How to use HiSuite

1 Introduction

HiSuite is a powerful piece of phone management software for your phone. You can use HiSuite to manage your contacts, messages, photos, and videos as well as install, update, and uninstall apps. This guide outlines how to make the best of the features that HiSuite has to offer.

2 Connecting your phone to HiSuite on a computer

Note: You can skip this step if your phone comes with the HiSuite app.

2.1 Enabling USB debugging

If you are unable to connect your phone to a computer, try enabling USB debugging. You will need to access the developer options in order to enable USB debugging:

On the home screen, go to **Settings** > **About phone** > **Build number** and then touch the version number repeatedly until you see **You are now a developer!**

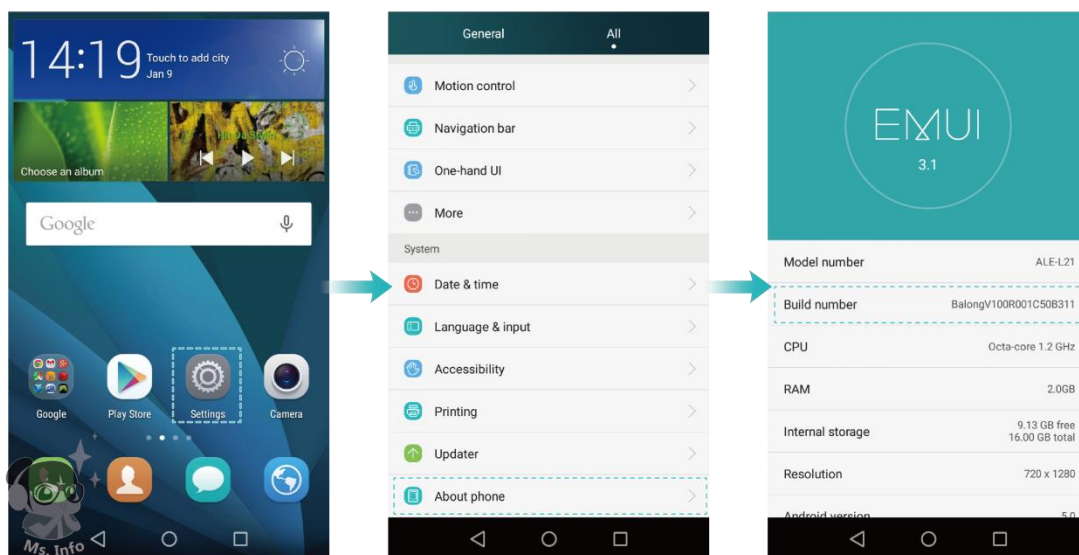

Figure 2-1 Accessing the developer options

Return to the main settings menu. You will now see **Developer options** listed in the menu. Touch **Developer options** and then enable **USB debugging**.

2.2 Connecting your phone to HiSuite on a computer

Connect your phone to the computer using a USB cable. The **Allow connection in HDB mode** screen will be displayed on your phone. Touch **OK**. HiSuite will be automatically installed on your phone.

3 Overview of HiSuite features

Once installation is complete, double-click the **HiSuite** icon on your desktop to launch HiSuite.

3.1 Introduction to HiSuite home page

On the home page, you can:

View **Android version** and **Software version** information.

Click **Update** to update the EMUI on your phone.

Click **Refresh** to display your phone's current screen on your computer.

Click **Screenshot** to capture your phone's current screen.

3.2 Backing up your data using HiSuite

You can use HiSuite to back up all your important data on your old phone and transfer it to your new phone. You can also back up your data before formatting your phone memory.

On the home page, click **Backup** to back up your phone's data.

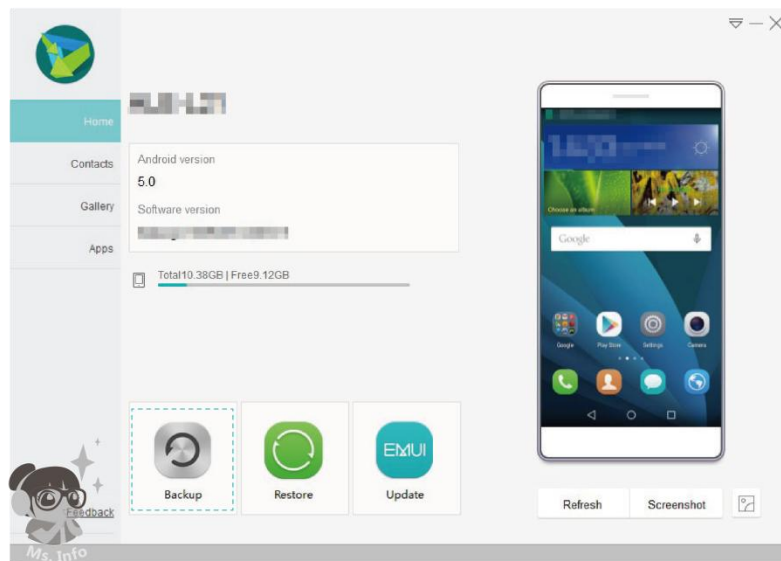

Figure 3-2 Using HiSuite to back up your phone data

Click **Next** and then select the data (**Contacts**, **Messages**, **Apps**, **Pictures**, **Music**, or **Others**) that you wish to back up. The **Backup** folder is saved to the C drive by default. Follow the onscreen instructions to complete the backup.

3.3 Restoring data from a backup

You can use the **Restore** feature within HiSuite to restore the data from your backup files.

On the home page, click **Restore**.

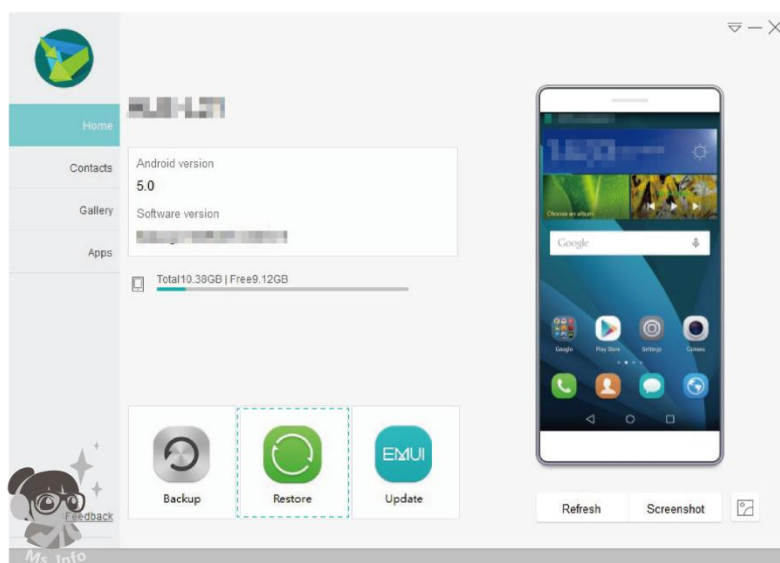

Figure 3-4 Using HiSuite to restore data from a backup

Select a backup file from the **Backup** records, then select the data (**Contacts**, **Messages**, **Apps**, **Pictures**, **Music**, or **Others**) that you wish to restore. Follow the onscreen instructions to restore the selected data.
