Checking Failures 117

Features of the Product

This product is a portable terminal designed for digital communication using the up-to-date communication technology CDMA (Code Division Multiple Access) to fulfill better communication services for users. Please review this users manual prior to using this product.

One

Korean Menu, Korean LCD

Up to 27 Korean characters can be displayed on one LCD. You can use desired functions through simple operations. Of course, you can use English menus.

Two

Support of Korean/ English mixed SMS.

The phone can receive Korean message. It supports a Korean message up to 40 × 30 Korean characters such as simple formal messages, contact numbers and information.

Three

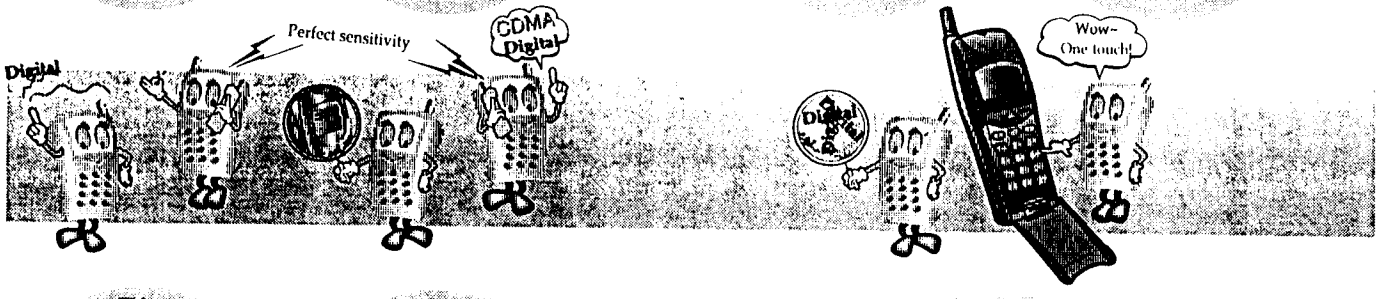
More clear call quality by adopting EVCR

A new vocoder technology EVCR was adopted to assure the most distinguished call quality under various environments.

Four

Long-run battery with power save function

Lithium ion battery and super power-saving design supports maximum 58 hours standby and maximum 140 minutes continuous call time.



Five

The telephone book function first in the nation that can store up to 500 numbers

You can conveniently search, store and call to 500 phone numbers using the jog dial. (Korean and English names can be used.)

Six

Various supplementary functions

Various supplementary functions such as biorhythm checking, melody editing, area code automatic insertion, vibration, ear microphone function and adoption of the etiquette mode first in the nation.

Seven

The first super-compact flip type human-engineering design in the nation

Super-compact flip type of handy size and the jog dial are adopted and the frequently used [Send/End/SMS] buttons are located at the top of the flip, so that you can use it without opening/closing the flip.

Chapter 1

Before Using

Precautions

Full-charge the battery when you first use the phone.

Do not use at a high temperature and humid place. Repairing may be impossible if it gets wet in the rain or with drinking water.

Do not disassemble or modify the phone.

Avoid vibration and impact and keep the phone at a safe place to avoid damages when you do not use it.

Lower the antenna or do not touch it during a call.

Do not clean the phone with chemical liquids such as solvent or thinner.

Do not use at a place with an explosive materials or flammable liquid.

Check the contents

Thank for purchasing this product. First, please check if the contents of the product agree with the parts given in the figure below.

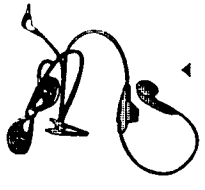
◀ Table of Functions

◀ Portable Loop



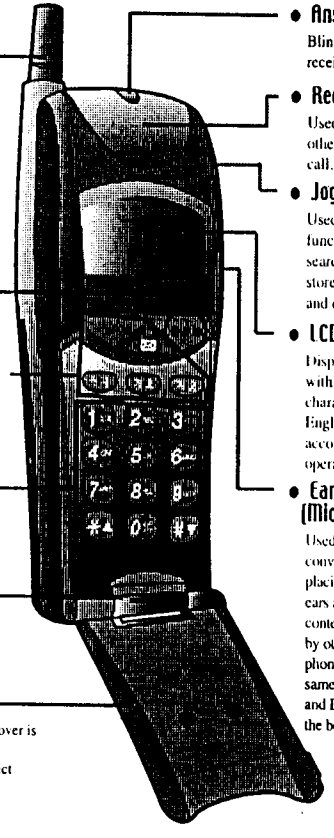
◀ Ear Microphone

Note

Check total eight items of the contents and please immediately inform the distributor if there is any defect in the product.

Name and Function of Each Part

Part Name of Body



Antenna
Raise the antenna during a call for best call quality.

Power Button
Used to turn on or off the phone

Function Buttons
Include call, SMS, character, symbol and delete buttons

Dial Button
Used to enter phone numbers or English characters.

Microphone
Used to speak to the other party during a call.

Cover
A sensor attached to the cover is used to receive a call or terminate a call or to protect button pressing.

Answering Lamp
Blinks during calling or receiving.

Receiver
Used to listen to the other party during a call.

Jog Dial
Used for various functions such as menu, search, button lock, store, volume adjusting and character input.

LCD Screen
Displays information with up to 27 Korean characters and 56 English characters according to users operation.

Ear Phone (Microphone)
Used to make a call conveniently without placing the phone to the ears and to make the contents of call not heard by others. [The ear phone button is used the same as the button (Send and End are possible.) of the body.].

Name and Function of Each Part

Functions of Jog Dial

① Jog Dial Push

You can use this to set a function menu or to call a phone number.

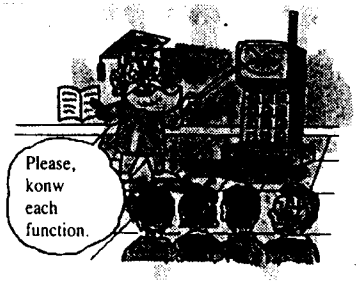
② Jog Dial Up

You can search the function menus of the telephone book or calls according to the call history. Also, you can set the display speed to one or two steps (slow, fast).

③ Jog Dial Down

Used to search names and numbers of the telephone book and to search the function menus. Also, you can set the display speed to one or two steps (slow, fast).

④ You can set/release the button lock by pushing the jog dial long when the cover is closed.



Name and Function of Each Part

Function Buttons

Used to enter a submenu or store the setting value and to make a call or receive a call.

Used to terminate the call and to exit from the current menu or turn on/off the power.

Used to check text and voice messages and to set/release the etiquette mode by pressing this button long.

Used to erase characters or numbers displayed on the screen or to exit from the current menu.

Used for the time machine function and it is used to enter or edit special characters.

Used to enter or edit various characters.

Used to select the contents on the LCD with the scroll button.

It is used the same as the jog dial up or down function but it is not used in searching the telephone book.

