Studio Microphone Preamplifier

Hi-Spec Pro Studio Microphone Preamplifier, with AC/DC Adaptor.

- Dedicated Studio Microphone Preamplifier
- State-of-the-Art Electronics
- Sweeter than the Channel "Pre" on Mixers!
- Three-Position Mic Attenuation
- Continuous Gain Control
- Switchable Phantom Power
- XLR Line Output and 1/4" Hi-Z Output.
- AC/DC Power Adapter Included.
- Indestructible Extruded Aluminum Chassis.
- Rugged, Utilitarian Design.

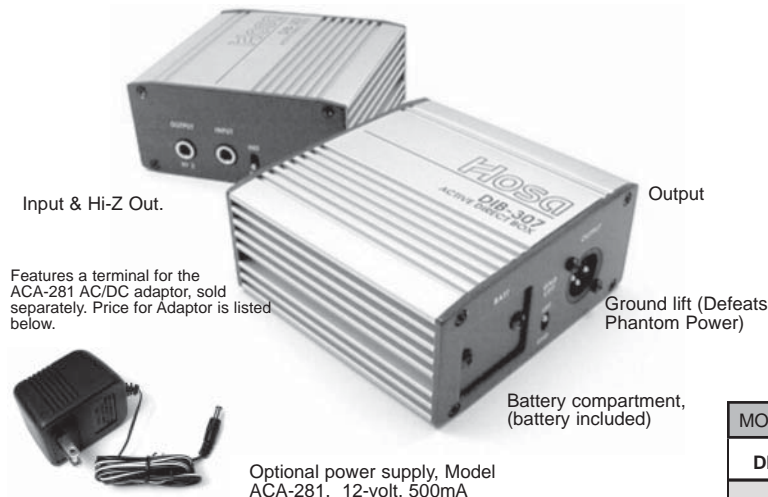

Works with Fine Studio Condenser Mics.

Active Direct Box for Guitar & Bass

Active direct box with terminal for AC/DC power supply.

Features a terminal for the ACA-281 AC/DC adaptor, sold separately. Price for Adaptor is listed below.

Optional power supply, Model ACA-281. 12-volt, 500mA

Electronically prepares guitar and bass signals for direct-to-mixer connections via Low-Z mic inputs. Perfect for sending guitar or bass through long microphone snakes.

"Amp-In" feature allows your amp's speaker output to feed the console. Now your amplified sound can go directly into the console without time-consuming microphone selection and placement.

Automatically switches from 9-volt battery (included) to **phantom power** when phantom power is present.

Ground-Lift Switch breaks "ground-loops", reducing 60-cycle hum.

No-compromise electronics for world-class performance. Sound is smmmmooth. Compare to other brands at twice the price!

ACA 281				\$18.30

"SIDEKICK" Passive Direct Box for Guitar & Bass

Hosa's new **DIB-443 "SIDEKICK"** Passive Direct Box utilizes a high-quality isolation transformer to change a guitar's very high-impedance output into a low-impedance output suitable for sending long distances via microphone cable or stage snake. Imparts a slight gain to your signal (gain is a good thing), that is useful and very musical.

Extras include a Hi-Z output for sending to an on-stage amp, Ground Lift (for stopping buzz and hum), and an Instrument/ Speaker switch to choose either direct input from the guitar, or amplified input from the guitar amp! **NO BATTERY REQUIRED.**

XLR OUTPUT AND GROUND LIFT SWITCH ON THE BACK.

MODEL				MSRP
DIB 443				\$29.95

AUDIO SWITCHERS

Audio Signal Selector

Noiseless BALANCED 3-IN, 1-OUT switching (or vice-versa) in left / right pairs. Great for selecting among multiple **powered monitor speakers**. Does not require power. For line-level only. Not for after amp speaker connections.

