## Contents

### Essential information

Given here is essential information that will help you in the optimum operation of your mobile phone. By adhering to these guidelines you will be protecting yourself from unnecessary personal or financial damages or infringements of the law. Kindly read the User Guide in its entirety for complete information.

#### 1.1 Safety guidelines

##### **Traffic regulations**

Traffic and road safety regulations prohibit your usage of the phone while driving. If, however the need arises, please do make use of the hands-free settings or move your car to the side of the road out of the flow of traffic. In case you use an air bag equipped vehicle, please do not place your phone in the air bag deployment area, it could result in serious personal injury and possible property damage.

##### **Switch off your phone at filling stations and sensitive areas**

Areas with a potentially explosive atmosphere are often, but not always, clearly marked. These include fuelling areas such as fuel filling stations, below decks on boats, fuel or chemical transfer or storage facilities, vehicles using liquefied petroleum gas (such as propane or butane), areas where the air contains chemicals or particles, such as grain, dust, or metal powders; or any other area where you would normally be advised to turn off your vehicle's engine. Electric or static sparks in such areas could cause an explosion or fire resulting in serious injury or even fatalities.

##### **Switch off your phone on aircraft**

Follow airline advisories on phone usage. Radio Frequency emissions from wireless devices such as your phone can cause electronic interference or disturbance in the delicate communication and control electronic equipment of the aircraft.

##### **Switch off your phone in the hospital**

Switch off your phone in healthcare facilities when any regulations posted in these areas instruct you to do so. Hospitals or healthcare facilities may be using equipment that could be sensitive to external RF energy.

#### **Pacemakers and medical implants**

The Health Industry Manufacturers Association (USA) recommends that a minimum separation of six inches (15 centimetres) be maintained between a handheld wireless product and medical implants (electronic) such as a Pacemaker to avoid potential interference with the implant. These recommendations are consistent with the international recommendations governing the usage of wireless technology.

Advisory for persons with Pacemakers:

- ALWAYS keep the phone more than six inches from your pacemaker when the phone is turned on.
- Do not carry the phone in a breast pocket.
- Preferably use the ear opposite the pacemaker to minimize the potential for interference.

If you have any reason to suspect interference is occurring, switch off your phone immediately.

#### **Other medical devices**

If you use any other personal medical device, do consult the manufacturer of the medical device to determine if it is adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information.

#### **Follow mandatory signs**

Always follow phone etiquette in public places. Switch off your phone where the use of mobile phones is explicitly forbidden, as it may be a safety risk or might infringe on the law.

#### **Emergency calls**

Emergency calls can be dialed at anytime - even if the handset is PIN locked or has no RUIM and SIM card.

- Emergency call procedure:

Type in the local emergency number and press the send key.

Emergency call numbers are: 100/101/102

#### **Electronic devices**

Most modern electronic equipment are shielded from Radio Frequency (RF) energy emissions. However, certain electronic equipment may not be shielded against the RF signals emitted by your phone and care must be taken in usage of your phone next to sensitive electronic equipment.

## 1.2 Care and maintenance information

Your phone is an electronic device that should be treated with due care during usage. The guidelines given here will help you in caring for your phone and keep it under warranty coverage.

Protect your phone from dust, temperature, humidity and other extreme environmental conditions as it will affect the performance or damage the instrument. Do not use or store your phone in a low temperature environment as moisture will condense in the phone and damage the circuit board.

Avoid striking, shaking or causing physical shock to the phone.

Protect your phone from rain, spilled beverages or other forms of moisture that can damage the electronics of your phone.

Use the batteries and fittings manufactured by Toneway Technology Company only. The use of other fittings may cause dangerous accidents and void all warranties.

Do not disassemble the phone or its accessories. If service or repair is required, contact a Toneway authorized service centre.

Do not inadvertently cause short-circuit by placing metal or conductive material across or on battery terminals.

- Keep your phone and accessories out of the reach of young children.
- Do not use chemical solvents or detergents to clean your phone.

## 2. Handset guide

### 2.1 Keypad

#### 2.1.1 Power /End key

Pressing and holding the key can switch on/off the mobile phone. Pressing the key can end a call during a phone call or reject an incoming call. Pressing the key in the menu can also return to the idle mode.

#### 2.1.2 Send key

You can dial from CDMA network or answer a call with the key. In idle mode, pressing the key can lead you to the recent calls list.

#### 2.1.3 Left/ Right soft key

The Left/Right soft keys are used to carry out the corresponding operation of last line on display screen, in accordance with the procedure are adopted to acquire different functions.

In idle mode, press  key and then press up/down navigation key to

select corresponding function, press  key to enter the Names function.

#### 2.1.4 Four ways navigation key

The navigation keys can control the cursor directions. Left/right key can move the cursor in text editing mode left /right. Up/down key can scroll the cursor in a list up/down.

In idle mode:

Up key: Press this key to enter the Messages menu directly.

Left key: Press the key to enter the Names menu directly.

Right key: Press the key to enter the Profiles directly.

Down key: Press the key to enter the Call history menu directly.

And you can adjust the speaker volume using up/down navigation key directly during a call.

#### 2.1.5 OK key

The OK key places within the 4-way navigation keys. Pressing the key in the menu mode confirms the selected options or enters the next menu.

#### 2.1.6 # (hash) key

In idle mode, you can press and hold  key to switch the Vibrate Mode on or off.

In text editing mode, press  key to change input methods.

#### 2.1.7 \* (star) key

In idle mode, press and hold  key to lock the keypad. By pressing the left soft key or the power key, the screen displays message '**Keyguard active, after left soft key, press right soft key to unlock keypad**'. Then press left soft key and right soft key successively to unlock .

In text editing mode, press  key to switch to symbol mode.

