## Disc-related terms

### DVD $\pm$ R / DVD $\pm$ RW

DVD -R and DVD +R are two different standards for recordable DVD drives and discs. This format allows information to be recorded onto the DVD disc only once. DVD +RW and DVD -RW are two standards for re-writable media, meaning the DVD content can be erased and re-recorded. Single-sided discs can hold 4.38 Gigabytes and double-sided discs hold twice as much. There are no dual layer single sided recordable discs.

### DVD-RAM

????

### DVD +R (Double Layer)

Double layer recording technology offers two recordable layers on a single DVD disc, providing nearly double the capacity of 4.7GB single layer DVDs. The greatest, most valuable benefit of double layer recording technology is increased capacity. Storage space is nearly doubled with double layer DVD+R media, allowing consumers to burn up to 8.5GB of video on a single DVD+R disc.

### VCD (Video CD)

A VCD holds up to 74 minutes (650 MB disc) or 80 minutes (700 MB disc) of MPEG-1 full-motion video along with quality stereo sound.

### MPEG

MPEG is an international standard for video and audio compression. MPEG-1 is used in encoding video for VCD and provides for multichannel surround sound coding such as PCM, Dolby Digital, DTS and MPEG audio.

### MP3

MP3 is a popular compression format used for digital audio files that yields very high near-CD quality.

### WMA

Windows media audio file. A type of coding / decoding developed by Microsoft Corp.

### JPEG

Joint Pictures Expert Group. JPEG is a compressed file format that allows you to save images with no limit on the number of colors.

### DivX

DivX is the name of a revolutionary new video codec which is based on the new MPEG-4 compression standard for video. You will be able to play DivX movies using this recorder.

### PBC: Playback Control (Video CD only)

Playback control is available for Video CD (VCD) version 2.0 disc formats. PBC allows you to interact with the system via menus, search functions, or other typical computer-like operations. Moreover, still pictures of high resolution can be played if they are included in the disc. Video CDs not equipped with PBC (Version 1.1) operate in the same way as audio CDs.

### Title (DVD video discs only)

A title is generally a distinct section of a DVD disc. For example the main feature could be title 1, a documentary describing how the film was made could be title 2, and cast interviews could be title 3. Each title is assigned a reference number enabling you to locate it easily.

### Chapter (DVD video discs only)

A chapter is a segment of a title such as a scene in a film or one interview in a series. Each chapter is assigned a chapter number, enabling you to locate the chapter you want. Depending on the disc, chapters may not be recorded.

### Scene (VCD)

On a video CD with PBC (playback control) functions, moving pictures and still pictures are divided into sections called "scenes". Each scene is displayed in the menu screen and assigned a scene number, enabling you to locate the scene you want. A scene is composed of one or several tracks.

### Track

A distinct element of audiovisual information, such as the picture or sound track for a specific language (DVD), or a musical piece on a video or audio CD. Each track is assigned a track number, enabling you to locate the track you want. DVD discs allow one track of video (with multiple angles) and several tracks of audio.

## Notes on MP3/WMA Recordings

### About MP3

- An MP3 file is audio data compressed by using the MPEG1 audio layer-3 file-coding scheme. We call files that have the “.mp3” file extension “MP3 files”.
- The VCR/DVD Recorder can not read an MP3 file that has a file extension other than “.mp3”.

### About WMA (Window Media Audio)

- A WMA file is made using Microsoft audio compression technology.
- WMA (Windows Media Audio) offers double the audio compression of the MP3 format.

### MP3 / WMA disc compatibility with this player is limited as follows:

- The player cannot read an MP3/WMA file that has a file extension other than “.mp3” / “.wma”.
- CD-R physical format should be ISO 9660
- If you record MP3 / WMA files using software that cannot create a file system (eg. Direct-CD) it is impossible to playback MP3 / WMA files. We recommend that you use Easy-CD Creator, which creates an ISO 9660 file system.
- The total number of files and folders on the disc are free but the total number of files and folders on the folder should be less than 999.

This VCR/DVD Recorder requires discs and recordings to meet certain technical standards in order to achieve optimal playback quality. Pre-recorded DVDs are automatically set to these standards. There are many different types of recordable disc formats (including CD-R containing MP3 or WMA files) and these require certain pre-existing conditions (see above) to ensure compatible playback.

