MODEL 1612 SHOWN

**SLICERS**

(INCLUDES MOTOR PARTS)

1612	ML-19515
1712	ML-19525
1712R	ML-19526

THIS MANUAL REPLACES AND SHOULD BE USED INSTEAD OF  
FORMS 12832B, 12836B & 12887A FOR REPLACEMENT PARTS.

# **Installation, Operation and Care of MODELS 1612, 1712, & 1712R SLICERS**

## **SAVE THESE INSTRUCTIONS**

### **GENERAL**

The Hobart Models 1612, 1712, and 1712R Slicers are equipped with Hobart-built motors and are available for single-phase electrical service. They feature the exclusive Hobart Stay-Sharp cast solid stainless steel knife and are furnished with a cord and plug as standard equipment.

The 1712 and 1712R Slicers feature two-speed automatic slicing and an adjustable carriage fence which can be adjusted to prevent products from rolling on the carriage. The feed grip and indexing screw on the 1712R make this model ideal for producing thin uniform slices of roast beef, boneless ham, etc.

Accessories available for all slicers include additional carriage fences and a tubular food chute, which can be used in place of the carriage tray to slice round items such as lettuce or pepperoni.

### **INSTALLATION**

#### **UNPACKING**

Immediately after unpacking the slicer, check it for possible shipping damage. If this machine is found to be damaged after unpacking, save the packing material and contact the carrier within 15 days of delivery.

Prior to installing the slicer, test the electrical service to assure it agrees with the specifications on the machine data plate.

## ASSEMBLY

### Model 1612

After removing the slicer from its shipping base, loosen the thumb screw on the knife sharpener, place it in its storage slot (Fig. 1), and tighten the thumb screw.

The oil shipped in the container marked *HAVOLINE #10* and the can of *Chevron Poly - FM #0* grease are for machine lubrication; refer to the MAINTENANCE section of this manual for instructions on their use.

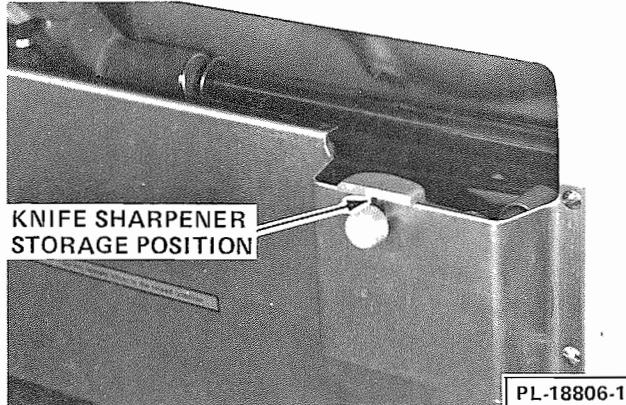

Fig. 1

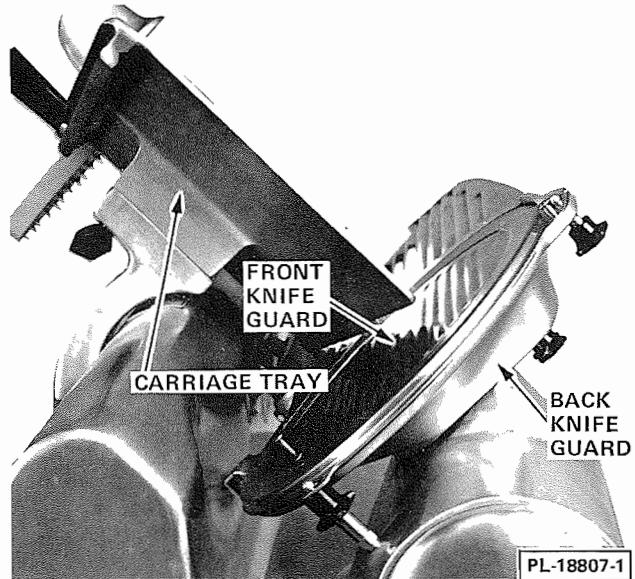

Fig. 2

### Models 1712 and 1712R

Remove the carriage tray from its shipping box, place it in position on the slicer (Fig. 2), and secure it by tightening the thumb screw.

Loosen the thumb screw on the knife sharpener, place it in the storage slot (Fig. 1), and tighten the thumb screw.

The oil shipped in the container marked *HAVOLINE #10* and the can of *Chevron Poly - FM #0* grease are for machine lubrication; refer to the MAINTENANCE section of this manual for instructions on their use.

## ELECTRICAL

**WARNING:** THIS MACHINE IS PROVIDED WITH A THREE-PRONG GROUNDING PLUG. IT IS IMPERATIVE THAT THE OUTLET TO WHICH THIS PLUG IS CONNECTED BE PROPERLY GROUNDED. IF THE RECEPTACLE IS NOT THE PROPER GROUNDING TYPE, CONTACT AN ELECTRICIAN.

## CLEANING

This machine must be thoroughly cleaned and sanitized after installation and before being used. Refer to the OPERATION section of this manual.