## 2.1.8 Numeric keys

Pressing these keys can enter the digits 0 to 9 (in idle mode or in number-inputting mode) or some associated characters (text editing mode) and perform associated functions (in a list).

## 2.2 Screen indicators and icons

Depending on your wireless service provider, some or all of the following indicators and icons may be displayed on your phone's screen.

When the phone is powered on, the following icons may be displayed:

### 2.2.1 Battery level indicator

The Battery Level Indicator shows the representative charge held by the phone's battery. Bar segments within the Battery Level Indicator show the level of charge held. All bars visible indicate a full charge. If only one or two bars are visible, it means the battery is low.

### 2.2.2 New message

The icon is displayed on your screen when a new message arrives. The new message icon disappears when you read all the unread messages.

### 2.2.3 Full message

When the SMS storage is full, the icon appears, becomes red and the phone shows '**SMS capacity full. Pls erase msg to proceed**'

One or more messages must be erased before the new message can be stored.

### 2.2.4 Alarm clock

The icon appears when the daily alarm or the alarm for the specified date and time is set.

### 2.2.5 ringtone

the icon appears When a new ringtone arrives. The new ringtone icon disappears when you read all the unread ringtones.

### 2.2.6 ringtone & message

While receiving a new message and a new ringtone, the icon comes out manifestation. It will disappear when you read the new message.

### 2.2.7 CDMA Network

It is Composed of two parts. The left part indicates that the mobile phone is

duly registered to a network. The right part shows the signal strength.

### 2.2.8 GSM network

It is Composed of two parts. The left part indicates that the mobile phone is duly registered to a network. The right part shows the signal strength.

### 2.2.9 Profiles

You can easily alter the phone tone (e.g. the ringer volume, keypad tones, etc.) according to your environment.

When a profile is available, the icon corresponding to the ring type is displayed in idle mode:

-  Vibrate only: For use when vibrate only is needed.
-  Silence: For use when silence is needed.
-  Vibr then ring: For use when vibrate then ring mode is needed.
-  Vibr and ring: For use when vibrate and ring mode is needed.
-  Ring : For use when ring is needed.
-  One beep: For use when the ring type is set to be one beep

### 2.2.10 Headset

The icon will appears on idle screen when you insert the headset.

### 2.2.11 auto answer

It will display on the idle screen when auto answer is set on and earphone is inserted.

## 2.3 Installing Battery , UIM card and SIM card.

### 2.3.1 Installing the battery

- Aim the top recess of the battery to the protrudent part of the phone.
- Push the bottom part of the battery to the phone and then put the phone back on.

### 2.3.2 Removing the battery

- Switch off the phone, keep your finger on the protrudent part of the phone back and then push down to take off the phone back.
- Pull up the bottom of the battery to uplift the battery and separate it with the main board.

### Installing the battery

### Removing the battery

### 2.3.3 Installing the UIM card and SIM card

Purchase a UIM card and SIM card from network operator. Your phone number and registration information are stored in your cards. Your number and information will not change.

- Make sure to switch off your phone before taking out the battery.
- Make the metal face of the UIM card down and put it conferring the level of the card. Then install the battery.

### 2.3.4 Removing the UIM/SIM card

- Remove the battery after switching off your phone.
- Remove the UIM card and the SIM card.
- Install the battery.

Installing the UIM card    Removing the UIM card

### 2.4 Charging the Battery

The CG210 can be charged either when it is switched on or off.

1. Insert the charger output plug into charging connector of the side of the phone.
2. Plug the charger transformer into a standard outlet.
3. The rolling of the electric quantity bar indicates that the phone begins to charge.
4. When the battery level full and stop rolled, the phone will display '**Battery full**'.
5. After charging is complete, switch off the electric supply. pull out the charger's jack.
6. it is recommended that you charge the battery for 12 or 14 hours if it is at the latest three times. But it can't be more than 24 hours. It can activate the lithium ion of battery in order to reach the battery's best state.

**Note:**

- When the battery level is low and only a few minutes of talk time remain, a beep is heard, the battery icon flashes and the phone displays '**Battery Low, please recharge soon!**'. When battery is drained completely, the phone displays '**Battery too low, Power off soon!**'
- When the battery is completely discharged, your phone will turn off.

- The battery can be charged whenever you want. However, using your phone while charging will increase the charging time.
- It is recommended that you charge the battery for three hours (full charging period) before you use it.
- Do not pull out the plug of the charger during charging to avoid electrical damage to the phone and the charger.

## 2.5 Switching a Phone On/Off

Press and hold down the power key  to switch your phone on or off.

If you switch the phone on and there is no UIM card and SIM card inserted, the phone displays ‘ **CDMA No Card, GSM No Card** ’. Press  key to only dial emergency call.

After inserted, the phone will check whether the two cards are valid. You can switch the phone on when you insert one of the two cards.

Then the screen displays the following messages:

- CDMA Please input PIN  
GSM Please input PIN--- Request to input the UIM card PIN code and SIM card PIN code (if required).
- CDMA Please input PIN or GSM Please input PIN  
---Request to input the UIM card PIN code or SIM card PIN code(if required).
- Enter Lock code --- In idle mode, press  key to request to enter the phone lock code (if required).

In the instances above mentioned, press  key to only dial emergency call.

### 2.5.1 Entering your UIM card PIN Code and SIM card PIN code

You can set protection code (PIN CODE) in order to prevent random using of your phone by others. Each time you restart your phone, the phone will prompt you to enter PIN code (The default PIN is 1234). In this condition, press 

key to dial emergency call. If two cards are locked, you should enter two cards' PIN code to restart phone.

- Input PIN code (supplied by network service provider. For security, an \* will be displayed on the screen to in place of the number you enter.)
- If you make a wrong enter, you can press  key to re-enter the code
- Press  key, and after a short time, your mobile phone will confirm its correctness and begin to register on the network. Once the network signal and the time are shown on the screen, you can call or access any of the functions of your phone.

