

## **ATTACHMENT E. USERS MANUAL**

U.S.A.

**U.S.FEDERAL COMMUNICATIONS COMMISSION  
RADIO FREQUENCY INTERFERENCE STATEMENT  
INFORMATION TO THE USER**

NOTE : This equipment has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet of a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for assistance.

Changes or modification not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Connecting of peripherals requires the use of grounded, shielded signal cables.

DELUXSCAN®

## How to get the most out of this monitor

This is a 15" color LCD monitor (Model: HLM 1510A) which can display signals from a personal or micro computer.

This manual has been prepared to familiarize you with your new display monitor.

ENGLISH

### Features

- 15" viewable XGA (1024×768) resolution LCD module
- 16.7 Mil Colors
- DPMS (Display Power Management Signaling)
- OSD (On-Screen Display) controls, multi-language OSD Menu
- Automatically adjust the image Position, the Clock, the Clock Phase settings
- Universal 100-240V AC power supply
- DDC 1/2B features

### General safety precautions

This Monitor has been engineered and manufactured to assure your safety. You can prevent serious electrical shock and other hazards by keeping in mind the following:

Do not place anything heavy, wet or magnetic on the monitor or the power cord. Never cover the ventilation openings with any material and never touch them with metallic or inflammable materials.

Avoid operating the monitor in extreme heat, humidity or areas affected by dust.

Temperature : 5~35°C

Humidity : 30~80RH

Be sure to turn the monitor off before plugging the power cord into the socket.  
Make sure that the power cord and the other cords are securely and rightly connected.

Overloaded AC outlets and extension cords are dangerous, as are frayed power cords and broken plugs, which may cause electric shock or fire.  
Call your service technician for replacement.

ENGLISH

### User's Guide

Do not use sharp tools such as a pin or a pencil near the monitor, as they may scratch the LCD surface.

Do not use a solvent, such as benzene, to clean the monitor, as it will damage the LCD surface.

### Maintenance

Do not open the monitor. There are no user-serviceable components inside, and there is a risk of exposure to high-voltage electricity inside, even when power is turned off. If the display monitor does not operate properly, remove the power cord from the wall outlet and contact your dealer. As with any electrical equipment, careless use and unprofessional maintenance are liable to cause a serious electric shock and other hazards.

### Packing List

HLM 1510A LCD Monitor

User's Guide

Audio Cable

USB Cable (Option)

Power Cord

Signal Cable

Above power cord can be changed upon different voltage areas.

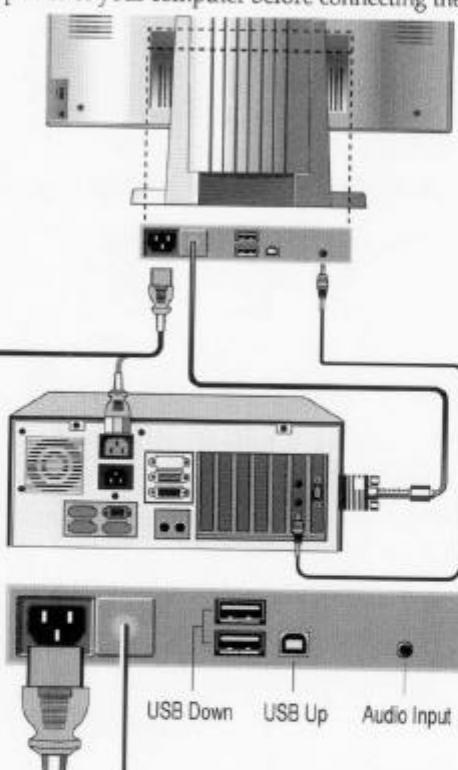

2

### Connecting with external equipment

#### Caution

Be sure to turn off the power of your computer before connecting the monitor.

ENGLISH

Connect the video signal cable (15-pin connector) to the connector on the video board inside the computer, usually located on the rear panel of the computer.

Connect the power supply cable to the monitor and then to the power supply.

After powering on the computer, wait for 30 seconds, then adjust the display using the various controls provided (see later). For further information on the installation procedure, refer to the operating guide of the computer being used.

## User's Guide

### Micro-controller features

The micro-controller automatically detects the video board installed in your system. When you turn on the monitor, the micro-controller first checks the display-mode memory stored in the user-setting area and the factory-presetting area.