**Customers should note that permission is required in order to download MP3 / WMA files and music from the Internet. Our company has no right to grant such permission. Permission should always be sought from the copyright owner.**

## Notes on MP3/WMA Recordings

- Depending upon the size and number of JPEG files, it could take a long time for the DVD+VCR to read the disc's contents. If you don't see an on-screen display after several minutes, some of the files may be too large — reduce the resolution of the JPEG files to less than 5760 x 3840 pixels and burn another disc.
- The total number of files and folders on the disc should be less than 1500.
- Some discs may be incompatible due to a different recording format or the condition of disc.
- Ensure that all the selected files have the “.jpg” extensions when copying into the CD layout.
- If the files have “.jpe” or “.jpeg” extensions, please rename them as “.jpg” file.
- File names without “.jpg” extension will not be able to be read by this DVD+VCR. Even though the files are shown as JPEG image files in Windows Explorer.

### DivX disc compatibility with this player is limited as follows:

- Available resolution size of the DivX file is under 720x576 (W x H) pixel.
- The file name of the DivX subtitle is limited to characters.
- If there is impossible code to express in the DivX file, it may be displayed as " \_ " mark on the display.
- **If the number of the screen frame is over 30 frames per second, this unit may not operate normally.**
- **If the video and audio structure of recorded file is not interleaved, either video or audio is outputted.**
- **If the file is recorded with GMC, the unit supports only 1-point of the record level.**
  - \* GMC?  
GMC is the acronym for Global Motion Compensation. It is an encoding tool specified in MPEG4 standard. Some MPEG4 encoders, like DivX or Xvid, have this option. There are different levels of GMC encoding, usually called 1-point, 2-point, or 3-point GMC.

### Caution

Do not touch the inner pins of the jacks on the rear panel. Electrostatic discharge may cause permanent damage to the unit.

## Preparation

Depending on your TV and other equipment there are various ways you can connect the player. Please refer to the manuals of your TV, VCR, stereo system or other devices as necessary for additional connection information.

### Notes:

- Make sure the VCR/DVD Recorder is connected directly to the TV and tune the TV to the correct video input channel.
- Do not connect the VCR/DVD Recorder's AUDIO OUT jack to the phono in jack (record deck) of your audio system. Do not connect the VCR/DVD Recorder via another VCR. The DVD image could be distorted by the copy protection system.
- The picture and sound of a nearby TV, VCR, or radio may be distorted during playback. Position the units away from each other or turn off the unit after removing the disc.

## Connecting an Antenna or Cable TV

### 1 Antenna:

Disconnect the antenna from the rear of the TV and identify the antenna cable. If it is a round 75 ohm coaxial cable connect it directly to the jack marked ANT.IN on your VCR/DVD Recorder. If your antenna cable is flat connect it to a 300-ohm to 75-ohm antenna adaptor (not supplied) and slip the adaptor over the ANT.IN jack. Don't attempt to screw it into the VCR/DVD Recorder.

### 2 Cable TV:

If your cable connection has no converter or descrambler, unscrew the cable from your TV and attach it to the ANT.IN jack on the VCR/DVD Recorder. If a converter is required connect a coaxial cable from the wall jack to the IN connector on the converter, and a coaxial cable from the OUT connector on the converter to the ANT IN on your VCR/DVD Recorder. This cable hookup permits both TV and VCR/DVD Recorder operation.

### To view or record a CATV channel

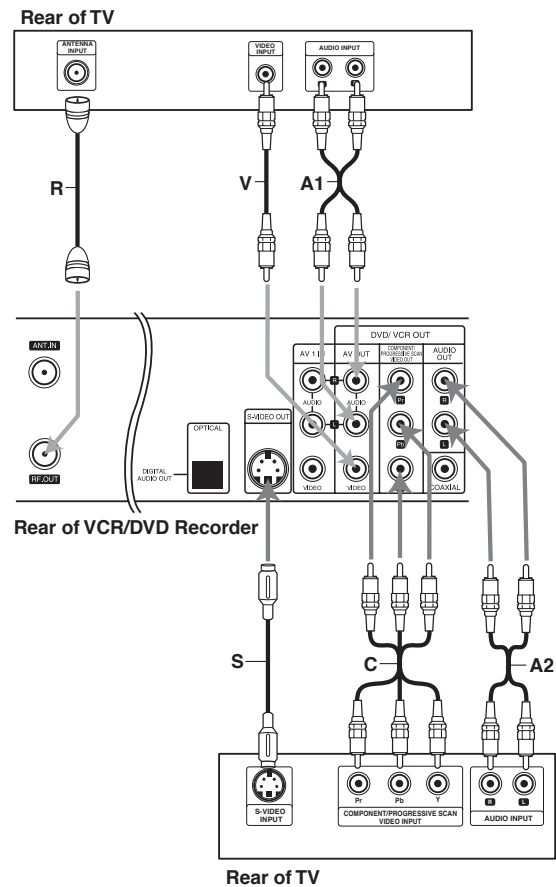

- 1 Tune the TV to the VCR/DVD Recorder output channel (CH 3 or 4).
- 2 Set the VCR/DVD Recorder channel selector to the cable output channel. (Example: CH3)
- 3 Select a channel using the cable converter.