**Note:**

If you have entered the PIN code incorrectly continuously for max retry limits, the card will be automatically locked. In this condition, the phone will prompt for PUK (PIN Unlocking key). You can get the PUK from your mobile phone service provider.

### 2.5.2 Entering your Phone Lock Code

The phone lock code is used to protect your phone from unauthorized use. It can be set to automatically lock your phone each time it is switched on or when in idle mode. In this condition, you can only dial emergency call.

You must press  key to enter correct phone lock code, and then access the phone menu (The default is 0000).  
The PIN code and Phone lock code can be changed.

## 2.6 basic operation

### 2.6.1 Dialing a number

To dial a number, your phone must be switched on and unlocked.

You can use the function only after the network-prompting icon is shown on the screen.

### 2.6.1.1 Using the digits keys

Enter district code and telephone number or mobile phone number, press  key to dial from CDMA network; or press the left soft key to select the GSM option, then dial from GSM network..

- Press  key to delete a typed number. Press and hold  key to delete all numbers.
- To indicate that you are dialing a number, the word **Calling** displays the screen.
- If the call is not answered and you want to end the call, press  key.

### 2.6.1.2 Dialing a number using the Recent Call List

The mobile phone can store not more than 30 call logs (received, dialed and missed calls).

1. In idle mode, press  key and then press up/down navigation key or press down navigation key directly to enter the call history list.
2. Scroll the list by pressing the up/down navigation key and select an entry.
3. Press  key to dial from CDMA network or press the left soft key to select GSM call, then dial from GSM network.

### 2.6.1.3 Dialing a number using the Names List

1. In idle mode, press left navigation key or press  key to enter the names list.
2. Scroll the list by pressing the up/down navigation key and select an entry.
3. Press  key to dial.

#### 2.6.1.4 Dialing a number using Speed Dial

Speed dial is a fast way to call one of your special numbers. See '**Speed dial list**' menu.

#### 2.6.1.5 Making an International call

- Press and hold  key until "+" appears on screen.
- Enter the country code, area code (without prefix zero) and phone number.
- Press  key to dial.

#### 2.6.2 Ending a call

You can end a call at any time by holding down the  key or press the right soft key till the call has been terminated.

#### 2.6.3 Receiving a call

When you receive a call, the phone will alert and the word '**Incoming call**' displays on the screen. If your phone has Caller Line Identification and the calling party is in Names list, the caller's number and name also appears.

Press  key or any key (need setting) to answer the call. Please refer to '**Any key answer**' menu.

Press  key or the right soft key to reject the incoming call.

#### 2.6.4 Missed calls

The missed calls and their numbers will be shown on the screen in idle mode.

Press  key to view the list. and press  key to cancel the list.

#### 2.6.5 During a phone call

After pressing  key, user can view following contents given below:

### 2.6.5.1 Mute

Temporarily turns the microphone off during a phone call. Reselect this option to resume your conversation.

### 2.6.5.2 Handfree on

By selecting this option, you can set the phone handfree on , and reselect the option to handfree off.

### 2.6.5.3 Names

This function allows you to access the Names menu.

### 2.6.6 IP call

Input numbers in idle mode and press the left soft key to select IP call option, then press send key to dial. You also can select number from contact or call history or message to finish IP call function.

### 2.6.7 New messages

When the new message is received:

1. Your phone makes alert tones (ringer, vibration or silence).
2. If the keypad is unlocked, your phone display will show '**You have 1 new message!**'. Press  key to view the message's contents and then press  key again to operate options. Press  key or  key to return to the idle mode, the new message-prompting icon is displayed on the screen.
3. If the keypad is locked, your phone display will also show '**You have 1 new message!**'. But you can't view the contents.

**Note:** If the message is urgent /emergency, your phone displays '**You have 1 new message (Urgent/Emergency)!**'.

Note: When the new ringtone is received, the operations is similar to the operation above.

### 2.7Headset

If you connect the headset with the phone, it will be to activate headset mode and to match the volume of headset mode.

Increase or decrease the volume through up and down navigation key during call.

If you plug out the headset from the phone, the phone will return to normal

mode automatically.

### 3. Menu overview

The two cards can be used in the handset for accessing the menu options detailed below. If the UIM card and GSM card is not inserted, you can still make SOS (emergency) calls.

You can view the main menu by Pressing  key in idle mode and up/down navigation key. Pressing  key again allow you to enter submenu which you selected. The main menu consists of 8 main functions. They are listed below.

- 1, Names
- 2, Messages
- 3, Call history
- 4, Profiles
- 5, Organizer
- 6, Setting
- 7, Radio
- 8, Game

**Note:** You can press left soft key first and then directly press 1 to 8 to enter the corresponding submenu.

#### 3.1 Names

You can store names and phone numbers in your phone , UIM card or SIM card memory.

In idle mode, press  to access the names function.

1	List	List the entire contacts in your phone book.
2	Add name	Add a new record into the Contacts List.
3	Find	Search for a contact from phone book by typing name or group.
4	Multicopy	Copy items one another from the phone memory to UIM card memory, or copy items one another from SIM card memory to phone memory
5	Groups	Allocate the names stored into phone book to specific group
6	Erase all	Erase all items in mobile phone ,UIM card or SIM card memory.
7	Speed dial	Your mobile phone can store 99 entries in its

		memory for easy/quick dial in which the first item is by default. User can edit each speed dial entry.
8	Memory status	Allow you to inquire the capacity of UIM card, SIM card and phone, including free number and total capacity.

This option will forward incoming calls when you are on a call.

**Not reply/Not reachable**

This function will forward incoming calls if you don't answer the call or your phone is out of network service or switched off.

Note: You should edit the feature code before you enable or disable the forward.

