**WARNING: TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE.**

## CAUTION
■ When you are not using the unit for a long period of time, it is recommended that you disconnect the power cord from the mains outlet.

## WARNING (S-VHS deck only)
There are two different types of SECAM colour systems: SECAM-L, used in FRANCE (also called SECAM-West), and SECAM-B, used in Eastern European countries (also called SECAM-East).
1. This unit can also receive SECAM-B colour television signals for recording and playback.
2. Recordings made of SECAM-B television signals produce monochrome pictures if played back on a video recorder of SECAM-L standard, or do not produce normal colour pictures if played back on a PAL video recorder with SECAM-B system incorporated (even if the TV set is SECAM-compatible).
3. SECAM-L prerecorded cassettes or recordings made with a SECAM-L video recorder produce monochrome pictures when played back with this unit.
4. This unit cannot be used for the SECAM-L standard. Use a SECAM-L recorder to record SECAM-L signals.

## IMPORTANT
■ Please read the various precautions on pages 2 and 3 before installing or operating the unit.
■ It should be noted that it may be unlawful to re-record pre-recorded tapes, DVDs, or discs without the consent of the owner of copyright in the sound or video recording, broadcast or cable programme and in any literary, dramatic, musical, or artistic work embodied therein.

Video tapes recorded with this unit in the LP/EP (Long Play/Extended Play) mode cannot be played back on a single-speed video recorder. (S-VHS deck only)

When the equipment is installed in a cabinet or a shelf, make sure that it has sufficient space on all sides to allow for ventilation (10 cm or more on both sides, on top and at the rear.)

When discarding batteries, environmental problems must be considered and the local rules or laws governing the disposal of these batteries must be followed strictly.

Failure to heed the following precautions may result in damage to the unit, remote control or video cassette.

1. <u>DO NOT</u> place the unit —
   — in an environment prone to extreme temperatures or humidity.
   — in direct sunlight.
   — in a dusty environment.
   — in an environment where strong magnetic fields are generated.
   — on a surface that is unstable or subject to vibration.
2. <u>DO NOT</u> block the unit's ventilation openings or holes.
   (If the ventilation openings or holes are blocked by a newspaper or cloth, etc., the heat may not be able to get out.)
3. <u>DO NOT</u> place heavy objects on the unit or remote control.
4. <u>DO NOT</u> place anything which might spill on top of the unit or remote control.
   (If water or liquid is allowed to enter this equipment, fire or electric shock may be caused.)
5. <u>DO NOT</u> expose the apparatus to dripping or splashing.
6. <u>DO NOT</u> use this equipment in a bathroom or places with water. Also <u>DO NOT</u> place any containers filled with water or liquids (such as cosmetics or medicines, flower vases, potted plants, cups, etc.) on top of this unit.
7. <u>DO NOT</u> place any naked flame sources, such as lighted candles, on the apparatus.
8. <u>AVOID</u> violent shocks to the unit during transport.

## MOISTURE CONDENSATION

Moisture in the air will condense on the unit when you move it from a cold place to a warm place, or under extremely humid conditions—just as water droplets form on the surface of a glass filled with cold liquid. Moisture condensation on the head drum will cause damage to the tape. In conditions where condensation may occur, keep the unit turned on for a few hours to let the moisture dry.

---

**ATTENTION**

**To mobile phone users:**
Using a mobile phone in the vicinity of the unit may cause picture vibration on the TV screen or change the screen to a blue back display.

**On placing the unit:**
Some TVs or other appliances generate strong magnetic fields. Do not place such appliances on top of the unit as it may cause picture disturbance.

- When switching from the first layer to the second layer of double-layered DVD VIDEO discs, the image and sound may be momentarily distorted. This is not a malfunction.

