[]   : display main functional menu window.
""   : display the functional submenu window.
<>   : window prompt.

The following Info icon is used to illuminate the special information:

Info: prompt information.

Note: a service or a function requires the support of the network or the predetermined service. Please consult your network service supplier for details.

Contents

Phone

The subscriber shall use the phone at the right operating locations (at the ear with the antenna toward to the upper side of the arm) in order for you to operate satisfactorily and safely.

Please use the phone carefully because it is designed deliberately and produced with the high technology. You can use the phone happily for long time with the suggestions as follows.

Do not let the kids or pets touch the phone, which is possible to throttle the kids or the pets or kids are possible to damage the phone.

Keep the phone dry and prevent various kinds of liquid from entering in the phone against the damage of the phone.

Please do not operate the phone with wet hands, which are possible to engender the electric shock.

Please do not store the phone under the high temperature environment, which is possible to shorten the service life of the electronic device, to damage the batteries or to melt the accessories.

Please do not store the phone under the low temperature environment because the vapor can enter in the phone and damage the circuit board of the phone when the phone is recovered to the normal operating temperature.

Please do not expose your phone under the strong sunlight to prevent the phone from be heated.

Please do not place your phone at the locations, near which there are flammable liquid, gas and explosive articles.

Batteries

Please do not use the damaged adapter or batteries.

Please use the batteries rightly, do not let the batteries at the short circuit, prevent the batteries from be heated, or otherwise causing the fire disaster possibly.

Prohibit playing the batteries under the high temperature or throwing the batteries into the fire, or otherwise causing the explosion.

Should return the waste batteries to the supplier or place at the designated recycling point and should not place them together with the life waste.

The charging time of the battery is dependent of the remained capacity, type and adapter of the battery. The battery may be charged for thousands of times, but it can be worn out gradually. Please purchase new batteries when the standby time is shorter than the normal standby time of the phone.

Please use the adapter or battery dedicated or authorized for the phone.

Please disconnect the adapter and the power supply when the adapter is not used.

Please do not charge the battery for long time, or otherwise the service life of the battery will be cut off.

The temperature extremes will have influences on the charging capacity. Please pre-cool or pre-heat up to the normal temperature (the lithium ion battery will be affected when the temperature is lower than 0℃)

Adapter

With the adapter, the AC 100V～240V input can be transferred into DC 5V for charging the batteries.

The optimum operating temperature of the adapter is from 0℃ to 40℃.

USB

Be sure not to try disassembling or refitting the memory card.

Be sure not to let the dirt, dust or foreign substances from contaminating the USB socket.

Earphone

It is recommended that you should use the authorized original audio accessories. Use the accessories of a third party is possible to lower the product performance or to engender the risk for your health and safety.

Please note to tune the volume of the audio device when using the audio accessories. A too high volume will damage your hearing.

Micro SD

Be sure not to expose the memory card to the damp environment.

Be sure not to touch the connecting terminals of the memory card with hands or any other metal article.

Be sure not to try disassembling or refitting the memory card.

Be sure not to use or store the memory card at the location where is damped, eroded or overheated (such as in a summer car). Please avoid the direct sunlight. Be sure not to place the memory card near to a heater).

Be sure not to press or bend the adapter of the memory card forcedly.

Be sure not to let the dirt, dust and foreign substances enter in the socket of the adapter of the memory card.

Attentions for Use

General Consideration

Please use the authorized accessories in order to guarantee using the phone safely and effectively.

Phone

The phone described under the manual is authorized to use the GSM900, GSM1900 and UMTS1700 networks. Please contact with the network service supplier for more information of the network.

Please abide by the laws or regulations, respect the rights and privacies of other persons when using the function of the phone.

Please power the phone on when in need of the function of the phone exclusive of the prompt of the alarm clock.

Please do not power the phone on when the wireless device is possible to engender the interference or risk.

Please do not throw, or beat the phone crudely, or otherwise the internal circuit board is possible to be damaged.

