

GL-1 Injector

Automatic Lubrication System

Graco's captured seals and improved poppet design are the best in the business!

- Test results show the difference: GL-1 injectors showed no seal leakage, bypass or reset failures at 360,000 cycles
- This performance leaves the competition in the dust

PROVEN QUALITY. LEADING TECHNOLOGY.

Precision-honed Components for Reliable Operation in the Harshest Environments

System Setup Tips

- Run branches off main line and “Tee Out” to banks of injectors instead of in-series
- Locate injectors as close to bearings as possible to minimize line length to bearing to enable max pressure to reach injectors
- Place pressure switch beyond last injector
- Use large diameter tubing (1/4 in.) to lessen restrictions
- Make sure you have enough pressure to achieve normal 2,500 psi (172 bar)
- Make sure you vent down to the minimum reset pressure of your smallest injector

To adjust:

1. Loosen the lock nut
2. Rotate 5/8 inch output adjustment nut clockwise to decrease grease output—decrease the travel of the piston
3. Rotate 5/8 inch output adjustment nut counter-clockwise to increase grease output—increase the travel piston
