Advanced Solutions SMART Design Review

The SMART Design Review solution is transforming how architecture, engineering and construction (AEC) project teams coordinate, collaborate and communicate. Our unique mix of Advanced Solutions, Autodesk, and SMART Technologies software and hardware solutions enable AEC firms to deliver projects on time and on budget, without sacrificing project quality.

- SMART Technologies SMART Board® interactive flat panel - With high-definition, LCD flat-panel displays, SMART's interactive flat panels offer the richest visual experience for interacting with digital content, including 3D models.

- SMART Meeting Pro™ software - Make notes over any available application and capture ideas easily into unlimited interactive whiteboard space.

- Bridgit® conferencing software - Engage with remote participants for design reviews like never before - at anytime, from any location.

- Integration with design review applications - Plug-Ins, such as idsDesignTOUCH, enable Autodesk software and other industry-leading design review applications to work with SMART Board interactive features, such as touch, gesture, note taking and conferencing.

SMART Design Review solutions enable:

1 Digital interaction during sessions to identify issues and make instantaneous adjustments before they become costly problems.

2 Remote participants who need to be involved in the session to interact with designs dynamically, so issues can be dealt with in one meeting.

3 The power of design review applications to be enhanced (without disrupting workflows) by allowing you to digitally interact within them.
