1.11.5 Whether Support Playing HD Videos

Support. Support playing 1080P HD video files and 25fps.

1.11.6 Whether the Camera Shutter Can be Silent

Yes.

1.11.7 How to Switch Front and Rear Cameras?

In the view finding interface, touch  to switch.

1.11.8 What is the Format of Video Recorder? What Size does Video Image support?

Format: 3gp and mp4.

Image size: FHD 1080P (16:9 Stereo), HD 720P (16:9 Stereo), VGA 640X480 (4:3) , MMS 176X144

1.11.9 What is the Format of Camera? What Size does Camera Image Support?

Format: jpg

Image size:

5M 2560*1920 (4:3), 3.7M 2560*1440 (16:9), 1.9M 1600*1200 (4:3), 0.9M 1280*720 (16:9)

1.11.10 Can Streaming Media Played Background during the Call? Can it Restore Automatically?

- 27. When connecting to a call, streaming media will stop automatically;
- 28. No matter how long the call continues, after the call, you need to touch to play the streaming media manually.

1.11.11 Why Some Streaming Media cannot be Played?

- 29. Unsupported files

Streaming media support the following audio/video code and file format:

- Video code: MPEG4, H263, H264
- Audio code: AAC, AMR-NB/WB
- Supported file format: 3gp, mp4
- Max code rate: 4Mbps

- 30. Unstable network
- 31. Not enough storage space

1.11.12 Reasons for Bad Effect when Playing Streaming Media Online

- 32. Bad effect of source file.
- 33. Bad network.

- 34. Hardware problems, such as damaged display, compare to local video.
- 35. Not enough storage.
- 36. High CPU usage.
- 37. Too many programs are running.

1.11.13 Will It lead Storage Shortage if Playing Online Video while Downloading?

This will not occupy storage space, it only occupy RAM. Thus will not lead to storage shortage.

1.12 Bluetooth

1.12.1 Supported Data File Format

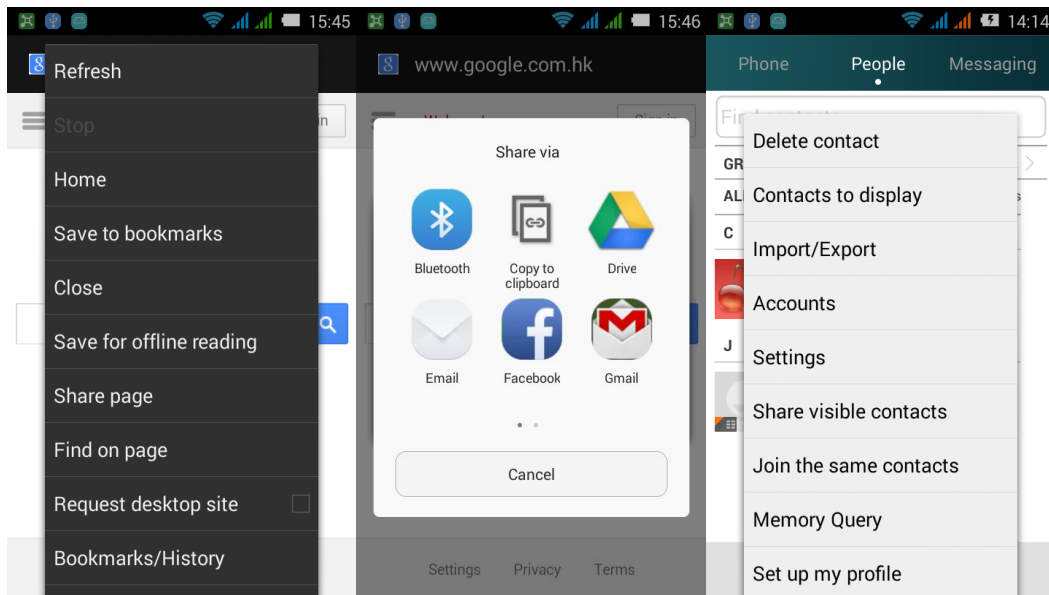

Common used data such as picture, audio, video, webpage, contact can be sent by Bluetooth.

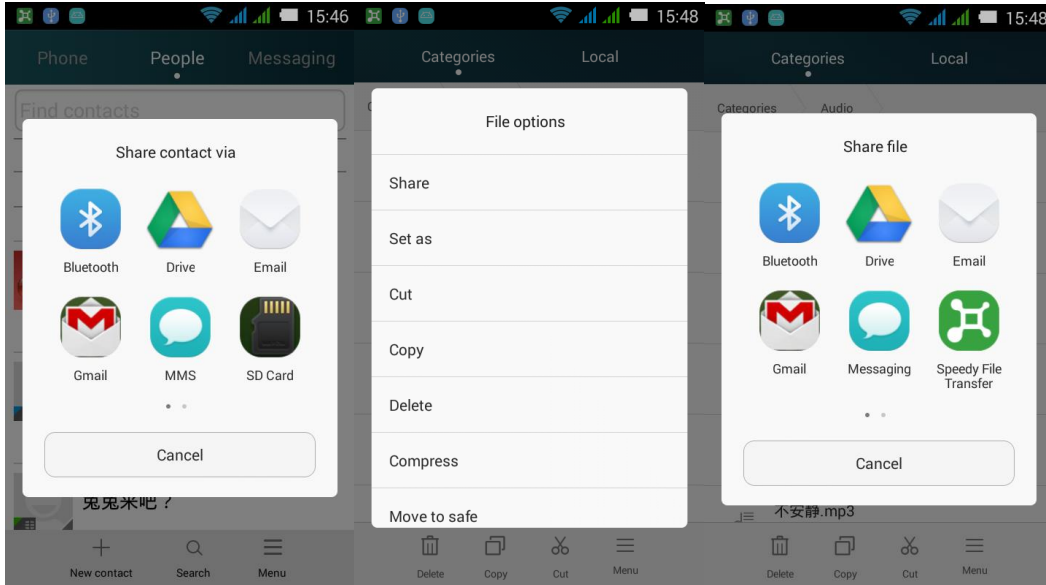

1.12.2 How to Transmit Data Files via Bluetooth

Enter Music or Gallery, select any desired file, touch and hold, select **Share > Bluetooth** to transmit the file.

Open Browser, enter any webpage, touch menu > **Share page > Bluetooth**.

Enter People, touch menu > **Share visible contacts > Bluetooth**.

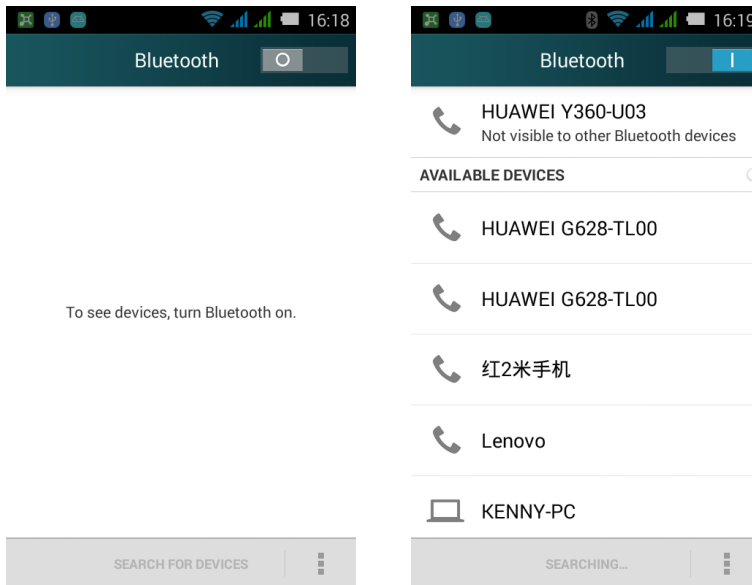

1.12.3 The Phone Cannot be Searched by Other Bluetooth Device

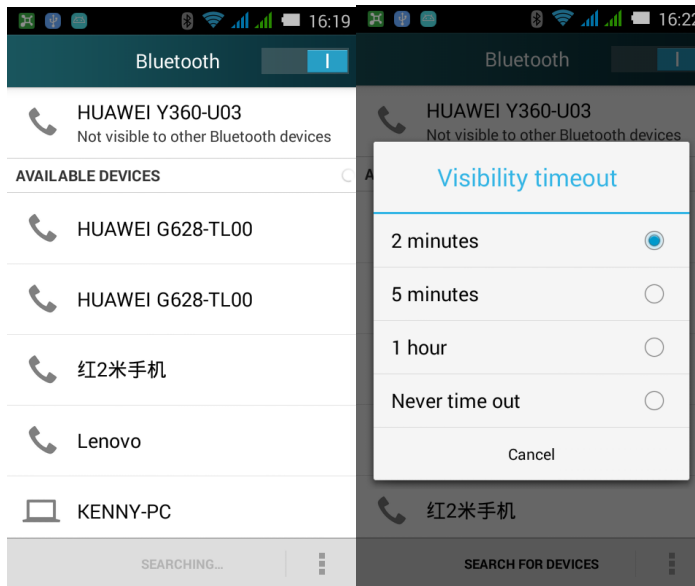

38. Bluetooth disabled

1.20 Preset Applications/Versions List

Depending on the customization.

