TÜVRheinland®

1.6 User Manual

Virtual Leash:
You can Create a Virtual Leash, by pressing the Virtual Leash tab on the app, selecting the StickNFind sticker you would like to create the Virtual Leash, select the approximate range and Ringtone Alert. You can run other apps, as long as you keep the StickNFind app working on the Background. To stop or cancel a Virtual leash, go the Virtual Leash tab on the app, and press Stop on Virtual leash.

If you completely close the app, it will also terminate the Virtual Leash.

Reverse Virtual Leash: By going on the Reverse Virtual Leash or RVL feature, you can select a sticker, that you would like to be paired always with your phone. If you leave your phone behind, the RVL Sticker will Buzz and Flash, emending you that you left your phone behind. StickNFind app must be running always on the background for RVL to work.

To cancel RVL with a sticker, go to the RVL feature, and select Stop. This will terminate the RVL mode.

Find It Feature:
Press the Find It feature on the StickNFind app. Select the StickNFind sticker you would like to find. Once that Sticker is in Range, your phone will Alert you.

Radar Feature:
When you are trying to find a Sticker, you can always launch the Radar Feature. It will show you all the Stickers within range. Press on the Sticker you would like to find. A new window will open. You can press the Buzz button, to make the buzzer make a tone, you can press the Flash button to make the LED flash, or press "Both" for Buzz and Flash.

Sticking the StickNFind to a surface:
First make sure the surface you would like to stick the StickNFind is clean. Really clean! This is very important, as even if it might look clean, microscopic dust will prevent the adhesive to proper bond.

One the area is clean, peel the back label of the Adhesive, and press hard. Try to press hard for some seconds. You must wait 1 hour for the adhesive to cure.

After 1 hour the adhesive will be at 60% cured. After 12 hours it will be 80% cured, and after 24 hours it will reach its maximum strength.

You can still use it after 1 hour, but try not to remove it or play with it until its fully cured.

Should you need to remove it, Peel it, remove the old Glue, and use any 2 side tape or glue to stick to the new surface.

Changing the Battery:
There is a small gap on the side, between the top cover and lower cover. With your nail, slightly pull the bottom cover off. Remove the old battery and place the new Battery. To close the cover, there is a small dent on the bottom cover. Align the dent to be on-top of the matching area. Close the cover, and make sure all sides are equally closed. You can slightly turn the bottom cover until it fully matches. You will hear 4 beeps to confirm the unit is on.

FCC Notices
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
