1 Overview

1.1 General Information

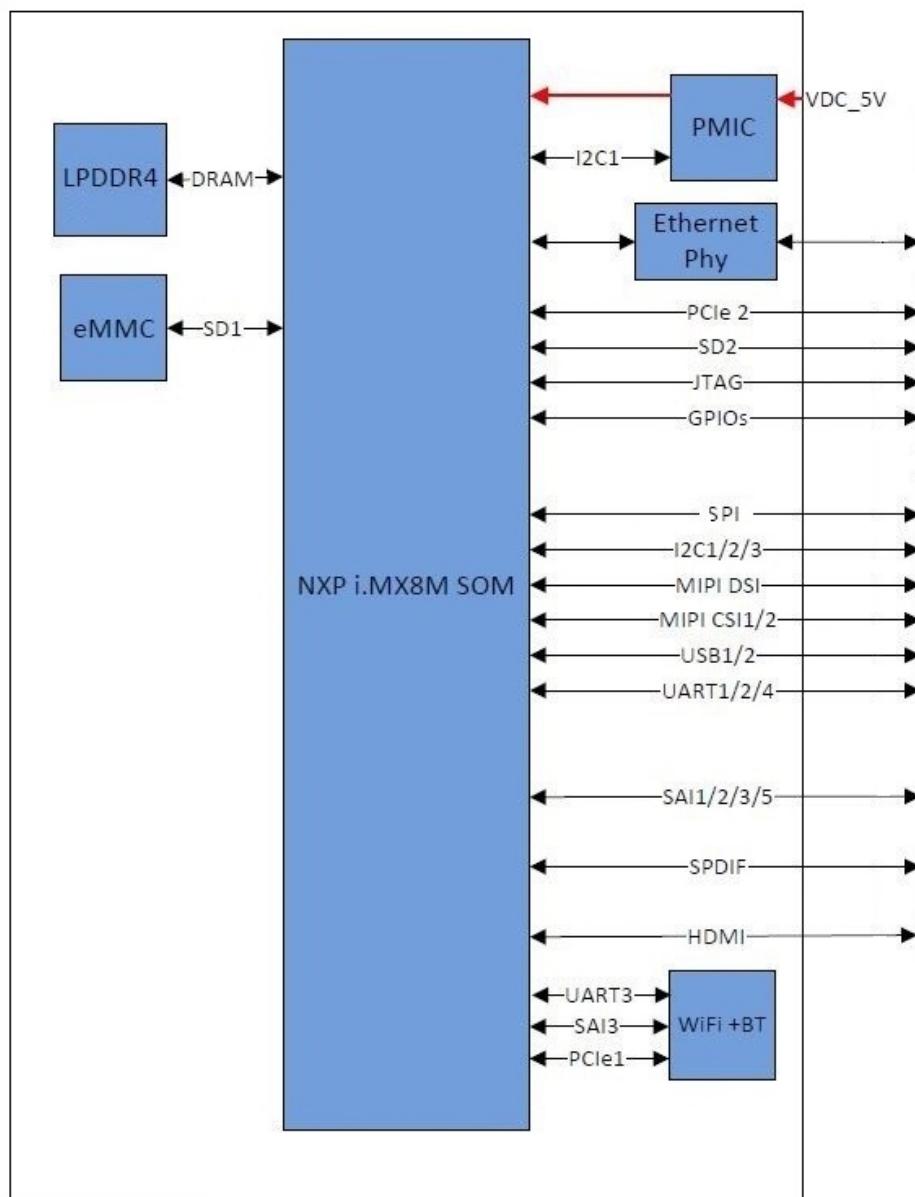

WB10 is a high performance System on Module(SOM) which is designed based on NXP®i.MX8MQuad processor. The i.MX8MQuad integrate fourARM® Cotex-A53 up to 1.5GHz and oneCotex-M4 cores to provide industry-leading audio voice and video processing for applications that scale from consumer home audio to home&building automation, voice assistance&machine vision, healthcare industry, etc. It supports video quality with full 4K Ultra HD resolution and supports the highest levels of pro audio fidelity with more than 20 audio channels each @384KHz as well.