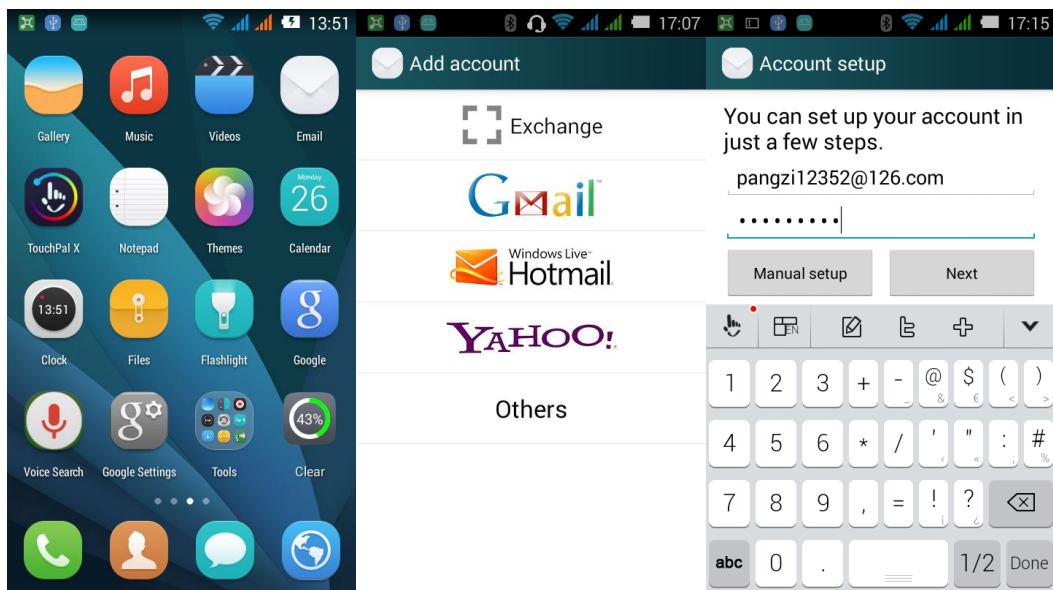

2 Common Settings

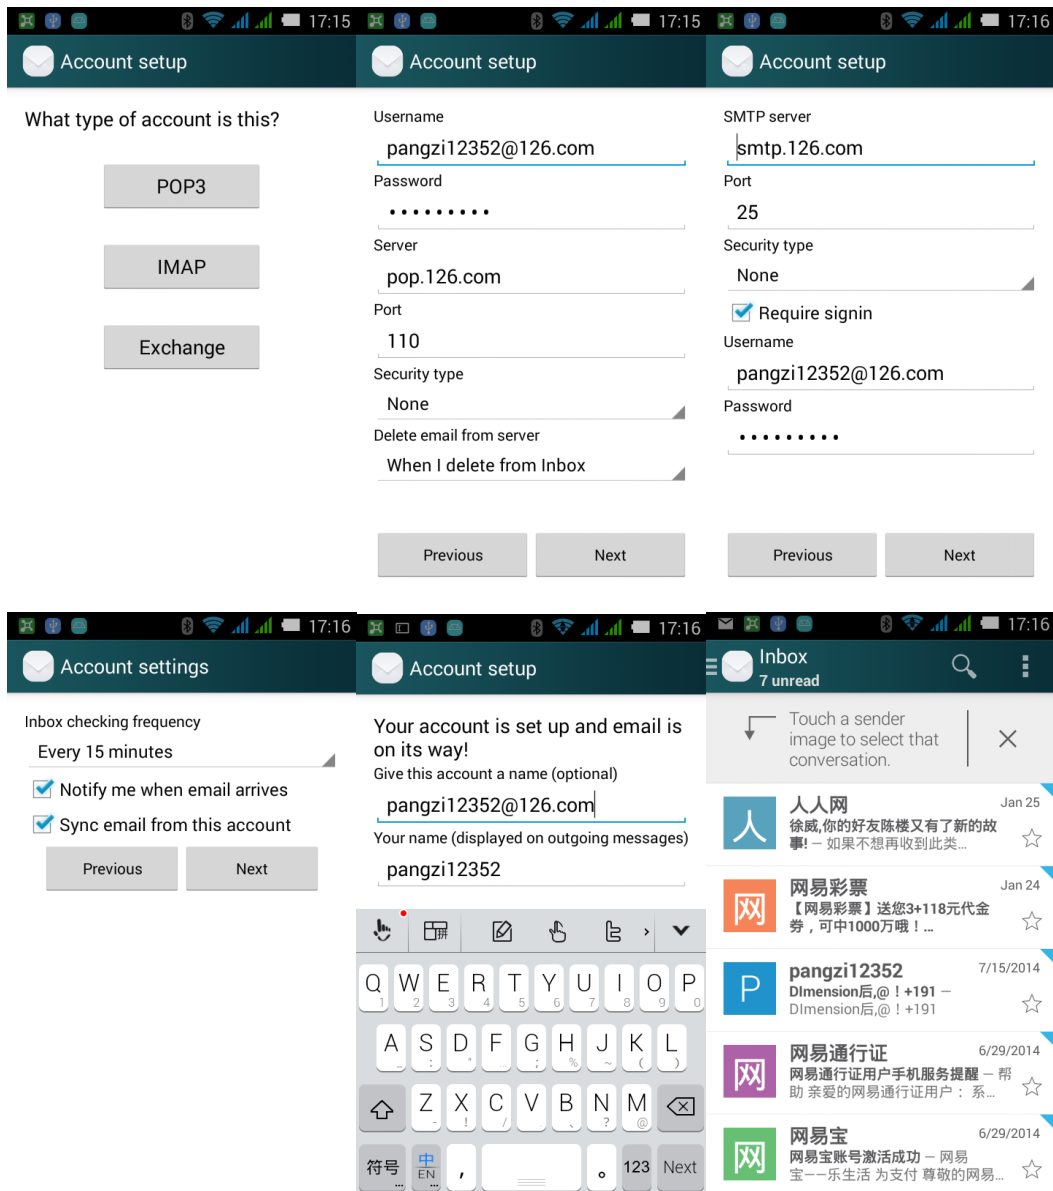

2.1 Email

2.1.1 Email Settings

51. Add an Email Account

Home screen > **Email**. Select email type, none in the list you need, please select Others. Enter the log in interface, you can set the account manually or automatically.

-- Manual settings:

1. Account setting interface > enter account name and password.
2. Touch Manual setup.
3. Touch POP3, enter server settings interface.
4. Touch Next, enter the outgoing server settings interface.
5. Touch Next, enter the receiving settings interface, select the receiving frequency of your email account.
6. Touch Next, enter set email interface to create account name for this account.
7. Touch Next, complete login and enter Inbox.

-- Automatic settings (this type of Email parameters need to be presented.):

1. Account setting interface > enter account name and password.
2. Touch Next.

3. Touch Next, enter email receiving settings interface and receiving frequency.
4. Touch Next, enter set email interface to create account name.
5. Touch Next, complete login and ether Inbox.

For non-preset Email account, users can log in email service provider's website to search during the login process.

52. Send Emails

In Inbox interface, touch menu key > **Compose**. Edit receiver, subject, and content, and then touch send.

53. View and delete emails

In Inbox interface, touch an email to view, touch  to delete.

54. Delete Email Account

Enter **Settings** > **All Settings** > **Account**, touch the desired account, touch menu key to delete.

2.1.2 Whether Support Viewing Emails Offline

Support viewing downloaded emails.

2.1.3 Gmail (Not Preset in Chinese Version, Reference Only)

Enter account setting interface, input Gmail address and password > touch **Next** to complete login automatically.

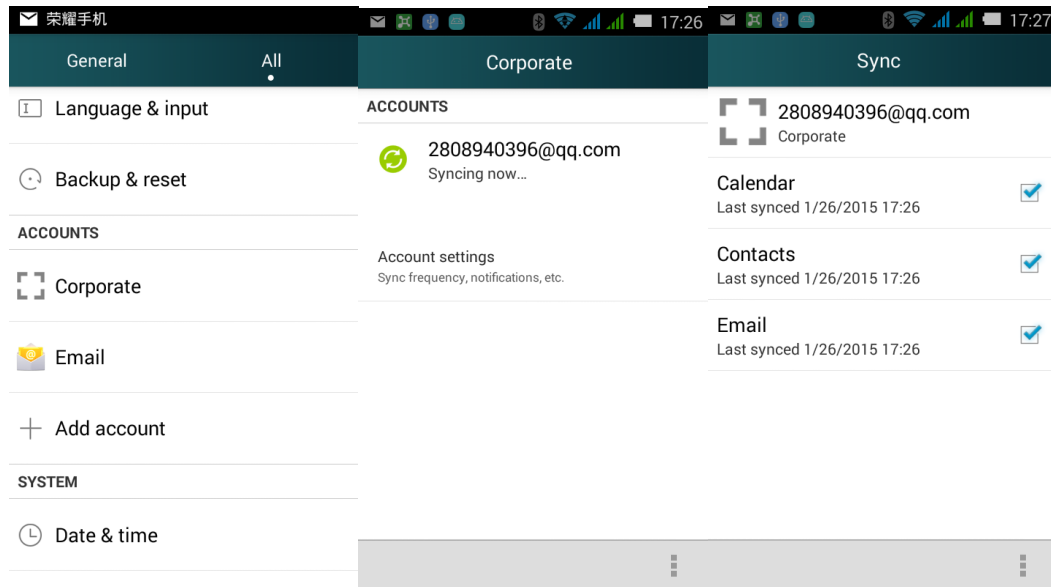

2.1.4 How to Do when Cannot Sync Contacts or Calendar?

Need to login at least one Exchange account.

In the account settings interface, select **Exchange**, search the parameters from the email server provider's website, and then finish login.

On the home screen, select **Settings > Corporate**, select the check box beside the desired account, touch menu key > **Sync now**, sync the selected contents from the server to your phone.

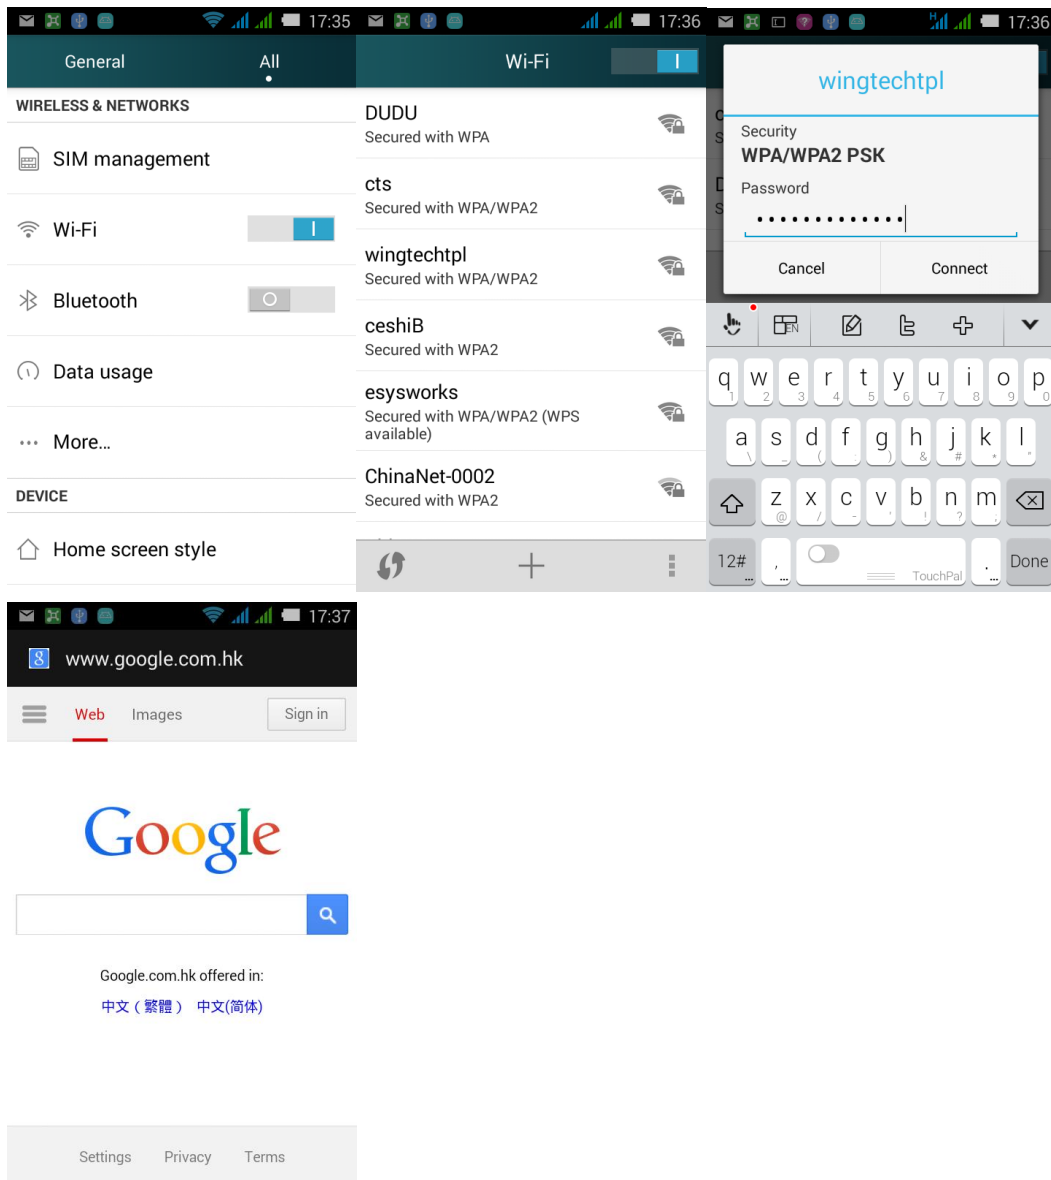

If fails, please check whether the data service is enabled, and the email server support syncing.

2.2 WLAN Settings

2.2.1 Use WLAN to Access to the Internet

1. On the home screen, touch **Settings > All > WLAN**.
2. If the WLAN switch is closed, drag it to open.
3. If the WLAN switch is opened, the phone will search available hotspots nearby. Touch the desired hotspot, enter correct password, touch Connect. You can access to the Internet after connect to the hotspot.

2.2.2 What Protocol does WLAN Support? What is the transmission Rate?

Support 802.11b/g/n.

2.2.3 Cannot Open Websites when Connected with WLAN

Reasons:

55. xDSL fails to dial. If the connected hotspot (such as wireless router) is using xDSL way to access to the Internet, when it fails to dial will lead the failure to access to the Internet. Make sure xDSL dial succeeded and then try again.
56. DNS domain name analyses problem. If the website cannot be open while QQ can be login and use, it is the DNS domain name analyses problem. (test whether you can deploy DNS)
57. WLAN hotspot restriction. If the hotspot is restricted you connected, the phone cannot open the webpage.

2.2.4 Cannot Search WLAN Signal

After enabling WLAN, it fails to search WLAN signal from wireless router. Other devices can search the signal, how to deal?

58. Make sure the wireless router SSID is hide or not.
59. Close the WLAN and reopen.
60. Restart the phone.

2.2.5 How to Judge access to the Internet via SIM Card or WLAN?

After connecting to WLAN, it will not cost USIM card charge. WLAN is prior than data service. check whether there is a WLAN icon at upper-right corner. If there is  at the corner means you can access to the Internet.

2.2.6 Reasons for Why Fail to Connect to WLAN

61. Users input wrong password, pay attention to the capital letters.
62. Sudden weak or no signal will cause connect error.

2.2.7 How to Fix the Wi-Fi Disconnect when Standby? What is the Default Settings?

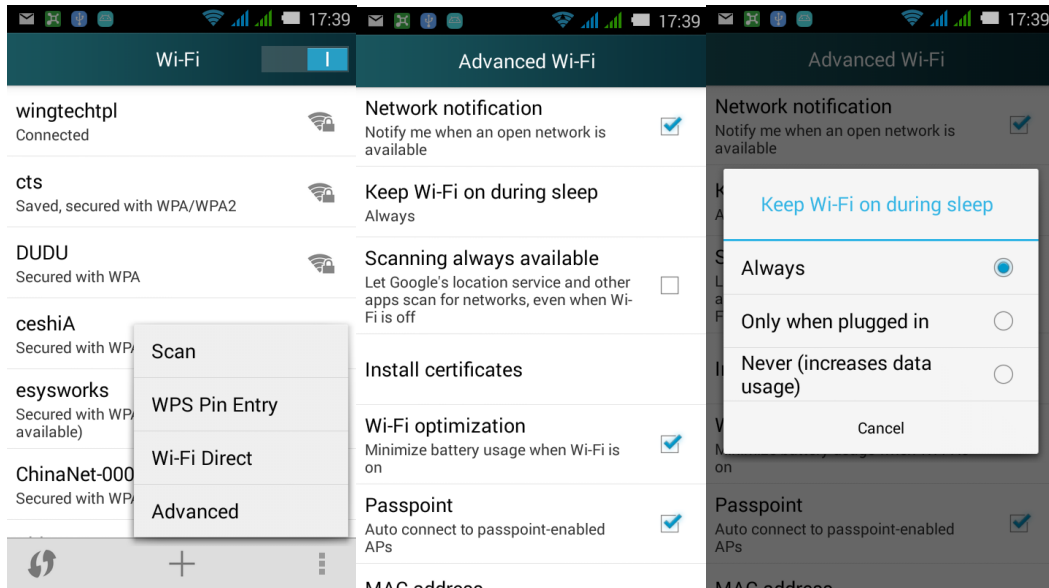

This is the sleep strategy. Method: On the home screen, touch **Settings** > **All** > **WLAN**, touch  to enter **Advanced** > keep WLAN connecting under sleep mode, set Always.