#### 3.6.2.1.2 Call waiting

If your mobile phone service provider supports this feature, the call waiting notifies you of an incoming call even while you are on a call. You can accept, reject, or ignore the incoming call. If you accept the new incoming when you are on a call, you can press send key to switch the calls.

The Call Waiting function needs to be supported by your network service provider.

#### 3.6.2.1.3 Any key answer

If it is set to on, it allows you to answer an incoming call by briefly pressing any key except the Power key and right soft key.

#### 3.6.2.1.4 Voice privacy

Voice Privacy is a network service. If your wireless service provider supports this feature, the voice privacy feature protects the privacy of your current phone conversation from other callers placing phone calls on your same network. By default Voice Privacy is set on Standard Mode.

### 3. 6.2.1.5 International call prefix

By using this function, you can set the local international dialing prefix code. If you set the prefix code by hand, when dial a number with prefix code '+', '+' will automatically change into code you input.

### 3.6.2.1.6 IP call setting

Allow you to set the IP call 'on' or 'off'.

### 3.6.2.2 GSM

#### 3.6.2.2.1 Call forward

##### **When busy**

This option will forward incoming calls when you are on a call.

When you select this option, following operations are allowed to do.

Query: query current status

Enable: switch the function on

Disable: switch the function off

##### **Not reply**

This function will forward incoming calls if you don't answer the call.

##### **Unconditional**

This function will unconditionally forward all incoming calls to other number.

##### **Unreachable**

This function will forward incoming calls if your phone is out of network service or switched off.

##### **Disable all**

This function will close all the forward off.

#### 3.6.2.2.2 Call waiting

It is similar to CDMA call waiting. Please refer to 3.6.2.1.2

### 3. 6.3 Phone

#### 3. 6.3.1 Keyguard

This function allows you to lock the keypad when phone is not in use. You can also customize keypad lock time in minutes.

#### 3. 6.3.2 Key tone

Allow you to select the key tone mode: Normal (the prolonged sound and the brief sound are fixed.), Long (when you are pressing the key, the key tone is alerted until un-pressing).

#### 3. 6.3.3 Version

You can view the SW/HW/PRL version number by using this menu.

### 3. 6.4 Security

Security menu protects your phone from unauthorized use. Before accessing this option, you will be asked to enter lock code (The default is 0000).

#### 3. 6.4.1 Lock mode

This option is used to set the lock code.

The lock code can be set to protect your phone from unauthorized use. It can be set to automatically lock your phone each time it is switched on or is in idle mode.

The lock code is a four digit number which is set at 0000. This can be changed at any time by using the 'change lock code' option.

##### **Off**

This option can be used to set the lock code disable.

##### **Now**

This option can be used to immediately lock your phone. Once selected, your phone will be unusable until the phone lock code is entered.

##### **On power up**

This option can be used to automatically lock your phone each time it is switched on.

#### 3. 6.4.2 Change lock code

This option is used to change the lock code.

After selecting this option, you will be asked to enter new lock code to replace the old code. The new lock code must be entered again as confirmation.

#### 3. 6.4.3 Reset

Allow you to restore your phone to the factory settings.

#### 3. 6.4.4 PIN Management

This option is used to set and change the PIN code.

The PIN code can be set to protect your UIM card from unauthorized use. If set to **Enable PIN**, access to your UIM card will be restricted each time the phone is powered on.

##### **Enable PIN**

If user enables the PIN, the Phone will ask for PIN each time it is switched on. By default the RUIIM PIN is 1234. If you enter wrong PIN code three times ,it will prompt that you need enter PUK code to unlock PIN code. These operations is also adapt to disable PIN code.

##### **Disable PIN**

This option can be used to set the PIN disable.

##### **Change PIN**

This option is used to change the UIM card PIN code.

The 'PIN Management' option must be set to **Enable PIN** and you must enter the old PIN code before you can proceed.

The phone will ask for enter a new 1~4 digits code to replace the old PIN code. The new PIN code must be entered again as confirmation.

#### 3.6.4.5 GSM PIN management

The function is similar to CDMA PIN management.

##### **Enable PIN**

If user enables the PIN, the Phone will ask for PIN each time it is switched on. By default the SIM PIN is 1234. If you enter wrong PIN code three times ,it will prompt that you need enter PUK code to unlock PIN code. These operations is also adapt to disable PIN code.

##### **Disable PIN**

This option can be used to set the PIN disable.

##### **Change PIN**

This option is used to change the SIM card PIN code.

The 'GSM PIN Management' option must be set to **Enable PIN** and you must enter the old PIN code before you can proceed.

The phone will ask for enter a new 4~8 digits code to replace the old PIN code. The new PIN code must be entered again as confirmation.

### 3.7 Radio

You can receive any channels in common mode. The channel's name and serial number are showed if the channel is stored. You can press up/down navigation key to tune up and press left/right navigation key to adjust the channel. When it is in prestore mode, you can adjust nothing but the saved channels.

Press  key to access the following operations.

Note: all operations are not allowed if the earphone is not on.

#### 3.7.1 switch off

Press  key to close the radio.

Note: if you pull out the earphone directly, the radio is still on. You must select the option to switch off the radio.

#### 3.7.2 prestore mode

Allow you to switch the mode between common mode and prestore mode.

### 3.7.3 save channel

You can save the current channel . it can stored not more than 20 notes.

Note: if the channel already existed , the pop-up message '**channel already existed!**' will display on the screen.

### 3.7.4 rename channel

Allow you to modify the saved channel's name to a wanted name.

### 3.7.5 set frequency

Allow you to receive any channels according to entering content . when you select the option, the current channel is showed and you can press the right soft key to delete it, then input a wanted channel by pressing numerical key.

Note: you must input valid channel according to territorial scope.

### 3.7.6 search up

Allow you to search previous channel when you select the option.

