

Regulatory Information

Regulatory information, certification, and compliance can be found on your device under **Settings > System > About > Regulatory labels** and on the back of your device.

EMC Compliance Statement

Important: This device, power adapter, and other in-box accessories have demonstrated Electromagnetic Compatibility (EMC) compliance under conditions that included the use of compliant peripheral devices and shielded cables between system components. It is important that you use compliant peripheral devices and shielded cables between system components to reduce the possibility of causing interference to radios, televisions, and other electronic devices.

Regulatory Information: United States

FCC Regulatory Compliance

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by Google could void your authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. These devices may not cause harmful interference.
2. These devices must accept any interference received, including interference that may cause undesired operation.

Radio Frequency Exposure

This device meets the U.S. Federal Communications Commission's (FCC) requirements for exposure to radio waves and is designed and manufactured not to exceed the FCC's emission limits for exposure to radio frequency (RF) energy. For satisfying FCC RF exposure compliance

requirements, body-worn operations are restricted to belt-clips, holsters or similar accessories that have no metallic component in the assembly and must provide at least 10 mm separation between the device, including its antenna, and the user's body.

Hearing Aid Compatibility (HAC)

This device has been evaluated and certified to be compatible with hearing aids per technical specification ANSI C63.19. There are two measures of hearing aid compatibility:

M rating, which is a measure of immunity to radio frequency interference for acoustic coupling hearing aids;

T rating, which is a measure of performance when used with an inductive coupling (telecoil) hearing aid.

The Hearing aid compatibility rating for the subject device is: M4/T3

Per FCC rules, a mobile phone is considered hearing aid compatible if rated M3 or M4 for acoustic coupling or T3 or T4 for inductive coupling.

This device has been tested and rated for use with hearing aids for some of the wireless technologies that they use. However, there may be some newer wireless technologies used in these phones that have not yet been tested for use with hearing aids. It is important to try the different features of your phone thoroughly and in different locations, using your hearing aid or cochlear implant, to determine if you hear any interfering noise. Consult your service provider or Google for information on hearing aid compatibility. If you have questions about return or exchange policies, consult your service provider or phone retailer.

These devices have not been rated for hearing aid compatibility with respect to Wi-Fi operation. Google's devices meet the hearing aid compatibility (HAC) requirements set by the Federal Communications Commission (FCC).