Note: The default settings is Always, that means connect the Internet all the time. If you adjust the sleep strategy, it will disconnect when standby. The options mean:

Always: Keep WLAN connected

Only when charging: Only keep connected when charging. If not charging, it will disconnect after 15 minutes standby.

Never (increases data flow): Disconnect after 15 minute standby.

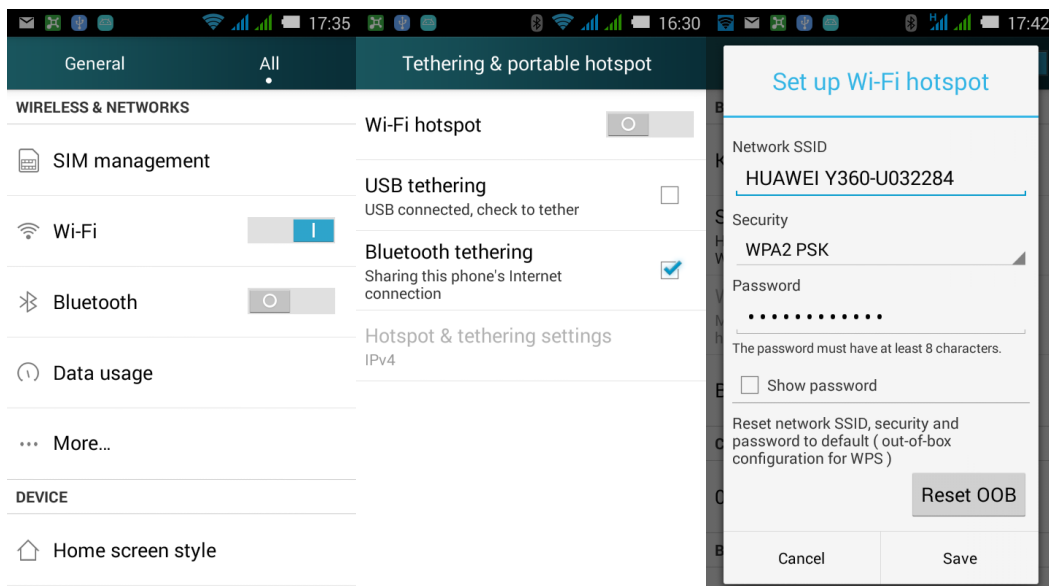

2.3 Tethering & Portable Hotspot

The mobile phone W-Fi hotspot is that this phone turns on hotspot, other phones access to the Internet via connecting to this hotspot.

Way to turn on: **Settings > All > More > Tethering & portable hotspot > Portable Wi-Fi hotspot.**

After turning on, other phones can use WLAN to search this phone and then connect to access to the Internet.

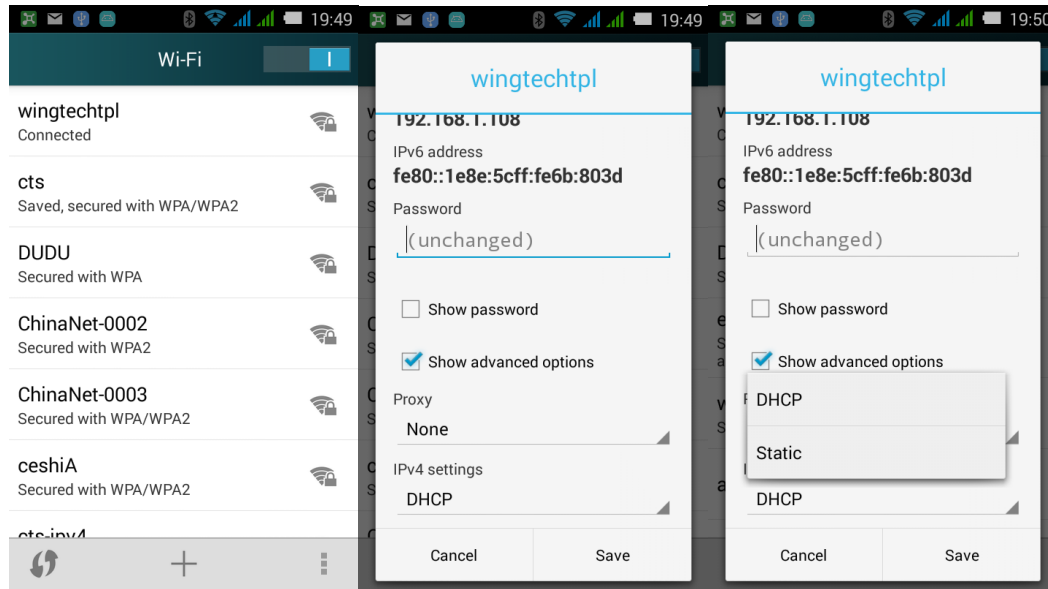

You can also set network SSID, security, or others in **Set up Wi-Fi hotspot.**

2.4 Use Static IP to Access to the Internet via WLAN

Settings > **Wi-Fi**, touch the desired hotspot, select **Show advanced options** in the dialog box. Select **Static** in IP settings, input **IP address** (mostly are set as 192.168.1.**), **Gateway** (mostly are set as 192.168.1.1), and **DNS** (dns address).

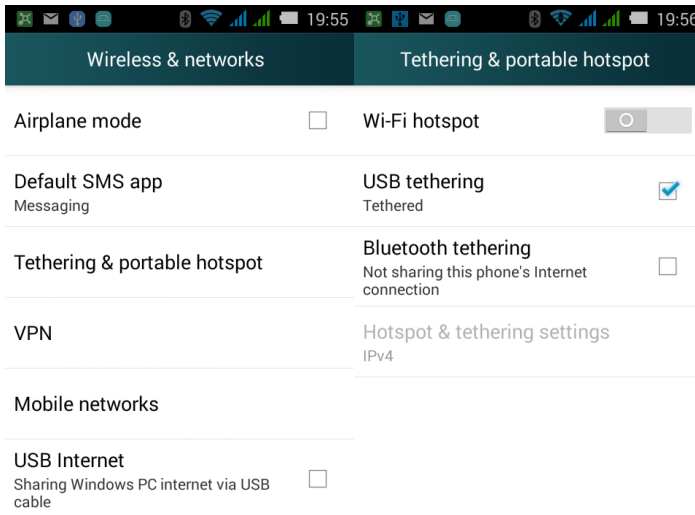

The biggest problem by using WLAN to access to the Internet is that cannot achieve free to wait, mobile devices will get a dynamic IP address after connected to the router, it's time-consuming. It can achieve rapidly access to the Internet by using a static IP.

2.5 Worked as a Modem to let PC Access to the Internet

1. On the home screen, touch **Settings** > **All**.
2. Under **Wireless & Network**, touch **More** > **Tethering & portable hotspot**.
3. Touch **USB tethering**.
4. After installed the drive (install via HiSuite), on the PC, right-click **My Computer**, select **Manage** in the pop-up menu, it will show the new network card device.

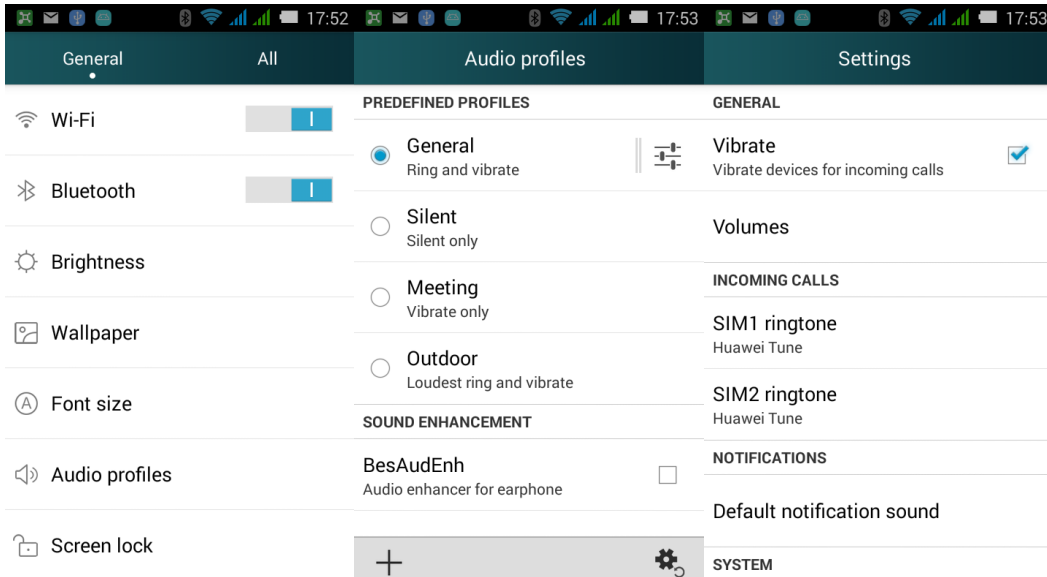

Note: If there is a wireless network device on your PC, you can use WLAN portable hotspot. PC can connect to the phone via WLAN, and then access to the Internet. (windows system only)

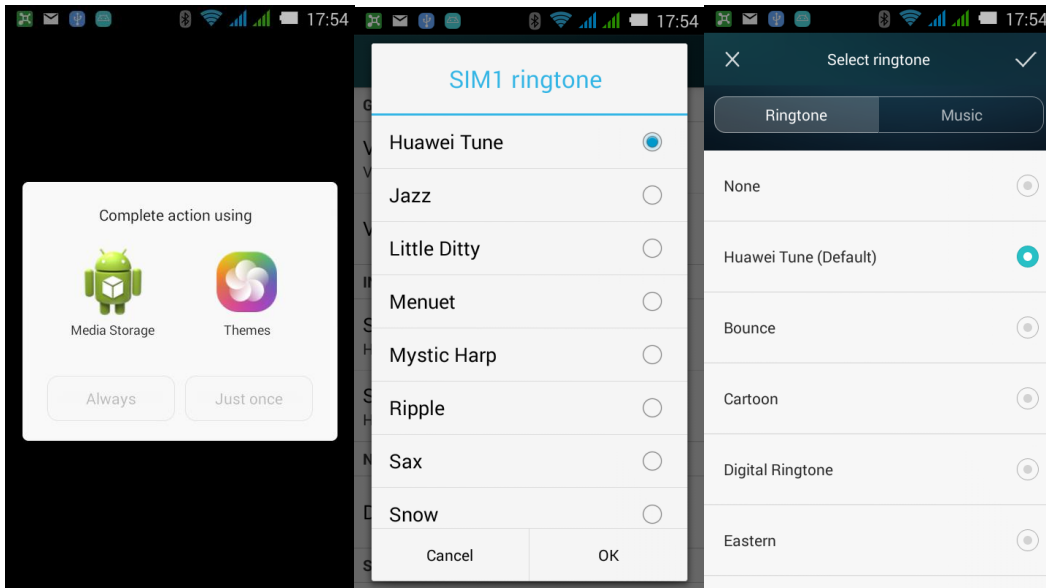

2.6 Settings Ringers

2.6.1 Way to Set Default Incoming Call Ringtone

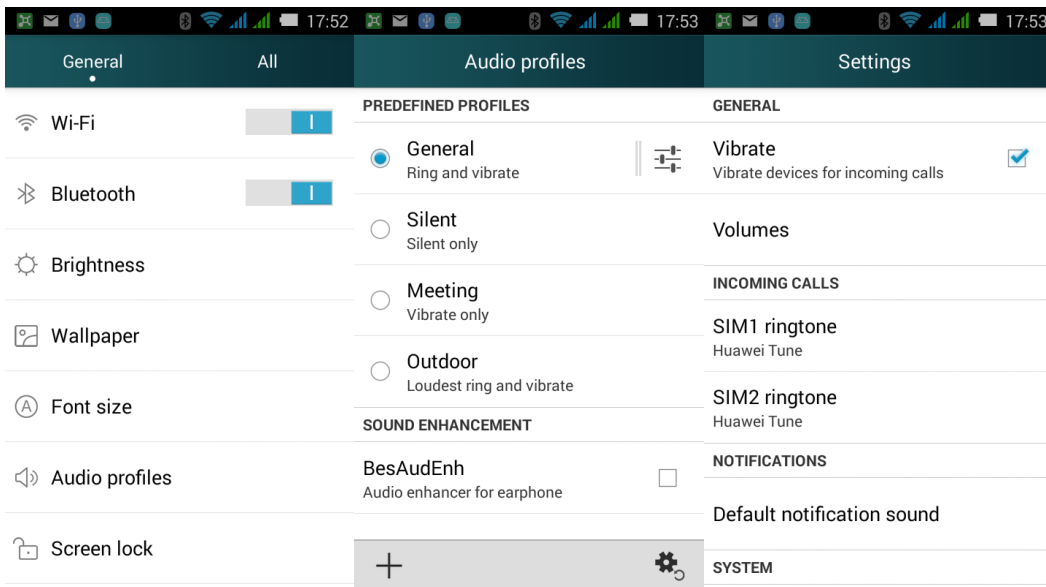

Enter Settings > Audio Profiles > General > Edit > SIM 1/2 Phone ringtone. Select desired ringtone, and then touch ✓.

