# Advanced

SOLUTIONS

The Leader in 2D and 3D Design Software

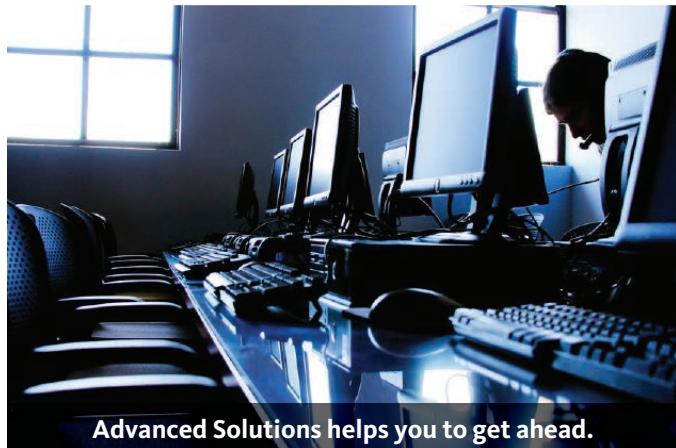

### Training Offerings

#### Professional Instructor Live Online Training

With Professional Instructor Live Online Training (PILOT), you can experience the benefits of our "in class" instructor led program without leaving your office.

#### Custom Training

Custom training services provide access to our subject matter experts, who target the syllabus to the specific, directed needs of the client.

Advanced Solutions helps you to get ahead.

### Training & Services Credits

- Credit => 1 hr of service
- Service is defined as any time spent 'on-site' or 'off-site', including prep time
- Minimum of (8) credits to be used for on-site service(s)
- Offsite time based on actual hours
- Credits may be exchanged for services not defined (please consult with your Sales Representative)

Description	Credits
1-day of Onsite Service(s)	8
8-hrs of Offsite Service(s)	8
Open Enrollment Training – 1 day class	2
Open Enrollment Training – 2 day class	4
Open Enrollment Training – 3 day class	5
Open Enrollment Training – 5 day class	7

### Service Offerings

#### Custom Content Development

With the growing adoption of Building Information Modeling (BIM) and Digital Prototyping, Advanced Solutions can assist in the design and development of custom content based on your requirements.

#### Configuration and Optimization Consulting

Advanced Solutions works with the client's BIM/CAD management team and key user(s) to show them how to configure and optimize the software according to the best practice recommendations. Recommendations will include project organization, work sharing, hardware, network configuration, and setup issues.

#### Mentoring

During Mentoring, Advanced Solutions technical engineers work closely with the project team members to provide support as they start and continue their project(s). This can take the form of over-the-shoulder mentoring with the project team and may include additional ad-hoc lecture style training. Mentoring would be sequenced with the project milestones to prepare the team for deliverables.

#### Off-Site Consulting

Consulting can also be provided remotely, via conference call or web-conference. Remote sessions will be conducted on a mutually agreed upon schedule. 'Best Practices' guidance/feedback will be provided.

#### Pilot Project

During the Pilot Project, Advanced Solutions technical engineers continue mentoring and working closely with a client for a defined period of time. This service provides proof-of-concept, sets realistic goals, and makes necessary changes to implementation.

#### Project HealthCheck

Project HealthCheck builds on the current foundation and maintains the health of the project. Through regular check-in's with the project team and on-site mentoring, Project HealthCheck validates the model and prioritizes the recommendations.

#### QuickStart

QuickStart is suggested for clients with Pilot Projects who are unfamiliar with the software, or the methodologies and workflows required by the software. The three four-day sessions provide: 4 days of "right sized" product training, 4 days of configuration and optimization of the Pilot Project, and 4 days of additional mentoring and advanced training for the team as the pilot project progresses. The first two sessions are designed to be back-to-back, with a break of 2-4 weeks before the follow-up mentoring week.

#### Software Development

Development resources will work with the client to scope and build custom extensions, enhancements or plug-ins to the Autodesk Suites. This enables seamless integration of the tools with other applications and systems. Custom engineering projects typically fall into three broad categories: development of core enhancement or API extension, plug-in engineering, and feature acceleration.
