1 DESIGNATION, SCOPE AND PREFACE

1.1 Designation

HONEYWELL ONEWIRELESS MULTINODE DEVICE.

1.1.1 Model Numbers and Revisions :

This document is valid for the following Multinode assembly number :

Number	Revision	Description
51153884-100	В	Honeywell OneWireless Multinode Device - Top Level Assembly Drawing

Table 1 – Assembly Number and Revision

1.2 Scope

This document outlines professional installation requirements for the Honeywell Multinode Device for the Honeywell OneWireless Network. Professional installation is required to comply with certification agency and legal requirements. This document must be adhered to for all installations of the Honeywell OneWireless Multinode device.

1.3 Preface

This manual covers professional installation of the optional external antennas for use with the Honeywell OneWireless Multinode device. Since this device requires manual power limit settings for use with the higher gain antennas, it is classified by the FCC as a professional install device. To be in compliance with FCC requirements, the radio must be installed with one of several approved antennas listed in this document. The Honeywell OneWireless Multinode device works in conjunction with Honeywell XYR5000 and XYR6000 wireless transmitters and Wi-Fi access point devices. See the Getting Started with Honeywell OneWireless Multinode User's Guide, for general information on overall system implementation, configuration, and management of the multimode.

2 FEDERAL COMMUNICATION COMMISSION (FCC)

2.1 FCC Compliance Statement

This device complies with Part 15 of FCC Rules and Regulations. Operation is subject to the following two conditions: (1) This device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation. This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radiofrequency energy and, if not installed and used in accordance with these instructions, may cause harmful interference to radio communications.

2.2 IMPORTANT FCC NOTE

Intentional or unintentional changes or modifications must not be made to the Multinode unless under the express consent of the party responsible for compliance. Any such modifications could void the user's authority to operate the equipment and will void the manufacturer's warranty.

2.2.1 <u>RF Safety Statement:</u>

To comply with FCC's and Industry Canada's RF exposure requirements, the following antenna installation and device operating configurations must be satisfied.

- Remote Point-to-Multi-Point antenna(s) for this unit must be fixed and mounted on outdoor permanent structures with a separation distance between the antenna(s) of greater than 20cm and a separation distance of at least 20cm from all persons.
- Remote Fixed Point-to-Point antenna(s) for this unit must be fixed and mounted on outdoor permanent structures with a separation distance between the antenna(s) of greater than 20cm and a separation distance of at least 100cm from all persons.
- Furthermore, when using integral antenna(s) the Multinode unit must not be co-located with any other antenna or transmitter device and have a separation distance of at least 20cm from all persons.

4 MULTINODE GENERAL DESCRIPTION

4.1 Intended Use

The Multinode unit is a key component of the Honeywell *Wireless Network for Secure Industrial Application* (WNSIA). It provides wireless mesh connectivity for wireless sensor networks and wireless worker appliances. The Multinode uses powerful radios to communicate with gateway devices connected to a wired DCS network, and a low-powered radio to communicate with wireless sensors. The Multinode unit consists of two types of radios: a sensor radio for communication with XYR 6000 transmitters and IEEE 802.11a/b/g radios for mesh (bridge) network and communication with mobile access point (client) devices.

4.2 Multinode Device Diagrams

Figure 1 shows the unit-level drawing of the Multinode Device. All cables exit the unit via a ³/₄" conduit hub. The conduit hub allows end user to land conduit on the Multinode Device. **Figure 1** shows the Multinode and all of external interfaces.

5 PRODUCT SPECIFICATIONS

5.1 Frequency Hopping Spread Spectrum (FHSS) Radio, 2.4GHz

Warning! The Multinode unit must be Professionally Installed in accordance with the requirements specified in this document. See Section 10, for professional installation maximum power setting requirements. Only the specified power settings, antenna types and gains and cable lengths (attenuation) as outlined in this document are valid for Multinode installations.

Item	Specification
Wireless Standard	Frequency Hopping Spread Spectrum (FHSS), 2.4GHz
Data Rates and Modulation	Data Rate: 250kbps
	Modulation: Gaussian Frequency Shift Keying (GFSK)
Frequency Band	2,402 – 2,482MHz
Transmit Power	Maximum: 19dBm
	(Maximum transmit power will vary by channel and individual country regulations.
Receive Sensitivity (typical)	-98dBm

5.2 IEEE 802.11a/b/G (Wi-Fi) Radios

The Multinode has two IEEE 802.11 radios for implementing client (access point) and mesh (bridge) networks.

Warning! The Multinode unit must be Professionally Installed in accordance with the requirements specified in this document. See Section 11, for professional installation maximum power setting requirements. Only the specified power settings, antenna types and gains and cable lengths (attenuation) as outlined in this document are valid for Multinode installations.

6 Cables

6.1 External Interface Cables

Cable Type	Specification	Qty	Comments/Specification
External	CAT5E	2	Routed through conduit hub.
Ethernet	Stranded Core		Termination = RJ-45 Modular Plug
			Finished Length = 24 inches
24VDC Power	Multi-	1	Finished Length = 24 inches
	conductor,		Routed through conduit hub
	AWG		Conductor Color:
			Red & Black = 24VDC
			White & Green = Common
			Drain wire = Chassis potential
Ground	AWG10	1	Routed through conduit hub
Conductor			Color = Green or Green with yellow stripes.
			Finished length = 24 inches

Note:

- Finished length is measured from conduit hub to outside tip of cable.
- Ground conductor must be attached to product safety protective earth and building steel ground.
- All external wiring must be routed through metal conduit.

