# Highlights

Congratulations on your purchase of the LSP-200 Fixed Wireless Telephone. This telephone has been designed to operate on the latest digital mobile communications technology. This technology has greatly enhanced voice clarity and can provide various advanced features.

The telephone provides:

- 3-line LCD Display with status indicator
- A choice of 10 ring sounds
- A menu driven interface with prompts for easy operation
- Last Number Redial
- Speed Dialing with a 99-number memory
- Dial tone
- ROH (Receiver Off-Hook) tone
- Step Ring Volume Level Switch
- Internal Back-up Battery Pack
- AC Power Supply
- Dipole Antenna
- DB9 Data Port for service and repair

# 1. Important Information

#### 1.1 Safety Information

#### Warning

To reduce the risk of fire or electric shock, do not expose this product to rain or moisture. Do not use this product near swimming pools or other bodies of water.

#### IMPORTANT

# Before installing or operating this product, read this information before using your telephone.

#### 1.2 Optimal Phone Performance

- Do not operate your product when holding the antenna, or when someone is within four inches (ten centimeters) of the antenna. Holding the antenna affects call quality and may cause the telephone to operate at a higher power level than needed.
- For the best call quality, keep the antenna free from obstructions and point the antenna straight up.
- Do not use the unit with a damaged antenna. Have your antenna replaced by a qualified technician immediately. Use only a manufacturer-approved antenna. Non-approved antennas, modifications, or attachments could impair call quality, damage the phone.
- RF energy may affect improperly installed or inadequately shielded personal medical devices such as pace markers, hospital monitor. Consult the manufacturer of any personal medical devices to determine if they are adequately shielded from external RF energy. Turn your terminal OFF in health care facilities when any regulations posted in the areas instruct you to do so. Hospitals or health care facilities may be using equipment that could be sensitive to external RF energy.
- If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
  - Reorient or relocate the receiving antenna
  - Increase the separation between the radio or television and the telephone.
  - Connect the equipment into an outlet on a circuit different from that to which the terminal is connected.
  - Consult you Authorized LGIC Dealer of an experienced radio/TV technician for help.
- Use only the battery, antenna and AC power supply provided by LGIC. Using any other type will invalidate the warranty.
- Only authorized personnel should service the phone and its accessories. Faulty installation or service any be dangerous and may invalidate the warranty.
- Do not use the unit in designated "no cellular phone use" area.
- Avoid exposure to high temperature or humidity.
- Avoid wetting the unit with any liquids. If the unit gets wet, turn the power off immediately and remove the backup battery and AC power supply. If the unit is inoperable, then return to the service agent for service.
- Avoid shock or impact.

• We recommend you to charge the backup battery before initial use. Backup battery may be discharged during delivery.

#### 1.3 Care and Service

- Unplug the telephone from the wall outlet and remove antenna (or disconnect antenna cable) before cleaning. Do not use liquid or aerosol cleaners. Use a damp cloth for cleaning.
- If the unit fails for any reason, do not attempt to disassemble; contact the telephone service provider for assistance.
- If any of the following conditions exist; unplug the unit at the wall plug, remove battery, and call the service provider.
  - The power supply cord is damaged or frayed.
  - Liquid has been spilled into the unit.
  - The unit has been exposed to rain or water.
  - The unit has been dropped or damaged.
  - The unit does not work normally by following the operating instructions.

# 2. Introduction

# 2.1 Front View of the Telephone

## 2.2 LCD Display

The LCD shows different wireless state and the displays visual feedback for the actions performed by user.

#### 2.3 Installation

You should follow each step carefully as shown below in order to guarantee proper operation of CDMA Fixed Wireless Telephone.

#### STEP I. Check Components

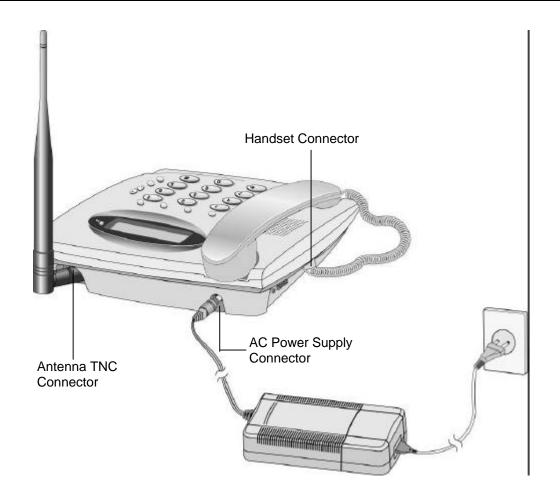

- Fixed Wireless Terminal is supplied with the following standard unit and accessories;
  - LSP-200 Main Unit with Handset -1EA Dipole Antenna -1EA Backup Battery -1EA User Guide -1EA AC/DC Power Adapter -1EA Power Cord(Only SMPS Adapter) -1EA-
- Please make sure that these components are present before you begin the unit installation. And then compare the following figures and components. If components are missing or damage is found, contact the store where you purchased the unit immediately.