Please use the wetter or static electricity-resistant clothing, do not use the dry clothing prone to produce the static electricity when cleaning the phone. Please do not use such chemicals as the detergent when cleaning the phone surface. Please power the phone off firstly and clean the phone secondly.

Please do not paint your phone because the paintings will hinder the normal use of the phone.

Please let the phone to be not too closed to the eye in preventing the eyes from damage when the phone is equipped with the flash light.

The after service provider will not guarantee the quality of the manufacture even if within the guarantee-to-repair period if your phone or battery is wetted and the internal label of the phone will be damaged.

Please do not shelter the phone during the use because the call quality is affected and the actual power of the phone will be increased, thus shortening the call and standby time of the phone.

Battery

The phone is powered with the chargeable battery. The new battery required a 2-3-hour charging and discharging process. The battery can be charged or discharged for hundreds of times, but it will be worn out gradually. When the call and standby time is less than the typical time, please purchase a new battery. Please use the ##-authorized battery or ##-authorized adapter for charging the battery.

Disassemble the battery when the phone is powered off. The over-charged battery will be shortened in the service time. Please do not let the battery that is finished charging remained at the charging status. The battery of full capacity will be gradually reduced in the capacity along with the time even if is not used.

The phone will display the charging icon after it is charged for a period of time when the battery is overused.

Please do not let the battery at short circuit because the short circuit will damage the battery. Such metal articles as the coins, pins or pen can result in the short circuit if directly connecting the positive and negative poles of the battery.

The call and standby time is depended on the different usage situations of the phone. For instance, the signal strength, the working temperature, the usage mode, the selected function, voice or data transport when the phone is operated. The battery can be up to 110 hours in the standby time optimally.

Adapter

Please confirm the model of the adapter before connecting the phone. The applicable current of the phone is 500mA.

Connect the AC adapter to the power supply of identical specified label of the product. Ensure the right position of the cables, which are not damaged or stressed.

Be sure to disconnect the power supply of all components before cleaning in preventing from electric shock.

Prohibit using the AC adapter outdoors or at the damp environment.

Be sure not to alter the cables or plugs. If the plug is not supported by the power supply socket, should ask the qualified electric technician to install the suitable power supply socket.

Please grasp and pull out the connector when disconnecting the adapter.

USB

Used to connect the USB socket of the PC communicated with the phone.

Earphone

Please be sure that you have inserted the earphone in the right earphone socket, or otherwise the earphone cannot be used normally.

Please do not draw the cables, or otherwise the earphone will be damaged.

Micro SD

Be sure that you have inserted the memory card rightly.

Insert the memory card in the adapter of the memory. The memory card required inserting completely, or otherwise it cannot be used normally.

Please back up your critical information. Our company will be irresponsible for any damaged or lost data on the memory card.

Be sure not to pull out the memory card or the adapter of the memory card or power the phone off when you format, read or write data.

The data is possible to be damaged or lost when the memory card is positioned in the static electricity or strong magnetic field.

Display screen

The display screen of 65K colors is used under suitable environmental temperature from

-40℃ to 70℃.

A 160° wide-angle is supported for viewing the display screen.

Be sure not to strike or bend the display screen.

Be sure not to scrape the display screen with the sharp and hard articles.

Use Consideration at Public Situation

Electronic Device

Most electronic device shields the wireless information. Please consult the manufacture for related information.

Pacemaker: keep it 6-inch (15cm)-distance from the phone; should not carry the phone in the chest packet; please answer the call with the phone at the other side of the pacemaker, lowering the possibly-caused interference. Please power the phone off rightly if you concern that the phone is interfering.

Hearing aid: partial digital wireless phone is possible to interfere the normal operation of the hearing aid. Please contact with the manufacturing of the hearing aid if there is a disturbance.

Other medical apparatus: please consult with the manufacture of the medical apparatus in confirming whether the medical apparatus shield the radio wave if you use the other medical personal apparatus. The doctor can assist you in obtaining the information. Please power the phone off near the healthcare facilities where the phone is prohibited using.

Automobile device: please contact with the manufacture of the device for the pertinent information because the wireless signal is possible to have influences on the electronic device installed in the automobile.