Status Display and Function

(Signal Strength)
The strength of the signal received is indicated with the number of bar(0~6).

(Roaming)
Indicates that you are in other service area beyond your service area.

(Service/No Service)
Indicated as ☎ in a service available area and as in a service unavailable area.

(Busy)
Indicated during call attempt or calling.

(Short Message Service)
Blinks when there are text or voice messages received.

(Digital Mode)
Indicated during calling or standby in digital mode.

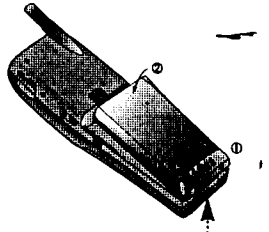
(Ringer/Vibration Selection)
Indicated as when the ringer mode is selected and as when the vibration mode is selected.

(Battery Power)
Indicates the current battery power with the number of bar (0~4).

Battery Installation and Removal

Battery Installation

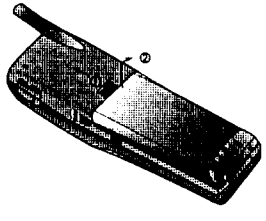
1. Adjust the battery to the battery installing mark as shown in ① and then press it tightly in direction ② until it snaps.



Note: Verify that battery is properly installed as the phone may not work or the battery may be ejected in use if it is not installed tightly.

Battery Removal

1. Pull the battery removal tab of the phone with one hand in direction ① and then remove it in direction ②.



Battery Charging

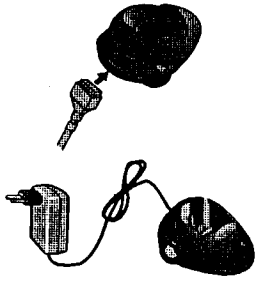
Charging Progress Status

- The battery is not charged upon purchasing. Use the phone after charging it fully.

1 *Power Connection*

Connect the jack of the portable charger into the connector on the rear side of the holder and then insert the power receptacle into the plug.

- The charger can be used free for 110V or 220V. After power on, the orange lamp blinks once.

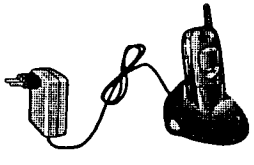


2 *Charging battery only*

Insert the battery into the charging slot in order to charge just the battery.

3 *Charging phone with battery installed*

Install the battery to the phone and then insert it into the charging slot.

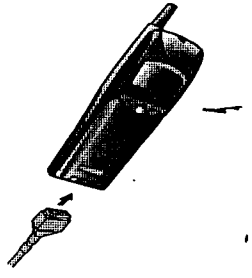


Battery Charging

4 *Charging during traveling*

Connect the jack of portable charger to the connector at the bottom of the phone.

- Be sure to make a call and charge the phone with the portable battery installed.



5 *Charging Completion*

The red lamp turns on during charging and the green lamp is lighted after charging is completed.

- Charging time may be delayed or charging efficiency may be degraded if the phone is charged in power on state or with the portable charger.
- There is no influence on the phone or charger even it is left with the green lamp on.
- Please charge the battery if the alert tone sounds from the phone and a message Battery Low Power is displayed on the LCD.
- As the memory may be damaged if the power goes off after a message Power off by battery low power is displayed on the LCD, do not turn on the power but immediately replace the battery or charge the battery.

Note

If the lamp dose not turn on at all or the red lamp blinks, check the contact part of the battery.
If it does not work normally after repeating the above 4~5 times, contact a near service center.

Battery Charging

Battery Full Charging Time

Battery Type	Standard Battery
Charging Time	About 300 minutes

Battery Run time(Based on a new battery)

Battery Type / Status		Standard Battery
Continuous Call		110~140 Minutes
Continuous Standby	Slot Mode 1	23 ~ 24 Hours
	Slot Mode 2	29 ~ 58 Hours

- As power consumption in active call state is more than in standby state, the standby time becomes short as the call time increases.
- Battery run time depends on environment condition such as temperature and charging state, habit of using the phone, radio condition at a service place and key pad lighting time selection.
- Digital continuous standby time may differ depending on the slot mode related service type of the mobile communication system of a service carrier.
- Slot mode means the communication cycle between the mobile communication system and the phone in digital continuous standby. The lower the slot mode is, the more frequent the communication is, so the shorter the standby time is as the power consumption increases.

As the battery is a consumable, the warranty period is six months.

Efficient Use of Battery

1. Do not place the battery near fire and do not disassemble it and connect pins.

   There may be a danger of explosion.

2. Do not give a strong impact to the phone nor drop it.

   Pay attention as the battery inside the battery pack may be adversely affected and its lifetime may be shortened.

3. Be sure to use the specified battery and the dedicated charger.

   Be sure to use the specified ones as the body and the battery may be damaged or explode.

4. As the battery is a consumable, the run time decreases slowly according to repeated charging/discharging.

   Purchase a new one if the run time decreases below a half compared with the battery provided upon purchasing.

5. The phone or battery has a good charging efficiency at a normal temperature.

   Do not charge the battery at a place with direct lays of light or direct contact of heat from a heater or wind from an air conditioner.
   Charging efficiency will decrease if it is too hot or cold and charging will restart at a normal temperature.

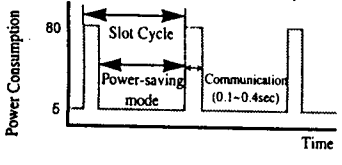
6. Keep the battery at a normal temperature.

   Capacity of the battery decreases and its lifetime becomes short if the battery is left in a car with the windows closed in summer or at a place too hot or cold for a long time.

Battery Run Time According to Service Environment

Slot Mode

When a phone is in standby state, the system sends information required for the phone with the specified cycle. In this case, it is called that the phone operates in slot mode and the cycle is called slot cycle. Available slot cycle types are 0 ~ 7 and the phone works in a power-saving mode to reduce battery power consumption while it is not communicating with the system.



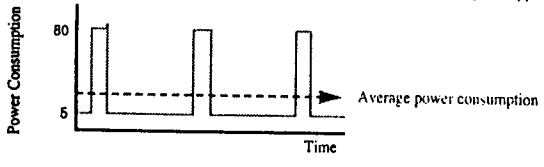
Power-saving mode duration
Slot cycle type 0: 1.28sec
(Highest battery power consumption)
Slot cycle type 1: 2.56sec
⋮
Slot cycle type 7: 163.84sec
(Lowest battery power consumption)

- Battery run time depends on slot cycle types which are used diversely according to service carriers and service areas.

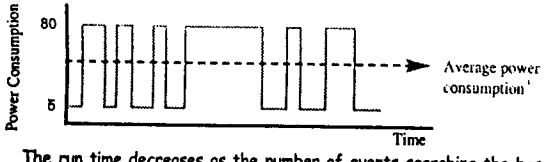
Service Environment and Battery Run Time

- Normal

Depends on slot cycle types.



