WARRANTY AND RETURNS

WARRANTY POLICY FOR LAVINA® X MACHINES

A warranty card must be submitted to Superabrasive within 30 days of purchase in order for the foregoing warranty to apply.

You can either mail a hard copy of the warranty card or submit it electronically - see page 2.

Superabrasive warrants, from the time of delivery and receipt by the original customer, new and unused products sold by Superabrasive or Superabrasive-appointed distributors or dealers. Goods shall be free from defects in materials and workmanship. Superabrasive or a Superabrasive-appointed repair facility shall either replace or repair any defects in the Goods resulting from faulty design, materials, or workmanship. Products repaired or replaced during the warranty period shall be covered by the foregoing warranty for the remainder of the original warranty period, or ninety (90) days from date of the repair or shipment of the replacement, whichever is longer. Spare parts for repair will be either new or equivalent to new.

Warranty period shall be 2 years from the time of delivery and receipt by the original customer, or 600 operating hours on the machine - whichever occurs first. Superabrasive will cover the shipping charges for the transportation of the machine to Superabrasive (or an approved repair facility) and back to the customer (within the 48 contiguous States) in the event that the damage occurs and is reported within 200 operating hours. Shipping charges, if covered by Superabrasive, must be agreed upon in advance and approved by Superabrasive. Thereafter, the customer will have to cover the shipping charges to Superabrasive and back. Superabrasive will not warranty Goods after a period of 2 years from the time of delivery and receipt by the original customer, or 600 operating hours on the machine - whichever occurs first.

Superabrasive shall not be liable for any defects that are caused by circumstances that occur after the Goods have been delivered and whilst the Goods are in the possession of the purchaser. Furthermore, the warranty does not include normal wear and tear or deterioration. Wear parts are not warranted. Superabrasive is not liable for defects arising out of use of non-OEM parts.

The Warranty is void if the purchaser has not followed the maintenance plan stipulated by the machine's manual and warranty card. The warranty is void if the purchaser repairs said Goods himself, or if repairs are conducted by a repair facility that is not approved by Superabrasive. Superabrasive's liability does not cover defects which are caused by faulty maintenance, incorrect operation, faulty repair by the purchaser, or by alterations conducted without Superabrasive's prior written consent. The same applies to any alterations of the Goods or services performed by another party other than Superabrasive, a Superabrasive-appointed distributor, or a Superabrasive-approved repair facility. The warranty is not applicable on a defect that arises due to tools or parts that are not original to Superabrasive. Replaced defective parts shall be placed at Superabrasive's disposal and shall become property of Superabrasive. If such defective parts are replaced within the warranty period, the shipping charges will be covered by Superabrasive. In warranty complaint cases, when no defects are found for which Superabrasive is liable, Superabrasive shall be entitled to compensation for the labor, material cost, and shipping charges, incurred by Superabrasive as a result of the complaint.

The warranty herein is non-transferable, and only applies to the original owner or purchaser of the machine.

RETURN POLICY FOR LAVINA® X MACHINES

The LAVINA® X machines may be returned, subject to the following terms:

In no case, a machine is to be returned to Superabrasive Inc. for credit or repair without prior authorization. Please contact Superabrasive Inc. or your local distributor for an authorization and issuance of a return authorization number. This number along with the serial number of the machine must be included on all packages and correspondence. Machines returned without prior authorization will remain property of the sender and Superabrasive Inc. will not be responsible for them. No machines will be credited after 90 days from the date of invoice.

All returns must be shipped freight prepaid. Returned machines may be exchanged for other equipment or parts of equal dollar value. If machines are not exchanged, they are subject to a fifteen percent (15%) restocking fee.

1. GENERAL INFORMATION

This owner's manual is intended for the operator of the Lavina® X machine, the servicing technician as well as anyone involved with operating or servicing the machine. We recommend that you read the instructions very carefully and follow them strictly. The manual includes information about assembling, using, handling, adjusting and maintaining your Lavina® X floor grinding and polishing machine.

MANUFACTURER

Superabrasive was founded in 1987, as a manufacturer of high quality diamond tools for the stone and concrete industry. Today, Superabrasive is one of the world's leading companies in the production of diamond tools and floor grinding machinery. At Superabrasive, we strive to deliver the very best solutions to our customers, and enable them to work more efficiently.

GENERAL DESCRIPTION

The Lavina® X machine is intended for grinding, polishing and buffing concrete, marble, granite, limestone, and terrazzo surfaces with diamond tools. Additionally, the machine could be used for grinding wood floor surfaces.

The Lavina® X machine is a three-disc machine, which can be used wet or dry.

For best results, use only tools manufactured or recommended by Superabrasive and its distributors.

⚠ WARNING The Lavina® X machine is manufactured and fitted for the above-mentioned applications only! Every other use may possess risks to the persons involved.

MACHINE CHARACTERISTICS

The Lavina® X machine is made of two main component sections:

MAIN DESIGN

The two main component sections are the carriage and main head.

The **handle** (Fig.1.2) on the frame is adjustable in height and allows the operator to work in a correct and safe working posture

The **halogen spotlight** (Fig.1.2) enables the operator to work in darker areas.

⚠ WARNING Lighting system does not replace adequate overhead lighting.

The **controls** are positioned on top of the electrical box (fig.1.3)

The **electrical box** (fig.1.3) contains the electric switching devices and the inverter.

The **main feeding cable** is connected with a plug and socket on top. The motor feeding cable is plugged into the socket located on the bottom of the box.

The **tank** is on the opposite side of the frame, so that the weight of the water has no influence on the operation of the machine. The frame weight, on the other hand, is fully absorbed by the driving wheels. An electric pump sprays the water through a front sprayer or internal.

The **motor** is mounted on the base plate and drives the three heads with a belt system.

The **planetary head** is driven by a simplex roller chain .

ENVIRONMENTAL CONDITIONS

The temperature range for operating the Lavina® X machine outdoors is between 41°F and 86°F or 5°C and 30°C. Never use the Lavina® X machine during rain or snow when working outdoors. When working indoors, always operate the machine in well-ventilated areas.

ELECTRICAL CONNECTION

The voltage (Volt) and current (Ampere) are displayed on a label on the electrical control box to avoid any incorrect connection. Refer to these before connecting the power. To avoid electrical shocks, make sure the ground power supply is functioning properly.

Figure 1.1

Figure 1.2

Figure 1.3

VACUUM CONNECTION

A connection for a vacuum dust extractor is located on the carriage. The Lavina® X machine does not include a vacuum dust extractor. The customer must purchase the vacuum dust extractor separately. The hose of the vacuum extractor must be Ø 50 mm and can be glided over the pipe. The vacuum dust extractor must be adapted for floor grinders and have a minimum air displacement of 320m³/h with a negative vacuum of 21 kPa.

