1 General

1.1 Approvals and Dates

	Approval Date
W. J. Jones	

1.2 Change Record

Date	Version	Author	Reason For Change Issue
20/08/2008	01.00	PFW	New Document.
23/10/2008	01.01	PFW	Additional details added.
04/03/2009	01.02	PFW	Updated PEM Mechanical drawing.
01/02/2010	01.03	PFW	Updated FCC Information

1.3 Acronyms

Term	Definition
MPE	Maximum Permissible Exposure
OEM	Original Equipment Manufacturer
PCIe	PCI Express
PCI SIG	PCI Special Interest Group
PEM	PCI Express Mini
SIM	Subscriber Identity Module
TDD	Time Division Duplex
UMTS	Universal Mobile Telephone System
USB	Universal Serial Bus

1.4 External References

Ref ()	Number	Title
1	FCC Part 15	Radio Frequency Devices
2	FCC Part 27	Miscellaneous Wireless Communications Service
3	FCC Part 90	Private Land Mobile Radio Services
4	PCI SIG	PCI Express Base Specification Revision 2.0
5	PCI SIG	Card Electromechanical Specification Revision 2.0
6	-	PEM + Adapter Thermal Specification Revision 1.0

Note: Where a reference is undated, the latest version applies unless a specific revision is defined.

2 Introduction

This document describes the method of integrating the IPWireless PCI Express Mini module into an OEM product.

2.1 Scope of Document

This document applies to the IPWireless PCI Express Mini module only.

2.2 Overview of Module

The IPWireless PCI Express Mini module provides a complete UMTS TDD wireless modem solution and only requires to be inserted in a PCI Express Mini compliant interface and connection of external antennas. The module is designed to minimise the time and resource required to integrate.

3 Module Connections

3.1 PCI Express Mini Interface (J1)

The IPWireless PCI Express Mini module is provided with a 52 pin edge connector for connection to the external application. This connection supports the following interface types and these are described below. The pinout is shown in Annex 1.

3.1.1 Universal Serial Bus

The PCI Express edge connector provides a USB 2.0 interface, this interface supports low speed (1.5Mbps), full speed (12Mbps) and High speed (480Mbps) operation.

3.1.2 SIM Interface

The PCI Express edge connector provides a 4 line SIM interface to allow use with Subscriber Identity Modules if required, this interface supports both 1.8V and 3.0V SIM's. The SIM interface does not provide ESD protection and this should be provided by the host device.

3.2 Media Independent Interface (J4)

The IPWireless PCI Express Mini module also provides a Media Independent Interface, this is a separate interface and is used only with the IPWireless PEM Adapter Boards.

Figure 1: MII Interface J4

3.3 RF Connections

The IPWireless PCI Express Mini module provides two RF connections for external antennas. The main port must be connected, the diversity port may or may not be connected depending upon application. The connector type is the Hirose U.FL series.

Figure 2: RF Connections

3.4 DC Power

The module requires a DC supply of between 3.0V to 3.6VDC with the nominal voltage being 3.3VDC, maximum input current is 950mA at 3.3VDC. DC power is applied to the module via the PCI Express Mini edge connector.

4 Mechanical

The IPWireless PCI Express Mini module is designed to be installed in a PCI Express compliant slot capable of holding an F1 full size mini card.

Figure 3: PEM Module

4.1 Thermal Management

The PCI Express Mini module integration shall be in accordance with the PCISIG thermal requirements.

5 Regulatory Information

5.1 Compliance with FCC Rules and Regulations

The IPWireless PCI Express Mini module is certified against FCC Parts 27 & 90 for operation in the 698-798MHz frequency allocation. The module is certified under FCC ID: PKTPEMAEX and is only certified for use with external antennas, the maximum antenna gain allowed is 8.6Bi. Please refer to the FCC Grant of Certification for this device.

If the FCC ID label is not visible from outside of the host device, then an additional label is required on the outside of the host device stating 'Contains FCC ID: PKTPEMAEX'

IMPORTANT: Manufacturers of devices containing the IPWireless PCI Express Mini module are advised to.

1. Clarify any regulatory questions, particularly if the host device contains other radio transceivers.
2. Have their final product tested and approved for FCC compliance.
3. Include instructions with the final product regarding meeting RF Exposure requirements of the FCC rules.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Caution: Changes or modifications not covered in this document must be approved in writing by the IPWireless. Changes or modifications made without written approval may void the user's authority to operate this equipment.

5.2 Exposure to Radio Frequency Signals

To comply with the FCC RF exposure rules, the UE PCI Express Mini module has been evaluated against the Maximum Permissible Exposure (MPE) limits defined in Section 1.1310 of the FCC rules for the uncontrolled environment. During normal operation, all persons should maintain a distance of at least 20cm from the antenna to ensure compliance with the MPE limits.

If after module integration, the user will be less than 20cm from the antennas additional RF exposure assessment will be required.

6 Annex 1: PCI Express Mini Edge Connector Pinout

Pin	Name	Pin	Name
51	Reserved	52	+3.3Vaux
