

Quick Start Guide

Your Device at a Glance

Before you start, let's take a look at your new device.

- To power on your device, press and hold the power button until the screen turns on.
- To power off your device, press and hold the power button, and then touch .
- To restart your device, press and hold the power button, and then touch .
- Press and hold the power button for 10 or more seconds to forcibly restart your device.

1	Secondary microphone	2	Laser sensor
3	Rear camera	4	Flash / Color temperature sensor
5	Earpiece	6	Card slot
7	Primary microphone	8	USB-C port / Headset jack
9	Speaker	10	Fingerprint scanner
11	Power button	12	Volume button
13	Ambient light sensor / Optical proximity sensor	14	Front camera
15	Status indicator	16	Infrared sensor

Getting Started

-  Do not insert or remove the SIM card when your device is powered on.
- Ensure that the card is correctly aligned and that the card tray is level when you insert it into your device.
-  Be careful not to scratch your device or hurt yourself when using the eject pin.
- Store the eject pin out of the reach of children to prevent accidental swallowing or injury.
-  Do not use cut or modified SIM cards with your device as these may not be recognized and could damage the card tray (slot).
- If your SIM card does not match your device, please contact your carrier.

Follow the instructions in the following figures to set up your device. Please use the eject pin included.

Dual Card Dual Standby Single Pass

Your device supports only dual card dual standby single pass, which means you cannot use both SIM cards for calls or data services simultaneously.

- When you are on a call using SIM card 1, SIM card 2 cannot be used to make or answer calls. If someone calls SIM card 2, the caller will hear a voice message similar to "The subscriber you dialed is out of the service area" or "The subscriber you dialed cannot be connected for the moment, please try again later." The actual message will vary by service provider.
- When you are using SIM card 1's data service, SIM card 2's data service will be disabled.

Your device's single pass feature helps reduce power consumption and increase your device's standby time. It is not related to your service provider's network conditions.

You can go to **Settings > Wireless & networks > Dual SIM settings**, and enable **Enable call forwarding between SIMs** to avoid the conflicts mentioned above.

For More Information

If you encounter any problems while using your device, you can obtain help from the following resources:

- Go to **Tips** for function details and usage tips.
- Visit <http://consumer.huawei.com/en> to view device information, frequently asked questions and other information.
- Visit <http://consumer.huawei.com/en/support> for the most up-to-date contact information for your country or region.
- You can find service hotlines, retailer addresses, service policies and more information for your local region in **HiCare**.

Go to **Settings** and touch **System > About phone > Legal** to view legal information for your product.

Go to **Settings** and touch **System > About phone > Legal > Safety information** to view safety information for your product.

Go to **Settings** and touch **System > Certification logos** to view more information on certification logos for your product.

- ❗ All pictures and illustrations in this guide, including but not limited to the device color, size, and display content, are for your reference only. The actual device may vary. Nothing in this guide constitutes a warranty of any kind, express or implied.

Safety Information

Please read all of the safety information carefully before using your device to ensure its safe and proper operation and to learn how to dispose of your device properly.

Operation and safety

- To prevent possible hearing damage, do not listen at high volume levels for long periods.
- Using an unapproved or incompatible power adapter, charger, or battery may damage your device, shorten its lifespan, or cause a fire, explosion, or other hazards.
- Ideal operating temperatures are 0 °C to 35 °C. Ideal storage temperatures are -20 °C to +45 °C.
- Pacemaker manufacturers recommend that a minimum distance of 15 cm be maintained between a device and a pacemaker to prevent potential interference with the pacemaker. If using a pacemaker, hold the device on the side opposite the pacemaker and do not carry the device in your front pocket.
- Keep the device and the battery away from excessive heat and direct sunlight. Do not place them on or in heating devices, such as microwave ovens, stoves, or radiators.
- Observe local laws and regulations while using the device. To reduce the risk of accidents, do not use your wireless device while driving.
- While flying in an aircraft or immediately before boarding, only use your device according to instructions provided. Use of a wireless device in an aircraft may disrupt wireless networks, present a hazard to aircraft operation, or be illegal.
- To prevent damage to your device's parts or internal circuits, do not use it in dusty, smoky, damp, or dirty environments or near magnetic fields.
- When charging the device, make sure the power adapter is plugged into a socket near the devices and is easily accessible.
- Unplug the charger from electrical outlets and the device when not in use.
- Do not use, store or transport the device where flammables or explosives are stored (in a gas station, oil depot, or

chemical plant, for example). Using your device in these environments increases the risk of explosion or fire.

- Dispose of this device, the battery, and accessories according to local regulations. They should not be disposed of in normal household waste. Improper battery use may lead to fire, explosion, or other hazards.
- Your device has been tested in a controlled environment and certified to be splash, water, and dust resistant in specific situations (meets requirements of classification IP67 as described by the international standard IEC 60529). Splash, water, and dust resistance are not permanent conditions and resistance might decrease as a result of normal wear. Do not charge your device in wet conditions. Visit <http://consumer.huawei.com/en/support> for detailed description of this function.

Safety precautions

- Use of wireless hands-free system (headphone, headset) with a low power Bluetooth emitter.
- Make sure the cell phone has a low SAR.
- Keep your calls short or send a text message (SMS) instead. This advice applies especially to children, adolescents and pregnant women.
- Use cell phone when the signal quality is good.
- People having active medical implants should preferably keep the cell phone at least 15 cm away from the implant.

Disposal and Recycling Information

This symbol on the device or on its packaging indicates that the device (including its electrical accessories) should not be disposed of as normal household garbage. Do not dispose this product with Regular Household, Dry and Wet Waste. If you wish to discard this product, please contact on the details below and follow the correct method of disposal as guided:

E-mail: service.hw.in@huawei.com, Service hotline:

1800-209-6555 (Toll-Free) 9AM-9PM all 7 days, except public holidays.

Reduction of Hazardous Substances

This device is compliant with the E-Waste (Management) Rules, 2016 and does not contain hazardous substances regulated by the Rules except for the applications of exemption.

Certification Information (SAR)

This device meets guidelines for exposure to radio waves. Your device is a low-power radio transmitter and receiver. As recommended by international guidelines, the device is designed not to exceed the limits for exposure to radio waves. These guidelines were developed by the independent scientific organization International Commission on Non-Ionizing Radiation Protection (ICNIRP) and include safety measures designed to ensure safety for all users, regardless of age and health.

The Specific Absorption Rate (SAR) is the unit of measurement for the amount of radio frequency energy absorbed by the body when using a device. The SAR value is determined at the highest certified power level in laboratory conditions, but the actual SAR level of the device when being operated can be well below the value. This is because the device is designed to use the minimum power required to reach the network.

The SAR limit adopted by India is 1.6 watts/kilogram (W/kg) averaged over one gram of tissue. The highest SAR value for this device is 0.93 W/kg.