TECHNICAL DATA

Lavina® 25-X		
Voltage/Hz	1or 3 ph x 200-240V 50-60Hz	
Amperage	Max 30 Amps	
Power	7,5 kW	10 HP
Tool holder rpm	300-1100 rpm

Weight	252 kg	555 lbs
Grinding pressure	141 kg	310 lbs
Additional weight	max 2x 29 kg	max 2x 64 lbs
Application	wet and dry	
Vacuum hose port	Yes	
Water tank capacity	20 l	5.2 gal
Water feed	with pump (peripheral and front)	
Cable length	17.4 m	57 ft
Machine LxWxH	1880x690x1180 mm	74x27.2x46.5"
Packing LxWxH Crate 1	1570x730x1100 mm	61.8x28.7x43.3"

VIBRATIONS

The vibrations of the machine are within the limits of directives and harmonized standards from the European Union when the Lavina® X is operated with the recommended tools and in normal conditions.

NOISE EMISSIONS

The noise emissions are within the limits of directives and harmonized standards from the European Union when the Lavina® X is operated with the recommended tools and in normal conditions. However, the operator must wear ear protectors.

LABEL DATA

The data on the label provides the correct Voltage and kW (needed for operational purposes); Weight (needed for transportation purposes); production year and serial number (needed for maintenance purposes).

CUSTOMER SERVICE

For customer assistance and technical support call your local distributor or call Superabrasive Inc. at 1-800-987-8403 or visit us at: www.superabrasive.com, where you can download a copy of this manual.

2. SAFETY INSTRUCTIONS**Recommended Use**

The Lavina® X machine is designed and manufactured to grind and polish concrete, terrazzo, and natural stone floors. It can be used for renovation as well as for polishing. The machine is designed for dry or wet use. When using it dry, use a vacuum of appropriate size. For more information, please refer to the chapter on handling the vacuum connection.

Prohibited Use**The machine MUST NOT be used:**

- For applications apart from the ones stated in the general description chapter.
- For non-suitable materials.
- In environments which:
 - Possess risks of explosion,
 - Possess high concentration of powders or oil substances in the

air,

- Possess risks of fire
- Feature inclement conditions,
- Possess electromagnetic radiation.

PREPARATION FOR WORK**Make sure that:**

- You have closed the work area, so that no person unfamiliar with operating the machine can enter the area.
- The tool plate and tools are adjusted to the machine properly.
- There are no missing parts of the machine
 - The machine is in upright working position.
 - The protection devices are working properly.
 - The electrical cable is free to move and follow the machine easily.

- In order to keep the electrical cable from being damaged, no vehicle should cross the zone where electrical cables are situated.

PROTECTION DEVICES**WARNING**

The machine is equipped with several protection devices including the following:

- An emergency stop button
- A protection skirt and a hood for protecting the tool plates. These devices protect the operator and/or others persons from potential injuries. Do not remove them. Before using the machine, please ensure that all protection devices are mounted and function properly. The Security plate prevents the QuickChange pads to from loosening during work

Arrest Functions**WARNING**

Methods of arresting of the machine are following:

- Button to stop the motor (category 1)
- Emergency button (category 1)

Safe Use**WARNING**

The Lavina® X is designed to reduce risks correlated with its use.

However, it is not possible to fully eliminate the risks of an accident with the machine. An unskilled or uninstructed operator may cause correlated residual risks. Such risks are:

- Position Risks: due to operator's incorrect working position
- Entanglement Risks: due to wearing inappropriate working clothes
- Training Risks: due to lack of operational training.

NOTE: In order to reduce any consequences of the above-mentioned risks, we advise that machine operators follow the instructions in the manual at all times.

RESIDUAL RISKS**WARNING**

During the normal operating and maintenance cycles, the operator is exposed to some residual risks, which cannot be eliminated due to the nature of the operations.

BEFORE YOU BEGIN**WARNING**

- Working area must be clear from any debris or objects.
- A first-time operator must always read the manual and pay attention to all safety instructions.
- All electric connections and cables must be inspected for potential damages.
- Ground wire system of the power supply must be also inspected.
- Perform general daily inspections of the machine and inspect the machine before each use.
- Always inspect the safety devices: Mount the Security plate for the QuickChange pads.
- The emergency break must be clear and working
- The tool protector must be working
- The machine must be clean
- Never operate the machine in the rain!
- Confirm that there are no missing parts especially after

transportation, repair or maintenance.

- Before filling the water tank with water make sure the machine is not working and the main switch is turned off.
- Before turning on the machine make sure that the base is placed on the floor, the machine MUST NOT be in an upright position when turned on!

Operating Machine**WARNING**

When operating the Lavina® X, make certain that there is no one but you around the machine.

Never leave the machine unattended while working.

The electrical cable must move freely and must be damage-free.

The water hose must move freely and must be damage-free. Check to make sure the floor you are preparing to work on is even. If the floor is uneven, it may damage the machine.

AFTER WORK IS COMPLETED**WARNING**

- Clean the machine and its surroundings properly
- Empty and clean the water tank
- Unplug the machine and wind up the electrical cable
- Store the machine in a safe place

THE WORK AREA**WARNING**

- Ensure that people or vehicles do not enter the work area.
- Clear any cables or hoses from the work area.
- Always check the floor for debris.

PERSONAL PROTECTIVE EQUIPMENT (PPE)**WARNING**

- Always wear safety shoes when working with the machine.
- Always wear ear protectors when working with the machine.
- All personnel in the immediate work area must wear safety glasses with side shields.
- Always wear safety gloves when changing the tools.
- Always wear clothes suitable for the work environment.

OPERATOR**WARNING**

The operator must know the machine's work environment. Only one operator can work with the machine at a time. The operator must be properly trained and well-instructed prior operating the machine.

- The operator must understand all the instructions in this manual.
- The operator must understand and be able to interpret all the drawings and designs in manual.
- The operator must know all sanitation and safety regulations pertaining to the operation of the machine
- The operator must have floor grinding experience.
- The operator must know what to do in case of emergency.
- The operator must have adequate technical knowledge and preparation.

3. HANDLING AND TRANSPORTATION

SPLITTING THE CARRIAGE FROM THE MAIN HEAD

Figure 3.1

Figure 3.2

Figure 3.3

Figure 3.4

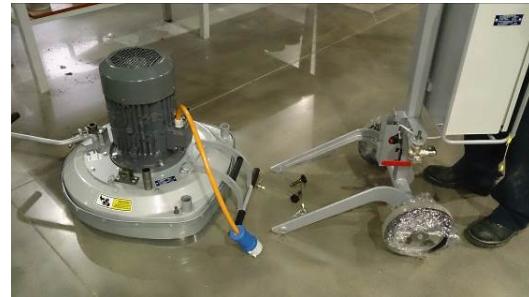

Figure 3.5

Unplug the motor cable plug from the control box and disconnect the water hose from the main head by pulling it out (Fig.3.1) (Fig.3.2). Wind the electrical cable on the carriage. Release the pin sets attaching the head to the carriage (Fig.3.4). Pull out the vacuum hoses (Fig.3.3), and dismount the head from the carriage (Fig.3.5).

The head of the LAVINA® X machine has one bar for support, which can be used as a handle for easier transportation.

LIFT THE MACHINE FROM WORKING TO TOOL MOUNTING POSITION

Push the lock the handle down and swivel it to the front (Fig.3.6.1). Pull the handle up and ensure the head is a stable upright position for mounting/dismounting the tool. Ensure that the water tank is empty before flipping the machine. Pull the head in upright position (Fig.3.6.2).