Traffic

The phone has a strong wireless voice communication function and you can make a call anywhere and anytime, thus the subscriber should undertake some significant responsibilities.

The driving is a first responsibility of you when driving. Should be alerted to answer the call and abide by the local regulations when at drive.

Please understand the radio phone and its function, such as quick dial and redial. With these functions, you can dial out conveniently without distraction when driving.

Should use the hand-free device if there is the hand-free device; if possible, using any now-supplied hand-free device may let you use the wireless phone conveniently safely.

Place the wireless phone at the place where the phone is easy to be stretched without distracting to get the phone from the road. You should use the voice mailbox to answer the call as far as possible if receiving a call at an inconvenient time.

Tell the opposite part of the call that you are driving; if necessary, hang up the call at the traffic congestion or bad climate. It will be extremely dangerous when it is rainy, rainy and snowy or frozen, even if at the traffic congestion.

The safety gas sac, brake and speed control system and fuel-jetting system shall be not affected by the wireless transmission. In foregoing cases, please contact with the distributor of the automobile.

Please power your phone when fueling or where the bidirectional wireless devices are prohibited using. Please place the flammable and explosive articles together with the phone because the internal spark of the phone is possible to fire them.

Please power the mobile phone off on board of the plane. The phone is not allowable to use during the flight in order to prevent the communication system of the plane from being disturbed. The phone should be used with the consent of the flight crew member according to the regulation when the plane is not taken off.

Please confirm that the phone will not be powered on when the alarm clock is launched automatically during the flight.

Environments Possibly Resulting in Risks

Please power the phone off at the potentially-explosive locations. Please abide by the safety labels and instruction at these locations the spark produced in these locations is possible to result in the explosion or fire, body injury or death.

It is recommended that the subscriber powers the phone off at the gas station or maintenance station. It is minded that the subscriber abides by the instruction to use the wireless device at the locations, such as oil depots, oil storage and distribution areas, chemical plants or the sites where are exposing.

The safety labels are possible to mark in the locations where there are risks of explosion, however, all the locations will not be marketed always, including the underside of the ship deck, chemical storage or place facilities, vehicle using the liquefied natural gas, locations where there is chemicals or particles in the air and other locations where you are recommended to turn off the engine of the automobile.

About Copyright

Based on the Copyright Law, the materials which is protected by the law for the reproduction, alternation and use (such as music) are limited to use personally. The subscriber will be regarded as violation of the law if the subscriber reproduces, alters or use the materials of the manual without copyright or authorization of the owner of the copyright and the owner of the copyright reserves to prosecute. Please do not use the copy-right-protected material of the manual.

About Recycling

The phone is labeled not to treat as the life waste in the product or package labels. The right method: send the product to the related electronic device recycling point for reusing. The correct treatment of the product can prevent the environment and human health from damage. If the product is treated improperly, the natural environment and human health will be

affected seriously. The recycling and reusing will benefit the conservation of the natural resources. Please contact with the local municipal office of life waste treatment institute for the details of the recyclable products.

The battery can be treated as the common life waste and should better to treat with the waste battery treatment equipment.

Disclaimer

We are exempted from the direct or indirect asset loss or claims of a third party caused in the usage of the phone or related functions, such as stolen information, lost data or changed data.

About Trademark

The names of the products and companies referred in the manual are the trademarks of various owners.

Export Management Rules

The software is supervised by the ####export control law, and possibly supervised by the export control laws of other countries. The client agrees to conform to the laws and regulations, and promises to obtain the licenses for the export, exported or imported software accountably. The client shall not export the software to any countries or regions or residents or citizens of any countries on which an embargo are laid on by downloading or in any other ways.

Use Keys

Use Soft Keys

The functions of soft keys vary with the current operating. The current function is displayed in the lowest line on the screen.

Press the left soft key to select the option of the highlighting display.

Press the right soft key to return to the previous functional menu.

