

80.00 mm

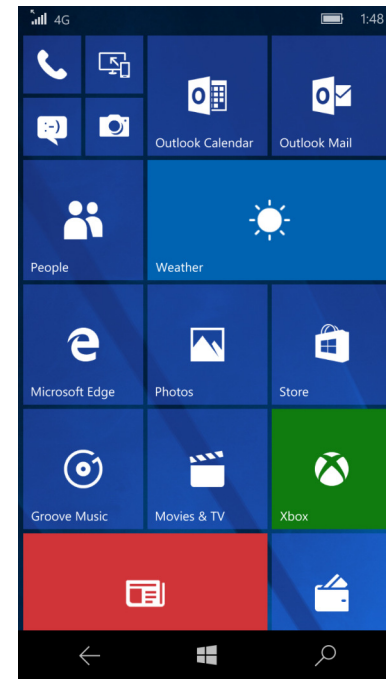

Quick guide
SoftBank 503LV

lenovo

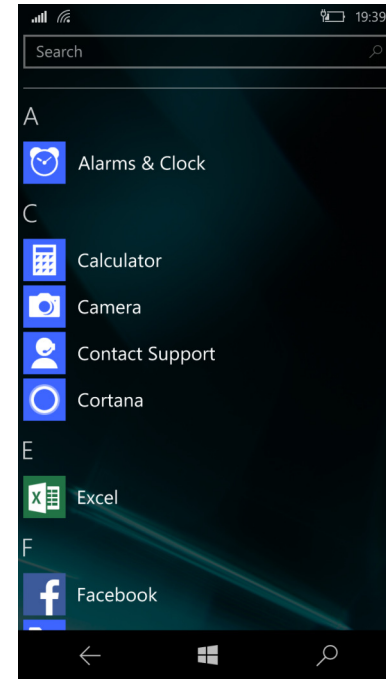

Windows 10 Mobile

145.00 mm

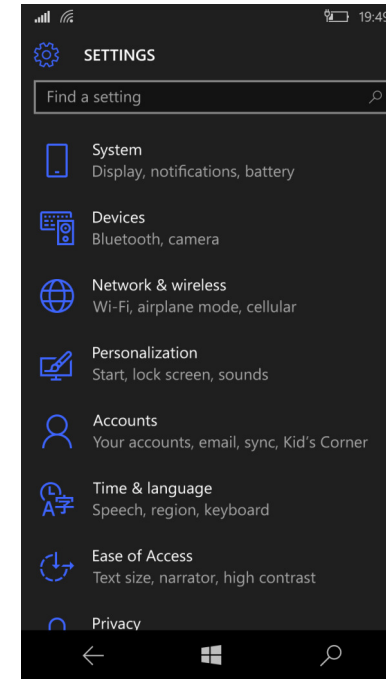

1.Shortcut Desktop:
Click the icon to quickly start the application.

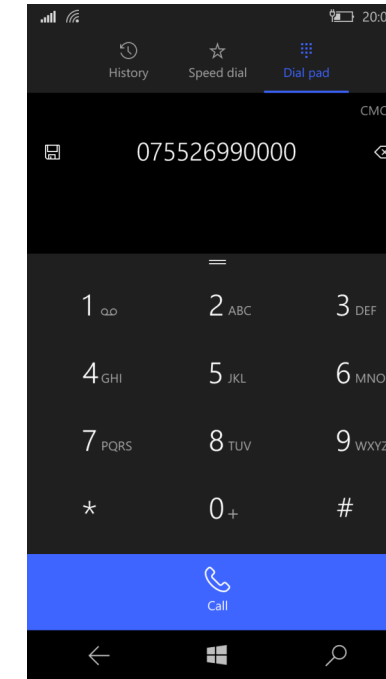

2.All apps:
Show all applications, click to open.

3.Settings:
Can view system device information and change the default settings.
For example: Bluetooth, Wi-Fi, SIM card, Data, Time, Date etc.

4.Phone:
Learn to use calling functions, such as making and answering calls, using options available during a call, or customizing and using call-related features.
Make a call
-In the application list, select Phone → Keypad, and then enter an area code and a phone number.
- Select to make a voice call.