# OPERATION

## SAFETY

SAFETY DEVICES INCORPORATED IN THIS SLICER MUST BE IN THEIR CORRECT OPERATING POSITIONS ANYTIME THE SLICER IS IN USE.

The FRONT and BACK KNIFE GUARDS (Fig. 2) must be in position on their locating studs and secured with the thumb screws.

The MEAT GRIP must be used when slicing short ends to keep your hands away from the knife.

When the slicer is not running, the INDEX KNOB (Fig. 3) must be turned back below zero (fully clockwise). The gauge plate will then prevent the knife edge from being exposed.

Always UNPLUG the power cord before cleaning or moving the slicer.

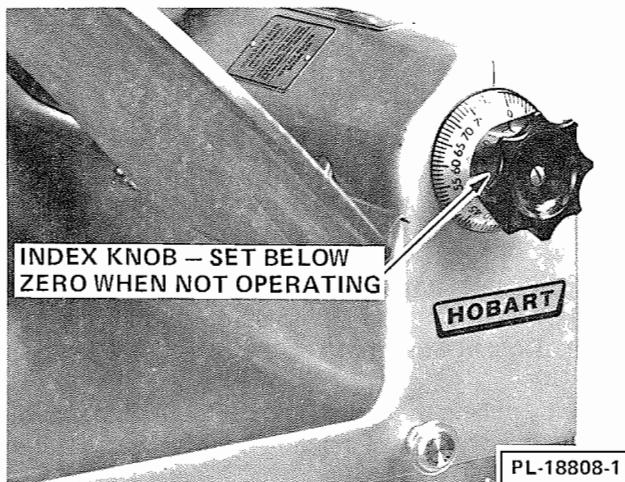

Fig. 3

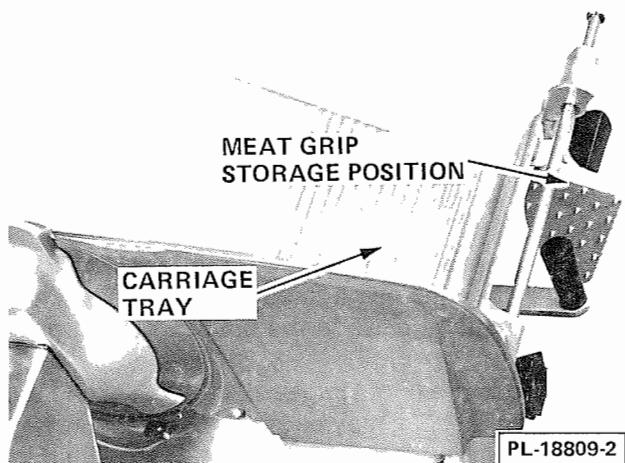

Fig. 4

## SLICING — MODEL 1612

Pull the carriage all the way toward you until it reaches its stop. With the meat grip out of the way, place the product to be sliced on the carriage tray (Fig. 4).

Set the meat grip against the product and turn on the slicer by pulling the switch knob (Fig. 5). If the meat grip is not needed, it may be stored out of the way by sliding it to the top of its travel, rotating it under the carriage tray, and allowing it to rest in the retaining clip (Fig. 4).

Adjust the gauge plate to obtain the desired slice thickness by turning the index knob (Fig. 5). The numbers on the index knob do not indicate actual measurements but may be used for reference to duplicate slice thicknesses.

Using the carriage tray handle or the meat grip handle (Fig. 5), push the carriage back and forth to slice.

To use the optional food chute, loosen the carriage tray thumb screw (Fig. 5) and carefully remove the carriage tray. Position the food chute on the carriage support and secure it by tightening the thumb screw. The pusher plate is provided with the food chute to force-feed products when necessary.

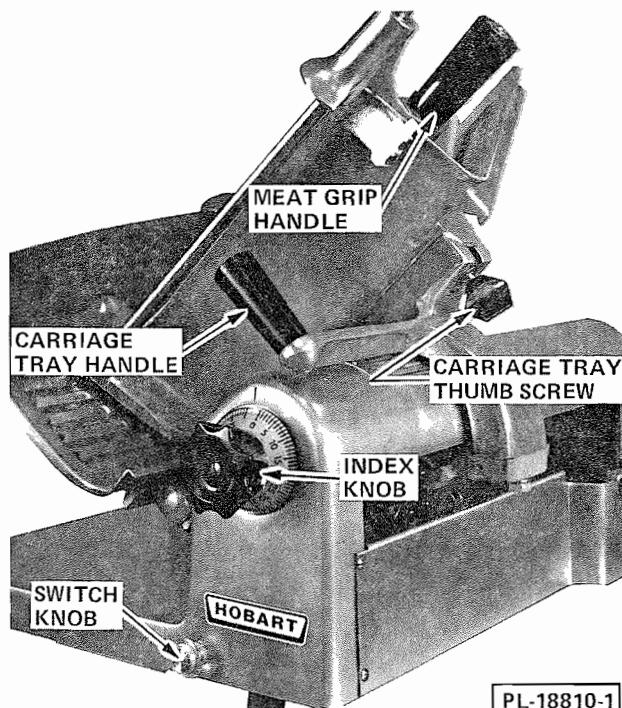

Fig. 5

PL-18810-1

## SLICING — MODEL 1712

Pull the carriage all the way toward you until it reaches its stop. With the meat grip out of the way, place the product to be sliced on the carriage tray (Fig. 6). Adjust the fence (Fig. 6) by loosening the thumb screw and sliding the fence so that it is close to the product but not pushing against it. Tighten the thumb screw.