LIFTING

Lifting the machine by crane is possible with the eye bolt, which is mounted on the carriage (see Fig. 3.7). The eye bolt and machine construction is rated only for the weight of the machine. Do not lift any other loads on the machine. Always use hoisting equipment rated for 300 kg (660 lbs) or greater.

Figure 3.7

Figure 3.6.1

Figure 3.6.2

ADJUSTING THE HANDLE

The Handle on the frame is adjustable in height and allows the operator to work in a correct and safe posture. To adjust, simply pull the locking pin (Fig.3.8.1) and move the frame. A loaded spring will return the pin and lock the handle in any of several positions (Fig.3.8.2). Choose the vertical position to easily move the machine.

Figure 3.8.1

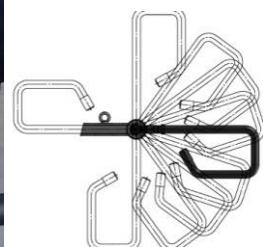

Figure 3.8.2

STORAGE

Always store and transport the Lavina® X machine in a dry place. Never transport the Lavina® X machine unprotected; it may be damaged if transported unprotected during rain or snow.

Figure 3.9

Figure 3.10

Figure 3.11

⚠ WARNING

When, during storage of the machine, the temperature may fall to 32F (or 0° C) or less, water should be emptied from the system using the following steps:

- Pull out the hose from the tank (Fig.3.9)
- Using compressed air, blow out excess water from the system at each position of the valve (Fig. 3.10, Fig. 3.11).

4. OPERATION**PRELIMINARY CONTROLS**

Inspect the working area as explained in the safety instructions. For wet use, fill the water tank with the electrical cable disconnected. Connect the vacuum extractor and ensure that the vacuum hose is clear and will easily follow the machine. Plug in the machine and make sure that the power cord is free to follow the working direction of the Lavina® X machine.

Figure 4.1

Figure 4.2

Figure 4.3

WATER FLOW CONTROL UNIT

The operator can direct water to be sprayed in the front (Fig.4.1) by positioning the lever in the horizontal position; the water will spray under the cover of the machine when the lever is in the vertical position (Fig.4.2). The flow regulating valve located on the tank (Fig.4.3) controls the water flow to the working area – in front of the machine or under the main head cover of the machine.

ADJUSTING AND MOUNTING TOOLS

The Holder A41 in LAVINA® X can work with either 3 or 6 buffers, which will alter its range of motion. You can make the change after dismounting the holder as per the instructions in TROUBLESHOOTING.

In the Lavina 25-X-E, the holder is initially mounted with 3 buffers.

Mount the tools only after ensuring that there is enough diamond bond material left. Be sure that the plates are always clean before mounting. **WARNING:** Always secure the "QuickChange" pads with the security plate (Fig.4.4), lock with the tool holder key (Fig.5.3). Diamond tools with Velcro are attached to three 9-inch foam plates (Fig.4.5). The foam plates are mounted on the key lock (butterfly). Always use the tool holder key (Fig.5.3).

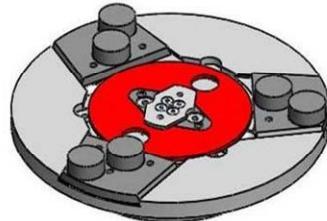

Figure 4.4

Figure 4.5

THE CONTROL BOARD

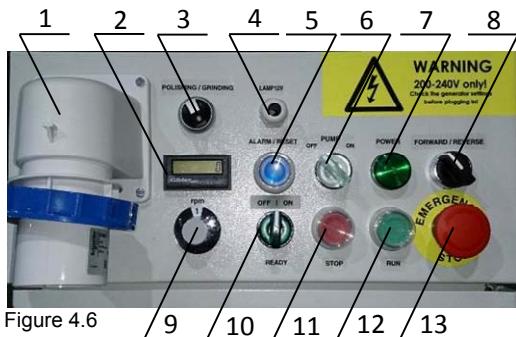

Figure 4.6

1. **Power cable plug**
2. **Digital Tachometer** Indicates the revolutions per minute of the grinding plates (not the revolutions per minute of the entire head)
3. **Polishing/Grinding switch** In "grinding" position, the operator has the ability to control the rpm from 300 to 700 rpm. In "Polishing" position, the range increases to 300 to 1100 rpm.
4. **Lamp cable gland**
5. **ALARM/Reset button** resets the alarm of the inverter. **Button** lights blue when the inverter goes into alarm mode
6. **Water pump switch** Lights orange when the water pump is running.
7. **Power led** lights green when the power is on
8. **Forward/Reverse switch** Select forward for clockwise rotation of the grinding plates or reverse for counterclockwise rotation of the grinding plates

(Recommended configuration). The preferred operating direction should be when the switch is in the forward position. The proper direction of rotation of the motor (counterclockwise) is indicated by an arrow on its cover.

9. **Potentiometer** controls the RPM of the grinding plates on a range of 300-1100 rpm
10. **READY OFF / ON switch**. Switching to ON puts the machine in standby mode. The switch lights to indicate this. Switching to OFF takes the machine out of standby. The light extinguishes to indicate this. The switch returns to its starting position after being released.
11. **STOP button** stops the motor
12. **RUN button** starts the motor
13. **Emergency button** stops the motor in case of emergency. The machine will not run without this being released

STARTING THE MACHINE

First, follow the directions in the chapter on Safety Devices and Safety Instructions. Next, release the emergency stop (12), turn the **Ready** switch (Fig. 4.6 9) to the ON position to put the machine in standby mode. Check the potentiometer (8), and ensure that it is set to the working speed. If working wet, add water to the floor surface. If working dry instead switch on the vacuum unit. Finally, hold the machine firmly and push the RUN button (11).

OPERATING THE MACHINE

Guide the machine in straight lines across the floor, slightly overlapping the previously completed surface with each new line. Work at a constant speed, allowing the tools time to work at a speed appropriate for the tools' grit size. Avoid vibrations. Do not stop the machine while tools are still running as they will mark the surface of the floor. When working wet, select the destination of the water feed with the water tap (fig. 4.2-1) and periodically run the pump (fig. 4.10-11) to release water onto the floor surface. Starting the pump is possible only if the machine motor is on. When working dry, check the floor surface periodically for dust accumulation. Check regularly to see if your vacuum works properly

STOPPING THE MACHINE

The stopping of the machine must be done gradually until the motor stops. Do not stop moving the machine before the motor comes to rest, as the tools could damage the surface.

To stop the machine:

1. Push the STOP button (10).
2. Turn the OFF/ON (9) switch in position OFF, this will cut the voltage to the inverter and the green light will turn off.

While working do not turn off directly from the READY switch or from the Emergency Stop, but follow the steps above.

⚠ WARNING

Use the Emergency button (12) only in emergency.

Remember not to hold the machine in one spot before turning off the motor.