## Unplayable Discs

The following types of discs cannot be played using this unit. Do not attempt to play back any kind of disc that is damaged (cracked, warped, or repaired with adhesive tape) or discs in unusual shapes (heart-shaped, octagonal, or other forms). If such discs are accidentally played back, it may cause noise that can lead to speaker damage.
- CD-ROM discs (including PHOTO-CD)
- DVD AUDIO discs
- Super Audio CDs (SACD)
- DVD-RW discs recorded in VR format
- DVD-RAM
- Discs which have a region number other than "2"

## Region Number

The world is divided into 6 regions for DVD VIDEO discs. DVD VIDEO discs are assigned a region number to indicate which region they may be played back in. A disc cannot be played back on this unit unless the region number of the disc matches that of the unit. The region number for this unit is "2". Only discs whose region number includes "2" can be played back such as shown below.

## DVD VIDEO Marks

Sometimes marks are printed on a DVD disc and/or on its packaging to indicate information regarding the contents and functions of a disc. Check marks indicating the contents and functions of a disc. Note, however, that in some cases a disc may not include a mark even for a function it supports.

**Marks related to video**

# File Structure of Discs

## DVD VIDEO

Typically, DVD VIDEO discs are made up of larger units called "titles". Each title has a number (title number) that can be used to select desired titles. Titles are further divided into units called "chapters". Each chapter has a number (chapter number) that can also be used to select desired chapters. Note that some discs are not divided into titles and chapters.

| Title1 | | | Title2 | |
|---|---|---|---|---|
| Chapter 1 | Chapter 2 | Chapter 3 | Chapter 1 | Chapter 2 |
## Audio CD/Video CD

Typically, Audio CD discs are divided into separate tracks each containing one song. Each track is assigned a number. For example, the third track is Track 3. The same is true for Video CD discs.

| Track 1 | Track 2 | Track 3 | Track 4 |
|---|---|---|---|
## NOTE:

**Video CD discs that support Playback Control (PBC)**
The still image or motion image which follows a menu screen is called a "scene". Each scene has a scene number.
For more details, refer to "Locating a desired scene using the menu of a Video CD with PBC" (☞ pg. 31).

# Placing a Disc

## 1 Open the disc tray.

Press ▲ on the DVD deck to open the disc tray.

● Pressing the button again closes the disc tray.
● Do not block the disc tray with your hand while it is opening or closing as this may result in hardware failure.
● Do not place unplayable discs or any object other than a disc in the disc tray.
● Do not press down strongly on the disc tray or place any heavy objects on it.
## 2 Place the disc.

Place the disc in the disc tray with the label side facing up.

● Since disc size changes depending on the disc to be played back, be sure to correctly align the disc with the grooves for its size. If the disc is not in its groove, it may be scratched or otherwise damaged.
● To insert an 8 cm disc, place it according to the inner groove.
# Care and Handling of Discs

## How to handle discs

When handling a disc, do not touch the surface of the disc. Since discs are made of plastic, they are easily damaged. If a disc gets dirty, dusty, scratched or warped, the images and sound will not be picked up correctly, and such a disc may cause the unit to malfunction.
## Label side

Do not damage the label side, stick paper to or use any adhesive on its surface.

## Storage

Make sure that discs are kept in their cases. If discs are piled on top of one another without their protective cases, they can be damaged. Do not put discs in a location where they may be exposed to direct sunlight, or in a place where the humidity or temperature is high. Avoid leaving discs in your car!

## Maintenance of discs

If there are fingerprints or other dirt adhering to a disc, wipe with a soft dry cloth, moving from the center outwards.
If a disc is difficult to clean, wipe with a cloth moistened with water. Never use record cleaners, petrol, alcohol or any anti-static agents.

### CAUTION

Sometimes during playback, noise or images may be garbled. This is sometimes due to the disc. (It may not be up to industry standards.)
These symptoms are caused by the discs, not by the malfunction of the unit.

# Receiving Stereo and Bilingual Programmes

Your unit is equipped with a Sound-Multiplex decoder (A2) and a Digital stereo sound decoder (NICAM) making reception of stereo and bilingual broadcasts possible.
When the channel is changed, the type of broadcast being received will be displayed on the TV screen for a few seconds.

| Type of Broadcast Being Received | On-screen Display |
|---|---|
| A2 Stereo | ST |
| A2 Bilingual | BIL. |
| Regular Monaural | (none) |
| NICAM Stereo | ST NICAM |
| NICAM Bilingual | BIL. NICAM |
| NICAM Monaural | NICAM |

● To listen to a stereo programme, press **A.MONITOR** until "HIFI L ▷ ◁ R" appears on the TV screen.
● To listen to a bilingual programme, press **A.MONITOR** until "HIFI L ▷" or "HIFI ◁ R" appears on the TV screen.
● To listen to the standard (Regular Monaural) audio while receiving a NICAM broadcast, press **A.MONITOR** until "NORM" appears on the TV screen.

