

# Product Lifecycle Management by Autodesk

Drive development of new products and services to become more competitive, profitable, and valuable to customers—with significantly less cost and risk.

The Autodesk<sup>®</sup> PLM 360 cloud-based platform is a next-generation alternative to traditional product lifecycle management that makes the benefits of PLM accessible anytime, anywhere, to companies of all sizes.

The first cloud-based PLM solution focused on business needs beyond engineering

Across the globe, companies in Manufacturing as well as in Architecture, Engineering, and Construction look to product lifecycle management (PLM) to streamline processes and workflows and deliver the right product, project and business information to those who need it when they need it. However, even after years of investment traditional PLM solutions are still struggling to deliver these benefits. With Autodesk PLM 360, there's a better way for everyone to achieve the promise of PLM – without the headaches. Autodesk PLM 360 cloud-based software-asservice transforms PLM by offering an affordable, easy-to-use, and simple-to-deploy solution that makes the benefits of PLM business applications available to anyone, anytime, anywhere. No matter what role you play, Autodesk PLM 360 streamlines the creation and management of information, people, and processes to help you become more competitive and grow your business – with significantly less cost and risk.

In contrast to traditional PLM implementations, Autodesk PLM 360 is affordable, quick to deploy and easy to use; yet the potential benefits to your business are the same, including:

- · Greater visibility to critical information
- More efficient business processes
- Improved supplier collaboration
- · Faster time to market
- Improved compliance to standards

Autodesk<sup>®</sup> PLM 360 unleashes a breadth of powerful PLM capabilities that empowers every department to make the entire business run faster.

Pre-Configured Apps:

Program Management Engineering Supply and Procurement Quality Operations and more...

For more information about Autodesk PLM 360, visit www.autodeskplm360.com

- Higher product quality
- Faster response to market dynamics
- Improved program and project visibility
- Reduced waste
- Greater component reuse

# **Unlock Organizational Productivity**

Successful companies focus on core competencies to produce truly valuable products and services, but even the best continue to suffer unique challenges. Autodesk PLM 360 can help business leaders overcome obstacles and remove bottlenecks that lead to inefficient operations. Strategic firms use Autodesk 360 to take PLM further and deliver new levels of service to their customers not typically possible with traditional PLM solutions. Autodesk PLM 360 comes equipped with dozens of apps pre-installed to help department leaders get started quickly with improving the specific business processes that will have the greatest impact on their efficiency, profitability, and customer satisfaction.

## Up and running in minutes

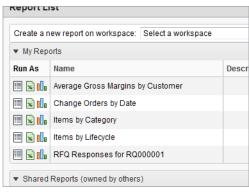

Cloud-based, next generation product lifecycle management solution

Whether purchasing 1 seat or 1000 seats, Autodesk PLM 360 provides a powerful infrastructure designed, tuned, and tested by the industry's most experienced cloud technology professionals. Developed and backed by experts in database technology, global networks, mobile access, backup and recovery, and security, Autodesk PLM 360 stands ready to perform and meet the needs of businesses wherever they operate, regardless of size. Customers get all of this instantly, at login, making it fast and easy to begin doing real PLMfocused activities on Day One.

#### Modern user experience

Familiar and consistent navigation using a system that's always up-to-date

The user-friendly design of Autodesk PLM 360 makes it easy for any businessperson to participate in PLM-related activities with little or no training. Selecting, sorting, and entering data is as simple and straightforward as browsing a webpage. Moreover, thanks to advanced cloud technology, every user of Autodesk PLM 360 is on the same version, so there is never a version mismatch, a long and arduous system upgrade, or additional training required to adopt new system-wide functional changes.

Autodesk PLM360 Powerful Reporting

Easy-to-understand reports, graphs, and dashboards

Autodesk PLM 360 reports, charts, and dashboards are an easy way to summarize data or results to improve decision-making. Following a 'noprogramming' mantra, Autodesk PLM 360 enables any user to create custom reports that assemble data from the workspaces available to them and produce reports in text (HTML) and spreadsheet (XLS) file formats. Sharing custom reports with others throughout the entire organization saves time in distributing and accessing critical information. Further, reports can render dynamically into 3D interactive formats that make findings even easier to understand. Dashboards help users see at-aglance indicators of progress and reminders of work to do, and provide ready links to favorite items directly at login from the Autodesk PLM 360 homepage.

#### PLM on-the-go

Capable and convenient mobile access

Thanks to the cloud, access to Autodesk PLM 360 offers the same, simplified experience whether you're on a desktop in your office or on a mobile device while on the go. You can maintain the same capabilities on a mobile device too. Use whichever mobile device you prefer to create new records in Autodesk PLM 360 complete with supporting documents, videos, and images, or simply perform reviews and markups of submitted work. Finally, with Autodesk PLM 360, PLM extends capabilities to mobile devices that enable professionals in virtually any industry to readily collect and share project information and conveniently engage in rich and informative interaction with clients.