### 3.7.7 search down

Allow you to search next channel when you select the option.

### 3.7.8 auto tuning

It will search all channels automatically one by one when you select the option. Then it will return to the primary channel that you received.

### 3.7.9 settings

#### **band setting**

Allow you to select the country where you live in .

#### **tuning precision**

Allow you to tune precision. It includes low ,mid ,high. You can select any one of the precisions.

#### **channel list**

You can view the channel list, edit or erase any one of the channels. And it allow you to add new channels or erase all channels.

Note: only when it is in prestore mode, the “rename channel” option is existed and only when it is in common mode, the options including search up ,search down, save channel and set frequency are existed .

## 3.8 Game

### 3.8.1 Kong ming

If you have saved the former game record, you can choose, start or resume game, or select game to start it again.

#### Instructions

Use up /2, down /8, left /4 and right /6 to control the cursor. Use 5 to select a chessman. When chessman X moves over chessman Y next to it, Y is erased from the chessboard. Only one chessman can be erased at one time. Player wins if there is only one chessman left in the center of the chessboard.

## 4. Input method

This mobile phone uses the abc input Method. When using your mobile phone there will be many times that you will need to input text e.g. sending messages, entering names into the Phonebook, editing the greetings message, etc.

Under the input mode, press  key to switch the input mode.

The phone provides the following methods:

### 4.1 Number (123)

This input method can be used to enter digits.

1. In text editing mode, press  key several times until ‘123’ is displayed at the top-right corner of the screen.
2. Press the numeric keys to input numbers.

### 4.2 Character (abc/ABC)

Using the character input method, you can enter uppercase and lowercase letters, and you can press and hold the numeric keys (2~9) to input numbers directly.

1. Tap the  key several times until ‘abc’ is displayed in the top-right corner of the screen, then you can type in lowercase letters.

2. Tap the  key several times until 'ABC' is displayed in the top-right corner of the screen, then you can type in capital letters.
3. Press desired number key, once to input a character, twice to display the second character, by analogy to finish the text.
4. Press 0 key to add a space.

#### 4.3 Entering symbols

1. Press the  key to enter the special character library.
2. Press up/down navigation key to select the symbol you need.
3. Press the corresponding number key.

Note: You also can press number key 1 continuously to enter corresponding symbol.

### 5. USB windows device driver installation guide

#### 5.1 Introduction

This document is a user guide for USB Windows device driver installation process. The USB Windows device driver provides the interface between the operating system and Toneway P100 handsets, allowing user applications to communicate with devices. This installation guide is intended to provide a detailed description of the USB Windows device driver installation process.

#### 5.2 Components

Upon successful completion of the installation process, the following files will be located in the specified directories folders:

C:\Program Files\VIA Telecom\VIA CBP USB Driver\\*.inf:

ViaUsbEts.inf  
ViaUsbHub.inf  
ViaUsbModem.inf

C:\Program Files\VIA Telecom\VIA CBP USB Driver\\*.sys:

ViaUsbEts.sys  
ViaUsbModem.sys

C:\Program Files\VIA Telecom\VIA CBP USB Driver\\*.PDF:

ctm\_via\_usb\_drv\_installation\_user\_g

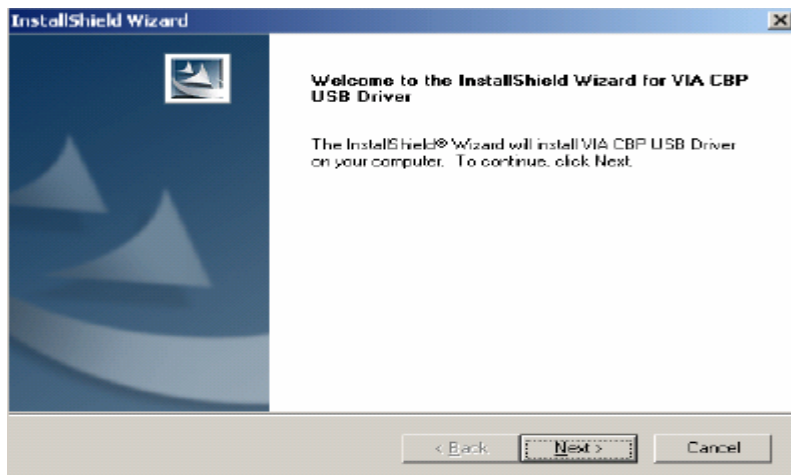

### 5.3 Installation

1. To install the USB Windows device driver, you must first start the Setup application, ViaUsb\_Setup.exe, by double-clicking the associated icon.

