant device
④	NMEA 0183 cable

Item	Garmin Wire Function	Garmin Wire Color	NMEA 0183 Device Wire Function
①	Power	Red	Power
②	Power ground	Black	Power ground
③	Data ground	Black	Data ground
④	Receive B (-)	Orange/white	N/A
⑤	Receive A (+)	White	Transmit

Item	Garmin Wire Function	Garmin Wire Color	NMEA 0183 Device Wire Function
6	Transmit A (+)	Gray	Receive
7	Transmit B (-)	Pink	N/A

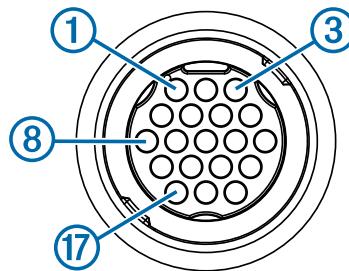

- If the NMEA 0183-compliant device has only one input (RX) wire (no A, B, +, or -), leave the pink wire unconnected.
- If the NMEA 0183-compliant device has only one output (TX) wire (no A, B, +, or -), connect the orange/white wire to ground.
- Consult the installation instructions of your NMEA 0183-compliant device to identify the output A(+) and B(-) wires and input A(+) and B(-) wires.
- Use 28 AWG, shielded, twisted-pair wiring for extended runs of wire.
- Solder all connections and seal them with heat-shrink tubing.

Advanced NMEA 0183 Connections

There are four internal NMEA 0183 input ports (RX ports), and two internal NMEA 0183 output (TX ports) on the included NMEA 0183 data cable. You can connect one NMEA 0183 device per internal RX port to input data to your Garmin device, and you can connect up to three NMEA 0183 devices in parallel to each internal TX port to receive data output by your Garmin device. Each internal RX and TX port has 2 wires, labeled A (+) and B (-) according to the NMEA 0183 convention. The corresponding A (+) and B (-) wires of each internal port should be connected to the A (+) and B (-) wires of your NMEA 0183-compliant device. Refer to the table and wiring diagrams when connecting the data cable to NMEA 0183 devices.

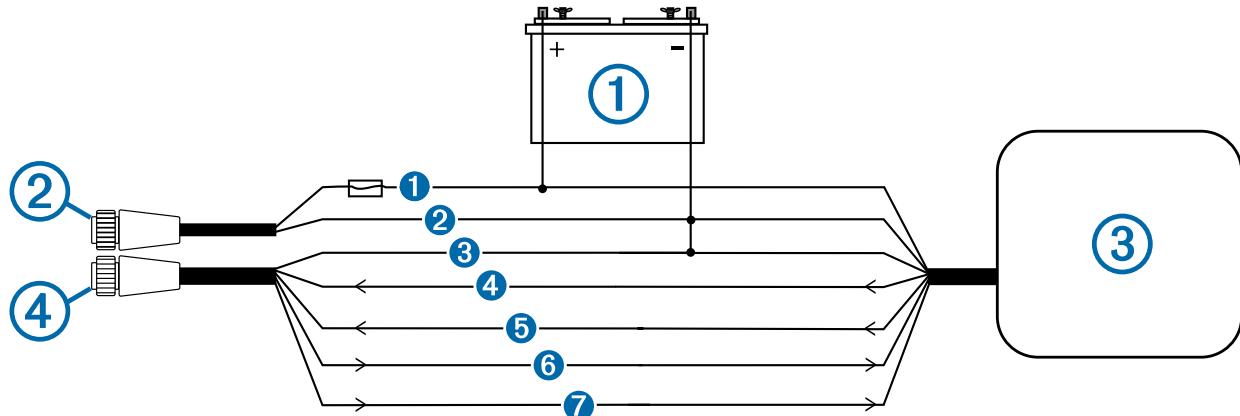

Consult the installation instructions for your NMEA 0183-compliant device to identify the output (TX) A (+) and B (-) wires and input (RX) A (+) and B (-) wires. Use 28 AWG, shielded, twisted-pair wiring for extended runs of wire. Solder all connections and seal them with heat-shrink tubing.

- For two-way communication with a NMEA 0183 device, the internal ports on the NMEA 0183 data cable are not linked. For example, if the input of the NMEA-compliant device is connected to the internal output port 1 on the data cable, you can connect the output port of your NMEA 0183-compliant device to any of the internal input ports (port 1, port 2, port 3, or port 4) on the wiring harness.
- The ground wires on the NMEA 0183 data cable and your NMEA 0183-compliant device must both be connected to ground.
- See [page 12](#) for a list of the approved NMEA 0183 sentences output by and input to your device.
- The internal NMEA 0183 ports and communication protocols are configured on the connected Garmin device. See the NMEA 0183 section or communication configuration section of the owner's manual provided with your Garmin device for more information.