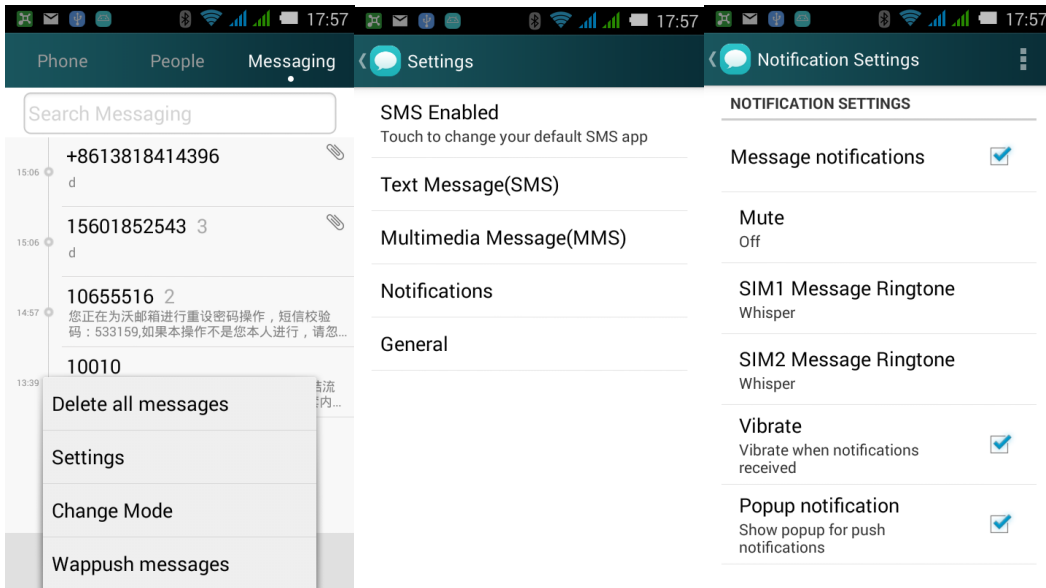

2.6.2 Way to Set Incoming Call/Message Vibration

Incoming call vibration: Audio Profiles > General > Vibrate.

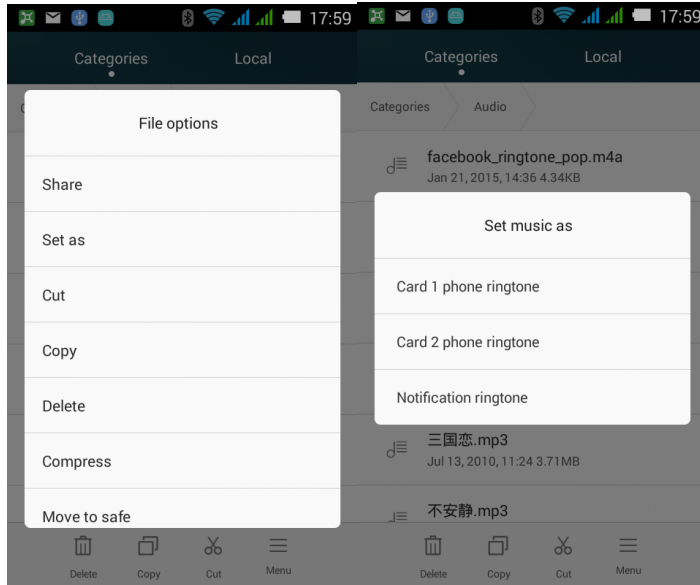

Message vibration: Messaging > Settings > Vibrate.

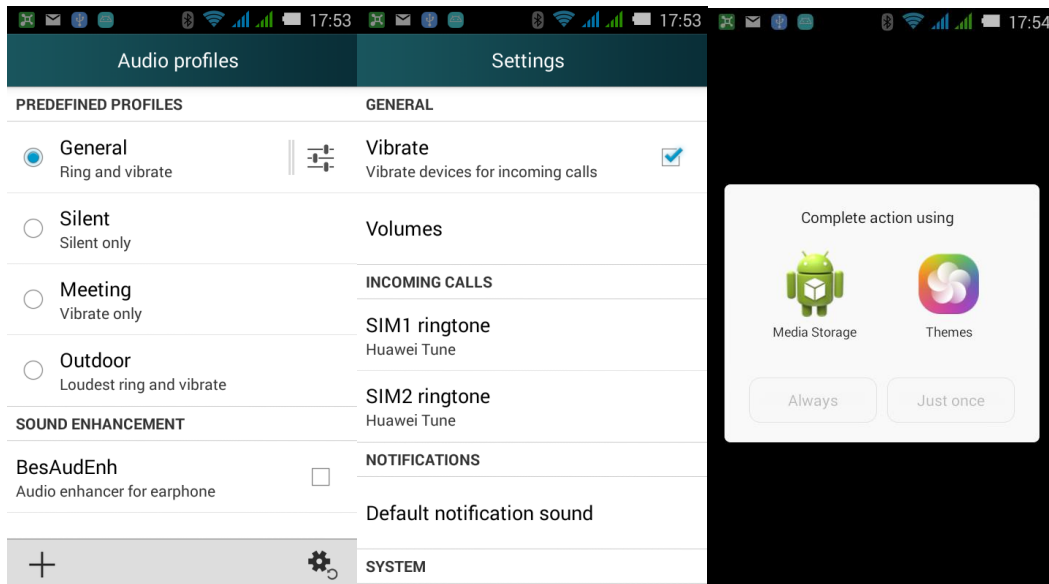

How to set music as incoming call/message ringtone?

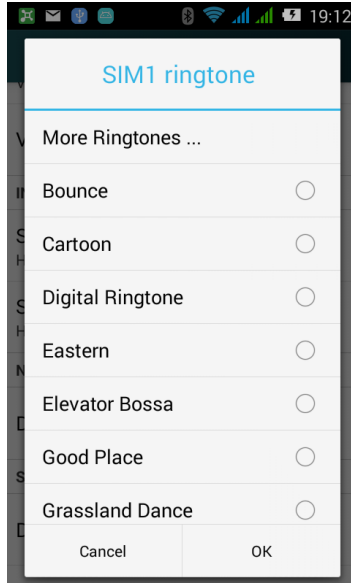

In Files, touch and hold a music file, select Set as, to set the music as SIM1/2 phone ringtone.

Enter Audio Profiles > General > Edit> SIM 1/2 Phone ringtone or Default notification > Media > More, select one music to set.

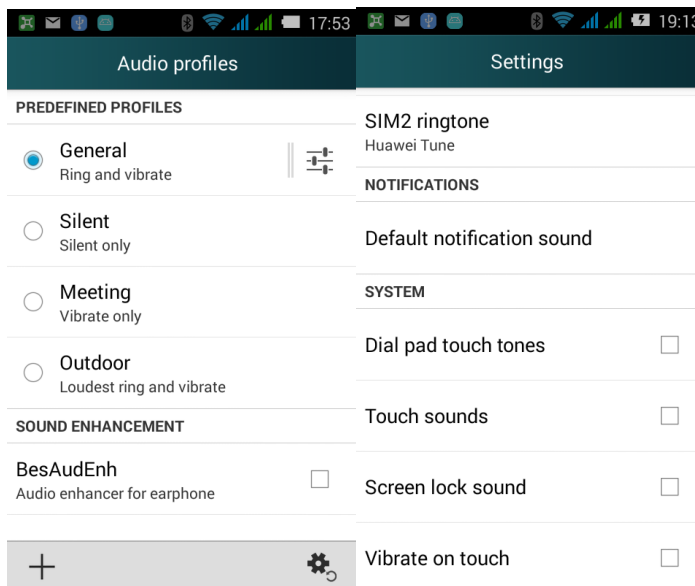

2.6.3 How to Set Group Ringtone?

Not support

2.6.4 How to Cancel Touch Sounds?

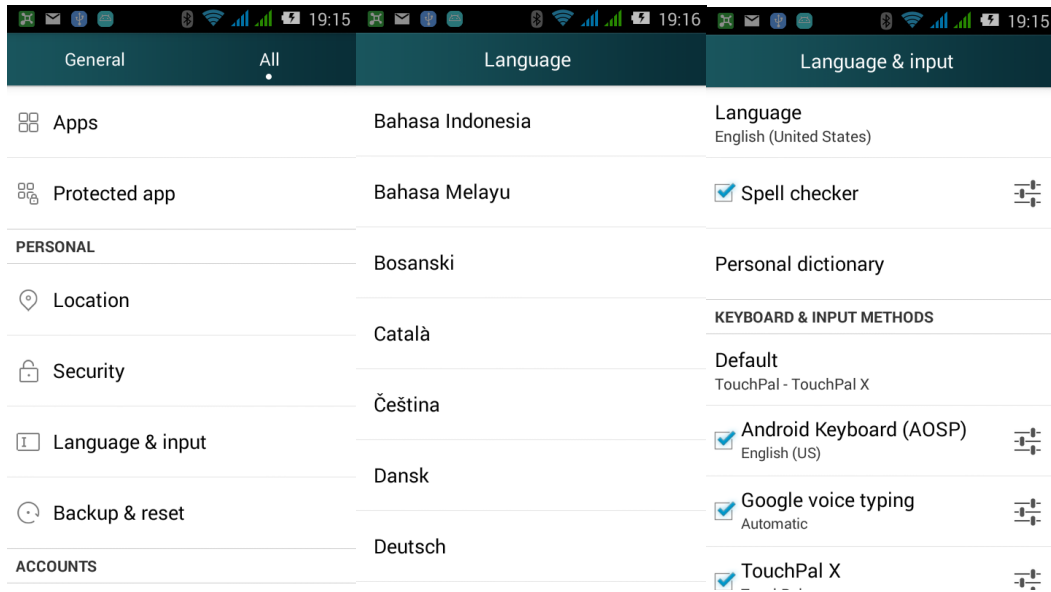

Enter Audio Profiles > General > Edit > Dial pad touch tones or Touch sounds.

2.7 Language and Input Settings

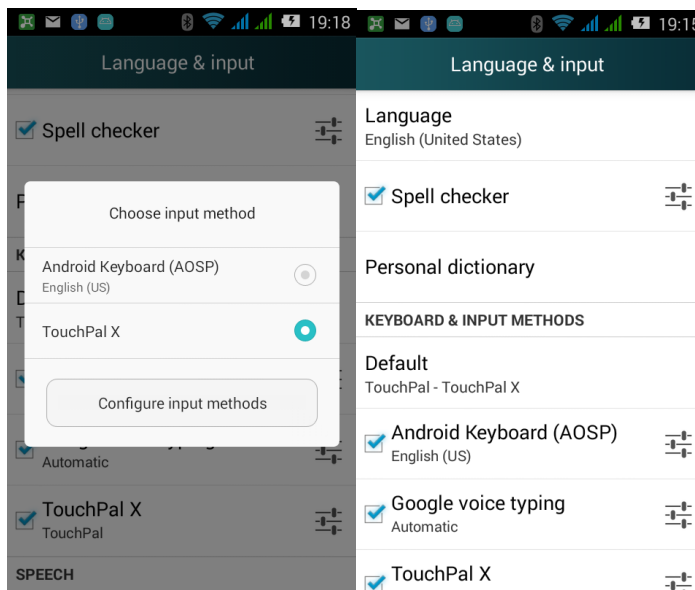

2.7.1 What Languages Does the Phone Support? How to Change Language?

On the home screen, touch **Settings** > **All** > **Language & input** > **Language**. Select the desired language in the list.

