

This device complies with part 15 of the Federal Communications Commissions (FCC) rules. Operation is subject to the following conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Exposure to radio frequency signals

Your wireless tracking device is a low power radio transmitter and receiver. When it is on, it receives and also sends out radio frequency (RF) signals.

In August, 1996, the FCC adopted RF exposure guidelines with safety levels for wireless devices. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies:

ANSI/IEEE C95.1 (1999)¹

NCRP Report 86 (1986)²

ICNIRP (1998)³

IRPA (1991) Guidelines on Protection Against Non-ionizing Radiation⁴ These standards are based on comprehensive and periodic evaluations of the relevant scientific literature. For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI Standard (C95.1).

To comply with FCC radiation exposure requirements, use of this device for wrist-worn operational configurations is limited to accessories tested and approved by Best Buy. This is the only authorized usage model for this device.
