PROBLEM	POSSIBLE CAUSE	SOLUTION
Skateboard won't move.	Skateboard is not paired with Controller. Steave/Controller is switched off. Weak Battery in Controller/Skateboard. Controller is not close enough to vehicle.	See Instructions (page 5) for correct pairing. Move switch to ON position. Ensure the batteries in the controller are fresh and the Skateboard Battery is fully charged. Make sure the Controller is placed within the signal receiving range.
Skateboard will not self-right.	Roll bar not present or installed correctly. Skateboard on a soft or uneven surface or does not have enough momentum to self-right.	See Instructions (page 2) on how to install the included Roll Bar. The Roll Bar is able to help the Skateboard self-right when on a hard surface and when it has enough momentum to get back on its wheels. Check the tread on the tires. Make sure the left side and right side have equal wear. Replace tires (See page 7) if necessary.
Skateboard will not go in a straight line.	Trim Control may need adjusting. Tires may be worn on one side.	See Instructions (page 5) on how to adjust the Trim Control. Check the tread on the tires. Make sure the left side and right side have equal wear. Replace tires (See page 7) if necessary.
The skateboard was ON and no longer responds to the controller.	Skateboard may have entered sleep mode.	If the remote control cannot wake up the skateboard, power OFF SKATEBOARD and then switch to ON and perform the pairing again.
The skateboard suddenly stops.	There is a built-in PTC to help protect the motor and battery from over-heating.	Skateboard may need to be immobile for a time allowing it to cool down while the PTC recovers.