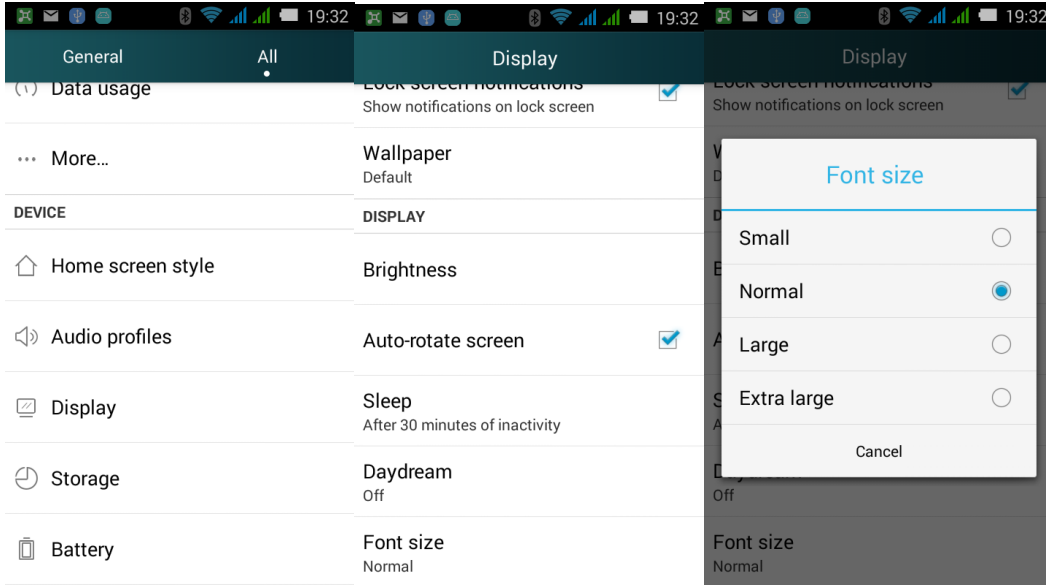

2.7.2 Why Cannot Use Other Input Method after It Installed Successfully?

On the home screen, touch **Settings** > **All** > **Language & input**, select the installed input methods, then touch **Default**, select the input method in the list.

2.7.3 Can the System Font Size to be Adjusted?

Touch **Settings** > **All** > **Display** > **Font size**, select the desired font size in the list.

2.7.4 The Default Input Methods

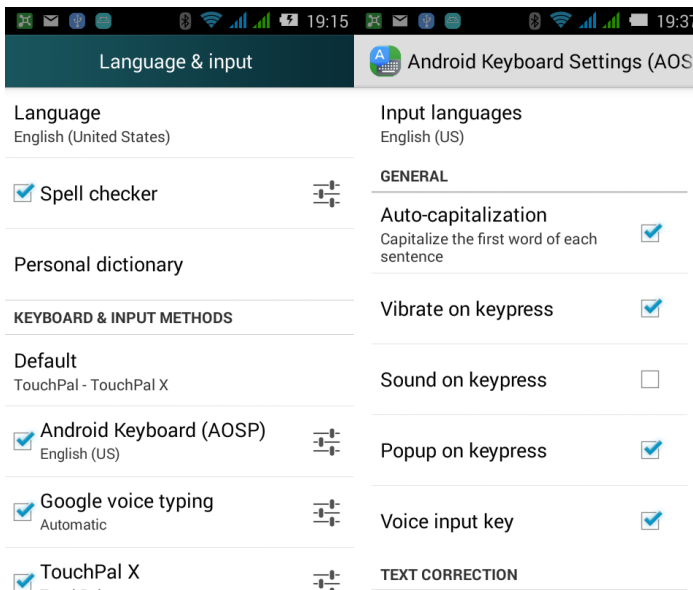

Android Keyboard (AOSP), TouchPal X

2.7.5 How to Switch to Bihua Input Method?

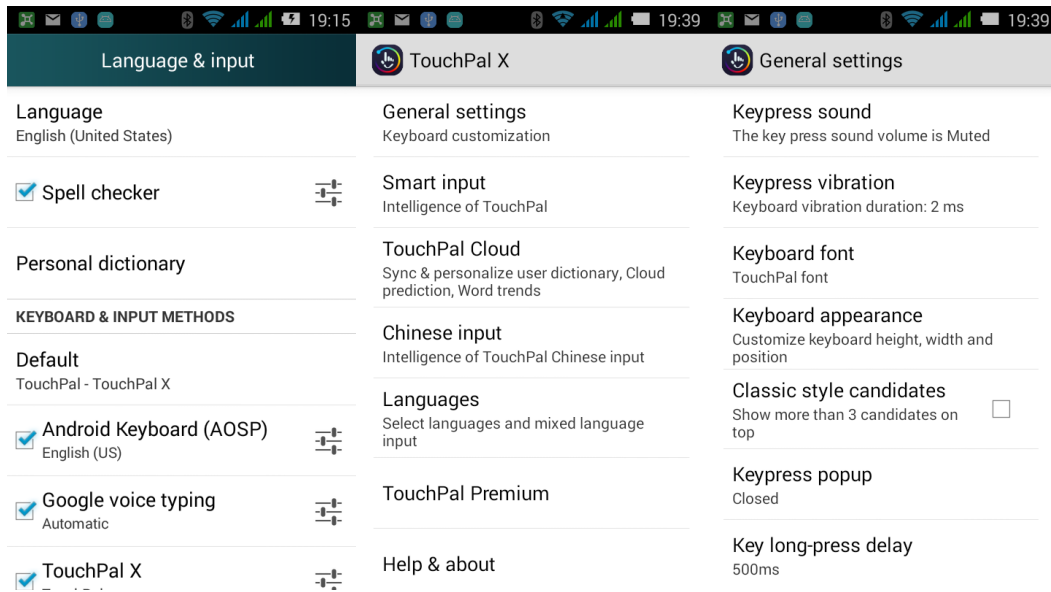

In the TouchPal X input method interface, touch and hold  to show the list, select Bihua in the list.

2.7.6 How to Cancel Input Method Vibration?

For Android keyboard, touch **Settings > All > Language & input**, touch  beside **Android Keyboard (AOSP)**, touch Vibrate on keypress to cancel the vibration.

For TouchPal X, touch **Settings > All > Language & input**, touch  beside **TouchPal X**, touch **General settings > Keypress vibration**, drag the slide to the left to cancel the vibration.

2.8 Internet-related Settings

2.8.1 Clear Cache and History of Phone Browser

In the browser, touch menu key, select **Settings > Privacy & security**, touch **Clear cache** or **Clear history**.

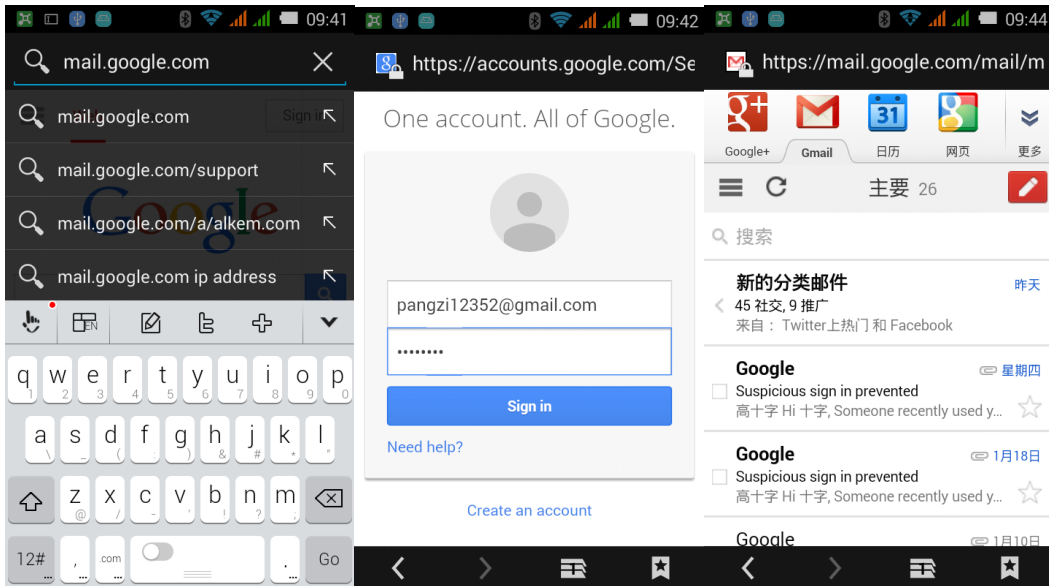

2.8.2 Full Screen and Bookmark Settings

Full screen: In the browser, touch menu key, select **Settings > Lab > Fullscreen**.

Bookmark: In the browser, touch menu key, select **Save to Bookmarks > OK**.

2.8.3 Login Email Account via Browser

Support. Input the email URL address in the address bar to open login interface.

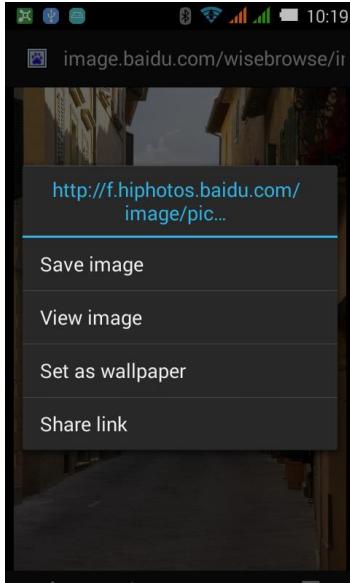

2.8.4 Whether Support Login Online Banking

Support. Need to install the corresponding clients. There may some problems when visit via the browser. Some banks' login plug-in needs to run under Microsoft's IE.

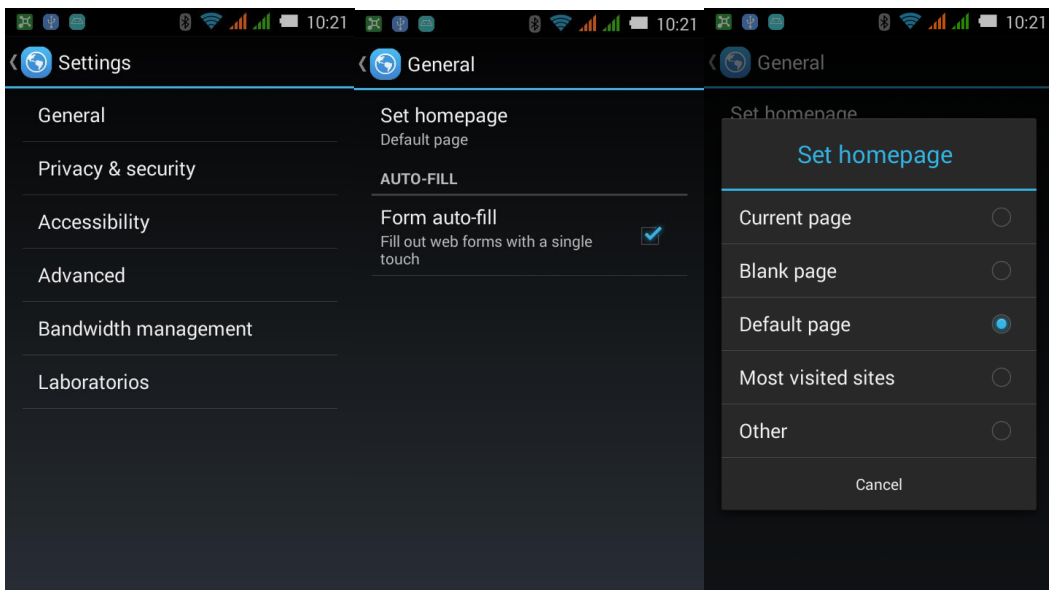

2.8.5 Save the Pictures on the Website

In the browser, touch and hold the picture, select **Save image**.

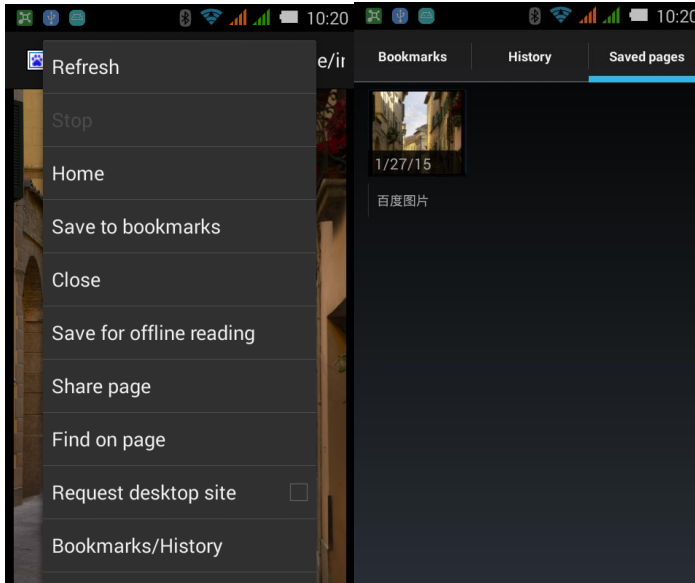

2.8.6 Set and Modify the Homepage

In the browser, touch menu key, select **Settings** > **General** > **Set homepage**.

2.8.7 Save my favorite website

In the browser, touch menu key, , and click save for offline reading

2.8.8 Phone can't online, network setting

Put in the SIM card, APN will configure network parameters automatically

Way to check: enter into main menu, choose **setting** > **Setting All** > **wireless& network** > **more...** > **mobile network** > **access point(APN)**

When the parameters are set to appear incorrect, you can touch the menu in the APN screen, choose Reset to restore the default settings.

2.8.9 Turn on/off data service

Turn on/off data service:

- enter into main menu, choose **setting** > **Setting All** > **wireless& network** > **more...** > **mobile network**, choose “china mobile” (or “china union”), to open data connection, choose close to turn off data service.