- Downtown area with closely installed base stations and during moving



The run time decreases as the number of events searching the base station increases.

- When you are in a no service area for a long time, the power consumption is as much as the power consumption in slot cycle type 0.

MEMO

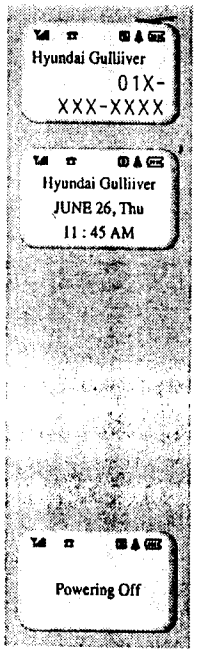
Chapter 2

Basic Operations

Basic Operation of the Phone

To turn on the phone

1. Press [ ] button until the lamp turns on.



- After power on of the phone, all indications (screen and indicators) will appear on the LCD for a while and disappear and then the message Hyundai Electronics HGC-900 and your phone number will be displayed in turn. Then, the receive field strength and battery voltage indicator will be displayed in turn. If you are in a no service area, will be turns on.
- If the battery voltage is extremely low, the phone will go off immediately and, if very low, Battery Low Power will be displayed on the screen and the alert tone will souns periodically.
- If the Lock Code? message is displayed on the LCD, as the phone is in lock state, enter a four-digit lock code to unlock it (Refer to page 97.).
- An error message displayed on the LCD indicates a fault of the phone. Please contact a near service center in that case. (Emergency calls (Ex: 112, 113, 119) can be serviced even in lock state.)

To turn off the phone

1. Press [ ] button until the lamp turns on again.

Be sure to turn off the phone using the [ ] button. call time, previous call and priority area code may not be stored normally if you turn off the phone by removing the battery.

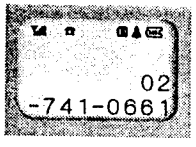
- In the event of abnormal operation during using the phone or power failure, remove the battery, install it again and then turn on the power.
- To turn off/on the phone, turn on the power after at least five seconds after power off.

Basic Operation of the Portable Phone

To make a call

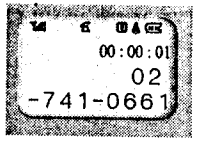
Area Code → Phone Number → [ ]

1. If 🚫 is lighted on the LCD, please escape from the present area as you are in a no service area.



2. Enter the area code and then a phone number.
   - You can enter up to 32 digits for a telephone number.
     Ex) To call 408-7722 in Seoul, press 024087722.
   - To correct a wrong number entered ([ ] Button)
     - Correct one digit: Press [ ] button short.
     - Correct all: Press the [ ] button longer than one second.

3. Press [ ] button.
   - 🕿 will be lighted on the LCD and the phone number to be connected will blink. If the call is connected, call time will be displayed, otherwise Connection Fails message will be displayed.



4. If the called party is busy, press [ ] button and then press [ ] button.

5. Press [ ] button after the call is finished.
   - To dial the phone number called last, adjust the [Jog] button up to display phone numbers by call history. Select a desired number and press the jog button. Then, the phone number will be displayed and the call will be connected if you repress the jog button again.

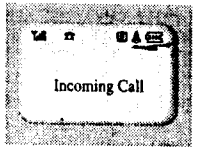
Note

- To recall the phone number called last, press the [Send] button. (If the ear microphone is used, press the button of the ear microphone to connect a call and press the button again to disconnect the call. This operation is allowed even the cover is closed.)
- 🚫 is lighted on the LCD, please escape from the present area as you are in a no service area.
- If automatic area code dial function is set, you need not enter the area code (Refer to page 66 for automatic area code dial function setting and release.)
- You can not make a call with collect call service (080).

Basic Operation of the Portable Phone

To receive a call

1. The receive lamp blinks and the ringer rings.
   - Refer to p.66 to change the receive mode (Ringer/Vibration/ Vibration + Ringer)
   - Default receive mode upon purchasing is Ringer.



2. The call will be connected automatically when you open the cover.
   - You can connect the call by pressing (jog)/ [ ] [ ] [ ] buttons even the cover is closed.
   - If you set the automatic answering function to receive calls automatically, the ringer will ring by the count specified and then the call will be connected automatically (Refer to p.69.)

3. When the call is connected, 🕿 and the call time will be displayed on the screen. Press the [ ] button or close the cover to terminate a call.

Chapter 3

Memory Function

To store a phone number preferentially

You can store maximum 500 phone numbers frequently used in the memory and make a call fast and conveniently using various call methods. The phone numbers stored are automatically aligned in the order of names (Korean/English) and numbers and the same information is not to be stored .(The memory stored in a group is displayed overlapped on the telephone number list screen of the group, but they are the same memory.)

Phone Number → Character → Enter Name → Jog → Jog ↕ → Jog

1 Press a desired phone number and then press [Character] button.

- A message requesting a name entry will be displayed on the LCD.

If 500 numbers have already been stored when [ ] button is pressed, All memories were used will be displayed and the screen will return to the initial LCD.

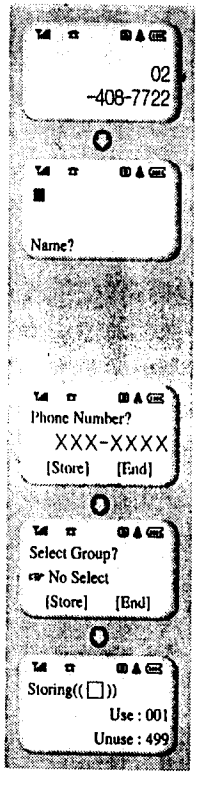
2 Enter name.

- Use the [Jog] button for a Korean name and use the dial button for an English name.
- If you need not store the name, press the [Jog] button to store it directly.
- If you need modification of the number and additional input after name input, press [Character] button. Then, the screen will automatically return to the phone number input LCD.
- Refer to page 29 to enter Korean characters and page 31 to enter English characters or special symbols.

3 Press the [Jog] button.

- A message asking a grouping of the phone number entered will be displayed
- Select a desired group for group setting. Otherwise, select No Group.

4 Press the [Jog] button to store it.



To store a name preferentially

Character → Enter Name → Character → Enter Phone Number → Jog → Jog ↕ → Jog

1 Press [Character] button to enter a name.

- A message requesting a name entry will be displayed on the LCD.

2 Enter name.

- Use the [Jog] button for a Korean name and use the dial button for an English name.
- If you need not store the number, press the [Jog] button to store it directly.
- Refer to page 29 to enter Korean characters and page 31 to enter English characters or special symbols.

If 500 numbers have already been stored when [ ] button is pressed, All memories were used will be displayed and the LCD will return to the initial screen.