#### STEP II. Place the Terminal

- Place the terminal on the stable flat secure surface area (desk, table, etc.). Serious damage may result if the unit falls. Do not place the unit on, or within 1 meter of heaters or radiators. This unit is designed for desktop usage. Avoid direct exposure to the sun lights and damp area.
- Read the SAFETY INFORMATION located at the first part of this document before you place the terminal

#### STEP III. Connect Components (See the figures in "Installation Steps".)

- Connect the antenna to the TNC antenna connector located at the top side of the terminal. If you placed the terminal on the flat surface, bend the antenna up right.
- Connect curl cord of handset assembly to the RJ-11C port located at the left side of the terminal.
- Open the battery case, securely connect the battery cord, place the backup battery pack and close the case.
- Connect the AC/DC Adapter cable to the DC input port located at the topside of the terminal.
- Please follow the below to get the better voice quality;
  - 1. Keep away from electrical appliances such as TV, computer, radio and so on.
  - 2. Keep terminal in a high and central location with no obstructions, such as metal walls.
  - 3. Raise the integral antenna of terminal to get maximum strength of receive signal as shown figure at the next page.

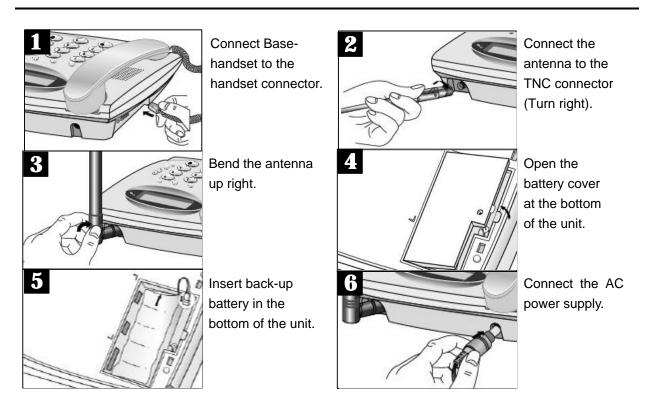

#### STEP IV. Check the LCD Display

- After you follow the installation instruction *step I* to *step III*, please check the LCD for normal operation.
- If you may not see status of service, please repeat the 5<sup>th</sup> instruction of step III. And conform Fixed Wireless Telephone to get the proper signal strength from service operator system.

## 2.4 Installation Steps

Please follow the below procedure to install the unit properly.

# 3. Basic Operation

#### 3.1 Making a Call

- 1. Pick up the handset or press **I**Dutton.
- 2. Listen for dial tone
- 3. Enter the phone number with area code if needed.

Yull 🖍	
	1234567
Till 🦿	<b></b>

- 4. Wait for the Auto Time-out.
- 5. The call is connected and you can start conversation.
- 6. To disconnect the call, replace the handset or press

#### 3.2 Redialing Last Outgoing Number

Pick up the handset or press Woutton.

Listen for dial tone.

Press Redial button. The last number that you called will be re-dialed.

#### • Correcting dialing mistakes

- 1. Press **Clear** button shortly to erase the most recent digit.
- 2. Press and hold **Clear** button for at least one second.
- If the phone is locked ,enter the Lock Code
- If the call did not go through, press the hook switch and dial again.
- Flashing / Hook Switch
  - 1. While in the middle of a call, pressing the hook switch for less than 1 second will be treated as a flash. After 1 second, the call will be terminated.
  - 2. Very briefly pressing the hook switch will be ignored.
- Battery icon is displayed only when the terminal is battery operating without AC power.

#### 3.3 Receiving a Call

- 1. When bell rings, pick up the handset.
- 2. Start conversation.
- 3. To disconnect the call, replace the handset.

.!	

#### 3.4 Signal Strength

The quality of calls depends on the signal strength in your area. The stronger the signal, the better the call quality. The signal strength icon indicates the current strength as a number of bars. You can see the antenna and bars according to the strength of received signal in the upper-left part.