**Figure 1 - USB Windows Device Driver Setup Icon**

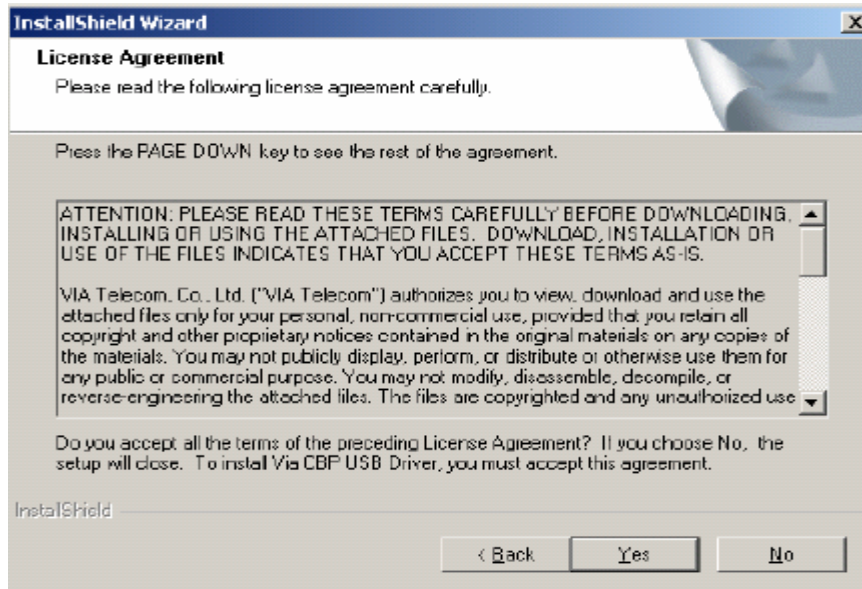

2. The USB Windows Device Driver Setup Welcome Dialog Box will appear.

**Figure 2 - USB Windows Device Driver Setup Welcome Dialog Box**

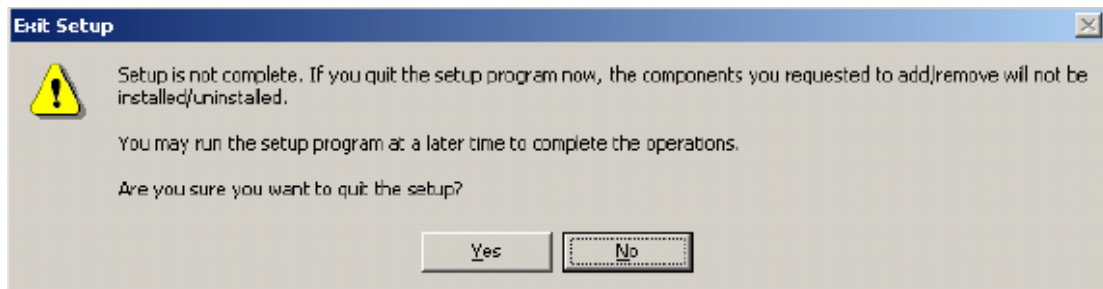

3. Click the **Next** button to continue.  
The License Agreement dialog box appears.

**Figure 3 - USB License Agreement Dialog Box**

4. To continue, you must accept the License Agreement by clicking the **Yes** button. If you select the **No** button, the following dialog box will appear, confirming whether you truly wish to terminate the installation process at this time.

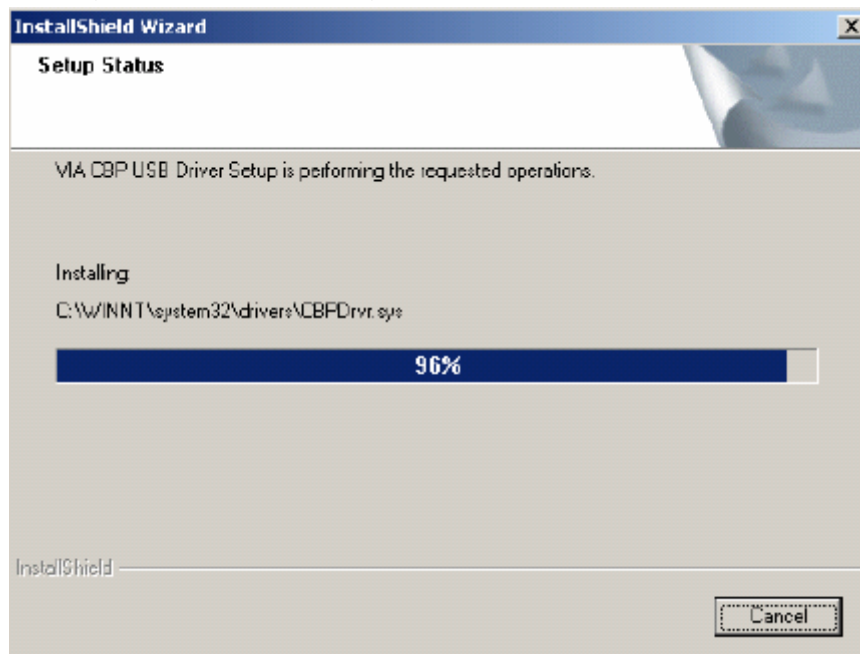

**Figure 4- USB Windows Device Driver Setup Process Termination Confirmation Dialog Box**

If you select the **Yes** button, the installation process is terminated. If you select the **No** button, the License Agreement dialog box (Figure 3) will reappear. Upon agreeing to the License Agreement (Figure 3), the Customer Information Request Dialog Box will appear.

**Figure 5 – USB Setup Customer Information Request Dialog Box**

5. Please enter the appropriate user and company name into the corresponding fields. By clicking the **Next** button, you will proceed to the actual installation of the USB Windows Device Driver support files into their appropriate folders. The USB Installation Status Message dialog box will then appear indicating what percentage of the file copying task is complete.

**Figure 6 – USB Driver Installation Operation Status Message**

Upon completion of this step, the following message box appears.

**Figure 7 – USB Device- Discovery Action Request Message**

6. Click **OK** to trigger the Plug-N-Play mechanism to complete the discovery, installation, and registration of the USB device driver components into the Windows Operating System. The following Device Manager dialog boxes will appear, indicating each USB device as it is discovered. You need only follow the instructions outlined in these dialog and message boxes as they appear to complete this part of the installation process.