Set the meat grip (Fig. 7) against the product and turn on the slicer by pulling the switch knob (Fig. 6). If the meat grip is not needed, it may be stored out of the way by sliding it to the top of its travel, rotating it under the carriage tray, and allowing it to rest in the retaining clip (Fig. 6).

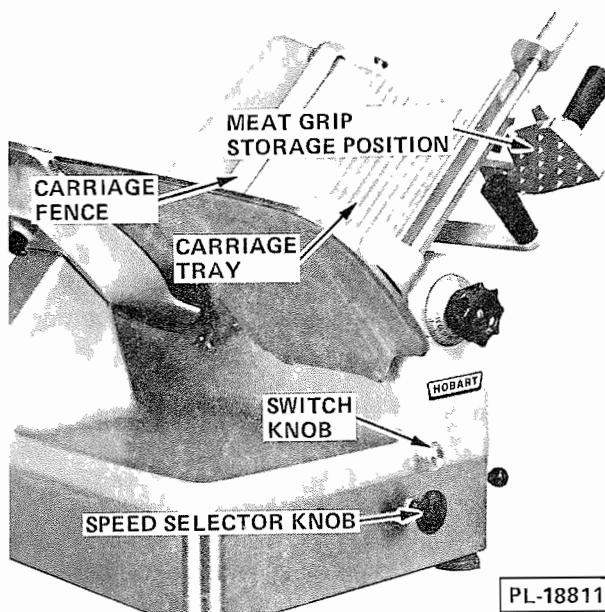

Fig. 6

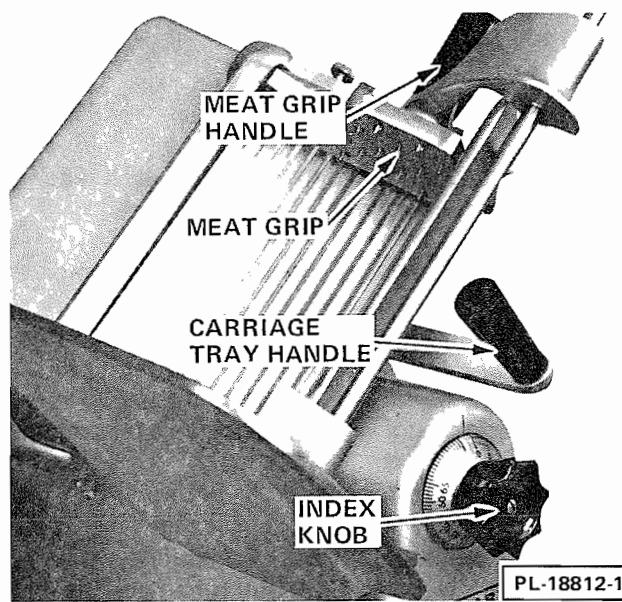

Fig. 7

Adjust the gauge plate to obtain the desired slice thickness by turning the index knob (Fig. 7). The numbers on the index knob do not indicate actual measurements but may be used for reference to duplicate slice thicknesses.

Using the carriage tray handle or meat grip handle (Fig. 7), push the carriage back and forth to slice.

To operate the slicer automatically, make sure the speed selector knob (Fig. 6) is set in, pull the carriage to the end of its travel, lift the actuating lever (Fig. 8) to its locked position, and gently push the carriage to engage the driving unit. Always start automatic slicing in low speed.

To change to high speed, pull the speed selector knob out (when the carriage is at the operator end of its travel) and rest the notch in the speed selector on the shifter sleeve. Release the speed selector to shift back to low speed.

To disengage the driving unit, push the locking clip (Fig. 8) when the carriage is nearing the operator end of its travel. Always leave the driving unit in low speed (knob set in) when the slicer is not operating automatically.

To use the optional food chute, loosen the carriage tray thumb screw (Fig. 8) and carefully remove the carriage tray. Position the food chute on the carriage support and secure it by tightening the thumb screw. The pusher plate is provided with the food chute to force-feed products when necessary.