9 Equivalent Isotropically Radiated Power (EIRP)

In radio communication systems, Equivalent isotropically radiated power (EIRP), or alternatively, Effective isotropic radiated power is the amount of power that would have to be emitted by an isotropic antenna (that evenly distributes power in all directions and is a theoretical construct) to produce the peak power density observed in the direction of maximum antenna gain. EIRP can take into account the losses in transmission line and connectors and includes the gain of the antenna. The EIRP is often stated in terms of decibels over a reference power level, that would be the power emitted by an isotropic radiator with an equivalent signal strength. The EIRP allows making comparisons between different emitters regardless of type, size or form. From the EIRP, and with knowledge of a real antenna's gain, it is possible to calculate real power and field strength values.

EIRP(dBm) = (Radio Power (dBm)) – (Cable Loss (dB)) + (Antenna Gain(dBi))

Antenna gain is expressed relative to a (theoretical) isotropic reference antenna (dBi).

14 Setting Power and Country Code: FHSS Radio

Warning! The Multinode unit must be Professionally Installed in accordance with the requirements specified in this document. Only the specified power settings, antenna types and gains and cable lengths (attenuation) as outlined in this document are valid for Multinode installations.

Set the radio power level using the Authentication Device application. Due to regulations, this command is only available if professional installer options have explicitly been enabled on your PDA. If you have not enabled professional installer options and would like to do so, please contact Honeywell DE or TAC. A separate application, AuthDev Power Settings, is required to enable the "Write TX Power Level" option.

Perform the following procedure to read and change the radio power level on your multinode or wireless device:

- Open the Authentication Device application on your Windows Mobile PDA.
- From the main menu, choose the Advanced Options menu to open the Advanced Options form.
- From the Advanced Options form, choose "Read TX Power Level" from the command drop down box.
- Aim the Authentication Device at your node and press the Transmit Command button to read the data from the node. The TX Power reading will be presented on your screen.
- If you have enabled professional installer options within the Authentication Device, choose the "Write TX Power Level" from the command drop down box.
- Choose a new power level. Aim the Authentication Device at your node and press the Transmit Command button to write the data to the node.

15 Setting Power & Country Code: 802.11 Access Point & Bridge Radio

Warning! The Multinode unit must be Professionally Installed in accordance with the requirements specified in this document. Only the specified power settings, antenna types and gains and cable lengths (attenuation) as outlined in this document are valid for Multinode installations.

Programming the Country Code

A hidden page on the Multinode Configuration Tool has been designed for professional installers to change country code and radio output power settings. A valid authorization code has to be entered for the any information to be modified. <u>This authorization code is hard-coded in the firmware and shall be kept as a SECRET at all times.</u>

To access the hidden page, type the following URL in your browser:

https://192.168.254.128/cgi-bin/sgateway?PG=911

Change 192.168.254.128 to the IP address of your unit, and make sure you login as: Login: CryptoOfficer, Password: CryptoFIPS

You should see something like this:

18.1.3 European Telecommunications Standards Institue (ETSI)

- Emissions Specification and Method: EN 300 328 V1.7.1
- Emissions Spec and Method: EN 301 893 V1.3.1
- Immunity Specification: EN 301 489-17 V1.2.1
- Immunity Method: EN 301 489-1 V1.6.1
- Product Standard: IEC61326-1 (1st Edition, 2002-02, Industrial Locations)

18.1.4 Australian communications and media authority (ACMA)

> Specification: AS NZS 4771-2000

FCF:	OneWireless Multinode Agency Compliance Professional Installation Guide							Honeywell

18.2 Product Safety Agency Certifications

18.2.1 Canadian Standards Association (CSA)

IEC61010-1 (2nd Edition, 2001-02), "Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use, part 1: General Requirements

CSA HAZ-LOC Standards?

• Temperature code: T4 (135°C) based on the maximum specified ambient of 60°C.

18.2.2 Factory Mutual (FM)

FM electrical equipment requirements for use within Class I, Division 2, Groups A, B, C and D/Zone 2, Group IIC Hazardous Locations.

Factory Mutual Approval Standard Class No. 3600, "Electrical Equipment for Use in Hazardous (Classified) Locations - General Requirements

Factory Mutual Approval Standard Class No. 3810, "Electrical and Electronic Test, Measuring, and Process Control Equipment

Factory Mutual Approval Standard Class No. 3611, "Electrical Equipment for Use in Class I, Division 2, Class II, Division 2 and Class III, Division 1 and 2 Hazardous (Classified) Locations

• Temperature code: T4 (135°C) based on the maximum specified ambient of 60°C.

Honeywell Proprietary	Α	51121307
and Confidential	AT1	REVISIONS

18.2.3 European ATEX Certification (ATEX)

The completely assembled Multinode will conform to European electrical equipment requirements for use within Zone 2, Ex n IIC, Hazardous Locations.

European Norms Standard EN 50014:1992, "Electrical Apparatus for Potentially Explosive Atmospheres - General Requirements"

European Norms Standard EN 50021:1999, "Electrical Apparatus for Potentially Explosive Atmospheres - Type of Protection "n"

The temperature code for the Multinode shall not exceed T4 (135°C) based on the maximum specified ambient of 60°C.

18.3 European Union Certification (CE-mark)

- Compliance with:
 - R&TTE Directive 1999/5/EC
 - o EMC Directive 2004/108/EC
 - LVD Directive 73/23/EEC
 - ATEX Directive 94/9/EC