**Figure 8- Windows Device Manager’s Device-Discovery Notification for the USB Hub/ETS/Moderm**

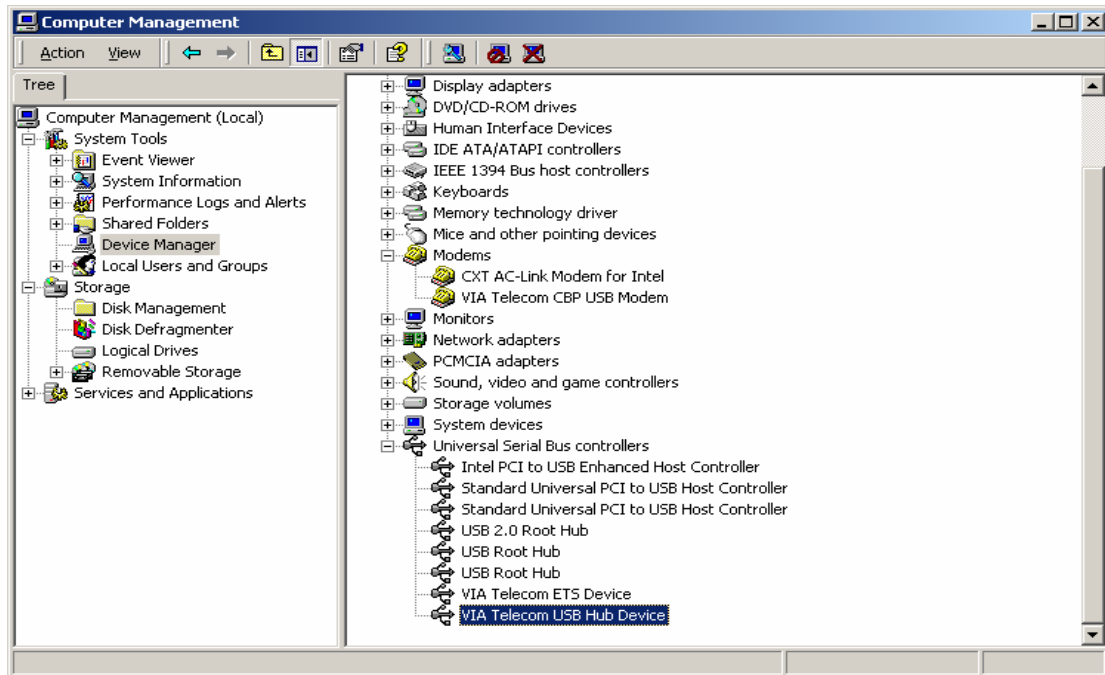

The message box illustrated in Figure 8 will only appear for a very short period of time, followed by the Window Hardware Installation Wizard’s Device-Found Notification for the USB Hub, the USB ETS device, and the USB Modem device. Installation of the USB Hub Device/the USB ETS device/the USB Modem device will occur automatically, requiring no user intervention. At last a prompt (Figure 9) will appear on the screen. The USB driver installation will then complete.

**Figure 9 – Windows Device Manager’s Device – Discovery Notification for the CBP USB Modem Device**

7. An examination of the Windows Device Manager’s device list (as depicted in Figure 10) will evidence the successful installation of the USB devices, namely:

- VIA Telecom USB Hub Device
- VIA Telecom ETS Device
- VIA Telecom CBP USB Modem

**Figure 10 – Windows Device Manger’s Device List After Successful Installation of the VIA USB Devices**

**Note:**

- This USB driver just supports windows 2000 and windows XP operating system.
- If the ‘Digital Signature Not Found’ dialog box (like Figure 11) appears, you need only click the **Yes** button.

**Figure 11 – Windows Device Manager’s Device-Discovery Notification that the CBP USB Modem Device- Driver Lacks WHQL Certification**

## 6. Modem installation guide

You can dial-up to the network by considering the phone as modem after connecting the PC and the phone.

1. Connect the PC and the phone using the cable that we supplied.
2. Add a new windows standard modem driver, i.e.

Install process:

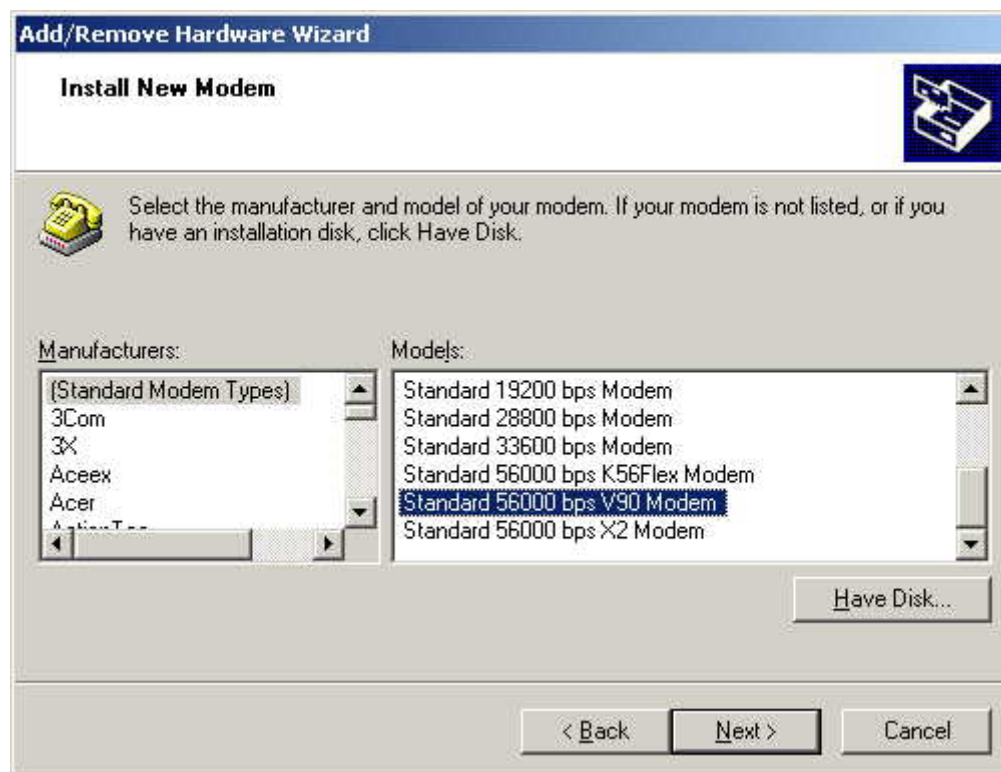

Enter Control panel

Enter Add/remove a hardware

Enter add a new device

Install a new modem

Choose a modem driver

Recommend:

Standard 56000 bps v90 modem for windows 2000

Standard 33600 bps modem for windows XP

3. Make a new dial-up connection

Enter Network and Dial-up Connections

Make new connection

Click Next as follow

#### 4. Dial-up to the network

Dial-up directly for windows XP

You will be asked to enter the user and password when log on for windows 2000. You can get the user and password from your mobile phone service provider.