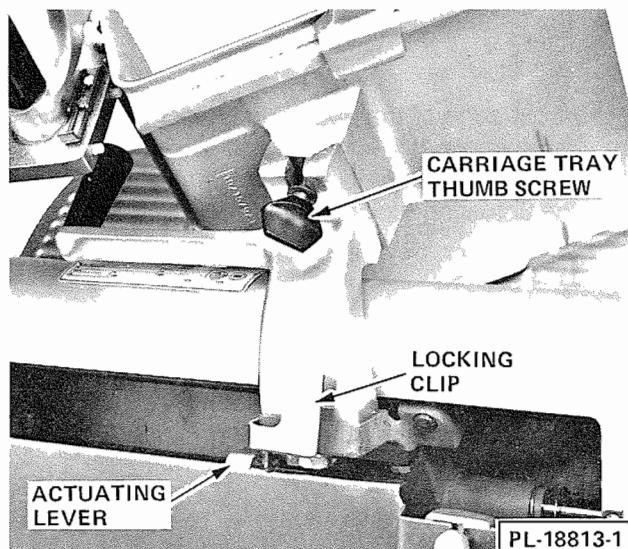

Fig. 8

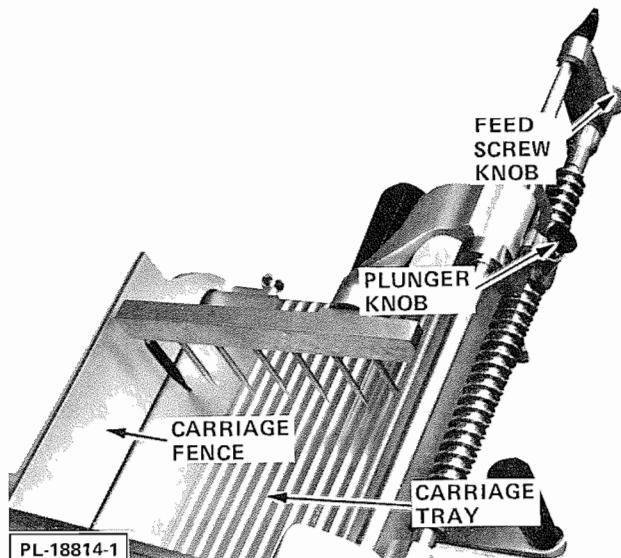

Fig. 9

## SLICING — MODEL 1712R

Pull out and rotate the plunger knob (Fig. 9) so that the pin rests on the plunger housing. Lift the meat grip to its raised position and place the product on the carriage tray (Fig. 9).

Adjust the fence (Fig. 9) by loosening the thumb screw and sliding the fence so that it is close to the product but not pushing against it. Tighten the thumb screw. Swing the meat grip around and firmly force the prongs into the product. The prongs should be set in the middle of the product and readjusted occasionally to maintain an even pressure during automatic slicing. Always turn off the slicer before resetting the meat grip. If desired, the meat grip can be set at the end of the product to serve as a pusher.

Adjust the gauge plate to obtain the desired slice thickness by turning the index knob (Fig. 10). The numbers on the index knob do not indicate actual measurements but may be used for reference to duplicate slice thicknesses.

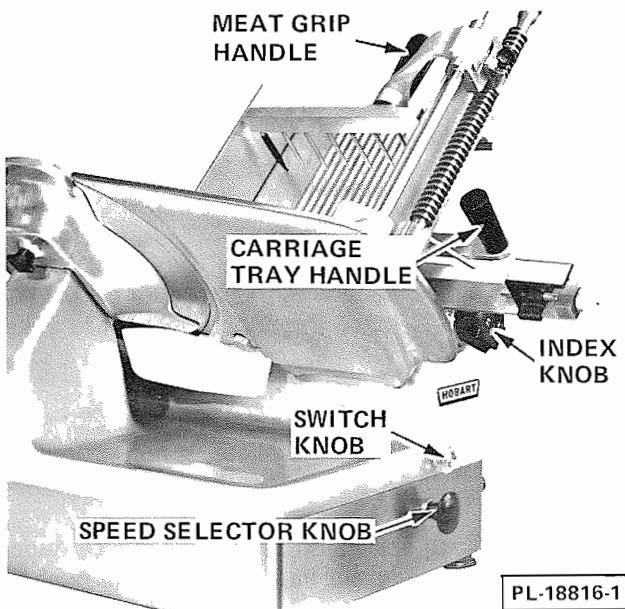

Fig. 10

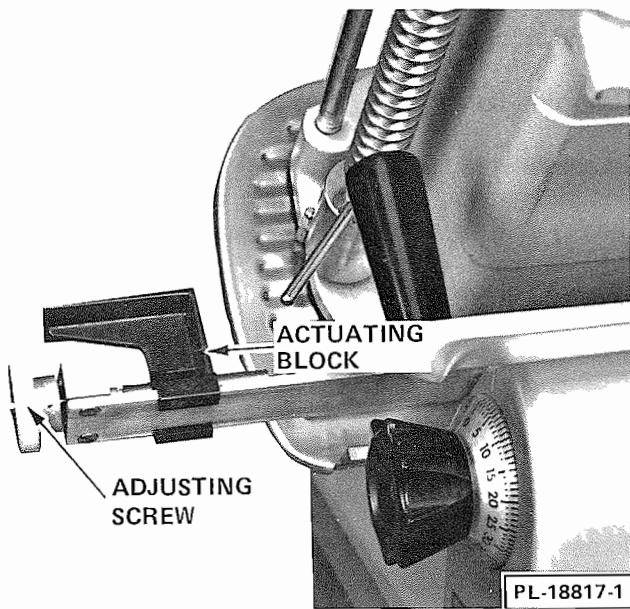

Fig. 11

**For manual slicing**, push the carriage back and forth using either the carriage tray handle or the meat grip handle (Fig. 10).