### Notes:

- With this connection, you cannot record one program while viewing another.
- If you are using a cable box to tune channels, it is not necessary to do Auto Channel Set.

## Basic TV Connections

Make one of the following connections, depending on the capabilities of your TV.

### RF coaxial connection

Connect the RF.OUT jack on the VCR/DVD Recorder to the antenna in jack on the TV using the supplied 75-ohm Coaxial Cable (**R**).

### How to set the VCR/DVD Recorder's RF output channel

1. When the VCR/DVD Recorder is turned off, press and hold CH (▼/▲) on the front panel for more than five seconds. "RF-03" or "RF-04" appears in the display window.
2. Press CH (▼/▲) to change the RF output channel (CH 03 or CH 04). Tune the TV to this channel.
3. Turn off the VCR/DVD Recorder.

### Audio/Video connection

1. Connect the DVD/VCR VIDEO OUT jack on the VCR/DVD Recorder to the video in jack on the TV using the video cable supplied (**V**).
2. Connect the Left and Right DVD/VCR AUDIO OUT jacks on the VCR/DVD Recorder to the audio left/right in jacks on the TV (**A1**) using the supplied audio cables.

#### Note:

If you use this connection, set the TV's source selector to VIDEO.

## Optional TV Connections

These connections support only DVD playback. The tuner and VCR still output through the RF.OUT (**R**) or DVD/VCR OUT (**A**, **V**) jacks.

### S-Video connection

1. Connect the S-VIDEO OUT jack on the VCR/DVD Recorder to the S-Video in jack on the TV using the optional S-Video cable (**S**).
2. Connect the Left and Right AUDIO OUT jacks of the VCR/DVD Recorder to the audio left/right in jacks on the TV using the supplied audio cables (**A2**).

### Component Video / Progressive Scan connection

If your television is a high-definition or "digital ready" television, you may take advantage of the VCR/DVD Recorder's progressive scan output for the highest video resolution possible.

1. Connect the COMPONENT/PROGRESSIVE SCAN VIDEO OUT jacks on the VCR/DVD Recorder to the corresponding in jacks on the TV using an optional Y Pb Pr cable (**C**).
2. Connect the Left and Right AUDIO OUT jacks of the VCR/DVD Recorder to the audio left/right in jacks on the TV (**A2**) using the supplied audio cables.

#### Notes:

- Set Progressive Scan option to "ON" in the General menu, see page 21.
- Progressive Scan does not work with the RF, Audio/Video or S-Video connections.
- If your TV does not accept the Progressive Scan format, the picture will appear scrambled.
- When you use Component Video signal, set the Progressive Scan to "Off" on the General menu.

## Audio Connection

### Connecting to an amplifier equipped with two channel analog stereo or Dolby Pro Logic II/Pro Logic

Connect the Left and Right AUDIO OUT (or DVD/VCR AUDIO OUT) jacks on the VCR/DVD Recorder to the audio left and right in jacks on your amplifier, receiver, or stereo system using the audio cables (**A**) supplied.

**Connecting to an amplifier equipped with two channel digital stereo (PCM) or to an Audio/Video receiver equipped with a multi-channel decoder (Dolby Digital™, MPEG 2, or DTS)**

1. Connect one of the VCR/DVD Recorder's DIGITAL AUDIO OUT jacks ( OPTICAL **O**, COAXIAL **X**) to the corresponding in jack on your amplifier. Use an optional digital (OPTICAL **O**, COAXIAL **X**) audio cable.
2. You will need to activate the VCR/DVD Recorder's digital output. (See "AUDIO" on page 18).

### Digital Multi-channel sound

A digital multi-channel connection provides the best sound quality. For this you need a multi-channel Audio/Video receiver that supports one or more of the audio formats supported by your VCR/DVD Recorder (MPEG 2, Dolby Digital and DTS). Check the receiver manual and the logos on the front of the receiver.