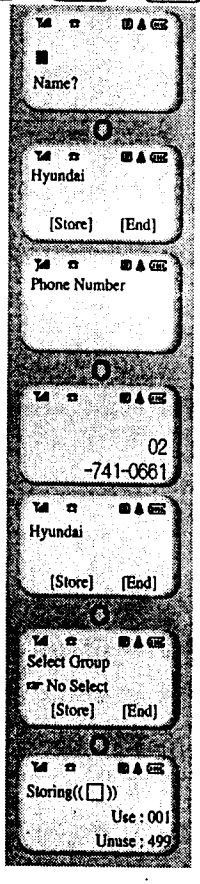
3 Press the [Character] button and enter a phone number.

- A message asking a grouping of the phone number entered will be displayed.

4 Press the [Jog] button.

- Select a desired group for group setting. Otherwise, select No Group.

5 Press the [Jog] button to store it.



Korean character input using the [Jog] button

1 Control the [Jog] button down on the LCD asking a name.

- A screen to select the initial sound of a desired Korean name will appear.

2 Select the initial sound of the name.

- Control the [Jog] button Up to move the cursor to the left on the LCD.
- Control the [Jog] button Down to move the cursor to the right on the/LCD.
- Press [ ] button to enter a special symbol.
- Moving cursor
  - Up/Down: [/]
  - Left/Right: [/]

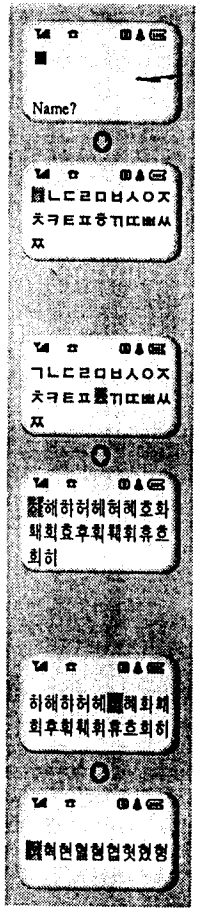
3 Press the [Jog] button.

- A screen to select initial sound + vowel of Korean character will appear.
- Press Delete button to move to the previous step.

4 Select initial sound + vowel of the character.

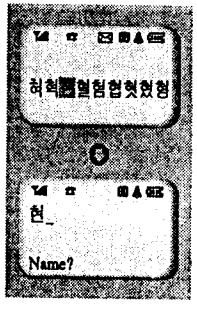
5 Press the [Jog] button

- A LCD to select initial sound + vowel + final consonant of the Korean character will appear.



Korean character input using the [Jog] button

6 Select initial sound + vowel + final consonant of the character.



7 Press the [Jog] button.

- The complete character will be displayed.
- The cursor will automatically move to the next space after one character is entered.

8 Repeat the above until all of the desired characters are entered

- Refer to page 31 English character input using character buttons to enter English characters.

9 Press the [Jog] button after all of the desired characters are entered.

- Correct wrong characters using [ ] button.
- Correct one character: Press [ ] button short.
- Correct all: Press [ ] button longer than one second.

Note

You can store maximum eight characters.

English character input using the [Character] button

Note

English Character, Number Input

❶ Press the dial button to select a character to be entered.

- The dial buttons will be changed in the following sequence whenever they are pressed.

Dial Button	Once	Twice	Three Times	Four Times
1QZ&	Q	Z	&	1
2ABC	A	B	C	2
3DEF	D	E	F	3
4GHI	G	H	I	4
5JKL	J	K	L	5
6MNO	M	N	O	6
7PRS	P	R	S	7
8TUV	T	U	V	8
9WXY	W	X	Y	9
0OPER	O	-	-	-

❷ Press the [ ] button to enter the following characters.

- The [ ] button moves the cursor to the left with deleting the characters on the LCD.
- The [ ] button moves the cursor to the right.
- The cursor automatically moves to the next space two seconds after selecting a character.

❸ Repeat the above until all of the desired characters are entered.

- You can store up to 8 Korean characters and up to 14 English characters.

❹ Correcting characters when wrong characters are entered.([ ])

- Correct one character: Press [ ] button short.
- Correct All : Press [ ] button longer than a half second.

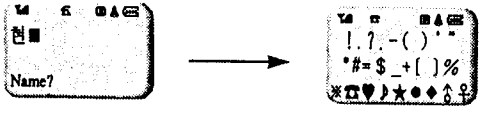
Special symbol input using the [symbol] button

Special Number Input

❶ Press [Symbol] button during character input. Then, the screen to enter special symbols will appear.

<Special symbol input screen in English mode>

<Special symbol input screen in Korea mode or Short Message Service (SMS) mode>



❷ Locate the cursor on a desired symbol and press the [Jog] button.

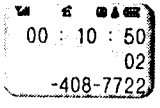
❸ Repeat the above until all of the desired special symbols are entered.

- Moving cursor
  - Up/Down: [/]
  - Left/Right: [/]

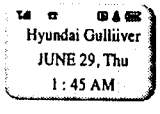
To store phone numbers automatically in the telephone book

Call history for maximum 500 numbers is automatically stored in the telephone book. The history is stored based on outgoing calls and the identical information is stored just updating the call details. The call history is aligned in the order of call time in the telephone book.

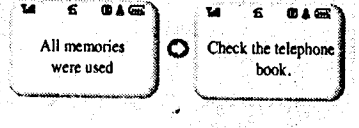
❶ Press [ ] or close the cover after call is finished.



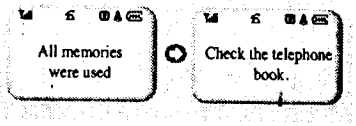
O



- Call details are automatically stored and the LCD automatically returns to the initial screen.
- If all of the 500 memories are used, the oldest one of the numbers not protected will be deleted automatically and the new number will be stored.
- In this case, the following alert message will be displayed.



- As it is impossible to store outgoing numbers if all of the 500 memories are used and coded or each memory has never attempted a call, a new phone number will not be stored. In this case, the following alert message will be displayed.



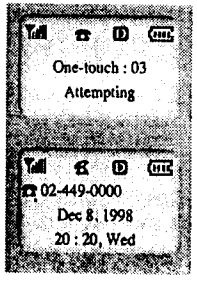
To use the stored numbers

This section describes various methods to dial maximum 500 phone numbers stored in the telephone book.

One-Touch Dialing Function

You can assign the frequently used phone numbers to memory a location number 00~09 and directly dial the ten numbers designated without pressing [▼] button. (location number 00 is used for the international call function.)

1 Press the one-touch number longer than one second or dial the one-touch number and press the [▼] button to attempt a call to the phone number corresponding to the one-touch number.