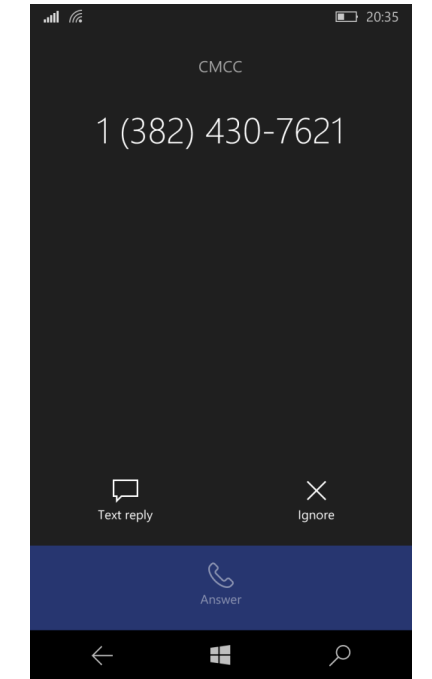

-Select End call to end the call.

5.Answer a call
1. During an incoming call. Press the Volume key to mute the ringtone, click answer

2. Select to end the call.

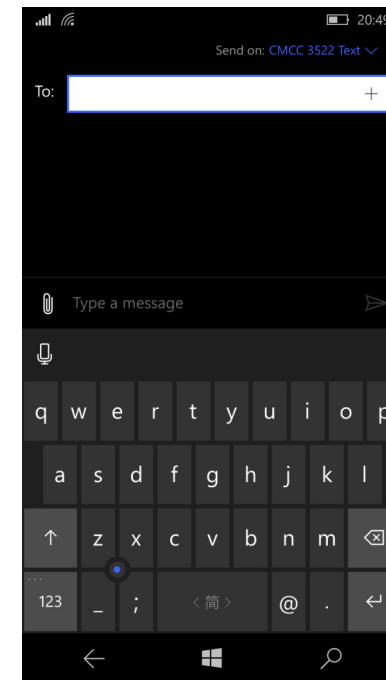

6.Reject a call
During an incoming call, Click reject the call.

Click to send a message to the caller when you reject a call.

7.Messages:
1. In the application list, select Messaging.

2.Enter your message, select

FCC Regulations:
This mobile phone complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
This mobile phone has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
-Reorient or relocate the receiving antenna.
-Increase the separation between the equipment and receiver.
-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
-Consult the dealer or an experienced radio/TV technician for help.

FCC Note:
Caution: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
RF Exposure Information (SAR)
This phone is designed and manufactured not to exceed the emission limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission of the United States.

During SAR testing, this device was set to transmit at its highest certified power level in all tested frequency bands, and placed in positions that simulate RF exposure in usage against the head with no separation, and near the body with the separation of 10 mm. Although the SAR is determined at the highest certified power level, the actual SAR level of the device while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output.

The exposure standard for wireless devices employing a unit of measurement is known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6W/kg.

This device is complied with SAR for general population /uncontrolled exposure limits in ANSI/IEEE C95.1-1992 and had been tested

in accordance with the measurement methods and procedures specified in IEEE1528.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of www.fcc.gov/oet/ea/fccid after searching on FCC ID: 2AJAYJP-LEN

For this device, the highest reported SAR value for usage against the head is 1.07 W/kg, for usage near the body is 0.65 W/kg.

While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirements.

SAR compliance for body-worn operation is based on a separation distance of 10 mm between the unit and the human body. Carry this device at least 10 mm away from your body to ensure RF exposure level compliant or lower to the reported level. To support body-worn operation, choose the belt clips or holsters, which do not contain metallic components, to maintain a separation of 10 mm between this device and your body. RF exposure compliance with any body-worn accessory, which contains metal, was not tested and certified, and use such body-worn accessory should be avoided.

1EU Regulatory Conformance*
Hereby, we declare that this device is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC.

CE 0700

To prevent possible hearing damage, do not listen at high volume levels for long periods.

Adapter shall be installed near the equipment and shall be easily accessible.

Caution
Risk of explosion if battery replaced by an incorrect type.
Dispose of used batteries according to the instructions.
Please make sure the temperature for device will be from -10 °C to 40 °C.

The device could be used with a separation distance of 0.5 cm to the human body. The device is going on be operated in 5150 ~5350 frequency range. It is restricted indoor environment only.