### Caution:

Due to the DTS Licensing agreement, the digital output will be in DTS digital out when DTS audio stream is selected.

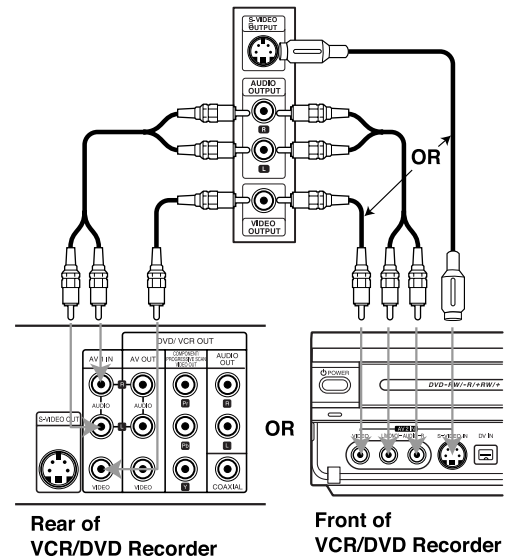

### Notes:

- If the audio format of the digital output does not match the capabilities of your receiver, the receiver will produce a strong, distorted sound or no sound at all.
- Six Channel Digital Surround Sound via digital connection can only be obtained if your receiver is equipped with a Digital Multi-channel decoder.
- To see the audio format of the current DVD in the on-screen display, press AUDIO.
- This VCR/DVD Recorder does not perform internal (2 channel) decoding of a DTS sound track. To enjoy DTS multi channel surround, you must connect this VCR/DVD Recorder to a DTS compatible receiver via one of this VCR/DVD Recorder's digital audio outputs.

### Accessory Audio/Video (A/V) Connections to VCR/DVD Recorder

Connect the AV 1 IN or AV 2 IN jacks on the VCR/DVD Recorder to the audio/video out jacks on your accessory component, using the optional audio/video cables. (Refer to page 24 for "Dubbing and Editing".)

Jack panel of Accessory Component (VCR, Camcorder, etc.)

### Connecting a Digital Camcorder

Use a DV cable (not supplied) to connect the DV in/out jack of your DV Digital Camcorder to the front panel DV IN jack of this VCR/DVD Recorder.

### Note:

This jack is for connection to DV equipment only. It is not compatible with digital satellite tuners or D-VHS video decks.

## Sample Freq. (Frequency)

If your receiver or amplifier is NOT capable of handling 96 kHz signals, select 48 kHz. When this choice is made, this unit automatically converts any 96 kHz signals to 48 kHz so your system can decode them. If your receiver or amplifier is capable of handling 96 kHz signals, select 96 kHz. When this choice is made, this unit passes each type of signal through without any further processing. Check the documentation for your amplifier to verify its capabilities.

## DRC (Dynamic Range Control)

With the DVD format, you can hear a program's soundtrack in the most accurate and realistic presentation possible, thanks to digital audio technology. However, you may wish to compress the dynamic range of the audio output (the difference between the loudest sounds and the quietest ones). This allows you to listen to a movie at a lower volume without losing clarity of sound. Set DRC to On for this effect.

## Vocal

Set Vocal to ON only when a multi-channel karaoke DVD is playing. The karaoke channels on the disc will mix into normal stereo sound.

## LOCK (Parental Control)

### Movie Rating

Some movies contain scenes that may not be suitable for children to view. Many of these discs contain parental control information that applies to the complete disc or to certain scenes on the disc. Movies and scenes are rated from 1 to 8, depending on the area. DVD video discs may or may not respond to the parental control setting if the Area code of the disc is set wrongly. Some discs offer more suitable scenes as an alternative. Ratings are area dependent. The parental control feature allows you to block access to scenes below the rating you input, thereby preventing your children from being able to view material you believe is unsuitable.

1. Select "Movie Rating" on the LOCK menu then press ►.
2. To access the Rating, Password and Area Code features, you must input the 4-digit security code you created.

If you have not yet entered a security code you are prompted to do so. Input a 4-digit code and press ENTER. Enter it again and press ENTER to verify. If you make a mistake before pressing ENTER, press CLEAR.

3. Select a rating from 1 to 8 using the ▲ / ▼ buttons.

**1-8:** Rating one (1) has the most restrictions and rating eight (8) is the least restrictive.

**No Limit :** If you select unlock, parental control is not active and the disc plays in full.

4. Press ENTER to confirm your rating selection, then press SETUP to exit the menu.
5. Press OPEN/CLOSE (▲) to activate parental control.