ALARM

The Reset button (4) will light when the inverter goes into alarm mode. The most common failure is motor overload. To exit alarm mode, push the reset button (4). A code on the inverter's display indicates the type of the alarm. **When the same alarm is repeated several times, it is imperative to find and eliminate the cause of it, less the inverter become damaged.**

5. TOOLS AND ACCESSORIES

Figure 5.1

WEIGHTS

Superabrasive offers additional weights used to increase the productivity of the machine (Fig.5.1). Each additional weight weighs about 64 lbs or 29kg. Each individual application, type and condition of surface, power capacity of the outlet, etc. will determine the number of weights you can use without tripping a breaker. The weights stack onto three posts fixed around the outer bowl (Fig.5.2). Additional weights will largely depend on the tools; it is not always possible to add weights. Some tools work too aggressively and will cause the machine to stop. The weight can be ordered with item number A08.00.00.00

Figure 5.2

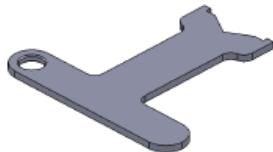

Figure 5.3

TOOL HOLDER KEY

The tool holder key (Fig.5.3) is used for adjusting, mounting and dismounting of the foam plates. Always use the key to properly secure foam plates.
Item number is A03.00.00.00

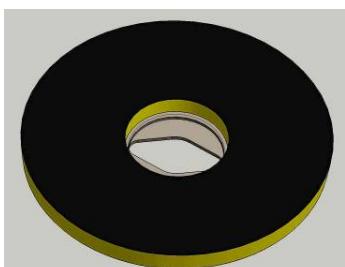

Figure 5.4

FOAM PLATE

Diamond tools with Velcro are mounted on the foam plate 9"(Fig.5.4). The foam plate is mounted on the "QuickChange" System.
Item number is LV-9-FP-S

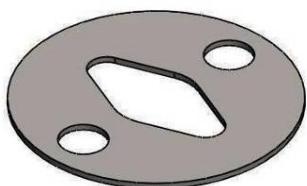

Figure 5.5

SECURITY PLATE FOR QUICKCHANGE PADS

Plate (Fig.5.5) used to secure the "QuickChange" pads.
Item number is A38.00.01

6. POPULAR TOOLS

QuickChange System and Tooling feature extremely fast and convenient tool changes, and a long tool life, providing for great long-term cost savings. The QuickChange pads are produced in four different bonds for super hard, hard, medium and soft concrete, in a variety of grit sizes. They are offered with 1 or 2 buttons or rectangular segments, which allows you to customize the aggressiveness of the cut.

Calibra grinding discs: our popular ceramic bond discs are designed for the removal of difficult scratches and they save you valuable time by eliminating the need for multiple passes with metal tools. They can be used wet or dry, and are best for hard concrete applications. They are 3-inch, with included Velcro back attachment.

NATO® polishing discs feature a special resin formula designed for both wet and dry applications and a unique design with wide channels allowing for work on a cleaner surface and ensuring a quality polish. Available in 3 and 4 in sizes. They are with Velcro attachment.

V-HARR® Premium Polishing Pads are designed for mechanically polishing and restoring concrete; also ideal for terrazzo and hard stone floors. V-HARR® pads are offered in a wide variety of diameters and grit sizes to accommodate many applications. Dry use is strongly recommended.

Shine Pro® are high quality diamond-integrated pads for floor maintenance. Available in a variety of sizes, they are great for daily use. When used wet, they require only water (no wax or chemicals needed), making them a very environmentally-friendly solution for maintaining floors.

Use Only Superabrasive's Recommended Tools. For More Tooling Options, Visit www.superabrasive.com

7. MAINTENANCE AND INSPECTION

CLEANING

Keep your machine clean. Cleaning the machine on a regular basis will help detect and solve potential problems before they can cause damage to the machine. Most importantly, check and clean the tool plate connections, power cords, plugs, vacuum hoses, and water tank.

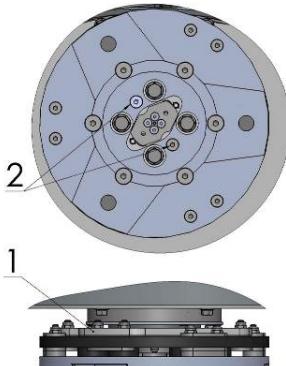

Figure 7.1

"QuickChange" should also be cleaned.

CHECK DAILY

After operating the Lavina® X machine, the operator should conduct a visual inspection of the machine. Any defect should be solved immediately. Pay attention to power cords, plugs, vacuum hoses, loose bolts or screws.

Tool holders: Buffers and elastic element are consumables and must be visually checked on a daily basis and replaced if necessary. Make sure the flanges or discs are securely locked in place. The key lock holders (butterflies) should also be checked.

Check the rubber buffers and make sure the holders are secure. The flange holding the buffers (Fig.7.1-1) has to be firmly secured to the unit. If there is a gap seen here, that means the screws securing the holder are loose. The screws have to be tightened immediately to safely operate the machine. Working with loose screws could cause serious damage to the machine. The tightening force of the screws has to be 22-25N.m (16-18ft.lbf).

It is very important to regularly check the screws that secure the "QuickChange" holder to the safety part (Fig.7.1- 2), so that the holder will not fly away if the buffers get damaged. The

Figure 7.2

Figure 7.3

CHECK EVERY 200 WORKING HOURS

Every 200 working hours, the operator should inspect all parts of the machine carefully. Most importantly, inspect and clean the tool plate connections, power cord plugs, vacuum hoses and water tank/filter. Also, check the water flow of the pump. Check the guard assembly. Ensure the wheels are clean and rotate properly. Inspect the control buttons. If there are defective control parts, they should be replaced immediately. Replace any worn vacuum or water hoses.

Open the service cover on the motor base (Fig 7.2) (Fig 7.3) to check the planetary chain. Lubricate the chain with chain lubricant and correct the sag if needed. (For sagging correction see TROUBLESHOOTING 8.4)

Dismount the tool holders (See TROUBLESHOOTING) and replace any parts (elastic element, buffers, sealer caps, "O" rings) showing any damage.

CHECK EVERY 400 WORKING HOURS

In addition to checks made every 200 working hours, replace sealer and V-rings as described in chapter "TROUBLESHOOTING - DISMOUNTING TOOL HOLDERS TO CHANGING V-RINGS AND FELT-RINGS".

VACUUM

As stated previously, frequently check hoses and other parts for clogging.

WATER LEAKS

Leaking parts should be replaced immediately because the water could damage your machine.