- The content of memory assigned to the one-touch location number will be displayed on the screen and the number will be dialed automatically.
- If the number entered is not assigned to an one-touch number, Not assigned message will be displayed along with the one-touch number.
- If no number is entered in the memory assigned to an one-touch number, No number will be displayed along with the one-touch number.
- If the memory dial assigned to a one-touch number is stored with phone number hide function (Refer to P.52), the phone number will not be displayed but indicated as *********.
- If the area code automatic insertion function (Refer to p.65) is set, the area code will automatically be inserted into the number entered by one/two-touch dial. This function does not affect dial.

Two-Touch Dialing Function

You can assign the frequently used phone numbers to memory location number 10~99 and directly dial the 90 numbers assigned without pressing [▼] button.

1 Press the first digit of a memory number (10~99) short and the second digit long.

- The phone number of the memory location number will automatically be displayed on the LCD and the number will be dialed automatically.

To use the stored numbers

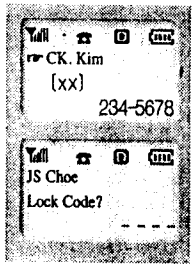
You can display the stored phone numbers including one-touch dialing and dial a desired number after checking the content of memory.

Call after checking the content of one(two)-touch numbers

Enter Number ○ Jog ○ Jog↑ ○ Jog

1 Enter a desired one-touch number on the initial screen.

- Allowed location numbers are 01 ~ 99.



2 Press the [Jog] button to display the detailed information on the phone number assigned to the specified number.

- If a phone number is not assigned to the specified number, One-touch: XX not assigned will be displayed and the LCD will return to the initial screen.

3 Adjust the [Jog] button up and down to indicate a desired phone number.

- [Jog] up moves the cursor forward and the [Jog] down moves the cursor backward.
- If the lock function is enabled, a message asking the lock code will be displayed on the LCD and the number will not be displayed unless the lock code of four digits is entered. If the lock code is entered, the lock state stored for the other location numbers will be unlocked.
- Press [▼] or [CLR] to cancel the one-touch display.

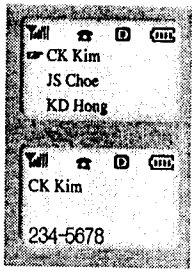
4 Press the [Jog] button or [▼] button to make a call to the phone number indicated.

To use the stored numbers

Call using a name and a phone number

Jog↓ ○ Jog ○ Jog

You can conveniently call up to 500 phone numbers stored in the memory in the order of names (Korean/English) and numbers using the [Jog] button.



1. Adjust the [Jog] button down on the initial screen.
   - Group name and the phone number list stored will be displayed on the LCD.

2. Adjustl the [Jog] button Up or Down to select a desired phone number and press the [Jog] button.
   - Detailed information on the selected phone number will be displayed on the LCD.
   - To display additional information on the selected phone number, see page 40 Time Machine function.

3. Press the [Jog] button or [ ] button to make a call.
   - The number displayed on the LCD will be dialed automatically.

Note

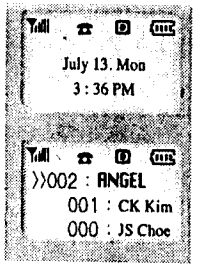
- Use [ ] button to return to the previous screen.
- Use [ ] button to return to the initial screen at any step.
- No Item_ message will be displayed if there is no more telephone number. Place the cursor on _No Item_ and press the [Jog] button to return to the initial screen.
- If there is a group registered in the memory, the group will be displayed and then the memories in which names are entered will be displayed in the order of the names. Finally, the phone numbers entered without name will be displayed.
- You can make a call on the phone number list screen using [Send] button or [Jog] button.

To use the stored numbers

Call using the call history stored

Jog↑ ○ Jog ○ Jog

You can conveniently call up to 500 phone numbers stored in the memory according to the call history using the [Jog] button.



1. Adjust the [Jog] button up on the initial LCD.
   - The phone number list stored according to the call history will be displayed on the screen.

2. Control the [Jog] button Up or Down to select a desired phone number and press the [Jog] button.
   - Detailed information on the phone number selected will be displayed on the LCD.
   - To display additional information on the selected phone number, see page 40 Time Machine function.

3. Press the [Jog] button or [ ] button to make a call.
   - The number displayed on the LCD will be dialed automatically.

Note

- Use [ ] button to return to the previous screen.
- Use [ ] button to return to the initial screen at any step.
- No Item_ message will be displayed if there is no more telephone number. Place the cursor on _No Item_ and press the [Jog] button to return to the initial screen.

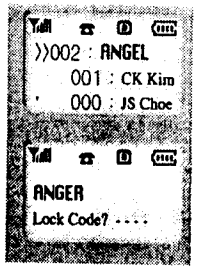
To use the stored numbers

Call using a hidden phone number

Jog ↕ → Jog → Enter Lock Code → Jog

Hidden numbers set are not displayed on the LCD during phone number searching and you can call the numbers only if a correct lock code is entered (You can neither call nor search phone numbers unless you know the lock code).

1. Adjust the [Jog] button Up or Down on the initial screen.
   - The stored telephone numbers will be listed on the LCD.



2. Adjust the [Jog] button Up or Down to select a desired phone number and press the [Jog] button.
   - If the selected number is a hidden one, a message asking the lock code will be displayed.

3. Enter the lock code (The lock code will be displayed as ****.)
   - If the entered lock code is correct, the hidden number will be displayed.
   - The default lock code upon delivery is 0000.

4. Press the [Jog] button or [ ] button to make a call.
   - The number displayed on the LCD will be dialed automatically.

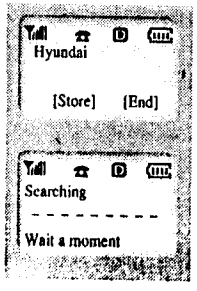
To search the stored phone numbers

You can search a stored phone number using a part of the name and call the searched number.

To search using a part of name

Character → Enter Name → Jog ↑ → Jog ↕ → Jog → Jog

1. Press [Character] button on the initial screen, enter a part of a desired name and then adjust [Jog] button Up.
   - The telephone book will be searched and the corresponding names will be displayed.
   - If there are no names corresponding to it, Character string not found will be displayed and the LCD will return to phone number list screen. In this case, the number on the top corresponds to the nearest memory location number to the character string for searching.



2. Adjust the [Jog] button Up or Down to select a desired phone number.

3. Press the [Jog] button to check the details.

4. Press the [Jog] button to attempt a call.

To search the stored phone numbers

To use the time machine function

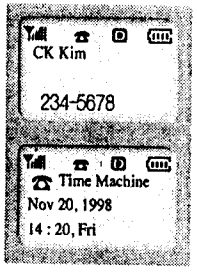
Jog ↕ → Jog → Symbol

You can check the latest call time for a phone number stored in the telephone book using the [Jog] button.

1. Press the [Jog] button Up or Down on the initial screen to select a desired number.

2. Press the [Jog] button to display the basic information on the selected phone number.

3. Press the [Symbol] button on the basic information screen to display the call date and time.
   - If there is no time machine information, No Information message will be displayed.
   - If you attempt a call in a no service area, the latest call date and time of the detailed information will not be updated.