### Note:

If you set a rating for the player, all disc scenes with the same rating or lower are played. Higher rated scenes are not played unless an alternate scene is available on the disc. The alternative must have the same rating or a lower one. If no suitable alternative is found, playback stops. You must enter the 4-digit password or change the rating level in order to play the disc.

## Set Password

You can enter or change password.

1. Select "Set Password" on the LOCK menu then press ►.

2. Follow step 2 as shown "Movie Rating". To change the password, select the "Change", press ENTER and input the new 4-digit code then press ENTER. Input it again to verify.
3. Press SETUP to exit the menu.

### *If you forget your password*

If you forget your password you can clear it using the following steps:

1. Press SETUP to display the Setup menu.
2. Input the 5-digit number "21019". The message appears, select "Yes" then press ENTER. The security code is cleared.
3. Enter a new code as described above.

## Area Code

Enter the Area Code whose standards were used to rate the DVD video disc, based on the list in the reference chapter (see p. ??).

1. Select "Area Code" on the LOCK menu then press ►.
2. Follow step 2 as shown "Movie Rating".
3. Select the first character using ▲ / ▼ buttons.
4. Press ► and select the second character using ▲ / ▼ buttons.
5. Press ENTER to confirm your area code selection.

## RECORD

### Disc Record Mode

You can set the picture quality for DVD recording; XP (High quality), SP (Standard quality), LP (Low quality), EP (Extend quality).

1. Select the "Disc Record Mode" on the RECORD menu then press ►.
2. Use ▲ / ▼ to select a desired Disc Record Mode (XP, SP, LP or EP).
3. Press ENTER to confirm your selection, then press SETUP to exit the menu.

### VCR Record Mode

You can set the picture quality for VCR recording; SP (Standard Play), SLP (Super Long Play).

### DV Record Audio

You need to set this if you have a camcorder using 32kHz/12-bit sound connected to the front panel DV IN jack. Some digital camcorders have two stereo tracks for audio. One is recorded at the time of shooting; the other is for overdubbing after shooting.

On the Audio 1 setting, the sound that was recorded while shooting is used.

On the Audio 2 setting, the overdubbed sound is used.

## Auto Chapter

During recording, chapter markers are added automatically at fixed intervals. You can set this interval to 5 minutes or 10 minutes. To turn off automatic chapter marking, select "None".

## DISC

### Disc Initialize

If you load a completely blank disc, the recorder will initialize the disc.

- DVD-R/DVD+R/DVD+RW: The recorder formats in Video mode.
- DVD-RW: The recorder initialize the disc to VR Mode or Video Mode.
- DVD-RAM: The recorder initialize the disc to VR Mode.

Also, you can format the disc from the Setup menu as below.

- 1 Select the "Disc Initialize" on the DISC menu then press ►.  
"Start" icon is highlighted.
- 2 Press ENTER.
  - In case of DVD-RW, use ◀ / ▶ to select a desired Disc Initialize Mode (VR Mode or Video Mode) then press ENTER.
  - In case of DVD+RW/DVD-RAM, use ◀ / ▶ to select "OK", and press ENTER.  
It takes a few moments to format the disc.

### Caution

If you want to change the disc format, everything recorded on the disc will be erased.

## Disc Finalize

Finalizing 'fixes' the recordings in place so that the disc can be played on a regular DVD player or computer equipped with a suitable DVD-ROM drive. Finalizing a Video mode disc creates a menu screen for navigating the disc. This is accessed by pressing LIST/DISC MENU or TITLE.

### Caution

Once you have finalized a DVD-R and DVD+R disc, you cannot edit or record anything else on that disc except DVD+RW. However, you can record and edit a DVD-RW disc by choosing Unfinalize.

- 1 Select the "Disc Finalize" on the DISC menu then press ►.  
Finalize is highlighted.
- 2 Press ENTER.
- 3 Use ◀ / ▶ to select OK then press ENTER.  
The VCR/DVD Recorder starts finalizing the disc.

### Note:

Finalization can take up to 3-4 minutes or more depending on the type of disc, how much is recorded on the disc, and the number of titles on the disc.

### Tips

## What is DV?

Using DV, also known as i.LINK, you can connect a DV-equipped camcorder to this recorder using a single DV cable for input and output of audio, video, data and control signals.