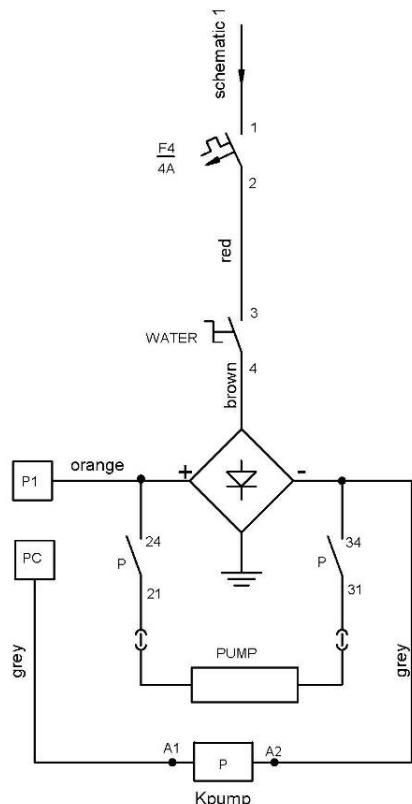

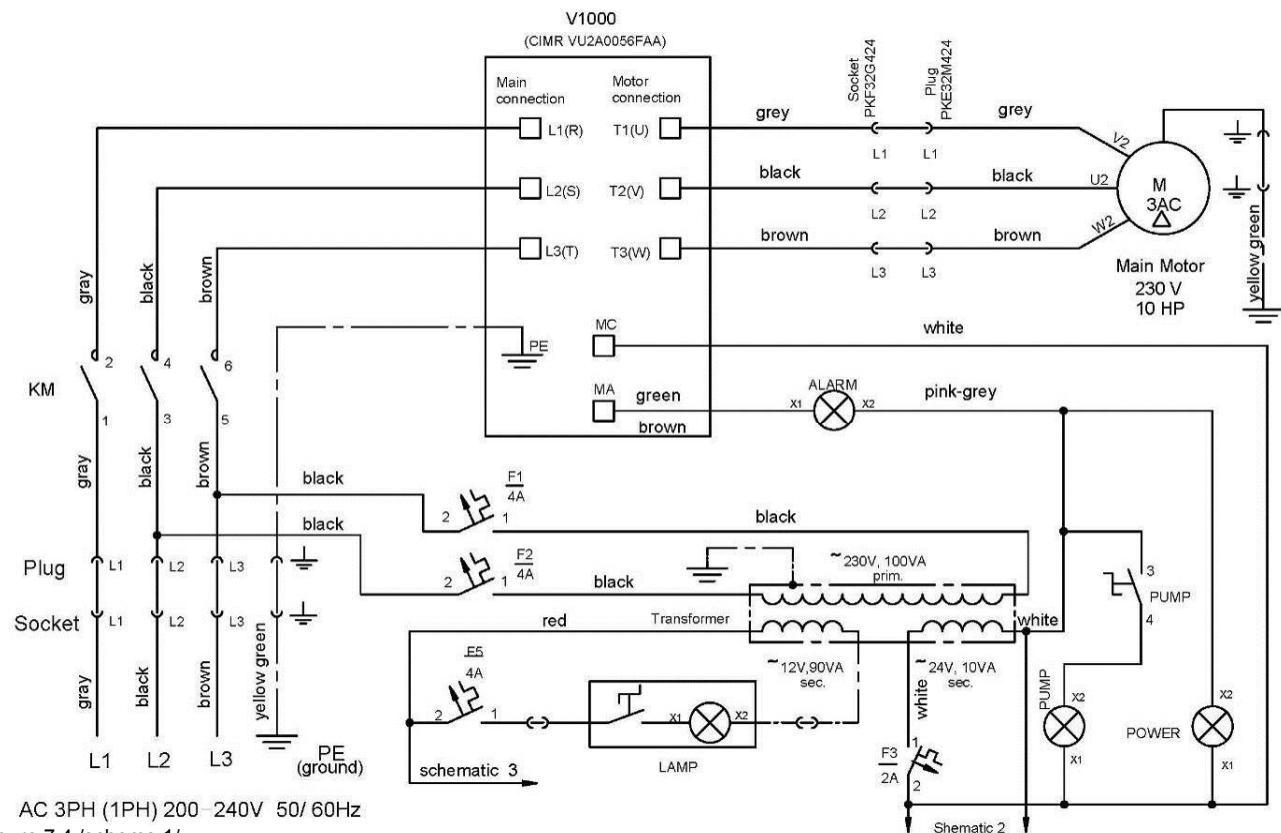

MECHANICAL PARTS

Parts such as the belts, seal rings, cap rings, spiders, buffers and guard assembly are subject to wear and must be replaced as needed.

ELECTRICAL SYSTEM

Dust should not enter the control box, as it will destroy the controls. Remove (blow out) any dust present.

200-240 Volt

LAVINA® 25-X ELECTRICAL SCHEMES YASKAWA CONNECTION MAIN CIRCUIT TERMINALS

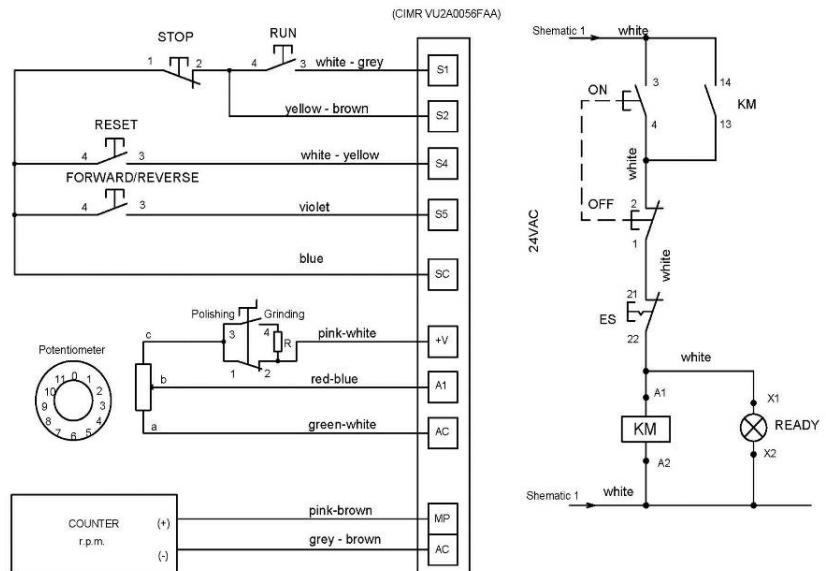

Figure 7.7

8. TROUBLESHOOTING

INDEX OF PROBLEMS AND SOLUTIONS

8.1 REPLACING POWER CORD AND PLUGS

When replacing the power cord or plugs, always use cords and plugs with the same specifications as the original ones. Do not use lower quality or different types of cords or plugs.

In addition, consider the distance between the appliance and the electrical source. The greater the distance, the greater the resistance and the less current that will be available at the other end. This will cause a voltage drop and the inverter will switch into alarm mode. This will also happen if several machines are working on the same line or the generator is not rated for the power needed. In general, our standard power cable can be doubled in length; longer lengths require replacing all the cables with cables of a larger gauge rate to account for the length and amperage.

8.2 DISMOUNTING AND MOUNTING TOOL HOLDER TO CHANGE V-RINGS AND FELT-RINGS

Figure 8.2.1

Figure 8.2.2

Figure 8.2.3

Figure 8.2.4

Figure 8.2.5

Figure 8.2.6

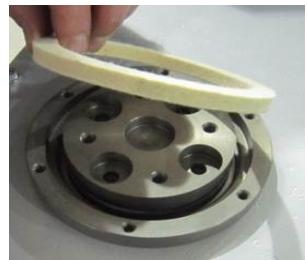

Figure 8.2.7

Figure 8.2.8

To check or replace the buffers and the elastic elements, the tool holders have to be dismounted.

You will need a 13mm deep metric socket with an outside diameter of no more than 3/4in to unscrew the four bolts (Fig.8.2.1) and remove the holder (Fig.8.2.2). When the tool holder is dismounted, you can change the sealers (V-Ring and Felt-Ring).