**For automatic slicing**, turn the adjusting screw (Fig. 11) until the front edge of the actuating block (Fig. 11) is at the setting (1, 2, 3, or 4) which matches that of the index knob. For example, if the index knob is set on 2, align the actuating block with the number 2 groove on the slide bar. This matches the feed speed with slice thickness. If the texture of the product causes inconsistent slices, advance the actuating block beyond the initial setting to increase feed pressure.

Turn the plunger knob (Fig. 9) to engage the meat grip with the feed screw. The product should be snugged against the gauge plate by turning the feed screw knob (Fig. 9).

Pull the carriage to the end of its travel and engage the driving unit by lifting the actuating lever (Fig. 12) to its locked position. Make sure the speed selector knob (Fig. 10) is set in, pull the switch knob (Fig. 10), and gently push the carriage to begin automatic slicing.

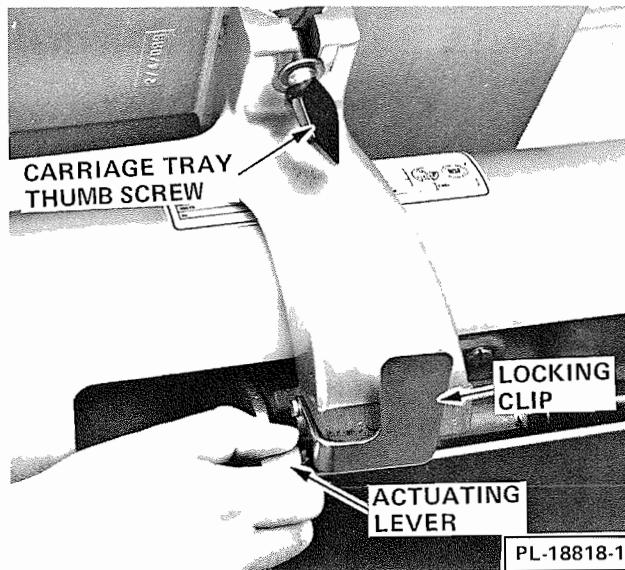

Fig. 12

To change to high speed, pull the speed selector knob out (when the carriage is at the operator end of its travel) and rest the notch in the speed selector on the shifter sleeve. Release the speed selector to shift back to low speed.

To disengage the driving unit, push the locking clip (Fig. 12) when the carriage is nearing the operator end of its travel. Always leave the driving unit in low speed (knob pushed in) when the slicer is not operating automatically.

To use the optional food chute, loosen the carriage tray thumb screw (Fig. 12) and carefully remove the carriage tray. Position the food chute on the carriage support and secure it by tightening the thumb screw. The pusher plate is provided with the food chute to force-feed products when necessary.

## CLEANING

This machine MUST be thoroughly cleaned and sanitized after each day's operation or anytime it is not to be used for an extended period of time.

**WARNING:** UNPLUG MACHINE POWER CORD AND TURN THE INDEX KNOB FULLY CLOCKWISE BEFORE CLEANING THE SLICER.

Using a mild soap (such as *Spic and Span*) and hot water solution and a clean cloth, wipe all surfaces of the machine, and then rinse it using another clean cloth and fresh water.

To clean under the 1712 or 1712R, raise the lift lever past center to its stop (Fig. 13). Set the machine back down after cleaning by slowly retracting the lift lever. The Model 1612 has a cleaning leg, which is underneath the machine. To clean under the 1612, raise the index knob end of the machine and support it with the cleaning leg.

Remove the front knife guard by loosening its two retaining knobs (Fig. 14) and rotating it clockwise to clear the slots of the retaining studs. With the front guard removed, loosen the back guard retaining knob (Fig. 14) and slide it off of the slicer.