About Patch Bays and "Normalling" Schemes

All Hosa patch bays feature "half-normalled" configuration (except for the PHB-265, the PDR-369, and the MXL-369). Two pieces of gear that are connected, one to the rear-panel top and one to the rear-panel bottom jacks, in any single bay channel are automatically connected to each other. Plugging into the bottom-front jack of that same channel breaks the connection.

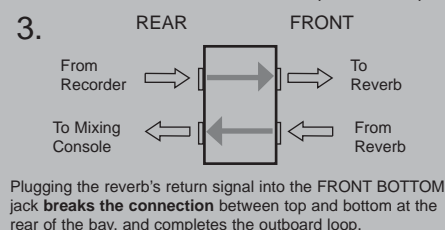

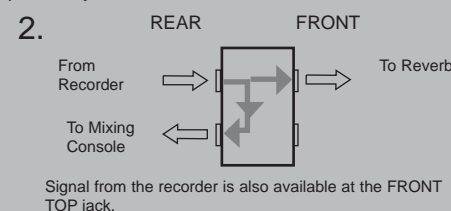

This "half-normal" configuration is the perfect combination of versatility and affordability, and it easily handles all of the patching scenarios needed by most commercial and home studios.

De-Normalled operation for Hosa patch bays (straight-through wiring) is accomplished by turning around selected internal channel modules 180 degrees, except on the PHB-360 and MHB-360 which can not be de-normalled.

This is "Half-Normalling"

A "Half-Normalled" patch bay is incredibly versatile. By inserting a plug into the switching jack at the front bottom position, you can break the "normal connection" between top and bottom at the rear. Here's a simplified example:

Modular Patch Bay Rack Mount Frame

Four slot, 19" Rack Frame for Patch Bay Modules

Use the PPP-000 to mount Hosa's modular patch bays. Comes with three covers. One rack unit high (1.75").

MODEL				MSRP
PPP 000				\$24.00

The PHB-265 uses recessed, front-panel switches to select half-normalled, full-normalled or de-normalled operation, so rotating the modules isn't necessary.

The PDR-369 and MDR-369 XLR bays have no normalling (straight through only).

All instrument polishes are not created equal!

- Lizard Spit products are hatched to be environmentally safe as they out-perform their competition.

Ergonomic Trigger-Style Sprayer!

- Applies just enough mist so that none is missed -- more flash for less cash.

The HISS is out there!

"Lizard Spit beats all the other brands we've ever used since we've been in business"—Kevin Harris, Bill Harris Music, Provo, Utah

"This is my new favorite polish" — "Guitar Maven" Liz Smith, American Music, Seattle, Washington

"Spit happens!" — The staff at Corner Music, Nashville, Tennessee

Lizard Spit Guitar Polish

Carnauba based and non-toxic with no VOCs and no silicone. It's safe for metal and plastics as well as painted, lacquered (including nitrocellulose), and varnished wood -- your entire axe! Use it on keyboards, LCD and CRT screens, vinyl and tolex cases, stands -- anything that needs a quick Spit Shine! It's ATA safe to boot. Trigger sprayer and non-smearing formula ensure easy application.

MODEL				MSRP
LZS 478				\$8.95

Lizard Spit Fretboard Conditioner

Ask any luthier and they will tell you: orange oil-based products clean more effectively than lemon oil-based products. This is the good stuff: premium, orange oil-based conditioner for porous, wood-grain fretboards. Use this product to safely remove polish build-up on finished surfaces as well as years of accumulated fretboard grime. Safe for wood, metal, and plastics. It contains some VOCs (alcohol) so it's unsafe for human and lizard consumption. ATA safe. Polish-style drip cap.

MODEL				MSRP
LZS 479				\$8.95

Lizard Spit Micro Fiber Cloth

Premium polishes are best applied with premium cloths. Use this 12-inch square micro-fiber cloth to apply the Spit of Champions to your favorite axe. Black Lizard Logo on color-fast, lizard-egg blue cloth. Wash it as often as necessary! Zip-lock retail packaging does double-duty as a storage pouch so you won't have to resort to such unlizard-like behavior. Use it on everything!