By loosening four Hex cap flange bolts (Fig.8.2.3) the adaptor comes loose. Unscrew the six screws of the cap (Fig.8.2.4) holding the felt-ring. Take out the Felt-Ring, adaptor and V-Ring.

Mount the V-Ring with the smallest lip of the V to the inside (Fig.8.2.5) - simply push the V-Ring so the top is on the same level as the pulley top (Fig.8.2.6). Then take the adaptor and push the V-Ring down with the adaptor (Fig.8.2.7). The lowest lip of the V-Ring should only barely touch its gliding surface. Mount the adaptor and the Felt-Ring on top (Fig.8.2.7). Close the sealers with the cap (Fig.8.2.8) and screw the bolts. Always use the original bolts. Do not push the V-ring down with fingers.

8.3 DISASSEMBLING AND MOUNTING TOOL HOLDER TO CHANGE BUFFERS AND ELASTIC ELEMENT

When the TOOL HOLDER is disassembled you can change defective parts – elastic element, buffers, etc.

Lift the locking pin (Fig.8.3.1) to dismount the retaining washer (Fig.8.3.2). Take out the screws on the buffers and the nuts of the elastic element (Fig.8.3.3;Fig.8.3.4). Remove the elastic element from the QC plate (Fig.8.3.5). While the holder is dismounted (Fig.8.3.6;Fig.8.3.7), clean the parts and replace any defective ones with new ones. Assemble the holder with new buffers, new screws, and new elastic element. Replace the retaining washer (Fig.8.3.8) and push the locking pin (Fig.8.3.9). This will prevent the washer from falling while mounting the holder on the machine.

Figure 8.3.1

Figure 8.3.2

Figure 8.3.3

Figure 8.3.4

Figure 8.3.5

Figure 8.3.6

Figure 8.3.7

Figure 8.3.8

Figure 8.3.9

Make sure the four bolts holding the adaptor (Fig.8.3.12) are reliably tightened. Mount the holder on the machine using the same socket as in 8.2 (Fig.8.3.10;Fig.8.3.11). The retaining washer fits into the central hole C of adaptor and the four bolts into the thread holes T (Fig.8.3.12). The holder is centered on the outside diameter of the adaptor. Ensure the holder is properly connected to the plate of the adaptor and then tight evenly the four bolts. Tightening force on the bolts has to be 22...25N.m (16...18 ft-lbf). Mounting the holder without the retaining washer (Fig.8.3.2) is **INADMISSIBLE** because the security system preventing the separation of part of the holder in case of broken buffers and elastic element will not function!

You can change the butterfly of the holder without dismounting the holder from the machine.

Fig.8.3.13 is a 3-D section view of the holder, showing its parts. The numbering is the same as in Spare parts.

Figure 8.3.10

Figure 8.3.11

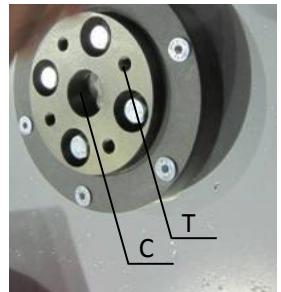

Figure 8.3.12

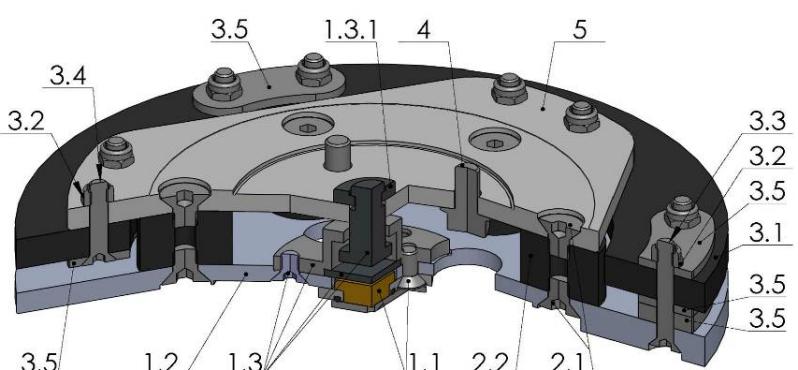

Figure 8.3.13

8.4 CORRECTING SAG OF THE USED PLANETARY CHAIN

Unscrew the eight bolts (Fig.8.4.1) and remove the cover (Fig.8.4.2). Pull the hose out of the water sprayer(Fig.8.4.3). Put the machine in position to change the tools. Manually turn the holders in order to turn the main head, stop when the chain tensioner can be seen through the window (Fig.8.4.4).

Figure 8.4.1

Figure 8.4.2

Figure 8.4.3

Figure 8.4.4

Loosen the two bolts of the chain tensioner a quarter to a half revolution(Fig.8.4.5). The tensioner should turn with minimum clearance, without inclination, then unscrew the inner nut. To tension the chain screw, tighten the outer nut (Fig.8.4.6). The tensioner of the planetary chain should allow chain sagging of 3...5mm (1/8...3/16 in) measured in span X (Fig.8.4.7). When set, screw the two nuts (Fig.8.4.6) and the screw(Fig.8.4.5).

Figure 8.4.5

Figure 8.4.6

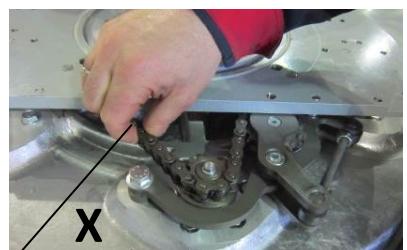

Figure 8.4.7

ATTENTION: NEVER “OVER” TENSION THE CHAIN, THE CHAIN WILL BE DAMAGED

8.5 MOUNTING NEW PLANETARY CHAIN

The planetary chain is replaced with new one when the step/drive of the chain tensioner is finished or there is a loss of integrity of the chain.

Unscrew the eight bolts (Fig.8.4.1), take off the cover (Fig.8.4.2), and pull the hose out of the water sprayer (Fig.8.4.3). Put the machine in position to change the tools. Manually turn the holders in order to rotate the main head, stopping when the chain tensioner can be seen through the window (Fig.8.4.4). Separate the carriage from main head, and pull out the motor plug (Fig. 3.1), water tubes, and vacuum tubes (Fig. 3.2) (Fig. 3.3). Take off the handle (without water tubes) (Fig. 8.4.3). Release the pin sets (Fig. 3.4) attaching the head to the carriage. Take off the weight holders(Fig. 8.5.1), machine support(Fig. 8.5.2), and the service window (Fig. 8.4.2) so the top cover can be removed(Fig. 8.5.3).

Figure 8.5.1

Figure 8.5.2

Figure 8.5.3

Loosen the two nuts (Fig.8.4.6) and unscrew the two screws of the tensioner (Fig.8.4.5)(Fig.8.5.4)(Fig.8.5.5). Remove the chain tensioner (Fig.8.5.6). Pull out the split pin (Fig.8.5.7) and the chain link pin (Fig.8.5.8) (Fig.8.5.9). Remove the chain, and install the new chain in the same manner, and then insert the chain link pin and split pin (Fig.8.5.9) (Fig.8.5.8) (Fig.8.5.7).