Port	Wire Function	Wire Color	Pin Number
Input port 1	RX/A (+)	White	①

Lamp or Horn Connections

The device can be used with a lamp, a horn, or both, to sound or flash an alert when the chartplotter displays a message. This is optional, and the alarm wire does not need to be used in order for the device to function normally. When connecting the device to a lamp or horn, observe these considerations.

- The alarm circuit switches to a low-voltage state when the alarm sounds.

- The maximum current is 100 mA, and a relay is needed to limit the current from the chartplotter to 100 mA.
- To manually toggle visual and audible alerts, you can install single-pole, single-throw switches.

Item	Description
①	10–35 Vdc power source
②	Power cable
③	Horn
④	Lamp
⑤	NMEA 0183 cable
⑥	Relay (100 mA coil current)
⑦	Toggle switches to enable and disable lamp or horn alerts

Item	Wire Color	Wire Function
①	Red	Power
②	Black	Ground
③	Yellow	Alarm

Video Input and Output Considerations

This device allows video input from composite, component, and digital video sources, depending on the model, and video output to a monitor. When connecting video input and output sources, observe these considerations.

- The eight- and twelve-inch models have two composite-video ports labeled CVBS 1 IN, and CVBS 2 IN. The fifteen-inch models have four composite-video ports labeled CVBS 1 IN, CVBS 2 IN, CVBS 3 IN, and CVBS 4 IN.
- The fifteen-inch models have one component-video port labeled COMPONENT IN (480i/576i).

- The composite- and component-video ports use BNC connectors. You can use a BNC to RCA adapter to connect a composite-video source with RCA connectors to these ports.
- The video from sources connected to these ports is available only for display on the device or additional monitor connected to the device. Composite or component video is not shared across the Garmin Marine Network or NMEA 2000 network.
- The fifteen-inch models have one video port labeled DVI-I VIDEO IN that accepts video from digital or analog sources using a DVI-D or DVI-I cable.
 - If needed, you can use an HDMI to DVI-D converter to connect an HDMI-compatible source to this device.
 - If needed, you can use a VGA to DVI-I adapter to connect a VGA source to this port.
- You can connect a display to the DVI-I VIDEO OUT port to view a mirror image of the screen on a computer monitor or HD TV using a DVI-D or DVI-I cable.
 - If needed, you can use a DVI-D to HDMI adapter to connect to an HD TV or other HDMI-compatible display.
 - If needed, you can use a DVI-I to VGA adapter to connect to a computer monitor or other VGA-compatible display.
- Although it is recommended to use DVI cables sold by Garmin, high-quality third-party DVI cables may be used.

You should test the DVI cable by connecting the devices before routing the cable.

Card Reader Connections

Connecting to Power

WARNING

When connecting the power cable, do not remove the in-line fuse holder. To prevent the possibility of injury or product damage caused by fire or overheating, the appropriate fuse must be in place as indicated in the product specifications. In addition, connecting the power cable without the appropriate fuse in place will void the product warranty.

- 1 Route the power cable to the power source and to the device.
- 2 Connect the red wire to the positive (+) battery terminal, and connect the black wire to the negative (-) battery terminal.
- 3 Install the locking ring and o-ring on the end of the power cable.
- 4 Connect the power cable to the device by turning the locking ring clockwise.

Connecting the Card Reader to the Garmin Marine Network

The card reader is not compatible with Garmin chartplotters prior to the GPSMAP 8000 Series and GPSMAP 8500.

Connect the card reader to a Garmin device on the Garmin Marine Network using a Garmin Marine Network cable.

Data from cards inserted in the card reader is shared with all compatible devices on the Garmin Marine Network.

Updating the Device Software

The device may contain a software-update memory card. If so, follow the instructions provided with the card.

If a software update memory card is not included, go to www.garmin.com to make sure your device software is up-to-date.

- 1 If necessary, load the software update onto the memory card from your computer by following the instructions on www.garmin.com.
- 2 Turn on the chartplotter.
- 3 Insert the memory card into the card slot.
- 4 Follow the on-screen instructions.

Specifications

Physical Specifications

Device	Specification	Measurement
Eight-inch models	Dimensions (W×H×D)	107/16 × 731/64 × 417/32 in. (265 × 190 × 115 mm)
	Display size (W×H)	647/64 in. × 51/8 in. (171 × 130 mm)
	Weight	7.12 lbs (3.23 kg)
Twelve-inch models	Dimensions (W×H×D)	137/64 × 923/32 × 313/36 in. (333 × 247 × 97 mm)
	Display size (W×H)	921/32 in. × 71/4 in. (245 × 184 mm)
	Weight	10.91 lbs (4.95 kg)
Fifteen-inch models	Dimensions (W×H×D)	157/8 × 123/64 × 345/64 in. (403 × 306 × 94 mm)
	Display size (W×H)	1131/32 in. × 863/64 in. (304 × 228 mm)
	Weight	16.76 lbs (7.6 kg)