- turn on the data service in the drop-down notification bar:

63. Put down notification bar, touch the icon, turn on data service, the icon become

2.8.10 Check or cut off data connection

Put down notification bar, check if the data icon is highlight.

- if highlight , that means turn on; Touch to cut off.
- if not highlight, that means cut off; Touch to turn on.

2.8.11 Whether to support online while make phone call

3G network support it, 2G does not.

2.8.12 The limitation of data service (CDMA double SIM card phone does not support GSM online)

So far, our phone supports CU's SIM (2G & 3G),USIM(2G & 3G) and china mobile's SIM card(2G) except CDMA2000 data service.

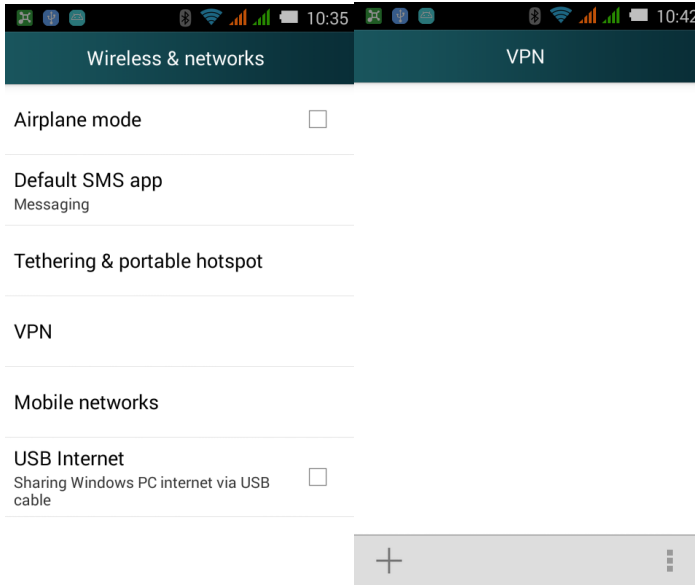

2.8.13 The usage of VPN and VPN's setting

Virtual Private Network (VPN) extends a private network across a public network, the data transmitted in the public network by the secure "encrypted channel".

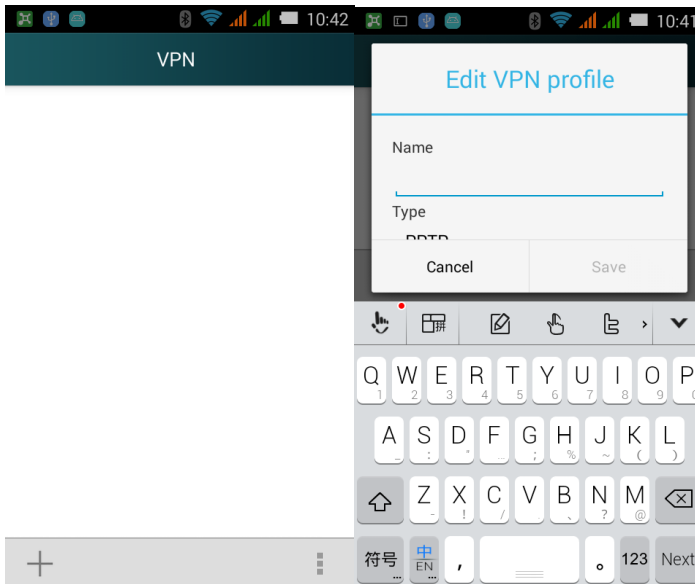

There are three kinds of VPN protocol: PPTP, L2TP, and IPSec, PPTP is widely used.

Setting PPTP:

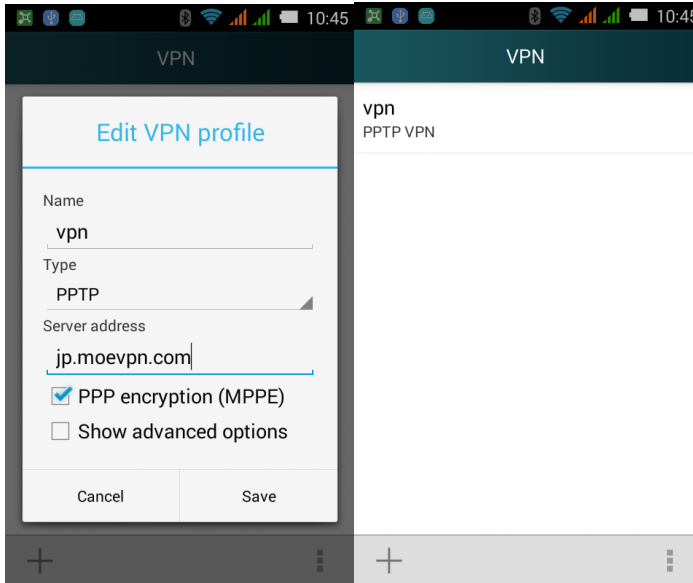

Step 1, enter VPN menu, and touch VPN into the adding screen;

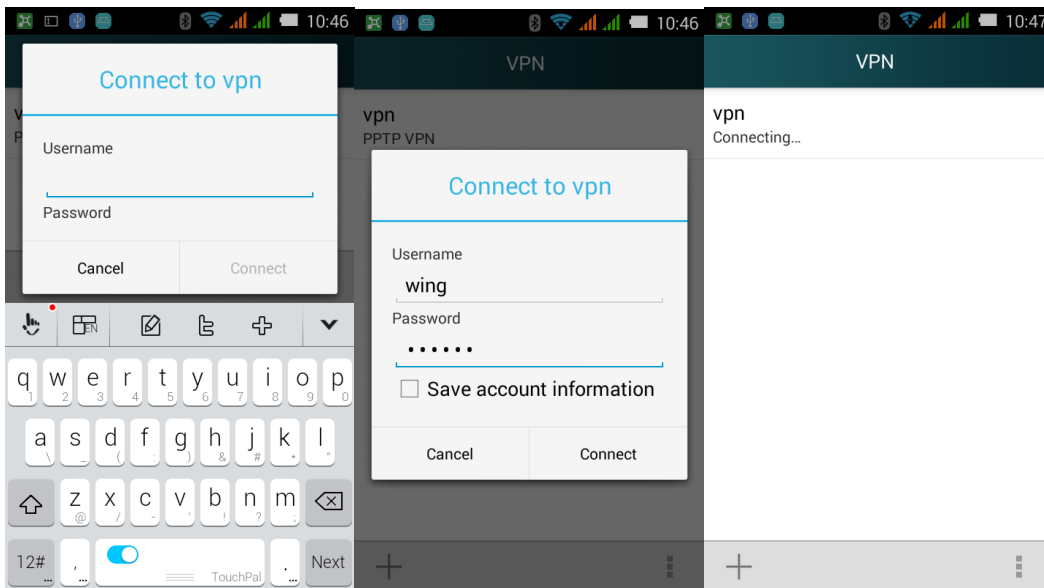

Step2, touch “add new VPN”;

Step3, enter the name and service address of VPN, touch save;

Step4, touch “vpn”, and enter username and password, touch connect, if succeed, it will show “VPN connected”, if failed, please check the WIFI connection, service address, username and password.

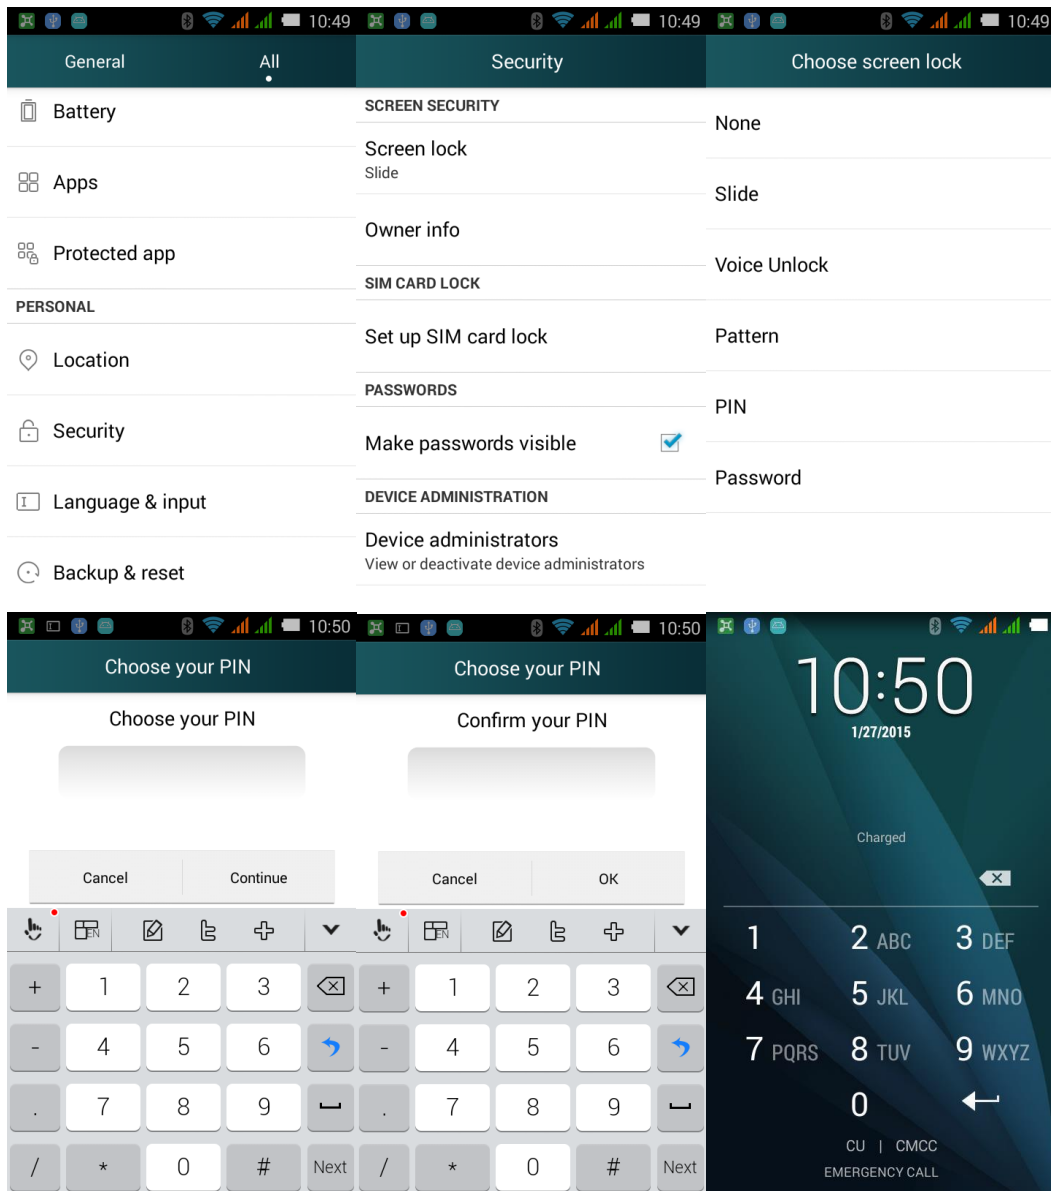

2.9 Screen lock setting

2.9.1 How to use PIN to lock screen?

1. Touch **Setting>Setting All>Security>Screen lock>PIN**.
2. At “choose your PIN” screen, enter PIN.
3. Enter again, and select ok.

When touch power button or power on/off, the phone will enter into PIN unlock screen, enter PIN and touch OK to unlock.

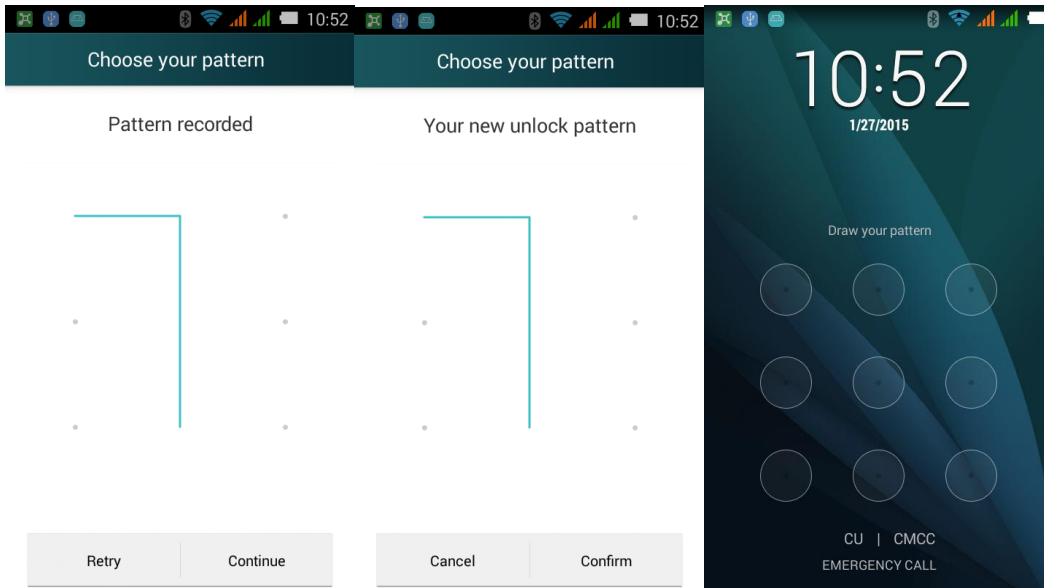

2.9.2 How to set face unlock

Not support.