Figure 9.5.4

Figure 9.5.5

Figure 9.5.6

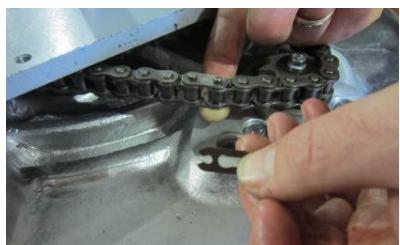

Figure 9.5.7

Figure 9.5.8

Figure 9.5.9

Mount the chain tensioner (Fig.8.4.6). Tighten the two screws (Fig.8.5.4)(Fig.8.4.5). Loosen the bolt of the chain tensioner a quarter to a half revolution (Fig.8.4.5). The tensioner should turn with minimum clearance, without inclination. Then unscrew the inner nut. To tension the chain, rotate the outer nut (Fig.8.4.6) . The tension of the planetary chain should allow chain sagging of 3...5mm (1/8...3/16 in) measured in span X (Fig.8.4.7).

When properly tensioned, retighten the two nuts (Fig.8.4.6) and the screw(Fig.8.4.5).

ATTENTION: NEVER “OVER” TENSION THE CHAIN, THE CHAIN WILL BE DAMAGED

8.6 REPLACING THE PLANETARY DRIVING GEAR AND PLANETARY TENSIONER

Check and repeat the instructions in 8.5 MOUNTING NEW PLANETARY CHAIN.

Unscrew bolt (1) and remove the chain pulley (3) with the sealer (5). Change the sealer, and mount it to the chain pulley (3). Apply lithium grease on the shaft and mount back the wheel and the front washer (2) as shown on (Fig.8.6.1). Screw the bolt using the “blue” thread locking adhesive. Tightening force on the bolts should be 9...11N.m(6.6...8 ft·lbf).

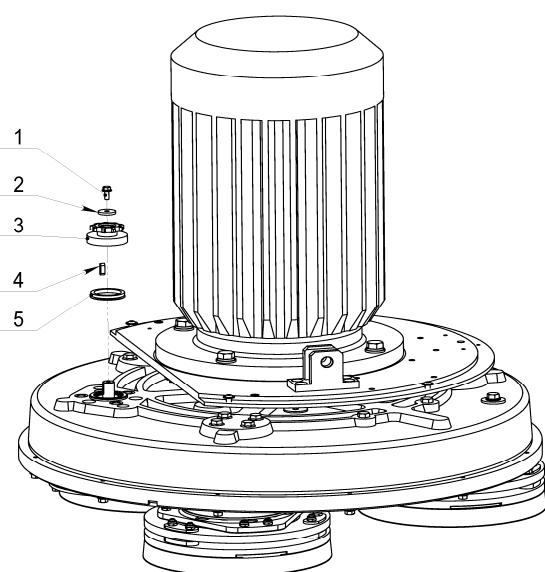

Figure 8.6.1

8.7 TENSIONING AND REPLACING THE BELTS

Figure 8.7.1

Figure 8.7.2

Figure 8.7.3

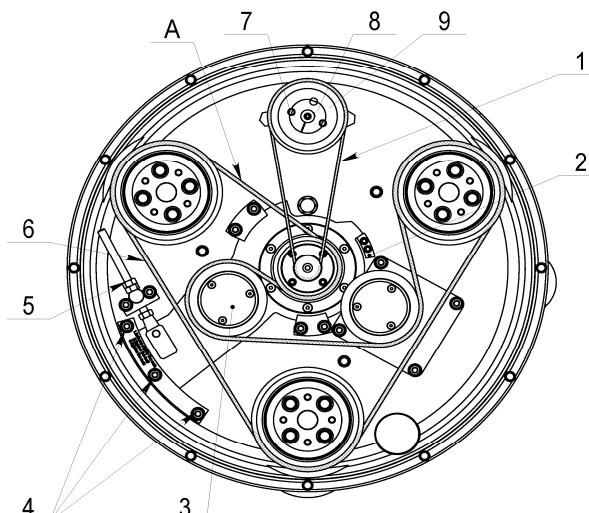

Figure 8.7.5

The transmission of the machine runs two timing belts (a main belt that rotates the plates (and tools) and an auxiliary planetary belt which propels the rotation of the head as a whole). To change the main belt, remove all plate holders and adapters. There will be a seal to remove as well. Check any friction surfaces for wear, and replace if necessary. To remove the bottom cover, unscrew the bolts at the circumference of the cover, as well as those in the spacers. We recommend that all seals (O-Rings in the pacers and seal around the cover) be replaced when changing belts.

Figure 8.7.5 shows the scheme of the belts. To remove the old belts first remove the planetary belt (1) and then the main belt (6). To remove the main belt (6), loosen nuts (4) and (5) enough to be able to turn the tensioners (3) around the central axle. Clean the washers and surrounding area, and check all bearings of pulley units/tensioners for too much clearance or rolling noise. Rotating the tensioner will allow the centre distance to be reduced in such that the timing belt may be fitted without force. Installation with the use of force is NOT permissible at any time as this can damage the high quality, low stretch tension cord and other components. This damage is often not

visible. Arrange the belts in pos.6 as per the scheme, paying attention to their orientation at every pulley. Loosen the nuts (5) to the end of the bolt, and fully loosen the nuts on the half moon (4), allowing the rotation of the tensioners with minimal force. Using nuts (5), tighten the belt, double checking the position/orientation of the belt and the gearing in each pulley.

Rotate the gear while tensioning to allow regular distribution of tension along the belt.

Measure the tension using a Frequency Tension Tester (Optibelt 3 TT) (Fig. 8.7.3). Tension in span "A" of the belt should be 120-130Hz. It is possible to use the pre-installed support (Fig. 8.7.5-2)(Fig. 8.7.6) as a reference to stop the tensioner at the desired belt tension, provided that the supports have not been moved from their factory position.

Figure 8.7.6

ATTENTION: NEVER "OVER" TENSION THE BELT, THE BELT WILL BE DESTROYED AND IT WILL NEVER RECOVER ITS ORIGINAL TENSION

To remove the planetary belt (Fig.8.7.5-1), unscrew the screw of the front washer (Fig.8.7.7) and the two screws of the conical sleeve (Fig.8.7.8). Screw one of the removed screws into the free thread(Fig.9.7.9) to push the washer down (Fig.8.7.10); take off the conical sleeve and the belt (Fig.8.7.11).

Figure 8.7.7

Figure 8.7.8

Figure 8.7.9

Figure 8.7.10

Figure 8.7.11

The reassembly is the same process in reverse. It is important to match the threads of the conical sleeve and the belt washer(Fig.8.7.13). Put the front washer (Fig.8.7.14), on the screw - using "blue" thread locking adhesive. Tightening force of the bolts has to be 4.5...6N.m (3,3...4,4 ft-lbf).

Carefully replace the two binder screws while leaving the central thread open. (Fig.8.7.14)(Fig.8.7.15). Insert the screws by alternating at 1.5 revolutions each until the conical sleeve pulls up the belt pulley. The conical sleeve must be aligned in height with the belt washer(Fig.8.7.16).