## NOTE:
"O.S.D." must be set to "ON", or the on-screen displays will not appear. (☞ pg. 65)

### To Record Stereo and Bilingual Programmes (A2)
Stereo programmes are automatically recorded in stereo on the Hi-Fi audio track (with the normal audio track recording mixed L and R channel sound).
● Bilingual programmes are automatically recorded in bilingual on the Hi-Fi audio track. The main soundtrack will be recorded on the normal audio track.

### To Record NICAM Stereo and Bilingual Programmes
The NICAM audio programme will be recorded on the Hi-Fi audio track, and the standard audio programme will be recorded on the normal audio track.

## NOTES:
● If the quality of stereo sound being received is poor, the broadcast will be received in monaural with better quality.
● Before playing back a programme recorded in stereo, or a bilingual programme, refer to "Soundtrack Selection" on page 20.

# B.E.S.T. Picture System

The B.E.S.T. (Biconditional Equalised Signal Tracking) system checks the condition of the tape in use during playback and recording, and compensates to provide the highest-possible playback and recording pictures. You can set "B.E.S.T." to "ON" or "OFF" to your preference. (☞ pg. 65)

## Playback

The unit assesses the quality of the tape once you initiate playback.
● The unit adjusts the playback picture quality based on the quality of the tape in use.
● B.E.S.T. is active during automatic tracking. "BEST" appears blinking on the front display panel.
● "BEST" only appears at the beginning of automatic tracking. Even though it doesn't appear after that, the B.E.S.T. function is operative.

## Recording

The unit assesses the quality of the tape once you initiate recording.
● The unit spends approximately 7 seconds assessing the condition of the tape, then begins recording.

---

### ATTENTION
Since the B.E.S.T. system works before recording actually starts, there is a delay of approximately 7 seconds after ● and ▶ on the remote control are pressed, or ● on the unit is pressed. To make sure you record the desired scene or programme in its entirety, first perform the following steps:
1 Press and hold ❚❚ and press ● to engage the Record Pause mode.
● The unit then automatically checks the condition of the tape and, after approximately 7 seconds, re-enters Record Pause mode.
2 Press ▶ to start recording.
If you want to bypass the B.E.S.T. system and begin recording immediately, set "B.E.S.T." to "OFF". (☞ pg. 65)

# VPS/PDC Recording

Now available from some TV stations, PDC (Programme Delivery Control) and VPS (Video Programme System) are service designed to assure safe, accurate timer recording. With this system, special code signals are transmitted together with the audio/video signals. These code signals control your unit and have precedence over the advertised times you may have preset into the timer. This means that your unit will start and stop recording when the preset TV programmes actually start and end — even if the broadcast time of a preset TV programme is changed.

## **NOTES:**
● When you use Express Timer Programming, set the start time (VPS or PDC Time) exactly as advertised in the TV listing. A different time than advertised will result in no recording.
● VPS/PDC recording is also possible when a satellite receiver or a cable system is connected to L-2 IN/ DECODER connector on your unit.
● VPS/PDC recording is also possible via the L-1 IN/OUT connector.

**How to check if the station being received transmits a VPS/PDC signal**
1️⃣ Press **– –:– –** until the channel position appears on the front display panel.
2️⃣ Hold down **START +** for about 5 seconds.
"VPS/PDC" appears blinking on the TV screen.
If a VPS/PDC signal is detected from the station, "VPS/PDC" will stop blinking.
If no VPS/PDC signal is detected from the station, "VPS/PDC" will blink at a slower rate.
3️⃣ Press **– –:– –** or **START +** again to return to normal display.