2.9.3 How to set screen pattern unlock?

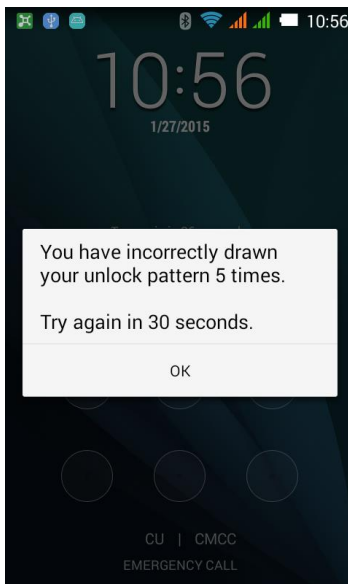

1. Touch **Setting** > **Setting All** > **Security** > **screen lock** > **pattern**.
2. In the “choose your pattern” screen, slide your finger to connect few dots, and touch “next”.
3. Slide again the same pattern, and touch ok.
4. When touch power button or power on/off, your phone will enter into PIN unlock screen, slide the pattern you have set to unlock.

2.9.4 Whether the phone will be locked after Pattern lock consecutive failed several times? How to unlock when forget the pattern? Can we unlock the phone through GMAIL?

Enter wrong pattern five times, there will be a warning to warn you, and the next time you can try to unlock the phone will be prolonged, but it will not be locked.

Please send your phone to service to unlock or refresh version, you cannot unlock through Gmail.

2.9.5 How to lock and unlock screen

Lock: press power button to lock.

Unlock: press power button, and then use slide, PIN, pattern to unlock.

2.10 Alarms

2.10.1 Add/Cancel alarms

1. Touch **alarms**
2. Touch **alarms** again to enter alarm screen
3. Choose “**add alarm**”, enter into alarm setting:
4. Touch “**time**” to set the time
5. Touch “**repeat**” to set the repeat period
6. Touch “**ringtones**” to choose ringtones
7. Touch “**vibrate**” to set vibrate
8. Touch “**label**” to enter its name
9. Touch 

In the alarms screen, you can see the list of all alarms, remove the “√” in the front of a alarm, means you cancel this alarm. Or touch and hold a alarm record in the menu, choose “delete alarm” in the pop-up menu to delete your alarm.

2.10.2 Whether to support power-off alarms?

Support.

2.11 APPs

2.11.1 Supported software formats, whether it support Java or not?

Support all applications based on Java, if you want to install .jar and .jad applications, you need to install the Java simulator(Such as Jbed.apk, GZL-signed-Jbed.apk etc).

2.11.2 How to get third-party applications?

1. Log in to Play Store to download third party applications.
2. Surfing the internet to download apk files
3. Download by PC tools, such as “SnapPea”

2.11.3 Whether to support the preferred installation location settings?

Not support

2.11.4 How to install, manage and uninstall applications?

Uninstall applications:

1. A long press on the application you want to uninstall in the main menu screen, move it to the top of delete icon to uninstall
2. Enter into **Settings > Setting all>Applications >Downloaded**. Touch an application and then touch **Uninstall**.

2.11.5 Unable to install applications, and how to solve the problem?

1. The space is insufficient, please uninstall some applications you don't use, and delete unnecessary files from the file manager.
2. The software is not compatible with the version, please install the application from Android2.3 to the current version of Android4.4.

2.11.6 Preset software, which belongs to the operating agencies, which belong to the phone, whether it can be deleted?

Depend on the specific requirements of Customization to preset

2.12 The common third party application problems

2.12.1 QQ

Whether to support the QQ backstage? Whether to support the QQ video? Whether to support sending pictures and download chat record? How to clean up the chat record information of the QQ account logging in the mobile phone?

If the mobile phone is not preset QQ, download QQ from the internet and install. Supporting QQ run in the backstage, QQ video, sending pictures and record download are the own functions of QQ application, the new version supports all the functions. For example, the version of QQ2013, in the account management interface, click "edit", click the left of the minus sign of QQ number you want to delete, select "Delete", choose and delete the related chat records in the pop-up dialog box.

2.12.2 The third party application installed on the SD card, may occupy the mobile phone system memory

Mobile phone support the third party applications installed directly on the micro SD card. Some parts of the temporary data will be stored in the mobile phone store when these applications are running, that will occupy the mobile phone system memory, it is a normal situation.

2.12.3 The reasons of part of phone number is not displayed the attribution

Do not support the inquiries of the attribution of phone call number.

Online banking transactions (Taobao, Ali Wangwang, Alipay, TenPay, Online bank)

Support online banking transactions, you need download its client application.

2.13 Data backup and recovery

2.13.1 Backup contacts and restore contacts

Touch **backup**, to backup and restore contacts.

- Backup

Touch **Utilities>backup**, enable local backup, touch "**new backup**", and then choose contacts, touch "**start backup**", enter password, it will backup all contacts.

If you have the external micro SD card, the backup file will be putted into Huawei backup folder.

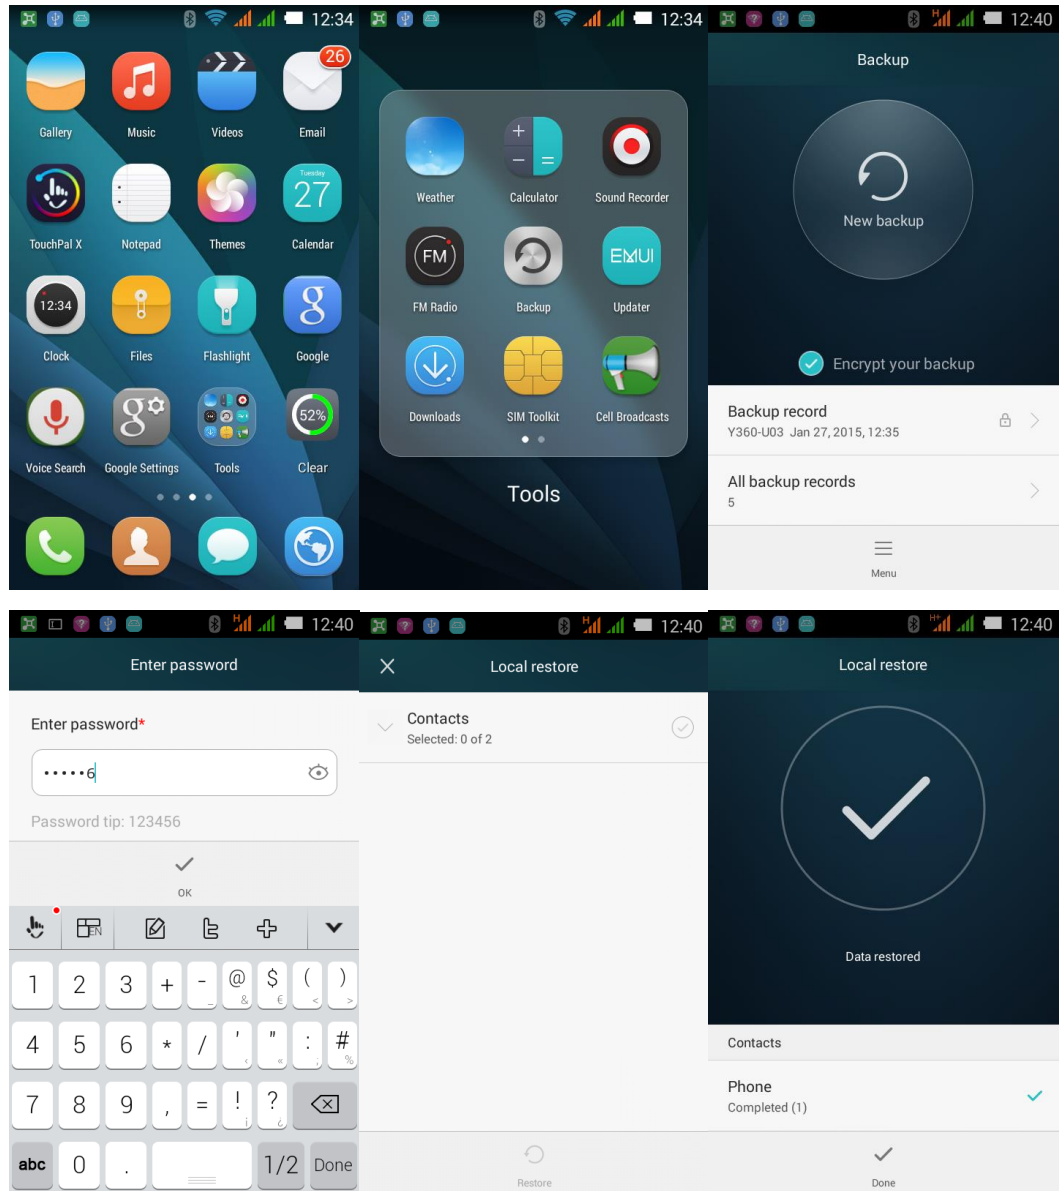

If you haven't, it will be putted into the internal storage, the same name folder.

- Restore

Touch **Utilities > backup**, after local backup is starting, touch “**restored data packet**”, choose contacts, touch restore, you can also choose cover or uncover the former contacts.

Make sure you have already backup before restore.

2.13.2 Whether support to backup group contacts

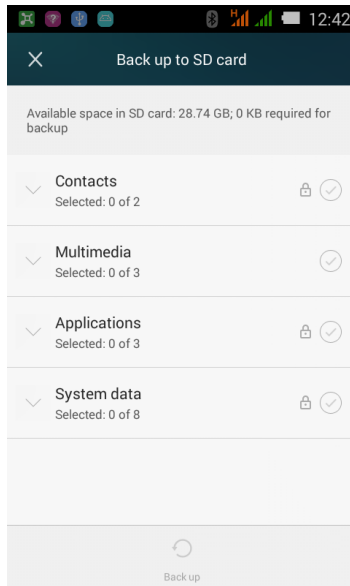

Not support.

2.13.3 How to use cloud backup---backup and restore

Not support.

2.13.4 What kind of data backup does mobile phone support?

Mobile phone supports to backup contacts, multimedia data, applications and system data.

2.14 Task Manager

2.14.1 The usage of task manager

Do not preset task manager.

2.14.2 How to open task manager?

Do not preset task manager.

2.14.3 The introduction of task manager interface

Do not preset task manager.

2.14.4 The related operation of task manager

Do not preset task manager.

2.15 The functions of cloud services

Do not support cloud services, Huawei UMTS phone supports cloud services, but TD-SCDMA phone doesn't. Because Huawei cloud services is a management restriction to China mobile market.

2.16 Security Guard

2.16.1 The usage of security guard

Do not preset security guard.

2.16.2 How to use Huawei security guard?

Do not preset security guard.

2.16.3 The encryption of mobile phone security guard

Do not preset security guard.

2.17 The usage of Huawei security guard backlist

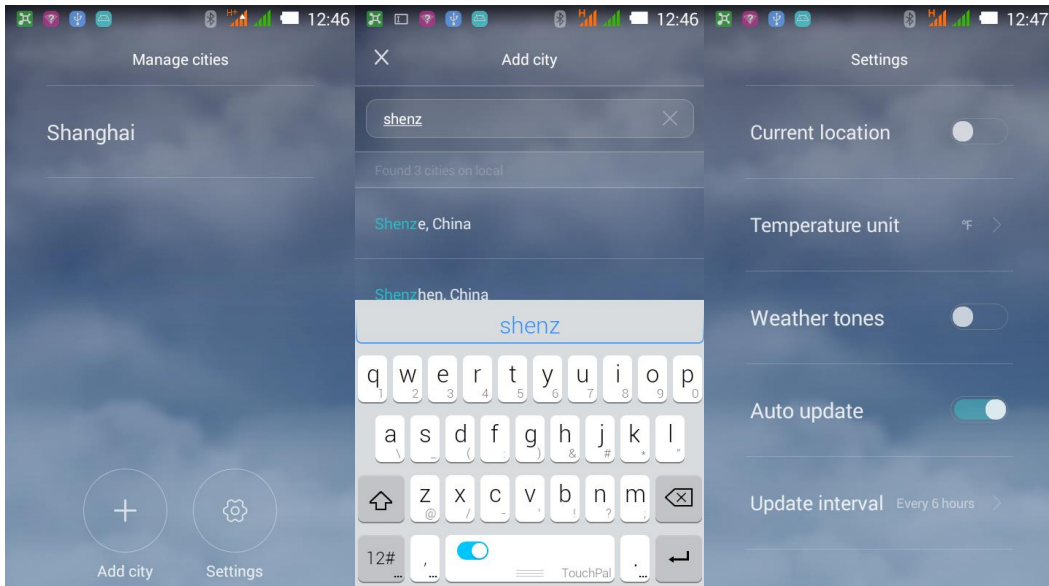

Do not preset security guard.