#### Display-mode memory

The micro-controller has the memory capacity to store 30 different display modes including timing formats and display settings. This memory capacity is divided into two parts. One is the user-setting area, and the other is the factory-presetting area.

#### User-setting area

The user can add nonstandard modes. If you adjust your display image, the image is saved automatically. The micro-controller will then always detect and display the last mode stored in the user-setting area when the monitor is turned on.

The user-setting area maintains the last 10 display modes set by the user in its memory. When the user-setting area is full (i.e. when 10 modes are registered), the oldest timing settings will be deleted as new ones are added.

#### Factory-presetting area

There are 20 display modes stored in this area. These display modes are preset at the factory and include most of the display modes currently available (see Preset-mode table in this manual).

You can also retrieve the factory-preset mode by selecting the RECALL menu.

#### Automatic save

The monitor automatically saves the setting value after certain times (5, 10, 15, 20, 25, 30, 35, 40, 45, 50 sec) of adjusting OSD menu.

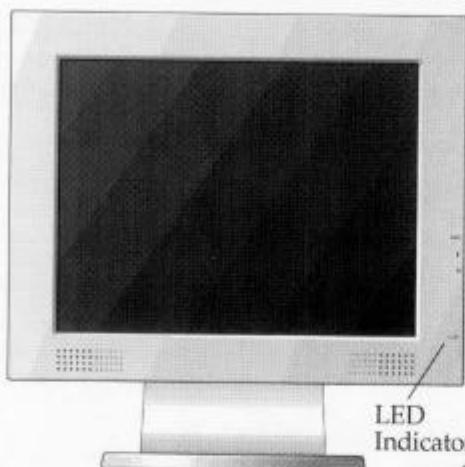

#### DDC 1/2B (Display Data Channel 1/2B)

DDC 1/2B (Display Data Channel 1/2B) is a communication channel through which the monitor automatically informs the host system of its capabilities.

DDC 1/2B uses a formerly unconnected signal pins in the 15-pin VGA connector. The system will perform as a "Plug & Play" feature if both monitor and host systems support DDC 1/2B protocol.

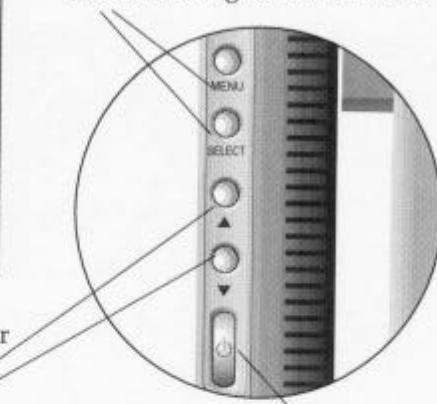

Some computer systems are not compatible with the DDC 1/2B standard. If your monitor displays the wrong resolution, please check your computer system, including the DDC compatible video card.

**DELUXSCAN®****On-screen controls and LED indicator**

- 1) Choose the sub-menu
- 2) Adjust the value of each menu
- 3) Adjust Contrast/Bright with pop-up

Enable the each Sub menu  
 1) Enable the OSD Menu  
 2) Return to higher level of menu

ENGLISH

**Main menu and control selection**

Press the MENU and select key to access the main menu.  
 The resolution and frequency are displayed at the top of the menu box.  
 When a nonstandard signal is detected, the frequency is also displayed.  
 Place the color box on the control icon you wish to adjust by using the ▲ or ▼ key.  
 Press the select key to access the control.

**Exit menu**

Press the MENU key to exit the OSD screen.

**Auto exit**

The OSD images disappear automatically after a few seconds of inactivity.

**Auto save**

The monitor automatically saves the new setting when OSD closes.

**Normal mode**

When the video signal is working in normal display mode, power LED is lit Green.

**DPMS mode**

The LED indicates different status when this unit operates in different power-saving modes.

**Out of range**

When an unsuitable signal is detected, the OSD displays an Out of Range message.

ENGLISH

## User's Guide

### On-screen display settings

The menu for screen setting adjustment is located in the OSD and can be viewed in one of five languages. OSD feature and main Menu functions are as follows:

**Brightness**

Adjust the screen's intensity.

**Contrast**

Adjust the contrast of the screen image.

**H-Position**

Adjust the horizontal position of the screen image.

**V-Position**

Adjust the vertical center of the screen image.

**Clock**

Adjust the width of the screen image.

**Clock-Phase**

Adjust the noise of the screen image.