# Automatic Satellite Programme Recording

This function allows you to automatically record a satellite programme which is timer-programmed on your external satellite receiver. Connect a satellite receiver to the unit's L-2 IN/DECODER connector and programme the timer on the satellite receiver. The unit starts or stops recording by the signals input from the satellite receiver. After recording, the unit's power shuts off automatically.

## ATTENTION
● Be sure not to turn on the satellite receiver before the programme is executed; otherwise, the unit will start recording when the satellite receiver's power is turned on.
● If you have connected another appliance other than a satellite receiver to the L-2 IN/DECODER connector, be sure not to engage the Automatic Satellite Programme Recording mode; otherwise, the unit will start recording when the connected appliance's power is turned on.
● Automatic Satellite Programme Recording and timer-recording cannot be done at the same time.

**Before performing the following steps:**
● Make sure the satellite receiver is connected to the unit's
L-2 IN/DECODER connector. (☞ pg. 62)
● Programme the timer on the satellite receiver.
● Insert a cassette with the safety tab in place.
● Slide the **TV/VCR/DVD** switch to the right.

## 1 Select the S-VHS deck.

**On the unit**
Press **VCR/DVD** repeatedly so that the VCR indicator
lights up.

**On the remote control**

## NOTES:
● Operations on the DVD deck are not possible when the
Automatic Satellite Programme Recording mode is engaged or
timer recording is in progress.
● To disengage the Automatic Satellite Programme Recording
mode, press **REC LINK**. The "⅄" indicator goes off.
● If the unit's power is off, it is not possible to engage the
Automatic Satellite Programme Recording mode.
● In step **4**, if the "⅄" indicator does not light but instead blinks
quickly even though your satellite receiver's power is off,
Automatic Satellite Programme Recording will not work
properly with that satellite receiver*. If this is the case, perform
"Express Timer Programming" (☞ pg. 26) to timer-record a
satellite programme.
  * Some satellite receivers output signals even if the power is off.
    Automatic Satellite Programme Recording is not possible with those
    satellite receivers.
● The "⅄" indicator blinks while Automatic Satellite Programme
Recording is in progress.
● For timer programming of the satellite receiver, refer to the
instruction manual of the satellite receiver.
● Automatic Satellite Programme Recording is not possible if
your satellite receiver does not have a timer.
● Pressing the unit's ⏻/Ⅰ button while Automatic Satellite
Programme Recording is in progress turns off the unit's power
and disengages the Automatic Satellite Programme Recording
mode.
● If there are more than one satellite programmes you wish to
record with Automatic Satellite Programme Recording, it is not
possible to set different tape speeds for each programme.
● Depending on the type of satellite receiver, the unit may not
record a slight portion of the beginning of the programme or
may record slightly longer than the actual length of the
programme.
● If you engage the Automatic Satellite Programme Recording
mode when the satellite receiver's power is on, the unit will
not start Automatic Satellite Programme Recording even
though the "⅄" and "⏱" indicators blink. When the satellite
receiver shuts off once and is turned back on again, the unit
starts recording.
● You can also record a programme from your cable system in
the same way if the system has a timer.
● The B.E.S.T. system (☞ pg. 23) does not work while Automatic
Satellite Programme Recording is in progress.
● Just Clock (☞ pg. 77) does not work when the Automatic

# About MP3/WMA Disc

This unit can playback CD discs recorded in the MP3/WMA format (we refer to those discs as MP3/WMA discs in this manual).
Operations for MP3/WMA discs are similar to those for Audio CD discs, though there are some restrictions and differences.

### What is MP3?

MP3 is the abbreviation of "MPEG1 Audio Layer 3". MPEG Audio is a compression specification that compresses the audio portion only. This image compression method is used in DVD or Video CD, etc. The audio data has been compressed into about 1/10.

### What is WMA?

WMA is an abbreviation of "Windows Media Audio", and is an audio data compression format developed by Microsoft Corporation. Sound quality of data compressed using WMA is the same as that of MP3, though the WMA file size is smaller than that of MP3.

On an MP3/WMA disc, each material (song) is recorded on each Track (file), which usually belongs to a Group (folder).