**WARNING:** THE SLICER KNIFE IS VERY SHARP. EXERCISE EXTREME CAUTION WHEN WORKING NEAR THE KNIFE.

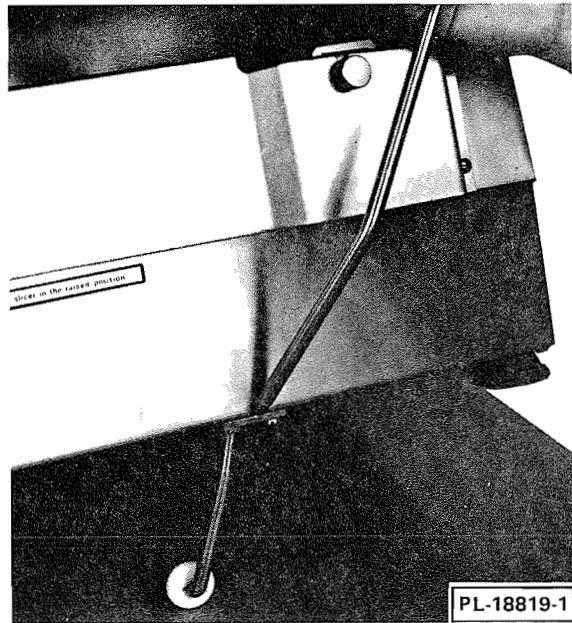

Fig. 13

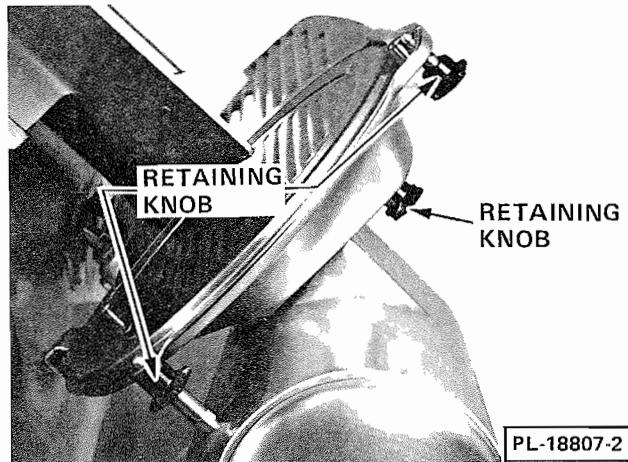

Fig. 14

Wash and rinse both sides of each knife guard.

CAREFULLY wash and rinse both sides of the knife by wiping outward from the center. Never use steel pads to clean the knife.

Carefully reassemble the back and front knife guards. The back knife guard must be assembled first.

DO NOT wash any slicer components in a dishwasher.

## MAINTENANCE

### KNIFE SHARPENING

The Hobart cast stainless steel knife will provide long service in normal food store or commercial kitchen use. However, in high volume applications where it is a practice to sharpen the knife frequently or even daily, the knife will be expended in a shorter time.

**WARNING: UNPLUG MACHINE POWER CORD.**

Set the index knob on zero.

With knife guards in place, thoroughly wash the area around the knife, exposed knife surfaces (front and back), and the knife edge.

Loosen the carriage tray thumb screw and remove the carriage.

Set the index knob on 50.

Remove the sharpener from its storage slot and loosen its thumb screw until it slips into the slot on the gauge plate (Fig. 15). Tighten the thumb screw to hold the sharpener in place.

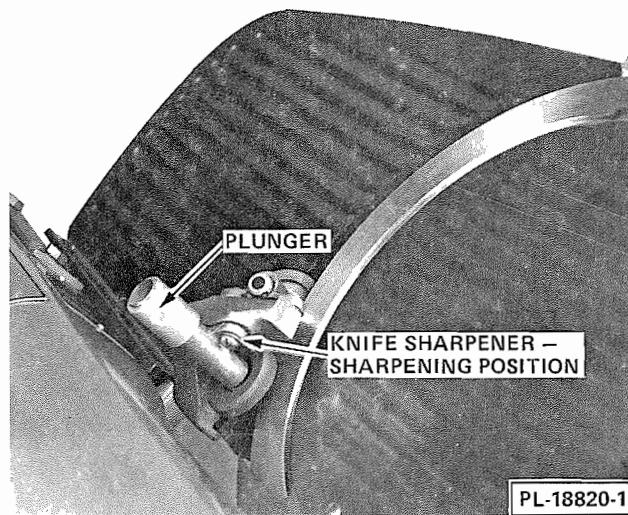

Fig. 15

Plug in the power cord and pull the switch knob to start the slicer. Slowly turn the index knob clockwise to grind the beveled (back) edge of the knife. Grind only until a burr appears on the front edge of the knife.

Turn the slicer off and inspect for a burr on the front edge of the knife. Repeat grinding as necessary until the knife edge is burred.

When a burr appears, start the slicer and depress the plunger (Fig. 15) for three seconds to engage the truing wheel. After three seconds, SIMULTANEOUSLY release the plunger and turn the index knob counterclockwise.

Turn the slicer off, **UNPLUG MACHINE POWER CORD**, remove the sharpener, and turn the index knob fully clockwise. Replace the sharpener in its storage position.

Wipe the slicer with a clean damp cloth to remove any grinding particles and replace the carriage.