**Recall**

Reload the factory-preset mode

**Color Control**

Display the Color Control menu.

**Informations**

Display the factory-preset timing.

**Language**

Select from 9 languages.

**OSD Control**

Displays the OSD position adjustment menu.

Select the OSD display timing.

**Test pattern**

Displays the TEST-pattern

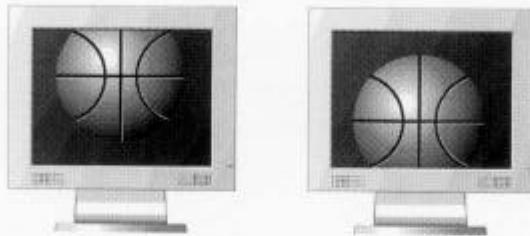

The Clock Phase may not be optimized in case VESA timing could not meet the standard.

In order to get the optimized result of Auto Adjust function, please brighten the background image.

### Refining the picture

- Step 1. At first display, a full screen, such as Window background or "H" character should be achieved by using Editor (eq; notepad).
- Step 2. Adjust the screen to the center of the display (LCD) by using the top and bottom display controls (i.e. using V-Position Adjust menu).

ENGLISH

- Step 3. Adjust the screen to the center of the Display (LCD) by using the right and left display controls (i.e. using Clock and H-Position adjust menu).

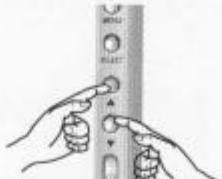

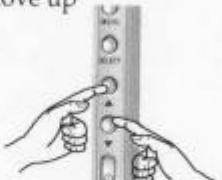

- Step 4. Adjust the Clock-Phase until the "H" Character displays clear.

- Step 5. Using the Contrast, Brightness, and Color Control menu, set the color to your preference.
- Step 6. When you finish the adjustment, you can save your settings by pressing on the menu until the OSD screen has disappeared.

User's Guide**Preset mode chart****Timing charts**

Supported video timings;

This monitor shall be capable of displaying following video-timing charts.

**Input timing limits**H-sync pulse width  $1.0\mu s \leq$  sync pulse width  $\leq 8.0\mu s$ V-sync pulse width  $0.04ms \leq$  sync pulse width  $\leq 0.5ms$ 

If the sync pulse width of input timing is out of range of input timing limits, monitor may operate abnormally. Be sure to check the input timing sync pulse width.

**Input level limits**

Low level: 0.4V max

High level: 2.4V min

DELUXSCAN®

**Preset-mode table**

The timing shown in the following table will be factory preset for display.

|                  |       |        |        |        |        |        |        |        |        |        |        |        |        |        |        |        |        |        |        |        |        |        |      |

|                  | V     | -      | -      | +      | -      | +      | +      | -      | -      | -      | -      | -      | -      | -      | -      | -      | -      | -      | -      | -      | -      | -      |      |

The monitor is compatible with additional modes within one of the following specified frequency ranges, provided that they are different at least for one of the following:

- Horizontal frequency: ±0.8kHz

! Even if the monitor detects the input timing as a factory-preset mode, you may not be able to set the size and position as desired.  
Check the input timings are under the specifications you want.

For better display image quality, use the timing and polarity shown in the preset-mode table. Please see your video card user guide to ensure compatibility.

### Universal Serial Bus

#### General USB Specifications Summary

USB is the simple and flexible way to connect external device to your desktop or notebook. USB will enable the PC to be easily reconfigured with new degree of connectivity and interactivity.

- 1) 12Mbps design with specific cost consideration for low cost peripherals
- 2) Supports up to 127 devices
- 3) Both isochronous and asynchronous data transfers
- 4) Up to 5 meters per cable segment
- 5) Built in power distribution for low power devices
- 6) Supports daisy chaining through a tiered star multidrop topology

#### Included USB Hub Feature

- 1) The USB Hub support both full speed 12Mbps and low speed 1.5Mbps bus rate
- 2) Include 1.53 meter USB Cable length
- 3) Self-Powered USB Hub
- 4) Support up to 2 downstream ports

To activate the USB Hub, the host system should support USB Hardware and Operating System software

#### How to connect to the downstream ports of the USB Hub

- 1) USB ports description

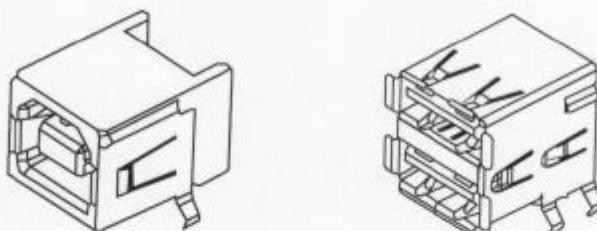

FIGURE (USB Upstream Ports, downstream Ports)

- 2) The USB Hub have 1 upstream port and 2 downstream ports The upstream port can be attached to root hub of host PC or the other downstream port. And each downstream port allows to attach another USB device as USB mouse, joystick, printer, etc.