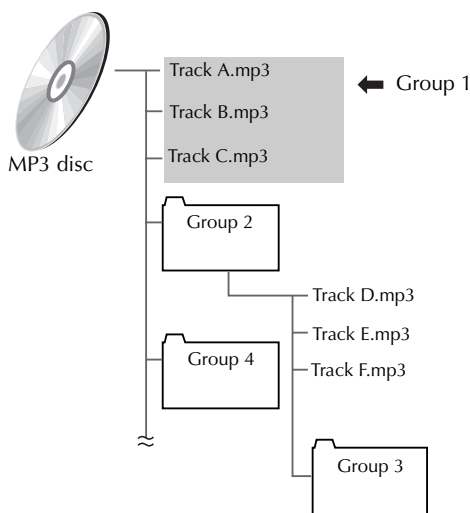

This unit can recognize up to 99 Groups and up to 150 Tracks per Group.
If a disc includes more than the Tracks above limit, the unit stops detecting Tracks when the number of detected Tracks reaches the limit and ignores the subsequent Tracks. The unit also ignores any non-MP3/WMA file on the disc.

---

**NOTES for making a private MP3/WMA disc using a CD-R/CD-RW disc:**
● Select "ISO 9660" as the disc format.
● Finalize the disc.

---

## NOTES:

● Because of the disc characteristics or recording condition, some discs may not be played back or it takes time to start playback.
● The unit does not support "packet writing" discs.
● If there are any Tracks (files) which are stored on a disc directly and do not belong to any Group (directory), the unit recognizes them as belonging to an independent Group.
● The unit plays back Groups/Tracks on an MP3/WMA disc in the alphabetical order.
● For example, if there are three title Groups [one], [two] and [three] on a disc, the playback order is [one], [three] then [two]. Tracks in a Group are played back in the same way.
● Therefore, an MP3/WMA disc on the market may be played back in different order from the order printed on its sleeve.

## MP3/WMA control display

The MP3/WMA control display appears on the TV screen and playback starts when an MP3/WMA disc is loaded.

# About JPEG Disc

This unit can playback CD discs recorded in the JPEG format (we refer to those discs as JPEG discs in this manual).
Operations for JPEG discs are similar to those for Audio CD discs, though there are some restrictions and differences.

## What is JPEG?

JPEG is the abbreviation of "Joint Photographic Expert Group". JPEG is a still-picture data compression system.

On a JPEG disc, each still picture is recorded as a file, which usually belongs to a Group (folder).

JPEG disc

File A.jpg
File B.jpg
File C.jpg
← Group 1

Group 2

File D.jpg
File E.jpg
File F.jpg
Group 4

Group 3

This unit can recognize up to 99 Groups and up to 150 Files per Group.
If a disc includes more than the Files above limit, the unit stops detecting Files when the number of detected Files reaches the limit and ignores the subsequent Files. The unit also ignores any non-JPEG file on the disc.

---

**NOTES for making a private JPEG disc using a CD-R/ CD-RW disc:**
- Select "ISO 9660" as the disc format.
- Finalize the disc.

---

## NOTES:

- We recommend to record a file at 640 x 480 resolution. (If a file has been recorded at a resolution of more than 640 x 480, it will take a longer time to be displayed.)
- This unit can only play back baseline JPEG files*. Progressive JPEG files* or lossless JPEG files* cannot be played back.
  * Baseline JPEG format: Used for digital cameras, web, etc.
    Progressive JPEG format: Used for web.
    Lossless JPEG format: An old type and rarely used now.
- Some files on a JPEG disc may be played back distortedly.
- Because of the disc characteristics or recording condition, some discs may not be played back or it takes time to start playback.
- The unit does not support "packet writing" discs.
- If there are any Files which are stored on a disc directly and do not belong to any Group (directory), the unit recognized them as belonging to an independent Group.
- The unit plays back Groups/Files on a JPEG disc in the alphabetical order.
- For example, if there are three title Groups [one], [two] and [three] on a disc, the playback order is [one], [three] then [two]. Files in a Group are played back in the same way.
- Therefore, a JPEG disc on the market may be played back in different order from the order printed on its sleeve.