Select Option

1. Press the pertinent soft key.
2. Press the side sliding wheel to move upon to the previous or next option.
3. Press <Option> to enter in the option of the highlighting display, or press the side OK key to confirm the display function.
4. If you require exiting, you can press <Back> to return to the previous functional menu or press the end key to return to the standby mode.

Use Shortcut Keys

Press the numeral key corresponding to the option required, confirming the pertinent function under the functional list status.

Basic Functions

Dial

1. Input the district number and the phone number, press the dial key or side OK key to launch the call under the standby mode.
2. Press the right soft key to delete the number at the left side of the cursor in sequence or press and hold the right soft key to delete all the numbers if a wrong number is input.
3. Press the end key if you require terminating or cancelling a call.

Answer

The phone will ring or vibrate and the screen will display the incoming call icon when you phone receives an incoming call.

1. Press the left soft key or end key to answer the call.
2. Click the end key to terminate the call or refuse the call if necessary.
3. Use the earphone key to answer if the earphone is inserted or the Bluetooth earphone is used.

Dial with Recent Call Log

1. Press the call key to display the recent call log under the standby mode or via the path: standby > call log > dialed-in calls/dialed-out calls/ all calls.
2. Use the side sliding wheel to select the phone number of the contact.
3. Press the call key or side OK key to originate the call.

Useful Function

Profile Mode

Use the phone, set up the personal ringtones and phone-pertinent prompt tones under the different profiles..

1. Operating path: standby > setting > profile mode.
2. Select the profile mode required to set up with the sliding wheel via the path: option > edit or use the side OK key to open the setting window of the profile mode.
3. Select the setting option with the sliding wheel, and press the side OK key to set up the parameters.
4. Return to the setting window after finishing setup, click the left soft key to save the setting value.
5. Activate the selected profile mode via the path: option > option when the phone displays the profile mode list.

Set up Phone Language

Set the display language for the phone:

1. Operating path: standby > setting > phone setting > language.
2. Select the phone display language with the sliding wheel and press the left soft key or side OK key for confirmation.

Set up Date and Time for Phone

1. Operating path: standby> setting > phone setting > date and time.
2. Select the type to be set up with the sliding wheel and press the side OK key to set up the parameters.
3. Return to the setting window after finishing setup and click the left soft key to save the set value.

Select Music to be played

1. Operating path: standby > music player.
2. Press the left soft key to open the option menu, and select the "play list".

10

3. Select the play list with the sliding wheel and press the left soft key to select "view".
4. Select the music to be played with the sliding wheel and press the side OK key to begin playing.

View Received SMS
1. Operating path: standby > SMS > inbox.
2. The SMS is arranged by the time sequence and marked with the icons for the read or unread status. Scroll the SMS list and search the SMS to be viewed with the sliding wheel.
3. Press the side OK key to view the SMS content under the SMS list status.

View Contact Data
1. Operating path: standby >phonebook.
2. Press * key or press the left soft key to open the option menu and select "search".
3. Select the sender with the sliding wheel or press the left soft or side OK key for confirmation.
4. The phone will display the contact list of the senders.

Shortcut Functions

Activate Mute Mode in Shortcut Way
1. Press and hold # key under the standby mode.
2. The window displays the prompt after the mute mode is launched and the mute mode icon is displayed in the standby mode bar.

Play Music in Shortcut Way
1. Press and hold the music key under the standby mode.
2. The phone displays the music list. Select the list or music to play.

Search Contact in Shortcut Way
1. Press and hold * key under the standby mode.
2. Select the sender with the sliding wheel and press the left soft key or the side OK key for confirmation.
3. The phone will display the contact list f the senders.

View Local Phone Number
With the function, you can view your local phone number.
1. Under the standby mode, press the left soft key or the side OK key for confirmation, entering in the main menu.
2. Press the numeral key 0 to view the local phone number under the main menu status.

Manually Lock Keypad
1. Press the left soft key and then press the * key under the standby mode.

Manually unlock Keypad
1. Press the left soft key and then press the * key under the standby mode.