WB10 module offers a wide range of interfaces - GPIOs, PWM, I2C, SPI, CSI, DSI, HDMI, UART, USB 3.0 and synchronous audio interface (SAI) that supports full duplex serial interfaces with frame synchronization, such as I2S, AC97, TDM, and codec/DSP interfaces. Moreover, this module features anEthernet PHY on the module to support Giga bitsEthernet Transceiver with HP Auto-MDIX.

It targets a wide range of embedded products such as medical devices, industrial automation, HMIs, data acquisition, and much more.

1.3 Feature Summary

- NXP i.MX8M Quad
- 1GB/2GB LPDDR4 RAM
- 4GB/8GB eMMC
- HDMI2.0a output

- 1 x MIPI DSI
- 2 x MIPI CSI
- Wi-Fi 802.11 a/b/g/n/ac, 2x2 MIMO
- Bluetooth 4.2
- 1 x USB 2.0 OTG
- 1 x USB 3.0 Host
- 1x Ethernet Gigabits
- 1 x SD/MMC
- Serial interfaces (3 x I2C, 3 x UART, 1 x SPI, 4 x SAI)
- 2 x PWM/GPIOs
- 1x PCIe2.0

2 Main Hardware Components

WB10 has three [Hirose DF40C-80DP-0.4V\(51\)](#) 80pin headers to connect with another carrier board. It integrates the NXP® i.MX8M, LPDDR4 Memory, eMMC, Power Manage IC (PMIC), and Wi-Fi/Bluetooth on the module.

2.1 CPU

The i.MX 8MQuad integrate four ARM® Cotex-A53 up to 1.5GHz and one Cotex-M4 coresto provide industry-leading audio, voice and video processing for applications.

The features of the i.MX 8MQuad of processors include the following:

- 4xARM Cortex-A53 plus ARM Cortex-M4
- L1 Instruction Cache
 - 32 KB L1 Instruction Cache for A53
 - 16 KBL1 Instruction Cache for M4
- L1 Data Cache (each core)
 - 32 KB L1 Data Cache (A7)
 - 16 KB L1Data Cache (M4)
- The ARM Cortex-A53 Core complex shares
 - General interrupt controller (GIC)
 - Global timer
 - Snoop control unit (SCU)
 - Unified instruction and data (1MB)

2.2 Memory

WB10 is available with up to 3GB of LPDDR4 memory. The default configuration is 1GB/2GB LPDDR4.

2.3 Power Management IC

WB10 features Rohm BD71837MWV power management IC. BD71837MWV is a programmable power management IC integrates 8 buck regulators and 7 LDOs to provide all power rails required by SoC and peripherals.

For system management, it provides the following features,

- Support software shutdown or hardware power off
- External wakeup source
- Output monitor
- PWROK signal for reset or power off
- OVP, UVLO, TSD

2.4 eMMC Storage

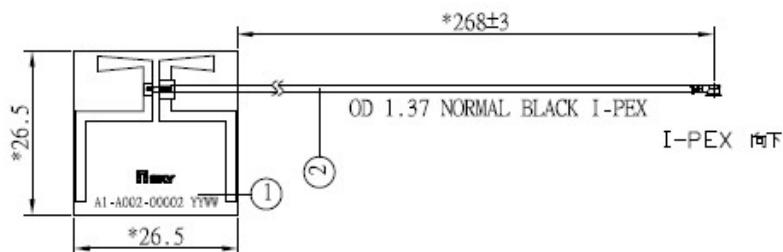

The onboard eMMC device is connected on the SD1 pins of the i.MX 8M processor in an 8 bit width configuration.

2.5 Wi-Fi/Bluetooth Module

The WB10 adopts Fn-Link 8274B combo module that integrates wireless local area network 802.11 a/b/g/n/ac2x2 MIMO and Bluetooth 4.2.