## JPEG control display

The JPEG control display appears on the TV screen and playback starts when a JPEG disc is loaded.

## Advantages of S-VHS video recorders
You can edit from VHS to S-VHS, S-VHS to VHS, or, from S-VHS to S-VHS.
● From VHS to S-VHS: Record VHS playback signals in the S-VHS mode. Although the picture quality is inherently limited by that of the original, the edited tape has better picture quality than those made by VHS-to-VHS editing.
● From S-VHS to VHS: Because the picture quality of the source material is very high, the edited tape has better picture quality than those made by VHS-to-VHS editing.
● From S-VHS to S-VHS: All signals will be transferred with minimum degradation.

● For details, refer to the instruction manual of the satellite receiver and decoder.

# Connecting/Using A Decoder

The L-2 IN/DECODER connector can be used as an input connector for an external decoder (descrambler). Simply connect a decoder and you can enjoy the variety of programming that is available through scrambled channels.

**1  Select the input mode.**

Set "L-2 SELECT" to "DECODER". (☞ pg. 57)

**2  Connect the decoder.**

Connect your unit's L-2 IN/DECODER connector to the decoder's 21-pin SCART connector using a 21-pin SCART cable.
**3  Set the tuner.**

Perform the procedure as described in "When Receiving A Scrambled Broadcast" on page 72.

# Connecting To A Dolby Digital Decoder or An Amplifier With A Built-in DTS (DVD deck only)

These instructions enable you to connect your unit to a Dolby Digital Decoder or an amplifier with built-in DTS.

## Make connections.

Connect the optical cable between the unit and the Dolby Digital Decoder or amplifier with a built-in DTS.

**Note for connection:**
Remove the connector cover from the unit and remove the protection cap from the cable.

### NOTES:
● For Dolby Digital sound, set "DIGITAL AUDIO OUTPUT" to "DOLBY DIGITAL/PCM". (☞ pg. 68)
● For DTS sound, set "DIGITAL AUDIO OUTPUT" to "STREAM/PCM". (☞ pg. 68)

### CAUTIONS:
● This unit has a dynamic range of more than 80 dB with regards to its Hi-Fi audio capability. It is recommended that you check the maximum level if you are going to listen to the Hi-Fi audio signals through a stereo amplifier. A sudden surge in the input level to the speakers may damage them.
● Some speakers and televisions are specially shielded to prevent television interference. If both are of the non-shielded type, do not place the speakers adjacent to the TV set as this can adversely affect the video playback picture.

* The default setting is **bold** in the table below.

## ■ S-VHS ET — ON / **OFF**

You can record in SP mode on VHS cassettes with S-VHS picture quality. You can play back a tape recorded using the S-VHS ET function on most S-VHS recorders and VHS recorders equipped with the SQPB (S-VHS QUASI PLAYBACK) function. (Notice some recorders are not compatible with the S-VHS ET function.) When this function is set to "ON", the S-VHS indicator lights up on the front display panel.

### NOTES:
● You can activate the S-VHS ET function only before you start recording on a VHS cassette.
● Before recording, make sure that "B.E.S.T." is set to "ON". (☞ below)
● You cannot activate the S-VHS ET function:
  — while recording is in progress.
  — while timer-recording or Instant Timer Recording (☞ pg. 22, 24, 26) is in progress.
  — while B.E.S.T. (☞ pg. 23) is in progress.
● The S-VHS ET function does not work:
  — with S-VHS cassettes.
  — with recordings in LP/EP mode.
● To keep the highest quality recording and playback pictures over a long period of time, S-VHS recording on S-VHS cassettes is recommended.
● Use of high grade tapes is recommended for S-VHS ET recordings. On some tapes, picture quality will not improve even if the S-VHS ET function is used. Check the recording quality before you start important recordings.
● While playing back a tape recorded using the S-VHS ET function on some recorders, noise may appear. (If playback picture becomes blurred or interrupted, use a cleaning cassette.)
● In the high-speed search, still, slow-motion or frame-by-frame playback modes (☞ pg. 19), noise may appear. If these modes are performed frequently on a tape recorded using the S-VHS ET function, the tape may be damaged and the picture may be deteriorated.

