

# External Equipment Connections

## PC Setup

- This monitor provides Plug and Play capability, meaning that the PC adjusts automatically to its settings. The monitor sends configuration information (EDID) to the PC using the Video Electronics Standard Association (VESA) Display Data Channel (DDC) protocol.
- The monitor perceives 640x480, 60Hz as DTV 480p based on the PC graphic card. In this case, change the screen scanning rate for the graphic card.

### How to connect

1. To get the best picture quality, adjust the PC graphics card to a 1600x1200, 60Hz.
2. Use the monitor's RGB INPUT or HDMI1 port for video connections, depending on your PC connector.

If the graphic card on the PC does not output analog and digital RGB simultaneously, connect only one of either RGB INPUT or HDMI1 INPUT to display the PC on the monitor.

If the graphic card on the PC does output analog and digital RGB simultaneously, set the monitor to either RGB or HDMI1; (the other mode is set to Plug and Play automatically by the monitor.)

3. Then, make the corresponding audio connections. If using a sound card, adjust the PC sound as required.

### How to use

1. Turn on the PC and the monitor.
2. Turn on the display by pressing the POWER button on the monitor's remote control.
3. Use the **INPUT** button on the remote control to select **RGB** or **HDMI1**.
4. Check the image on your monitor. There may be noise associated with the resolution, vertical pattern, contrast or brightness in PC mode. If noise is present, change the PC mode to another resolution, change the refresh rate to another rate or adjust the brightness and contrast on the menu until the picture is clear. If the refresh rate of the PC graphic card can not be changed, change the PC graphic card or consult the manufacturer of the PC graphic card.

- NOTES:**
- Use a HDMI to DVI cable.
  - Avoid keeping a fixed image on the monitor's screen for a long period of time. The fixed image may become permanently imprinted on the screen. Use the Orbiter screen saver when possible.
  - The synchronization input form for Horizontal and Vertical frequencies is separate.

**HDMI™**  
HIGH DEFINITION MULTIMEDIA INTERFACE

- HDMI™, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI Licensing LLC."
- This monitor can receive the High-Definition Multimedia Interface(HDMI).
- This monitor supports HDCP(High-bandwidth Digital Contents Protection) Protocol for 480p, 720p, 1080i, 1080p modes.
- When you Connect with HDMI Source Devices (DVD Player or Set Top Box) supporting Auto HDMI function, automatically, support Plug & Play and then set the HDMI Source Devices(1920 x 1080i). After reading in HDMI Source Devices using Display Data Channel(DDC) Protocol, EDID stored in monitor is used. If HDMI Source Devices not supported Auto HDMI is been, the Resolution is setted, manually.
- To get the best picture quality, adjust the DVD Player or Set Top Box output resolution to 1920 x 1080i.

**How to connect**

- When Source Devices(DVD Player or Set Top Box) support HDMI.
- If Source Devices have HDMI Output Connector, Source Devices connect to DTV with HDMI Cable .(not supplied with the product).
  - If Source Devices support Auto HDMI, automatically, Source Devices divert output resolution in 1920 x 1080i. But if not, resolution divert Manually Setting for reference Manual of Source Devices.
  - To get the best picture quality, adjust the DVD Player or Set Top Box output resolution to 1920 x 1080i.
  - Because HDMI sends Digital Video and Audio with one cable, need not especial Audio Cable for using HDMI Cable.

### Transmission / Receiving Protocol

#### Transmission

[Command1][Command2][ ][Set ID][ ][Data][Cr]

- \* [Command 1]: k, j, m
- \* [Command 2]: To control PDP set.
- \* [Set ID]: You can adjust the set ID to choose desired monitor ID number in Special menu. Adjustment range is 1 ~ 99. When selecting Set ID '0', every connected PDP set is controlled. Set ID is indicated as decimal (1~99) on menu and as Hexa decimal (0x0~0x63) on transmission/receiving protocol.
- \* [DATA]: To transmit command data.  
Transmit 'FF' data to read status of command.
- \* [Cr]: Carriage Return  
ASCII code '0x0D'
- \* [ ]: ASCII code 'space (0x20)'

#### OK Acknowledgement

[Command2][ ][Set ID][ ][OK][Data][x]

- \* The Monitor transmits ACK (acknowledgement) based on this format when receiving normal data. At this time, if the data is data read mode, it indicates present status data. If the data is data write mode, it returns the data of the PC computer.

#### Error Acknowledgement

[Command2][ ][Set ID][ ][NG][x]

- \* The Monitor transmits ACK (acknowledgement) based on this format when receiving abnormal data from non-viable functions or communication errors.

# IR Code

## How to Connect

- ▶ Connect your wired remote control to the Remote Control port on the Monitor.

## Remote Control IR Code

### ▶ Output waveform

Single pulse, modulated with 37.917KHz signal at 455KHz

### ▶ Configuration of frame

- 1st frame

- Repeat frame

### ▶ Lead code

### ▶ Repeat code

### ▶ Bit description

- Bit "0"

- Bit "1"

### ▶ Frame interval : Tf

The waveform is transmitted as long as a key is depressed.

## Programming the Remote

- ▶ The remote control is a multi-brand or universal remote control. It can be programmed to operate most remote-controllable devices of other manufacturers.  
Note that the remote control may not control all models of other brands.

### Programming a code into a remote mode

1. Test your remote control.  
To find out whether your remote control can operate the component without programming, turn on the component such as a VCR and press the corresponding **MODE** button (VCR) on the remote control, while pointing at the component.
2. Turn on the component to be programmed, then press the corresponding **MODE** button on the remote control.
3. Press the **MENU** and **MUTE** buttons simultaneously, the remote control is ready to be programmed for the code.
4. Enter a code number using the number buttons on the remote. Programming code numbers for the corresponding component can be found on the following pages. Again, if the code is correct, the device will turn off.
5. Press the **MENU** button to store the code.
6. Test the remote control functions to see if the component responds properly. If not, repeat from step 1.

## Troubleshooting Checklist

### No picture & No sound

- Check whether the Monitor is turned on.
- Power cord inserted into wall outlet?
- Test the wall power outlet, plug other product's power cord into the wall outlet where the Monitor's power cord was plugged in.

### Picture OK & No sound

- Press the **VOLUME (+)** button.
- Sound muted? Press **MUTE** button.

### The remote control doesn't work

- Check to see if there is any object between the Plasma Display and the remote control causing obstruction.
- Are batteries installed with correct polarity (+ to +, - to -)? (Refer to p.9)
- Install new batteries. (Refer to p.9)

### Picture appears slowly after switching on

- This is normal, the image is muted during the plasma display startup process. Please contact your service center, if the picture has not appeared after five minutes.

### No or Poor color or Poor picture

- Select **Color** in the **Picture** menu and press the ► button. (Refer to p.20)
- Keep a sufficient distance between the Monitor and the VCR.
- Activate any function to restore the brightness of the picture. (If still picture is on the screen for more than 5 minutes, the screen gets dark.)

### Horizontal/vertical bars or picture shaking

- Check for local interference such as an electrical appliance or power tool.

### No output from one of the speakers

- Adjust **Balance** in the **Sound** menu. (Refer to p.21)

### Unusual sound from inside the monitor

- A change in ambient humidity or temperature may result in an unusual noise when the plasma display is turned on or off and does not indicate a fault with the monitor.