2.18 Weather clock

1. Main screen---weather--- pull down screen to refresh former weather

2. Weather screen---touch options---add city, set default city, delete city, set temperature unit, voice on/off, turn on/off update automatically

3. If the current position does not match the default position, it will show two weather clock, touch the icon  or  to set the default city

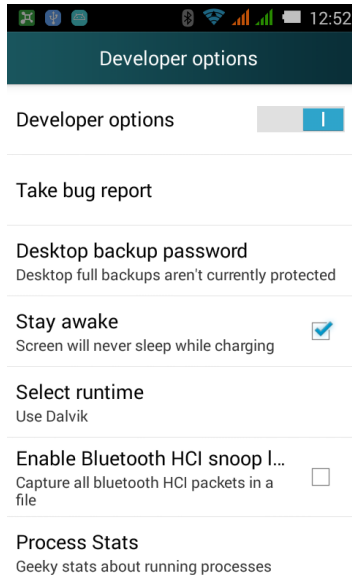

2.19 Developer options

The user can touch the switch to open/close developer options.

1. Using adb command to debug mobile phone.
2. Do not lock the screen: the screen does not hibernate when charging.
3. Allowing to simulate locations: to enable simulate locations.
4. Backup desktop password: the full desktop backup is not set password protection.
5. Location pointer: touch screen overlay shows the current data
6. Display touch operation: to provide cues for touch operation
7. Display the usage of CPU: display the current usage of CPU

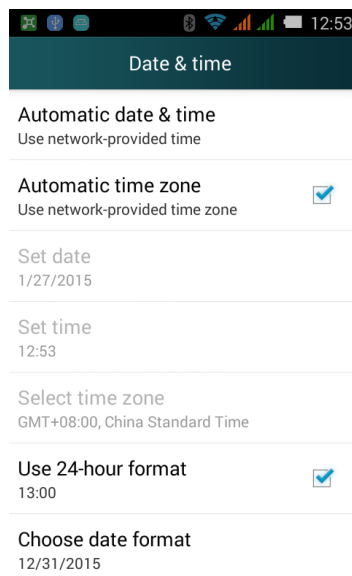

8. Mandatory GPU rendering: mandatory use of the GPU for 2D drawing
9. Zoom Animation: control the zoom speed
10. The limitation of background processes: limit the number of background processes
11. Display all "Applications are not responding": display the "Applications are not responding" dialog box.

2.20 Time synchronization

Support time synchronization

In the main screen, touch **Setting** > **Setting all** > **date and time**, and then choose confirm date and time and time zone automatically.

2.21 Connect to PC as a U disk

Connecting mobile phone to computer through USB, it can identify micro SD card, but the storage of mobile phone cannot be identified.

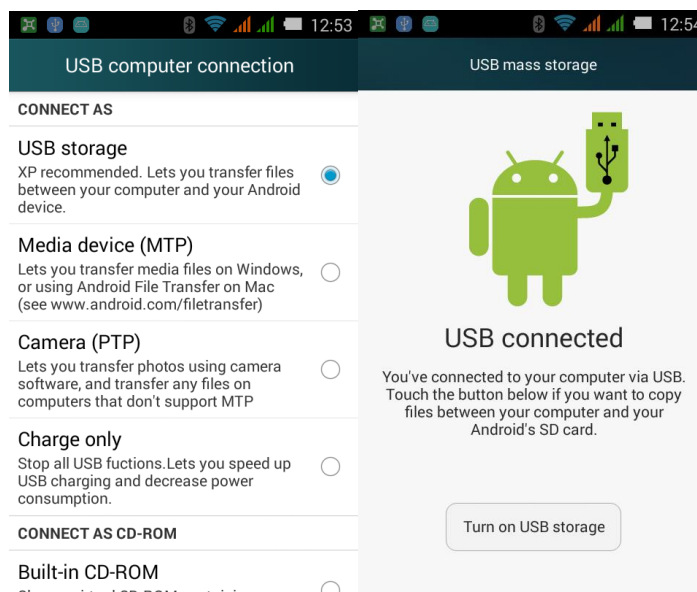

USB storage devices: used in XP system, copy files to mobile phone.

MTP: used to transmit media files on windows or Android files on Mac.

PTP: used to transmit picture with camera software, it is a good way for those don't support MTP.

Only Charging: it will stop all other USB functions in order to charge faster and reduce power consumption.

Built-in disk: as a virtual disk, containing several common software

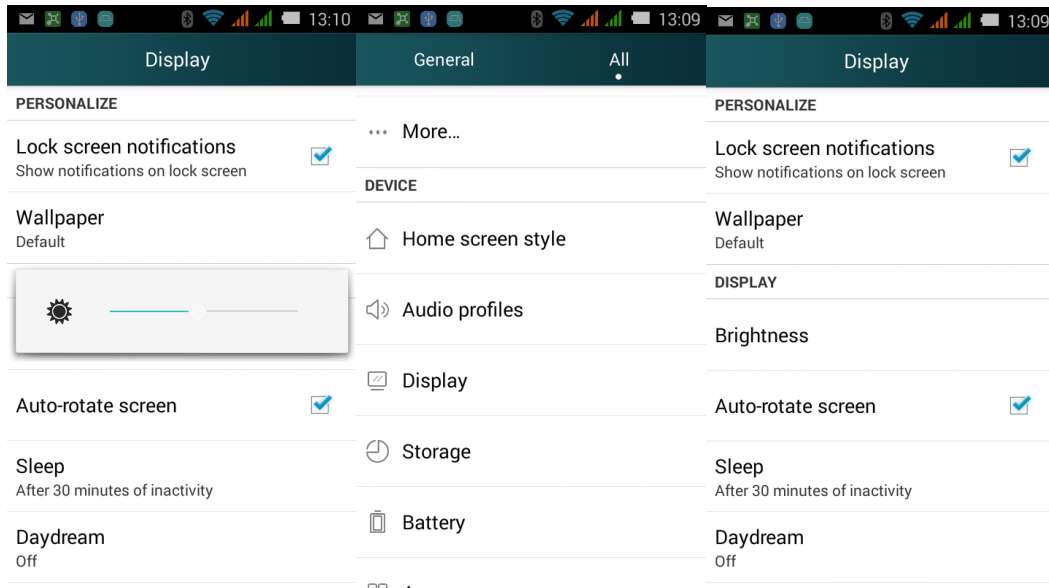

2.22 Release mobile phone internal storage

Delete useless file: touch  > task manager, check files or folders, touch and hold files or folders to delete in the pop-up menu.

2.23 Adjust screen brightness

In the main screen, touch **setting** > **setting all** > **display** > **brightness**, you can slide the bar to adjust.

2.24 Power-saving of the phone keypad backlight

Not support

2.25 Setting flight mode

64. In the main menu, touch **setting**>**setting all**>**more...**, choose flight mode, turn on flight mode; cancel to turn off.
65. Turn on the flight mode by the shortcut switch
66. A long press on the power button to turn on the flight mode

2.26 Reset mobile phone

1. In the main screen, touch **setting**>**setting all**>**reset**>**reset factory data**
2. Touch “reset mobile phone”, restore factory data.

2.27 How to enter and exit security mode

A long press on the power button and the “shutdown” menu, OK, reboot the phone into the security mode, if you want to exit security mode, reboot the phone.

2.28 HiSuite

Not support.

2.29 HDMI

Not support.

2.30 TV-OUT

Not support.

2.31 OTG

Not support.

Note: OTG is a new transmission technology of USB. Mobile phone can get access to external devices by OTG to output HD video, the external devices including U disk, digital camera, keyboard and mouse.

2.32 Status Indicator

Not support.

2.33 Whether chargers can be mixed?

Yes, there is a charger protector in the phone. However, we suggest users to use Standard charger, if you usually use strong electric to charge the phone, it is harm to the mobile phone and battery. Using low electric to charge will take more time.

2.34 The features of this phone

Y3 lite is a digital mobile phone that supports UMTS / GSM / EDGE, above Android 4.4 operating system, MTK- MT6572V quad-core platform, 4.0-inch TFT LCM, GF capacitive two-point touch panel, 200W AF back camera , 0.3W front camera, USB high-speed ports, with gravity sensors, dual card, 1730mAH external battery. Support FM, Bluetooth, WIFI and GPS.

3 OTHERS

3.1 Power saving tips

- When you don't use the phone, press the power button to turn off the screen.
- Shorten the dormant time of screen: in the home screen, touch **setting>setting all>display>dormant**, set up the dormant time.
- Reduce the screen brightness: in the home screen, touch **setting>setting all>display >brightness**, set up the screen brightness.
- Turn off Bluetooth and WLAN: in the home screen, touch **setting>setting all**, turn off Bluetooth and WLAN on the wireless and network area.
- Turn off background data synchronization: in the home screen, touch **setting>setting all > Network traffic usage>menu**, turn off the data synchronization.
- Turn off data service: in the home screen, touch **setting>setting all >more...>mobile network**, cancel the data flow.
- Turn off GPS: in the home screen, touch **setting>setting all >location service**, cancel check GPS satellite.

3.2 Network traffic saving tips

- When you don't use data service, turn off the data service function.
- Under WLAN environment, turn off the data service.
- Logging in wap website saves more flows than www website.
- Turn off data service: in the home screen, touch **setting>setting all >more...>mobile network**, cancel check enabled data flow.
- Turn off background data synchronization: in the home screen touch **setting>setting all > Network traffic usage>menu**, turn off the account and synchronization.

3.3 What if the phone running slowly?

If there are many programs running at the same time, you can turn off some programs running in the backstage. In the home screen, touch **setting>setting all > application>running**, select the applications and choose stopping.

Installed too many applications, insufficient system disk space leads to phone running slow; you can uninstall some application programs to release system disk space in order to increase internal operation storage.

If CPU is highly occupied, and there are too many programs running in the backstage, stuck condition occurs, you can reboot the phone, the unrelated background processes and the application will be turned off. Or you can touch the Cleanup application to release the storage.

3.4 Wallpaper set up by user will be drawn automatically, whether to set not drawing wallpaper

Not support, but the third party desktop supports, such as 360 desktop, GO desktop.

3.5 Enter into RECOVERY mode and restore factory setting

Under the power off state, you can press the power button and the up volume key simultaneously to enter into recovery mode; after entering, press up/down volume key to select, press menu key and enter related functions.

Restore factory setting: in the home screen, touch **setting>setting all >backup and reset>restore factory setting**, and then press reset phone.

3.6 Whether to support two-dimensional code snapshot?

Yes, you need to download two-dimensional code application.

3.7 Whether to support 3D speed up?

Yes. In the home screen, touch **setting>setting all >developer options**, select mandatory GPU rendering to turn on the function.

3D speed up can make the game more smoother, but it will occupy more memory, when you play game, it may be OK, but if you run other applications, it may make the phone running slowly.

3.8 How to judge whether the phone has been rooted?

Using the adb shell command to check, displaying \$ indicate non-rooted, displaying # indicate rooted.

```
C:\WINDOWS\system32\cmd.exe - adb shell
Microsoft Windows XP [版本 5.1.2600]
(C) 版权所有 1985-2001 Microsoft Corp.

C:\Documents and Settings\xuwei2>adb shell
shell@HWY360-U:/ $
```

3.9 Whether to return zero after removing battery; whether to take the network flow if time set synchronization automatic

Removing phone battery for more than 20 seconds, time will return to zero. If the mobile phone gains the time in the boot from registered network operator, it will not update time through the Internet and also not occupy the network traffic.

If the mobile phone does not gain the time from registered network operator when reboot, and open updating time automatically in the settings, it will occupy a small part of network traffic.

3.10 Built-in recorder

It has built-in recorder.

3.11 Whether has pad pasting?

No

3.12 Whether to support mobile TV?

Not support.

3.13 Whether to support Editing and browsing word, excel, ppt, pdf?

Not support, you can download the third party application to edit and browse.

3.14 The phone's memory

In fact, the actual physical ROM and RAM is consistent with the specifications like PC and PAD, and the system will occupy a part of them. The specification of Y3 lite is 4G ROM+512M RAM.

4G ROM:

Programs, files and database in the system will occupy this part of memory space, about 1.5G, will not display to the user. The user, in fact, can use about 1.84G like T card to store all kinds of files.

ROM comparison:

Galaxy III	total memory 16G	available memory 11.35G
Galaxy Note	total memory 4G	available memory 1.51G
G520	total memory 4G	available memory 1.84G
T8950	total memory 4G	available memory 1.82G

512M RAM

As part of the memory that is used to run kernel will be hide by the Android system, leading to the actual size of memory do not comply with the specifications. The total available RAM of G520 is 460M. As 512M ROM phones are on the low side of the market, so we make a comparison of 1G RAM phone.

1G RAM mobile phones comparison:

Galaxy III total 763M

Galaxy Note	total 713M
C8950	total 627M
T9200	total 656M
T9510E	total 713M
T8950	In total 980M

3.15 The phone's internal memory and micro SD card remaining storage space

In the home screen, choose setting>Storage, you can see the usage of storage space.