### ■ B.E.S.T. — **ON** / OFF

You can set the B.E.S.T. (Bicondional Equalised Signal Tracking) system to "ON" or "OFF". (☞ pg. 23)

## NOTES:

● When watching a tape recorded with "B.E.S.T." set to "ON", it is recommended that you leave B.E.S.T. on during playback as well.
● When watching a rental tape or one recorded on another video recorder, or when using this unit as the player for editing, set B.E.S.T. to your preference.
● The B.E.S.T. system works for both SP and LP (or EP) modes only after a tape has been inserted and the Record mode is first initiated. It does not work during recording.
● The B.E.S.T. system does not work while Automatic Satellite Programme Recording is in progress. (☞ pg. 28)
● In the case of timer recordings, the B.E.S.T. system works before recording is initiated.
● Once the cassette is ejected, the B.E.S.T. data is cancelled. The next time the cassette is used for recording, B.E.S.T. is re-performed.
● Pressing the unit's ● button while "BEST" is displayed does not start Instant Timer Recording. (☞ pg. 22)

### ■ PICTURE CONTROL— **AUTO** / EDIT / SOFT

This feature helps you to adjust the playback picture quality according to your preference. Normally select "AUTO".

**AUTO**: Provides the optimised picture benefits of the B.E.S.T. Picture System.
EDIT: Minimizes picture degradation during editing (recording and playback).
SOFT: Reduces image coarseness when viewing overplayed tapes containing a lot of noise.

## NOTES:

● When you select "EDIT" or "SOFT", the selected mode will not change until you select another mode.
● When you select "EDIT" to dub tapes, be sure to select "AUTO" after you finish dubbing the tapes.
● When "B.E.S.T." is "OFF", "PICTURE CONTROL" switches automatically from "AUTO" to "NORM".

### ■ O.S.D. — **ON** / OFF

When this function is set to "ON", various operational indicators appear on the TV screen. Messages appear in the selected language. (☞ pg. 10, 15)

## NOTES:

● When you use this unit as the source player for editing, be sure to set "O.S.D." to "OFF" before starting.
● During playback, the operation mode indicators may be disturbed depending on the type of tape being used.

### ■ DIRECT REC — **ON** / OFF

When this function is set to "ON", you can easily start recording the programme that you are watching on your TV. Press and hold ● and press ► on the remote control, or press ● on the unit.

## NOTES:

● When you use the Direct Rec function, be sure to use a TV offering T-V LINK, etc. and connect a fully-wired 21-pin SCART cable between the unit and the TV. (☞ pg. 9)
● If "DIRECT REC" is set to "OFF", the ● button functions as described in "Basic Recording" (☞ pg. 21).
● During Direct Rec, "– –" appears on the front display panel.
● When "DIRECT REC" is set to "ON", if you press any button just after pressing ● on the unit (or ● and ► on the remote control), the unit may not function properly.

### ■ AUTO SP➔LP TIMER — ON / **OFF**

When this function is set to "ON", the unit automatically switches to LP mode to allow complete recording if there is not enough tape to record the entire programme while timer-recording in SP mode.

**For Example:**
Recording a programme of 210 minutes in length onto a 180-minute tape

| Approximately 150 minutes | Approximately 60 minutes |
|---|---|
| SP mode | LP mode |
| Total 210 minutes | |

Make sure you set this function to "ON", before the timer-recording starts.

## NOTES:

● If you have programmed the unit to timer-record 2 or more programmes, the second programme and those thereafter may not fit on the tape if you set "AUTO SP➔LP TIMER" to "ON". In this case, make sure the mode is not engaged, then set the tape speed manually during timer programming.
● In order to ensure that the recording fits on the tape, this feature may leave a slight non-recorded section at the end of the tape.
● There may be some noise and sound disturbance at the point on the tape where the unit switches from SP to LP mode.
● The Auto SP➔LP Timer feature is not available during ITR (Instant Timer Recording), and the feature will not work properly with any tapes longer than E-180, or with some tapes of shorter lengths.
● If you perform timer recording with both VPS/PDC and the Auto SP➔LP Timer activated, and the programme goes beyond its originally scheduled length, there may be times when the programme cannot be recorded in its entirety.