2.6 Antenna

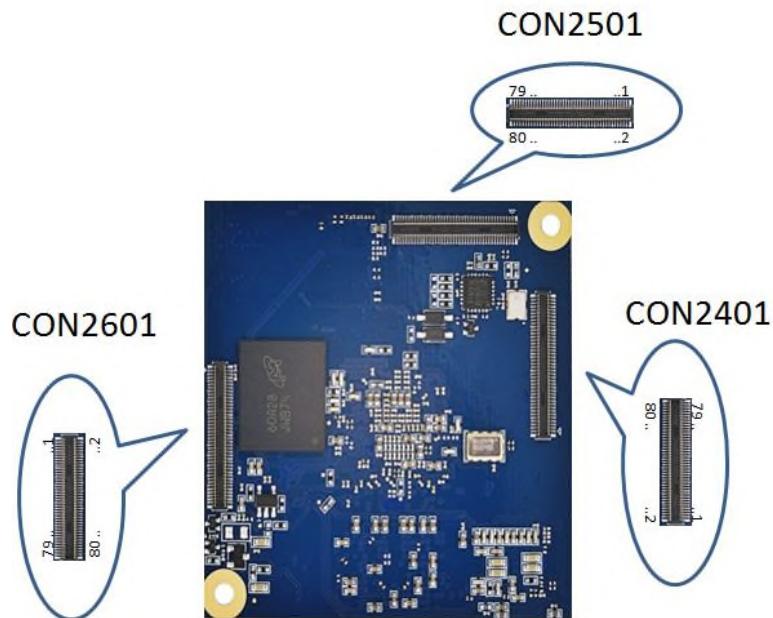

The module is shipped with an Embedded Wi-Fi Dual Band Antenna, only the antenna supplied with the module may be used. It is PCB type, using IPEX connector to connect with module.

3 WB10 Interfaces and Connectors

WB10is equipped with three [Hirose DF40C-80DP-0.4V\(51\)](#) connectors- CON2401, CON2501 and CON2601. The tables below detail the pin assignment and functionality of these connectors.

4.2 GPIO

WB10 SOM has 15 dedicate pins for GPIO purpose, moreover the pins are not used in other function (SDIO, SPI, UART, SAI..) can be configured as GPIO as well. The power domain of WB10 SOM IOs is VDDIO_3V3.

Table 4-2 GPIO Signal Pins

4.5 UARTs

Each of the UART interface support the following serial data transmit/receive protocols and configurations:

- 7- or 8-bit data words, 1 or 2 stop bits, programmable parity (even, odd or none)
- Programmable baud rates up to 4 Mbps. This is a higher max baud rate relative to the 1.875 MHz, which is stated by the TIA/EIA-232-F standard.
- 32-byte FIFO on Tx and 32 half-word FIFO on Rx supporting auto-baud

4.10 PWM

The pulse-width modulator (PWM) has a 16-bit counter and is optimized to generate sound from stored sample audio images and it can also generate tones. It uses 16-bit resolution and a 4x16 data FIFO.

5 Getting start

1. The SoM can function power on 5V DC input, once system start, WB10 can use EVB HDMI output or use USB sharing to external monitor for control.

2. You can use App for any application like play video, music etc.

Federal Communication Commission Interference Statement

15.19

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

15.105

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

15.21

Any changes or modifications not expressly approved by the party responsible for compliance could void the authority to operate equipment.

This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter.

End-users and installers must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance.

For product available in the USA/Canada market, only channel 1~11 can be operated. Selection of other channels is not possible

FCC RF Radiation Exposure Statement:

This module is intended for OEM integrator. The OEM integrator is still responsible for the FCC compliance requirement of the end product, which integrates this module. 20cm minimum distance has to be able to be maintained between the antenna and the users for the host this module is integrated into. Under such configuration, the FCC radiation exposure limits set forth for an population/uncontrolled environment can be satisfied.

Any changes or modifications not expressly approved by the manufacturer could void the user's authority to operate this equipment.

USERS MANUAL OF THE END PRODUCT:

In the users manual of the end product, the end user has to be informed to keep at least 20cm separation with the antenna while this end product is installed and operated. The end user has to be informed that the FCC radio-frequency exposure guidelines for an uncontrolled environment can be satisfied. The end user has to also be informed that any changes or modifications not expressly approved by the manufacturer could void the user's authority to operate this equipment.

If the size of the end product is smaller than 8x10cm, then additional FCC part 15.19 statement is required to be available in the users manual: This device complies with Part 15 of FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

LABEL OF THE END PRODUCT:

The final end product must be labeled in a visible area with the following " Contains TX FCC ID: YAIWB10 ". If the size of the end product is larger than 8x10cm, then the following FCC part 15.19 statement has to also be available on the label: This device complies with Part 15 of FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.
