HOW TO TRANSFER THE DOOR HINGE LOCATION OF A REVERSIBLE DOOR

For your convenience, this door can be reversed by changing the position of the door hinge assembly.

1. Gently lay the refrigerator on its back.
2. Unscrew the leg at opening side and set aside. **There may be a screw next to the leg; if so unscrew it. Otherwise unable to attach the hinge.*
3. Unscrew two screws (some models have 3 screws) at the bottom hinge, remove the leg, a hinge and a shaft.
4. Unscrew two screws at the bottom of the door and remove the door stopper, then transfer them to the other side.
5. Pull the door toward you, and set it at the side. (We recommended putting the door on a blanket to avoid scratches.)
6. Remove the shaft carefully from the top table as using the screwdriver and relocate it to the other side.
7. Remove the hinge collar cap from the door cap, and then relocate it to the other side.
8. Reattach the door to the refrigerator cabinet toward the shaft at the top table and the bottom of the door hole has to meet with the shaft at the bottom hinge.
9. Reattach the hinge with two screws (some models have 3 screws), the leg and also the shaft with the hinge.
10. Now your door has been reversed. The following points should be checked.
 - A. Make sure the door is on straight.
 - B. Make sure that there is no space between the door gasket and the refrigerator unit itself when the door is closed.
 - C. Make sure that the gasket on the hinge side is not caught between the door and the unit when the door is opened or closed. (If the door is forced closed when the gasket is caught, the gasket may be damaged.)When checking the above points, if it is discovered that the door is not installed properly (this is apt to happen at the first try), loosen the screws holding the lower hinge, straighten the door and tighten the screws slowly with the socket wrench. After making sure that the door is installed correctly, tighten all the screws holding the door and the unit.
11. Stand the unit back in the upright position.
Wait 3 hours before plug in the power cord.

Use and Care Information

Tips on everyday care and use

1. To control the temperature:

First, set the cold control on "3". Wait 24 hours for the entire cabinet to cool. Then adjust the control if necessary. Setting the Cold Control to MIN, is the warmest setting; MAX is the coldest. The MAX setting may reduce the temperature to below freezing, but it will not cool the refrigerator faster.

The fresh food section should be as cold as possible without freezing vegetables or milk. Adjust as necessary.

2. Defrost:

Defrost when 1/4 inch of frost forms. Set the temperature control dial to OFF for defrosting. Remove food. Do not touch the freezing plate with your bare hands. Do not use electric defrost devices or hair dryers to melt the frost. They may damage the plastic parts. When defrosting is completed, wipe the freezing plate dry and reset the control dial. Return food to refrigerator.

3. For all cleaning:

Mix 2 tablespoons baking soda with 1 quart warm water or use a mild soap. Do not use strong cleaners, scouring powder or pads. For persistent odors, contact Sears Service Center for odor removal products. Do not put the drip tray in the dishwasher.

Energy Saving tips

1. **Close the door as soon as you can** after opening it. Make sure the door is fully shut after each use so the cold air does not escape from the refrigerator cavity.
2. **Adjust the Cold Control.** Try a warmer setting. Your refrigerator may be colder than necessary. Use the condition of milk to check refrigerator temperature. As long as milk keeps without spoiling your refrigerator is cold enough.
3. **Do Not** place hot foods in the refrigerator.
4. **Do Not** allow more than 1/4 inch of frost to build up in the freezer compartment.

5. **Reduce** the number and length of time you open the door. Your cooling system will not have to run as often.

6. **Keep your refrigerator level**, so that the door seals tightly. When the door is closed, the door gaskets should touch the refrigerator all the way around. If not, make your refrigerator level by use of the adjustable leg located under the unit.

7. **Keep your refrigerator away** from stoves or other heat sources. A cool and dry place allows your refrigerator to operate more efficiently.