### ■ POWER SAVE — ON / **OFF**

When this function is set to "ON", you can reduce the power consumption while the unit is turned off.

## NOTES:

● During Power Save mode:
 — the front display panel will be turned off.
 — the Just Clock function (☞ pg. 77) does not work.
 — the picture may be distorted momentarily when you turn on/off the unit.
● Power Save does not work when:
 — the unit is in the Timer mode.
 — the unit's power is turned off after timer-recording or Instant Timer Recording.
 — the Automatic Satellite Programme Recording mode is engaged. (☞ pg. 28)
 — "L-2 SELECT" is set to "DECODER" or "SAT". (☞ pg. 57)

### ■ VIDEO STABILIZER — ON / **OFF**

When this function is set to "ON", you can automatically correct vertical vibration in the picture when playing back unstable recordings made on another recorder.

## NOTES:

● When you finish viewing a tape, be sure to set this function to "OFF".
● Regardless of the setting, this function has no effect during recording and during special effects playback.
● The on-screen display may jitter vertically when this function is set to "ON".
● To watch recordings with close-caption, set this function to "OFF".

### ■ S-VHS — ON / OFF

Your unit can record in S-VHS (Super VHS), S-VHS ET or VHS.

● **To record in S-VHS:**
Set "S-VHS" to "ON". Then, insert a cassette marked "S-VHS". The S-VHS indicator lights up on the front display panel.
The S-VHS recording mode is selected.

● **To record in S-VHS ET on a VHS cassette:**
Set "S-VHS ET" to "ON". (☞ pg. 64) Then, insert a cassette marked "VHS". The S-VHS indicator lights up on the front display panel.

● **To record in VHS:**
Insert a cassette marked "VHS".
Set "S-VHS ET" to "OFF". (☞ pg. 64)
The VHS recording mode is automatically selected regardless of the "S-VHS" mode setting.

● **To record in VHS on an S-VHS cassette:**
Insert a cassette marked "S-VHS". The S-VHS indicator lights up on the front display panel. Then, set "S-VHS" to "OFF". The S-VHS indicator goes off.
The VHS recording mode is selected.

## NOTE:

When playing back a tape that has been recorded in S-VHS or S-VHS ET, the S-VHS indicator lights up on the front display panel regardless of the "S-VHS" mode setting.

### ■ COLOUR SYSTEM — PAL/NTSC / MESECAM

You can play back PAL, NTSC and MESECAM tapes, or record PAL and SECAM* signals on this unit. Select the appropriate colour system.

*\* SECAM signals will be recorded as MESECAM on this unit; MESECAM is the designation for tapes with SECAM signals that have been recorded on a MESECAM-compatible PAL video cassette recorder.*

**PAL/NTSC**: To record PAL signals, or play back a PAL or NTSC tape.

MESECAM: To record SECAM signals, or play back a MESECAM tape.

## NOTES:

● It is not possible to record in S-VHS if "MESECAM" is selected. The recording mode is forced to change to VHS.
● If "MESECAM" is selected when the tape speed is set to EP mode, the tape speed will be forced to change to LP mode.
● It is not possible to select EP mode if "MESECAM" is selected.

**About NTSC Playback**
● Some TVs shrink the picture vertically and place black bars at the top and bottom of the TV screen. This is not a malfunction on the part of either the unit or the TV.
● The picture may roll up and down. This can be corrected using the V-HOLD control found on some TVs. (This cannot be corrected if the TV does not have a V-HOLD control.)
● The counter and tape remaining time readings will be incorrect.
● During search, still, or frame-by-frame playback, the picture will be distorted, and there may be a loss of colour.
● Depending on the type of TV, the top and bottom portions of superimposed displays may be cut off during NTSC playback.

### ■ AUTO POWER OFF — 3H / OFF

When this function is set to "3H", the unit is turned off automatically if no operation is done within 3 hours. "AUTO POWER OFF IN 3 MIN" appears on the screen 3 minutes before the unit is turned off.