To erase the stored phone numbers

This function erases phone numbers stored in the telephone book using the [Jog] button.

To erase a phone number

Jog → Jog → Jog ↕ → Jog → Jog → 1. Erase

1. Press the [Jog] button on the initial screen.

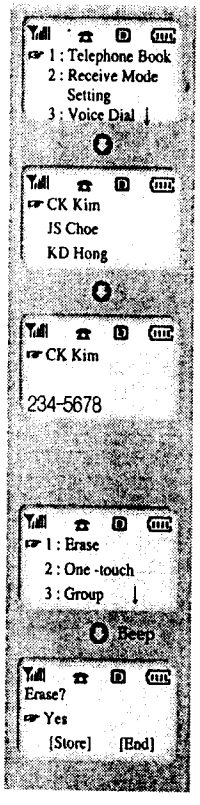
2. Adjust the [Jog] button Up or Down to select Telephone Book menu item and press the [Jog] button.
   - The stored telephone number list will be displayed.
   - For a group, the group or telephone number list will be displayed.

3. Select a number to be deleted and then press the [Jog] button.
   - Detailed information on the selected phone number will be displayed.

4. Press the [Jog] button on the detailed information screen and select Erase.

5. Select a desired setting value using the [Jog] button or scroll button.
   - Yes : Erase the phone number
   - No : Do not erase the phone number

6. Press the [Jog] button.



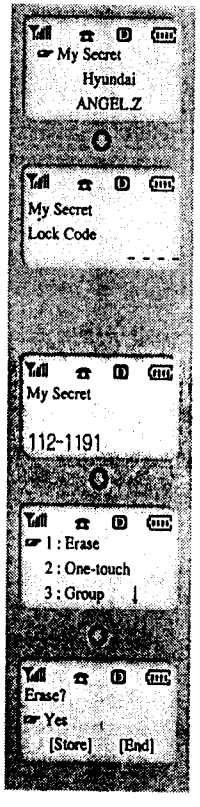
To erase the stored phone numbers

This function erases phone numbers stored in the telephone book using the [Jog] button.

To erase a hidden phone number

Jog → Jog → Jog ↕ → Jog → Lock Code → Jog → 1. erase

1. Press the [Jog] button on the initial screen.
2. Adjust the [Jog] button to select Telephone Book menu item and press the [Jog] button.
   - The stored telephone number list will be displayed.
3. Select a number to be deleted and then press the [Jog] button.
   - A message asking a lock code for the selected phone number will be displayed.
4. If the lock code entered is correct, detailed information on the selected phone number will be displayed.
5. Press the [Jog] button on the detailed information screen and select Erase.
6. Select a desired setting value using the [Jog] button or scroll button.
   - Yes : Erase the phone number
   - No : Do not erase the phone number
7. Press the [Jog] button.



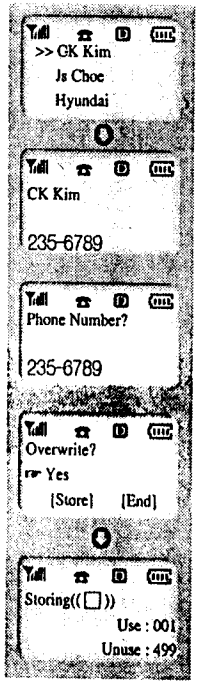
To modify the stored phone numbers

This function modifies phone numbers stored in the telephone book using the [Jog] button.

To modify a phone number

Jog ↕ → Jog → Character → Character → Modify Number → Jog → Jog

1. Adjust the [Jog] button Up or Down on the initial screen and press the [Jog] button on a phone number or name to be modified.
2. Press [ ] button twice, modify the phone number and then press the [Jog] button.
   - If name modification or additional input is required after number modification, press the [Character] button. Then, the LCD will automatically return to a LCD to enter a name.
3. Select a desired setting value using the [Jog] button or scroll button and then press the [Jog] button.
   - Yes : Overwrite with the modified phone number
   - No : Store the phone number in a new location number



To modify the stored names

This function modifies names stored in the telephone book using the [Jog] button.

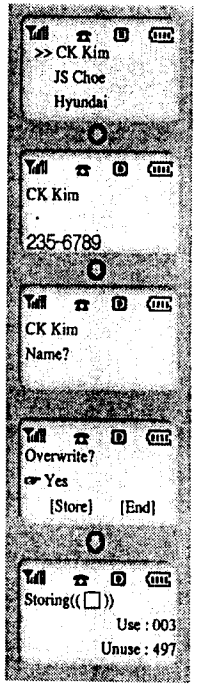
To modify a name

Jog ↕ → Jog → [ ] → Modify Name → Jog → Jog

1. Adjust the [Jog] button Up or Down on the initial screen and press the [Jog] button on a phone number or name to be modified.

2. Press [ ] button once, modify the name and then press the [Jog] button.
   - If number modification or additional input is required after name modification, press the [Character] button. Then, the LCD will automatically return to a LCD to enter a number.

3. Select a desired setting value using the [Jog] button or scroll button and then press the [Jog] button.
   - Yes : Overwrite with the modified phone number.
   - No : Store the modified phone number in a new address



To manage the stored phone numbers by groups

This section describes how to register or cancel a group or change a group name when the phone numbers stored in the telephone book are managed by groups such as business group, friend group, etc.
Basically, six groups are supported and each group can contain maximum 30 phone numbers or less depending on memory registration condition.

NO	Group Name(English)
0	Friends 1
1	Friends 2
2	Business 1
3	Business 2
4	Family
5	Information

The phone number list displayed with the telephone book menu includes all groups but the phone number list displayed by controlling the Jog down on the initial screen displays just the groups that contain phone numbers registered.

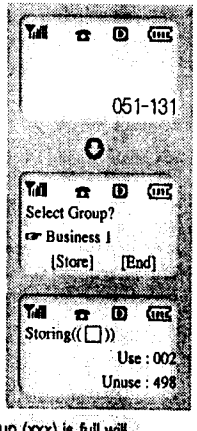
To register (modify) phone numbers by groups

Phone Number → Character → Enter Name → Jog → Jog ↕ → Jog

1. Enter a phone number to be registered on the initial screen and press [ ] button
   - Press [Character] button to enter a name.
   - After entering a name by pressing the [Character] button, you can also enter and store a phone number by pressing the [Character] button

2. After entering a name, press the [Jog] button to display the group selection screen.
   - Select a desired group using the [Jog] button.

3. Press the [Jog] button to store it.



If the assigned group is full, the message Group (xxx) is full will be displayed and registration will not be allowed any more.

To manage the stored phone numbers by groups

To automatically register phone numbers in a group

This function automatically stores a phone number dialed on the group display screen of the telephone book in the specified group after the call is finished.