Device	Specification	Measurement
All models	Temperature range	From 5° to 131°F (from -15° to 55°C)
	Material	Die case aluminum and polycarbonate plastic

Power Specifications

Device	Specification	Measurement
All models	Input power	10–35 Vdc
	Fuse	7.5 A, 42 V fast-acting
	NMEA 2000 LEN	2
	NMEA 2000 Draw	75 mA max.
Eight-inch models	Max. power usage at 10 Vdc	28 W
	Typical current draw at 12 Vdc	1.3 A
	Max current draw at 12 Vdc	2.8 A
	Compass-safe distance	12 ¹³ / ₆₄ (310 mm)
Twelve-inch models	Max. power usage at 10 Vdc	35 W
	Typical current draw at 12 Vdc	1.6 A
	Max. current draw at 12 Vdc	3.5 A
	Compass-safe distance	18 ⁷ / ₆₄ (460 mm)
Fifteen-inch models	Max. power usage at 10 Vdc	47 W
	Typical current draw at 12 Vdc	2.5 A
	Max. current draw at 12 Vdc	4.7 A
	Compass-safe distance	18 ⁷ / ₆₄ (460 mm)

GPS 19x Antenna Specifications

Measurement	Specification
Dimensions (diameter x height)	3 ¹⁹ / ₃₂ in. × 1 ¹⁵ / ₁₆ in. (91.6 × 49.5 mm)
Weight	7.1 oz (201 g)
Temperature range	-22° to 176°F (-30° to 80°C)
Case material	Fully gasketed, high-impact plastic alloy, waterproof to IEC 60529 IPX7 standards.
Compass-safe distance	5 ⁵⁷ / ₆₄ in. (150 mm)
Power input source	9–16 Vdc
Input current	40 mA at 12 Vdc
NMEA 2000 LEN	2
NMEA 2000 draw	100 mA max

NMEA 2000 PGN Information

Type	PGN	Description
Transmit and receive	059392	ISO acknowledgment
	059904	ISO request
	060928	ISO address claim
	126208	NMEA: Command, request, and acknowledge group function
	126464	Transmit and receive PGN list group function
	126996	Product information
	129026	COG and SOG : Rapid update
	129029	GNSS position data
	129540	GNSS satellites in view
	130306	Wind data
Transmit	130312	Temperature
	127250	Vessel heading
	127258	Magnetic variance
	128259	Speed: Water referenced
	128267	Water depth

Type	PGN	Description
Receive	129025	Position: Rapid update
	129283	Cross track error
	129284	Navigation data
	129285	Navigation route and waypoint info
Receive	126992	System time
	127250	Vessel heading
	127489	Engine parameters: Dynamic
	127488	Engine parameters: Rapid update
	127493	Transmission parameters: Dynamic
	127505	Fluid level
	128259	Speed: water referenced
	128267	Water depth
	129025	Position: rapid update
	129038	AIS class A position report
	129039	AIS class B position report
	129040	AIS class B extended position report
	129539	GNSS DOPs
	129794	AIS class A static and voyage related data
	129809	AIS class B "CS" static data report, part A
	129810	AIS class B "CS" static data report, part B
	130310	Environmental parameters
	130311	Environmental parameters
	130313	Humidity
	130314	Actual pressure

Type	Sentence	Description
Receive	PGGGA	GGA: Global positioning system fix data
	PGPLL	GLL: Geographic position (latitude and longitude)
	PGPSA	GSA: GNSS DOP and active satellites
	PGPSV	GSV: GNSS satellites in view
	GPRMB	RMB: Recommended minimum navigation information
	GPRMC	RMC: Recommended minimum specific GNSS data
	GPRTE	RTE: Routes
	GPVTG	VTG: Course over ground and ground speed
	GPWPL	WPL: Waypoint location
	GPXTE	XTE: Cross track error
	PGRME	E: Estimated error
	PGRMM	M: Map datum
	PGRMZ	Z: Altitude
	SDDBT	DBT: Depth below transducer
	SDDPT	DPT: Depth
	SDMTW	MTW: Water temperature
	SDVHW	VHW: Water speed and heading
	DPT	Depth
	DBT	Depth below transducer
	MTW	Water temperature
	VHW	Water speed and heading
	WPL	Waypoint location
	DSC	Digital selective calling information
	DSE	Expanded digital selective calling
	HDG	Heading, deviation, and variation
	HDM	Heading, magnetic
	MWD	Wind direction and speed
	MDA	Meteorological composite
	MWV	Wind speed and angle
	VDM	AIS VHF data-link message

NMEA 0183 Information

Type	Sentence	Description
Transmit	GPAPB	APB: Heading or track controller (autopilot) sentence "B"
	GPBOD	BOD: Bearing (origin to destination)
	GPBWC	BWC: Bearing and distance to waypoint