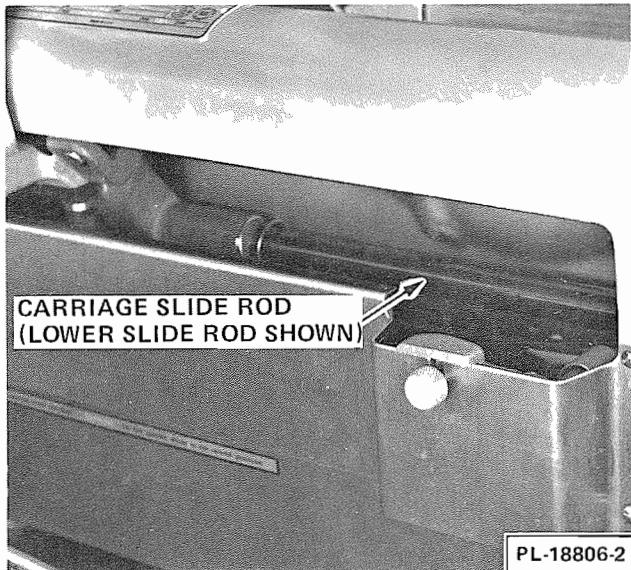

Fig. 16

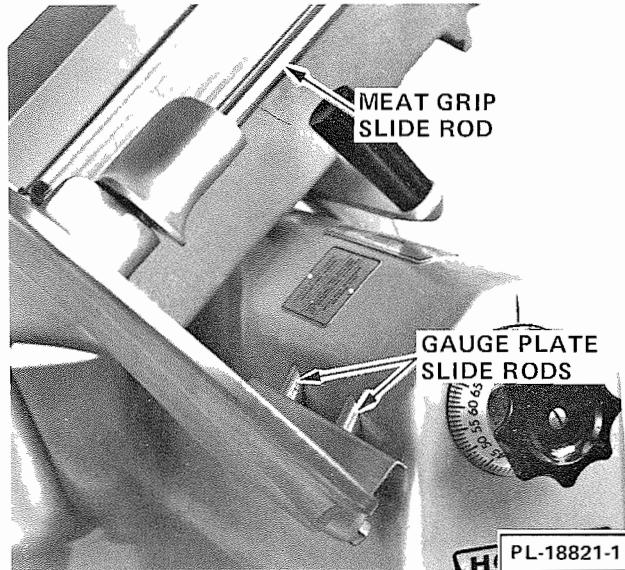

Fig. 17

## LUBRICATION

The upper and lower carriage slide rods (Fig. 16) should be lubricated weekly with several drops of *Texaco Havoline #10* oil (or equivalent). A two-ounce container of this oil was supplied with the slicer; additional quantities are available from your local Hobart Service Office. DO NOT use vegetable oil.