Jog → Jog → Jog ↕ → Jog → Phone Number → Send

1 Press the [Jog] button on the initial screen.

- The function menu will be displayed.

2 Select Telephone Book and press the [Jog] button.

- Select a group to be registered using the [Jog] button.
- You cannot register numbers in the voice dial group with this operation.

3 Press the [Jog] button to display the phone number list of the group.

- A message "Wait a minute" may be displayed until the phone number list is displayed.

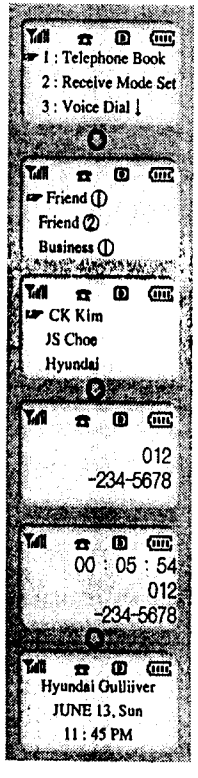
4 Enter a desired phone number.

- The LCD will be changed to the phone number input screen.

5 Press [ ] button to call the number.

- When a call is finished, the number will be registered in the group selected in step 3.

* This function is also available on the telephone number list screen displayed when the [Jog] button is Adjusted down on the initial screen. In this case, a group with no memory registered will not be displayed.



To manage the stored phone numbers by groups

To register a stored phone number in a group

This function registers a phone number, which is stored but not registered in a group, in a desired group.

Jog → Jog → Jog ↕ → Jog → Jog → 3. Group

1 Press the [Jog] button on the initial screen.

- The function menu will be displayed.

2 Select Telephone Book and press the [Jog] button.

- Select a desired group using the [Jog] button.

3 Press the [Jog] button to display the information on phone numbers.

4 Press the [Jog] button to select Group.

- Select a desired group using the [Jog] button.

5 Press the [Jog] button to set it.

If the assigned group is full, the message "Group (xxx) is full" will be displayed and registration will not be allowed any more.

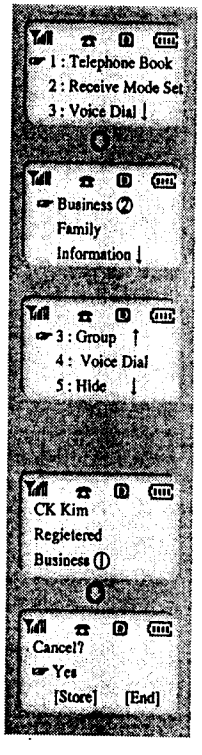
To manage the stored phone numbers by groups

To cancel a group registration of the stored phone numbers

This function cancels a group registration of the stored phone numbers.

Jog → Jog → Jog↕ → Jog → Jog↕ → Jog → Jog → 3. Group

1. Press the [Jog] button on the initial screen.
   - The function menu will be displayed.
2. Select Telephone Book and press the [Jog] button.
   - Select a group to be canceled using the [Jog] button.
   - You cannot cancel the voice dial group with this operation.
3. Press the [Jog] button to display the phone number list of the group.
   - A message "Wait a minute" may be displayed until the phone number list is displayed.
4. Press the [Jog] button to display the detailed information on phone numbers.
5. Press the [Jog] button to select Group
   - "Registered" will be displayed.
6. Control the [Jog] button "Up or Down" to select a desired setting value and then press the [Jog] button.
   - Yes: Cancel the group registered for the phone numbers and return to the telephone number list screen.
   - No: Return to the telephone number list screen without canceling the group.



To manage the stored phone numbers by groups

To change a group name

This function changes a group name.

Jog → Jog → Jog↕ → Character → Enter Group Name → Jog

1. Press the [Jog] button on the initial screen.
2. Select Telephone Book and press the [Jog] button.
   - Select a desired group using the [Jog] button.
3. Press the [ ] button.
   - Enter a desired group name (Korean and English).
   - Refer to Korean and English character input.
4. Press the [Jog] button to store the new group name.
   - You can also change a group name on the telephone number list screen displayed when the [Jog] button is adjusted down on the initial screen. In that case, a group with no numbers registered will not be displayed.

Jog → Jog → Jog ↕ → Jog → Jog → Jog ↕ → 2. One touch → Jog

This section describes how to set a frequently used phone number stored in the telephone book to a memory location numers of 00~99 so as to call the number by one-touch without pressing the [ ] button.

① Press the [Jog] button on the initial screen.

② Adjust the [Jog] button to select Telephone Book and then press the [Jog] button.

- The phone number list stored will be displayed.

③ Select a number to be set to one-touch and then press the [Jog] button.

④ Press the [Jog] button on the detailed information screen to display the submenu items.

⑤ Adjust the [Jog] button Down to select One-touch and press the [Jog] button.

- A memory address to register the selected phone number as one-touch will be displayed.

To set a stored phone number to one-touch

⑥ Press the [Jog] button. Then, Completed message will be displayed, indicating that one-touch setting is completed.

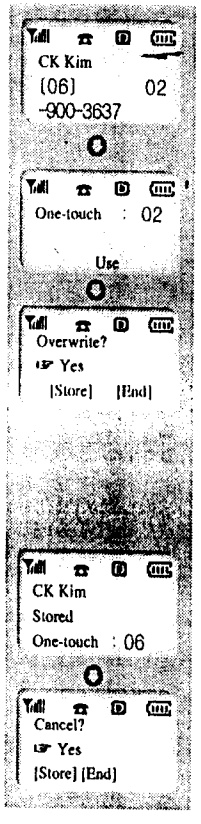
- XX indicates memory location numbers of 00~99.
- To set to other memory location number, adjust the [Jog] button to display other memory location number. Then, press the [Jog] button to complete setting to the new memory address.

⑦ If a selected memory location number is already used for an one-touch number, "In use" will be displayed.

- Select a desired setting value using the [Jog] button or scroll button and then press the [Jog] button.
- Yes: Set to the current memory location number.
- No: Return to the memory location number

⑧ To cancel one-touch setting for a selected phone number, press the [Jog] button on the "One-touch" item in Step ⑤.

- If it is set, "Set" will be displayed.
- Select a desired setting value using the [Jog] button or scroll button and press the [Jog] button.
- Yes: Cancel one-touch setting of the phone number and return to the telephone number list screen.
- No: Return to the detailed information screen without canceling.

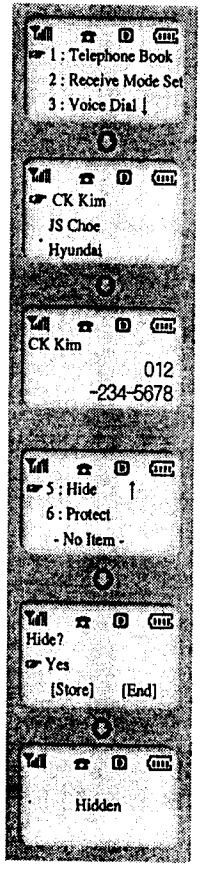


To hide a stored phone number

This function hides phone numbers so that others who are not aware of the hide code for the hidden phone numbers stored in the telephone book can not check or call the phone numbers.