Figure 8.7.13

Figure 8.7.14

Figure 8.7.15

Figure 8.7.16

Dismounting the planetary belt is possible without removing of the Bottom cover assembly by unscrewing the eight bolts and removing the service window cover and sealing(Fig.8.7.17)(Fig.8.7.18) to access the planetary belt. (see 8.7.19)

Figure 8.7.17

Figure 8.7.18

Figure 8.7.19

8.8 REPLACING THE DRIVEN PLANETARY GEAR (SPROCKET)

Remove the planetary chain and tensioner (see Fig.8.5 - MOUNTING NEW PLANETARY CHAIN).

Dismount the tool holders, sealers, and bottom cover (see Fig.8.7 - TENSIONING AND REPLACING THE BELTS). Unscrew the cap to access the fastening bolts of the driven gear (Fig.8.8.1)(Fig.8.8.2). Rotate the main head such that you see a fastening bolt of the gear (Fig.8.8.3) through the hole.

You will need a 10mm magnetic deep metric socket with an outside diameter of no more than 11/16 in to unscrew the six bolts (Fig.8.8.3)(Fig.8.8.4) (Fig.8.8.5). Once these are removed, remove the two halves of the gear.

The gear is composed of two symmetrical halves(Fig.8.8.6). Mount them in reverse order.

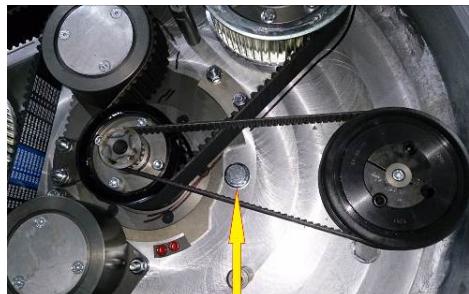

Figure 8.8.1

Figure 8.8.2

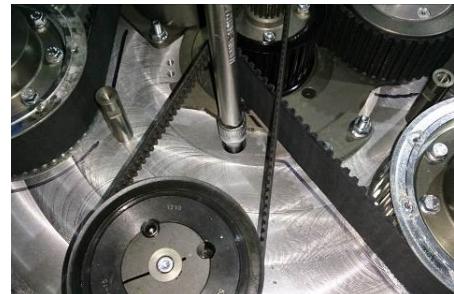

Figure 8.8.3

Figure 8.8.4

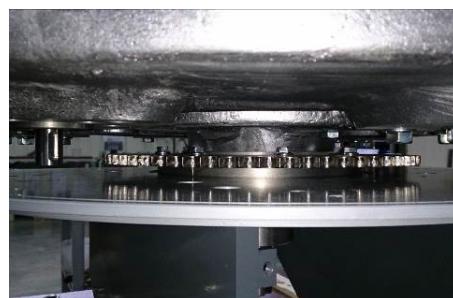

Figure 8.8.5

Figure 8.8.6

8.9 REPLACING THE PULLEY UNITS

Remove guard, top cover, maintenance window, chain tensioner, driven gear, bottom cover and belts as previously described.

Figure 8.9.1

Figure 8.9.2

Figure 8.9.3

Unscrew the four bolts of each pulley between the base plate and the motor base disc (Fig.8.9.1)(Fig.8.9.2) and dismount the pulley (Fig.8.9.3).

A seal (Fig.8.9.4) should be placed on top of the pulley before mounting.

Figure 8.9.4

8.10 REPLACING THE PLANETARY UNIT

Figure 8.10.1

Figure 8.10.2

Figure 8.10.3

Unscrew the six bolts (Fig.8.10.1)(Fig.8.10.2) and press down the planetary unit.
When mounting back secure with sealant (fig.8.10.3).

8.11 MOTOR CONNECTION

In case the motor is being replaced, please follow the cable connections in the figures below (Fig.8.11.1).

Lavina® 25 X

The motor is connected in "Delta"
(Triangle) 230 Volt, reminder for
the wire connection of the motor.

8.12 FAULT DIAGNOSIS INVERTER YASKAWA V1000

Pages are referring to

Yaskawa Electric SIEP C710606 18A YASKAWA AC Drive – V1000 Technical Manual

◆ Types of Alarms, Faults, and Errors

Check the LED operator for information about possible faults if the drive or motor fails to operate. [Refer to Using the Digital LED Operator on page 70.](#)

If problems occur that are not covered in this manual, contact the nearest Yaskawa representative with the following information:

- Drive model
- Software version
- Date of purchase
- Description of the problem

Table 6.4 contains descriptions of the various types of alarms, faults, and errors that may occur while operating the drive.

Contact Yaskawa in the event of drive failure.

Table 6.4 Types of Alarms, Faults, and Errors

Type	Drive Responses to Alarms, Faults, and Errors
Faults	<p>When the drive detects a fault:</p> <ul style="list-style-type: none"> • The digital operator displays text that indicates the specific fault and the ALM indicator LED remains lit until the fault is reset. • The fault interrupts drive output and the motor coasts to a stop. • Depending on the setting, the drive and motor may stop via different methods than listed. • If a digital output is programmed for fault output (H2-□□ = E), it will close if a fault occurs. • When the drive detects a fault, it will remain inoperable until that fault has been reset. Refer to Fault Reset Methods on page 264.
Minor Faults and Alarms	<p>When the drive detects an alarm or a minor fault:</p> <ul style="list-style-type: none"> • The digital operator displays text that indicates the specific alarm or minor fault and the ALM indicator LED flashes. • The motor does not stop. • One of the multi-function contact outputs closes if set to be tripped by a minor fault (H2-□□ = 10), but not by an alarm. • The digital operator displays text indicating a specific alarm and ALM indicator LED flashes. • Remove the cause of an alarm or minor fault to automatically reset.
Operation Errors	<p>When parameter settings conflict with one another or do not match hardware settings (such as with an option card), it results in an operation error.</p> <p>When the drive detects an operation error:</p> <ul style="list-style-type: none"> • The digital operator displays text that indicates the specific error. • Multi-function contact outputs do not operate. • When the drive detects an operation error, it will not operate the motor until the error has been reset. Correct the settings that caused the operation error to reset.
Tuning Errors	<p>Tuning errors occur while performing Auto-Tuning.</p> <p>When the drive detects a tuning error:</p> <ul style="list-style-type: none"> • The digital operator displays text indicating the specific error. • Multi-function contact outputs do not operate. • Motor coasts to stop. • Remove the cause of the error and repeat the Auto-Tuning process.

◆ Alarm and Error Displays**■ Faults**

When the drive detects a fault, the ALM indicator LEDs remain lit without flashing. If the LEDs flash, the drive has detected a minor fault or alarm. [Refer to Minor Faults and Alarms on page 240](#) for more information. An overvoltage situation trips both faults and minor faults, therefore it is important to note whether the LEDs remain lit or if the LEDs flash.

Note: If faults CPF11 through CPF19 occur, the LED operator will display *CPF00* or *CPF11*.

■ Minor Faults and Alarms

When a minor fault or alarm occurs, the ALM LED flashes and the text display shows an alarm code. A fault has occurred if the text remains lit and does not flash. [Refer to Alarm Detection on page 253](#). An overvoltage situation, for example, can trigger both faults and minor faults. It is therefore important to note whether the LEDs remain lit or if the LEDs flash.