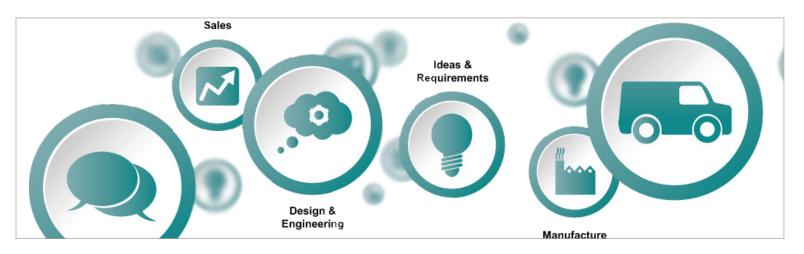

Autodesk PLM360 Project Management

Works the way you do

Tailoring, configuration, and process modeling

The nature of product development dictates the need to modify chosen PLM solutions to align with the ways people actually work and to interact with other systems in an established computing environment. Continuing the 'no programing' approach, Autodesk PLM 360 enables process owners - not programmers - to modify PLM elements such as item details, process workflows, and lifecycle states using easy drag-and-drop functionality. To automate programmable, multistep tasks that are unique and critical to an organization, Autodesk PLM 360 includes browserbased scripting and a debugging engine that accepts standard, open-sourced JavaScript. In addition, a full set of application programming interfaces (APIs) is available to assist with integrations to other systems or with advanced handling of Autodesk PLM 360 information.

# Apps for Everyone—Robust PLM applications to power your business

# **Program Management**

Apps for Program Management help leaders stay connected to the entire team, wherever they are, using any device, and finish projects on time and on budget.

- Project Management
- **Project Costing**
- New Product Introduction
- Tasks
- Requirements

# Engineering

Apps for Engineering help teams capture, organize, and share relevant product details as they develop new and exciting products.

- Items and BOMs
- **Change Request**
- Change Orders
- Material Specifications
- **Design Review**

# Supply & Procurement

Apps for Supply & Procurement support strategic partner interactions to help maintain steady and efficient production.

- **Suppliers**
- RFQ

Quality

Warranty Recovery

Apps for Quality help team leaders create closedloop processes that drive continuous improvement and consistent results toward great customer experiences.

- Inspections
- Non Conformances
- **Corrective / Preventative Actions**
- Audits
- **Return Merchandise Authorization**
- **Document Management**

# **Operations**

Apps for Operations support accurate and efficient record keeping of routine activities, events, and tasks critical to keeping a business running smoothly.

- Accident Reports
- Calibration
- **Equipment Maintenance**

# Sales & Marketing

Apps for Sales & Marketing aid key stakeholders in coordinating end-to-end experiences that will please customers.

- Customers
- Sales Quotes
- Marketing Assets

# Service & Support

Apps for Service & Support help to communicate product failures to those best able to deliver timely remedies and improve customer satisfaction.

- Service Request
- **Return Merchandise Authorization**

# **Classification & Reference**

- **Approval Lists**
- **ISO9001** Sections
- **Material Properties**
- **Inspection Templates**
- **Item Categories**
- **Calibration Providers**

As new business needs arise, customers may enhance the applications within the entire Autodesk PLM 360 portfolio by adding or configuring new, tailored applications as necessary.

### Autodesk PLM 360

Builds on your existing foundation

Integrations with PDM, CRM, ERP, and more

Activities managed within Autodesk PLM 360 encompass the entire product lifecycle, so it's natural to share the data stored in PLM with other enterprise systems used in an organization. Autodesk PLM 360 Connect technology enables migration, integration, and consolidation of information. Migration capabilities support one-time movement of data into or out of Autodesk PLM 360. Integration capabilities make synchronous data sharing possible for processes that run in Autodesk PLM 360 and other systems. Consolidation capabilities gather data originating in other systems so it appears as though it's stored directly in Autodesk PLM 360. Built-in integration templates give clients a head start on integrations among Autodesk Vault and popular CRM (Customer Relationship Management) and ERP (Enterprise Resource Planning) systems on the market today. As in the configuration process, a full set of application programming interfaces (APIs) is available to assist with more advanced integrations.

Attractive, predictable pricing

Starts affordable, stays affordable

The efficiency and economies of scale underlying cloud technology make it possible to offer Autodesk PLM 360 at roughly 1/10th the cost of traditional PLM systems, while achieving substantially the same benefits. Customers subscribe to individual seats of Autodesk PLM 360 on an annual basis, making it easy to forecast and adjust usage and expenses. Autodesk PLM 360 offers seats for both Participant and Professional users. Professional users may use and create an unlimited number of PLM applications, including: Program and Project Management, New Product Introduction, Change Management, Item Masters and Bills of Material, Quality Processes, Supplier Management, Request for Quote, and other applications tailored by clients themselves to meet their specific business needs. The Participant seats are for workers not directly responsible for adding PLM content (e.g. some managers, partners, or suppliers). Participants are able to read and review data and documents, run reports to better understand the context of information, and perform workflow activities or make comments on submitted work as part of the approval process.

See for yourself

Take the next step to unleashing the collective power inside your organization with Autodesk PLM 360.