#### 7. Frequently asked questions (FAQ)

Here you will find answers to questions that you may have about your Toneway P100 mobile phone.

Q. What is my Security Code?

A. The Default Security code is 0000. However, it is suggested that you change this code immediately. Certain features can be used only after the correct security code has been successfully entered.

Q. How do I change the Security Code?

A. Settings → Security → Enter Lock code (By Default lock code is 0000) → Change lock code → Enter Lock code (enter any code which you are able to remember easily) → Confirm Lock code → Ok

Q. What is the RUIM Lock?

A. The RUIM lock code enables you to lock your RUIM card, thus preventing

someone else from using it. The Default RUIM Lock is 1234, However, it is suggested that you change this code immediately.

Q. How to change the RUIM Lock?

A. Settings→Security→Enter Lock code (By Default lock code is 0000)→PIN Management→Change PIN→Enter old PIN (By Default PIN is 1234) →Enter new PIN→ Repeat new PIN→Ok

Q. How to enable RUIM Card Lock?

A. Settings→Security→Enter Lock code(By Default lock code is 0000)→PIN Management→Enable PIN→Enter PIN (By Default PIN is 1234) →Ok

Q. How to disable the RUIM Lock?

A. Settings→Security→Enter Lock code (By Default lock code is 0000) →PIN Management→Disable PIN→Enter PIN (By Default PIN is 1234) →Ok

Q. How do I increase the volume of the phone ringer?

A. Profiles→select any mode→Edit profile→Ringer volume→select High

Q. How do I change the ringing tone?

A. Profiles→ select any mode→Edit profile→Ring tone→select any music →Ok

Q. How do I view the last dialed numbers?

A. Press the call key to select the last dialed call.

Q. How do I assign a key to speed dialing?

A. Names→Speed dial→Options→Set entry→Select number from names lists→Ok

Q. How do I reset my phone's call timer?

A. Call History→Call duration→Reset all→Ok

Q. How do I find my phone's ESN (electronic serial number)?

A. Turn off your phone. Remove the battery from the back of the phone. Your phone's ESN number is printed on the sticker that is pasted on the rear cover, and is labelled "ESN."

Q. How do I find out how much memory the phone has?

A. Names→Memory status→Ok

Q. How do I call my voice mailbox number (Retrieve voice messages)?

A. When your phone alerts you to new voice messages, press and hold down

the 1 key. Follow the phone instructions to listen to your voice mail.

## 8. Trouble shooting

If there are troubles when using your phone, please refer to the following table.  
If there are still questions, please dial Toneway service telephone to solve.

Problem	Solution
The phone cannot be switched on.	Make sure the battery is installed correctly and charged.
	The contacts on the battery and charger must be clean and dry.
Please insert RUIM	There is no RUIM card in the phone, or you have inserted it incorrectly.
Incorrect PIN code	Input the correct PIN code (the default is 1234).
The RUIM card is locked.	The RUIM card will be locked after entering the PIN code incorrectly three times in a row. You must enter PUK code from the service provider to unlock.
Input the phone lock code	In idle mode, press the right soft key to input the phone lock code (the default is 0000).
No network	Make sure the network has coverage the current location. If the received signal is too weak, move to an open space or near the window.
The phone has poor reception and drops calls.	The received signal of current location is not good (i.e., in a car or train). Move to an area with a stronger signal to use your phone.
Cannot make or receive a call.	Check the signal strength indicator on the screen. If the signal is too weak, move outdoor to obtain a strong signal.
	Avoid electrical interference and obstructions such as tall buildings, bridges, i.e.
	Check the <b>Call forward</b> settings.
	If <b>SOS</b> is displayed on the screen, you won't use the network service. But you can dial the emergency call.
Cannot send or receive message.	Make sure you have subscribed for this service, otherwise, contact your network service provider.
	The phone memory may be full. Delete some messages to free memory.
The battery cannot be charged.	Make sure the charger connector has been properly connected to the phone.
	Check the battery and charger contacts to make sure they are clean and dry.

	<p>Check the battery temperature. To avoid charging the battery in extreme temperature.</p> <p>If the battery or charger is an old one, its performance will decline after several years use. You must change a new one.</p>
The phone switches itself off.	Check the battery to make sure it is installed properly and charged.
The other party is unable to hear what you are saying.	Make sure your phone is not set to silence mode.
	<p>Make sure you do not block the microphone.</p> <p>Check if you are out of the network range.</p>
The speaker volume is too low.	Press the upper volume side key during a conversation.
The phone display is too dark or bright.	Check the <b>Backlight</b> and <b>Contrast</b> settings.

## RF Exposure Information and Statement

The SAR limit of USA (FCC) is 1.6 W/kg averaged over one gram of tissue. Device types HC-CG210 (FCC ID: SG70902HC-CG210) has also been tested against this SAR limit. The highest SAR value reported under this standard during product certification for use at the ear is 1.43 W/kg and when properly worn on the body is 0.688 W/kg. This device was tested for typical body-worn operations with the back of the handset kept 1.5cm from the body. To maintain compliance with FCC RF exposure requirements, use accessories that maintain a 1.5cm separation distance between the user's body and the back of the handset. The use of belt clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**NOTE:** The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

**NOTE:** This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help