The i.LINK interface is also known as IEEE 1394-1995. "i.LINK" and the "i.LINK" logo are trademarks.

- This recorder is only compatible with DV-format (DVC-SD) camcorders. Digital satellite tuners and Digital VHS video recorders are not compatible.
- You cannot connect more than one DV camcorder at a time to this recorder.
- You cannot control this recorder from external equipment connected via the DV IN jack (including two DVD Recorders).
- It may not always be possible to control the connected camcorder via the DV IN jack.
- Digital camcorders can usually record audio as stereo 16-bit/48kHz, or twin stereo tracks of 12-bit/32kHz. The VCR/DVD Recorder can only record one stereo audio track. Set DV Record Audio to Audio 1 or Audio 2 as necessary (see page 26).
- Audio input to the DV IN jack should be 32 or 48kHz (not 44.1kHz).
- Picture disturbance on the recording may occur if the source component pauses playback or plays an unrecorded section of tape, or if the power fails in the source component, or the DV cable becomes disconnected.
- If DV Record Audio is set to Audio 2, but no Audio 2 signal is present, DV Record Audio will be reset to Audio 1 automatically.

## DV-Related Messages

You may see the following messages appear on your TV screen when using the DV IN jack.

### **Not connected to Camcorder.**

The camcorder is not connected properly, or the camcorder is switched off.

### **Too many devices connected.**

The DV jack on this recorder supports connection to just one camcorder.

### **Check the tape.**

There is no cassette loaded into the connected equipment.

### **Uncontrollable device.**

The VCR/DVD Recorder cannot control the camcorder.

### **Updating the Information.**

Camcorder is updating information for DV.

### **Camera mode.**

Camcorder is set to camera mode.

## Troubleshooting

If you cannot get a picture and/or audio through the DV IN jack, check the following:

- Make sure the DV cable is properly connected.
- Try switching off the connected equipment, then switch it back on.
- Try switching the audio input.

### **Notes:**

- Depending on the connected camcorder, you may not be able to control it using the Remote Control supplied with this VCR/DVD Recorder.
- Before you set the mode of your Camcorder to camera mode, turn down the volume of connected Sound device. There can be a howling sound.

## Title and Chapter Editing

Edits you make to the Original content changes the actual content of the disc. For example, if you delete a title or chapter from the Original content (Title or Chapter), that title or chapter is deleted from the disc, freeing up extra recording time.

When you edit the Playlist, on the other hand, you are not changing the content of the disc. For example, when you delete a title from the Playlist, you are just telling the recorder not to play that title; nothing is actually deleted from the disc.

### Titles, Chapters and Parts

Titles in the disc's original content contain one or more chapters. When you insert a title into the Playlist, all the chapters within that title also appear. In other words, chapters in the Playlist behave exactly as chapters on a DVD-Video disc do. Parts are sections of Original or Playlist titles. From the Original and Playlist menu you can add or delete parts. Adding a chapter or title to the Playlist creates a new title made up of a section (ie., chapter) of an Original title. Deleting a part removes part of a title from the Original or Playlist menu.

#### Caution

- When editing using the Delete, Add and Move functions, the start and end frames may not be exactly as set in the start and end point display.
- During Playlist playback, you may notice a momentary pause between edits. This is not a malfunction.

## Adding Chapter Markers

You can put a chapter marker anywhere in a title during recording or playback.

Once the chapter is marked, you can use the Chapter Search feature, as well as Erase, combine and move chapters in the Chapter List menu.

- 1 Play the title (Original or Playlist).
- 2 At the point you want to start a new chapter, press CHP ADD.  
A chapter marker icon appears on the TV screen.

#### Notes:

- Chapter markers are inserted at regular intervals automatically. You can change this interval from the Initial Setup menu (see Auto Chapter on page 26).
- You can also put chapter markers during recording.

## Changing Title Thumbnails

Each title displayed in the Title List menu is represented by a thumbnail picture taken from the start of that title or chapter.

If you prefer, select a different still picture from within a title.

- 1 Play the title (Original or Playlist).
- 2 Press THUMBNAIL to make the currently displayed picture the one that appears in the Original or Playlist menu.  
The still picture that you choose appears in both the Original or Playlist menu.

#### Tip:

You can also change the thumbnail picture of the title on the Chapter List-Original or Chapter List-Playlist menu. Select a chapter on the Chapter List-Original or Chapter List-Playlist menu then press THUMBNAIL. The thumbnail picture of the title that includes the chapter is changed.