Jog → Jog → Jog ↕ → Jog → Jog → Jog ↕ → 5. Hide → Jog

1. Press the [Jog] button on the initial screen.
2. Adjust the [Jog] button to select Telephone Book and then press the [Jog] button.
   - The phone number list stored will be displayed
3. Select a number to be hidden and then press the [Jog] button.
4. Press the [Jog] button on the detailed information screen to display the submenu items.
5. Adjust the [Jog] button "Down" to select "Hide" and then press the [Jog] button
   - A message asking hiding of the selected phone number will be displayed.
6. Select a desired setting value using the [Jog] button or scroll button and press the [Jog] button.
   - Yes: Hide the selected phone number not to be used by others.
   - No: Cancel phone number hide.
7. To release a hidden phone number, press the [Jog] button on the Hide item in Step ⑤.
   - If you select No and press the [Jog] button, "Hidden number canceled" will be displayed.

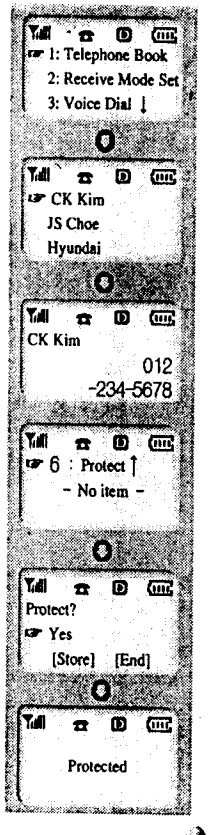


To protect a stored phone number

When a call is finished, if all of the 500 memory location numbers are used by phone number automatic store function, the oldest number will automatically be deleted and a new number will be stored. In this case, this function protects important phone numbers to prevent the numbers from being deleted.

Jog → Jog → Jog ↕ → Jog → Jog → Jog ↕ → 6. Protec → ~~Jog~~

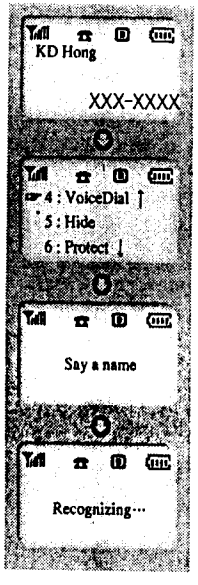
1. Press the [Jog] button on the initial screen.
2. Adjust the [Jog] button to select Telephone Book and then press the [Jog] button.
   - The phone number list stored will be displayed.
3. Select a number to be protected and then press the [Jog] button.
4. Press the [Jog] button on the detailed information screen to display the submenu items.
5. Adjust the [Jog] button "Down" to select "Protect" and press the [Jog] button.
   - A message asking protection of the selected phone number will be displayed.
6. Select a desired setting value using the [Jog] button or scroll button and press the [Jog] button.
   - Yes: Set protection of the selected phone number.
   - No: Cancel phone number protection.
7. To release the protected phone number, press the [Jog] button on the "Protect" item in Step ⑤.
   - If you select No and press the [Jog] button, "Number protection canceled" will be displayed.



To store a stored phone number to voice dial

When the phone number of K.D. Hong is stored in the friend group

Jog → Jog → Jog ↕ → Jog → Jog → 4. Voice Dial → Enter Voice



1. Press the [Jog] button on the initial screen.
   - The function menu will be displayed.

2. Select Telephone Book and then press the [Jog] button.
   - Select a group or a phone number to be registered using the [Jog] button.
   - You can not register a number in the voice dial group with this operation.

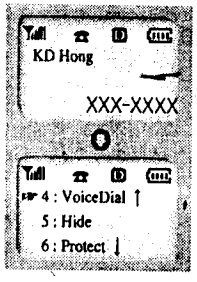
3. Select a number and then press the [Jog] button to display detailed information. Then, press the [Jog] button again.
   - A message "Wait a minute" may be displayed until the phone number list is displayed.

4. Select Voice Dial and then press the [Jog] button.

5. After beep sound, say a name to be registered.
   - "Recognizing" message will be displayed on the LCD and then the registered voice will sound.
   - ✱ If the voice is not recognized, the recorded voice will not sound and Please say again message will sound.

To store a stored phone number to voice dial

6. If "Please say again" message sounds, say the same name again.
   - "Recognizing" message will be displayed on the LCD and then the registered voice will sound.
   - ✱ Pronounce it same as the first as much as you can.
   - ✱ If the voice is not recognized, the recorded voice will not sound and "Please start again" message will sound.



7. "Storing" message will be displayed and then "Registered" message will sound.
   - The LCD automatically returns to the telephone book screen after storing the voice.

8. To cancel the voice dial of a selected phone number, press the [Jog] button on the Voice Dial menu in step (4).
   - If the voice dial has been registered, "Voice Dial Registered" will be displayed.
   - Select a desired setting value using the [Jog] button and press the [Jog] button.
   - Yes: Cancel the voice dial set of the phone number and return to the telephone number list screen.
   - No: Return to the detailed information on phone numbers screen without canceling.

Note

If a voice dial is registered, "Voice Dials" will automatically be created. A voice dial group contains just the memories stored as voice dials. If voice dials are selected from the phone number list, detailed information on the phone number memories will be displayed and the voice registered will be regenerated. The memories registered for "Voice Dials can be included in other group. (For example, a number can be included in "Voice Dials" and "Friend 1"group.)

Locking Failures

Status	Measures
There is no sign on the LCD	• Reset the phone.
[☎] icon appears on the LCD	• No service area. Move to the service area.
Alert tone sounds (call failure tone) when making a call.	• There is no call channel nor communication with a base station. • Repress [Send] button after ending, then the number will be redialed automatically
When powering on, "Lock Code?" is displayed and making a call is not possible.	• Unlock the phone. • Refer to P.97 for unlocking the phone.
The use time of battery is different from that of manual.	• Since the battery is a kind of supplies, its use time gets shorter than that of new product. • When placing at low or high temperature, the use time may be changed.
The phone does not turn on even though the battery is enough charged.	• Reinsert the battery into and power on the phone. • Clean the contact terminal of battery and phone.
The phone is off in busy or alert beep tone sounds with the "Low Battery" message.	• The battery is consumed almost and the battery pack should be charged. Charge the battery.
A red lamp is blinking on the charger.	• Reinsert the battery in the charger. • Check the cleanness of battery contact part. • Contact the service center if the blinking does not stop.
You hear the echo sound in busy.	• The echo canceling function of a base station is set wrongly. Adjust volume or move other area.
Abnormal operations are found out or the power is not on.	• Pull out and then reinsert the battery. Power on the phone.