DELUXSCAN®

- 1) The maximum supply current of down stream port is 500mA each When self powered Hub.  
 2) To activate the USB Hub,your host system should have USB capability.

#### USB connector Terminal DATA

| Contact Number | Signal name |
|----------------|-------------|
| 1              | Vbus        |
| 2              | D-          |
| 3              | D+          |
| 4              | GND         |

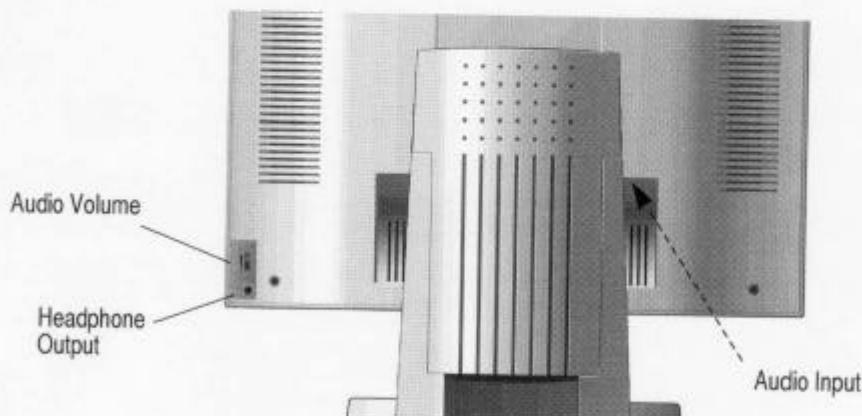

ENGLISH

#### Audio System

This monitor has a audio system including two micro loudspeakers. Each of two micro loudspeakers has a 1Wrms(Max.) output power. This system also supports a headphone (earphone) output.

This system has been tuned to get a best tone quality which a audio input level is under max 600mVp-p. If more than 600mVp-p, because a audio output tone may be distort, you must tune down audio input.

### User's Guide

## Power management

This monitor is equipped with a DPMS (Display Power Management Signaling) function that automatically cuts power use to just a little less than 5W when the computer is left unattended.

Although the monitor can be left in power-saving mode for longer periods, we recommend that you turn it off after your daily work.

### Operation

The DPMS function requires support from the computer system for any software DPMS function applied. If the keyboard (or mouse) is left unattended for a certain period, the program or system will set the sync signals to DPMS mode. The recommended signals, power consumption, and recovery times are shown in the table below.

| Status  | Signal   |          |        | Power Consumption | Recovery Time | LED Indicator                    |
|---------|----------|----------|--------|-------------------|---------------|----------------------------------|
|         | H Sync   | V Sync   | Video  |                   |               |                                  |
| On      | Pulse    | Pulse    | Active | 40 Watt           | -             | Green                            |
| Standby | No Pulse | Pulse    | Blank  | Less than 15 Watt | Within 2 sec  | Alternating Green/Orange(1sec)   |
| Suspend | Pulse    | No Pulse | Blank  | Less than 10 Watt | Within 3 sec  | Alternating Green/Orange(0.5sec) |
| Off     | No Pulse | No Pulse | Blank  | Less than 5 Watt  | Within 3 sec  | Orange                           |

## Video input terminal

A 15 pin D-sub connector is used as the input signal connector.  
 Pin and input signals are shown in the table below.

| Pin Number | Signal Name  |
|------------|--------------|
| 1          | RED          |
| 2          | GREEN        |
| 3          | BLUE         |
| 4          | GROUND       |
| 5          | DDC-Return   |
| 6          | RED-Ground   |
| 7          | GREEN-Ground |
| 8          | BLUE-Ground  |
| 9          | N.C.         |
| 10         | Logic-Ground |
| 11         | Ground       |
| 12         | SDA(DDC)     |
| 13         | H-Sync       |
| 14         | V-Sync       |
| 15         | SCL(DDC)     |
