

# Bluetooth Adapter for Keyboard and Mouse BT-500

## User Manual v1.0

### Key Features:

- Based on Bluetooth 4.0 (Bluetooth Low Energy or BLE) with reduction in power consumption and fast connection time.
- Works with all types of hosts including Mac OS, iPad, iPhone, Android tablets/smartphones, all versions of Windows and Linux as long as they have Bluetooth 4.0.
- Compatible with all types of USB keyboards including those with a built-in hub (e.g., Happy Hacking v1, DAS, Apple, Dell, IBM/Lenovo) and keyboard/trackball combos (both the keyboard and trackball will work). For keyboards with a built-in hub, there can be only one other device connected to it.
- Most media keys on keyboard will work including volume +/-, mute, play/stop, previous/next, browser, calculator, home, help, sleep, search. The handling of those keys varies greatly by the host. Programmable keys (for example, those marked as G1, G2, ... on some Logitech keyboards) will *not* work since they need customized device driver.
- Many keyboard-like USB devices will work if they appear as keyboards in the operating system. Those include keypads, foot pedals, bar code readers, magnetic strip readers, and PS2 to USB adapters. Most 2.4G wireless dongles (e.g., Logitech Unifying Adapter) will also work.
- No keycode pairing: pairing just works without typing in any code.
- Advanced Firmware features:
  - Timers: periodically send a key, mouse movement or macro. There can be up to 4 timers.
  - Macro: a sequence of keys or mouse movements which can be used in key mapping or timer.
  - Key mappings: you can map any key to another key, to mouse movement or to a macro. There are built-in mappings to turn a Qwerty keyboard to Dvorak or Colemak in one simple command.

### 1. LED indicators:

#### Green LED (for keyboard/mouse status)

Off when there is no devices connected. Fast blinking when device is plugged. Stopped blinking when device has been initialized successfully. Otherwise keep blinking.

When there are key strokes or mouse movement, the LED would blink to indicate activities.

#### Blue LED (for Bluetooth connection status)

Blinks slowly (once per 2 seconds) when the adapter is connected to a host.

Blinks normal (once per second) when the adapter is not connected to a host.

Blinks fast (twice per second) when the adapter is in command mode.

2. When plugged into a laptop, the USB male port shows up as a composite keyboard and mouse device. Any keystrokes or mouse movements will be output to this port.
3. If the adapter is not connected to a host, during the first 30 seconds after turning on, it will advertise its present and become available for pairing. Follow the process below to pair:
  - Turn on the adapter with or without a keyboard connected. Blue LED should start flashing normally (once per second).
  - On the host, search for Bluetooth devices. The name of the adapter is *ADAPTER\_nnnn* where *nnnn* is the last 4 digits of its MAC address.
  - When the host finds the adapter, select it and do "pair". There is no need for any pairing code. If pairing succeeds, the adapter will then be connected to the host and ready to be used. Blue LED flashes slowly.

Pairing is done only once. Next time when the adapter is turned on, it will connect to the paired host if it is available.

BT-500  
Bluetooth Adapter for Keyboard and Mouse  
FCC ID: 2AQL7-BT-500

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
  - Increase the separation between the equipment and receiver.
  - Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
  - Consult the dealer or an experienced radio/TV technician for help
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