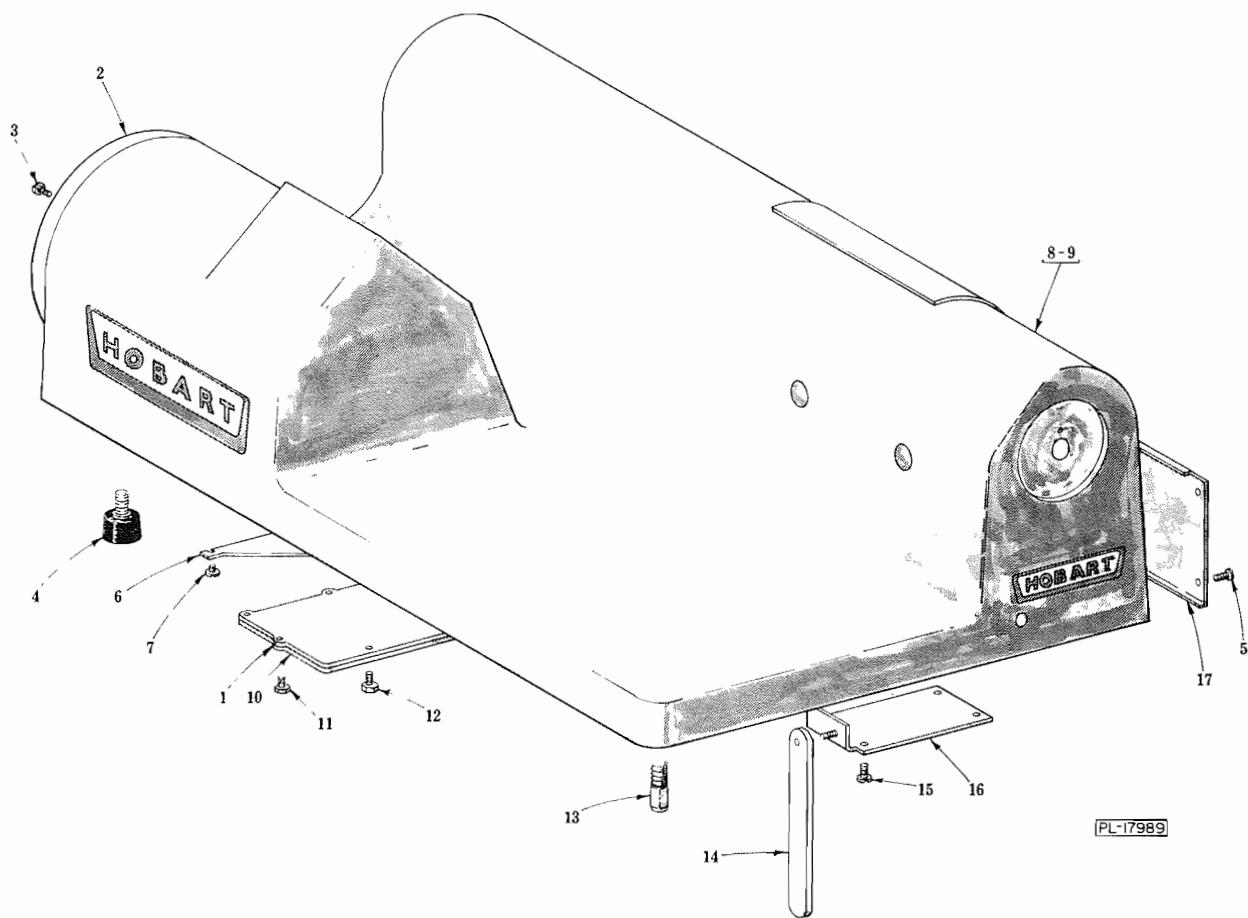

Occasionally, the gauge plate slide rods (Fig. 17) should be lightly coated with *Chevron Poly - FM #0* (2 oz. container supplied) or an equivalent tasteless lubricant. Turn the index knob fully counterclockwise when lubricating these slide rods, and then turn it fully clockwise when finished. Additional quantities of this lubricant are available from your local Hobart Service Office.

DO NOT lubricate the meat grip slide rod (Fig. 17). It must be kept clean but not lubricated.

The motor has sealed bearings and requires no lubrication maintenance.

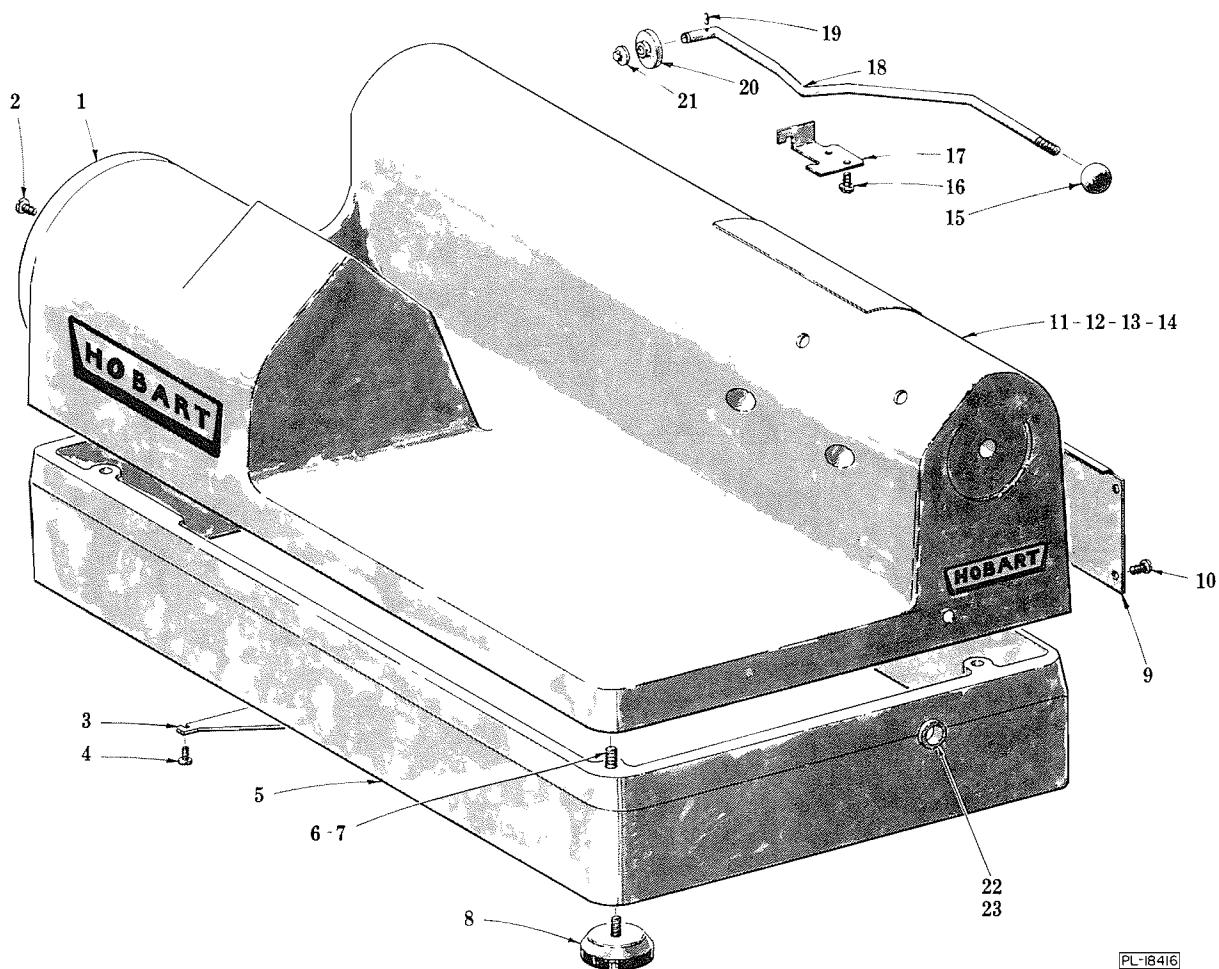

## WEAR ADJUSTMENT

After several years of operation and many sharpenings of the knife, it may become necessary to have the gauge plate adjusted closer to the knife. Contact your local Hobart Service Office if this service becomes necessary as it must be done by an authorized Hobart Service Technician.