Call

The phone will actively access to the main network if it is within the coverage of the main network after the phone is powered on. The phone can use the other network, termed as roaming, if it is not within the coverage of the main network and permitted by the network operator protocol.
You can dial out or in when the network supplier symbol is displayed on the screen.
The signal icon at the left-up corner of the screen indicates the current network signal strength and the call quality will be affected when the signal is weak.
The call quality is subject to the hindrance, therefore a move within a small range can enhance the signal strength and call quality effectively.

Dial

Dial Typically
1. Under the standby mode, input the district number and phone number, press the call key or the side OK key to originate a call.
2. Press the right soft key to delete the numbers at the left of the cursor or press and hold the right soft key to delete all numbers if a number is input wrongly.
3. Press the end key if you want to end or cancel a call.

Dial Telephone Extension
1. Under the standby mode, input the exchanger number and then consecutively input * till the P number appears.
2. Input the extension number, press the call key or side OK key to originate the call.

Dial Emergency Call
1. Use the keypad to input the emergency call whenever the SIM card or USIM card is inserted in the phone or not, such as 999 or 911.

4. Please input the phone password and press the left soft key or the side OK key for confirmation when you want to delete many contacts and the system enquires into the password, which is preset as 0000 in default.

Send Contacts
1. Operating path:standby > phonebook.

2. Press * key or press the left soft key to open the option menu, select "send" .
3. The phone will export the contact info. Refer to pertinent information for sending.

Send Message to Contact
1. Operating path:standby >phonebook.
2. Press * key or press the left soft key to open the option menu, select "send" .
3. The phone will skid to the SMS window, export the contact phne number as the number of the receiver. Refer to pertinent content for editing and sending.

Copy Contact
1. Operating path:standby > phonebook.
2. Press * key or press the left soft key to open the option menu, select "copy to USIM card/phone"   and copy mode.
3. If it is a batch operation, please use the side OK key to select or cancel, and press the left soft key to operate.

Display Contacts in SIM/USIM Card
1. Operating path: standby > phonebook.
2. Press * key or press the left soft key to open the option menu, select "contact in USIM card ".
3. The phone will display the list of contacts saved in the SIM/USIM card.
        4. Press the side OK key to view the contact details. 。

Create My Businness Card
1. Operating path: standby > phonebook.
2. Press the left soft key to open the option menu, select "setting" .
3. Select my business card option.
4. Select the edit option with the sliding wheel and input the business card info in sequence.
5. After finishing edition, click the left soft key to save it.

Send My Business Card
1. Operating path:standby > phonebook.
2. Press the left soft key to open the option menu, select "setting" 。
3. Select my business card option.
4. When there is a business card, press the left soft key for conformation of sending. The phone will skid to the sending window and export the contact info as the SMS content automatically. Refer to pertinent conent for operation. 。

Quick Dial
1. Operating path:standby > phonebook.
2. Press the left soft key to open the option menu, select "setting" 。
3. Select quick dial list option.
4. The key 1 is assigned to the voice mailbox. Select the shortcut keys 2-9 with the side sliding wheel and press the OK key to begin to edit the shortcut phone number.
5. Input the pertinent phone number of the shortcut key or press the left soft key to select the contact phone number in the phonebook.
6. After finishing setup of shortcut keys, press the left soft key to save them.

Memory Capacity
1. Operating path:standby >phonebook.
2. Press the left soft key to open the option menu, select "memory status".
3. The phone will dislay the memory status of the phone and the SIM/USIM card.

Phonebook Option
Search: search the contact via the Pinyin table quickly.
Call: call the contact in voice.
Send SMS: send the SMS to the contact.
Create: create the contact info.
Edit: edit the contact info.
Delete: delete the contact info.
Copy to USIM: copy the contact info to the USIM card.
Send: send the contact info via SMS.
USIM contact: dispay the contact data saved in the USIM card.
Setting: set up the quick dial and my business card info.
Memory status: view the quantity of contacts saved in th ephone memory and USIM card.

Contact Info Option
Store position: set up the store position of the contact.
Name: input the name of the contact.
Voice: input the voice of the contact.
Phone number 1: input the phone number of the contact.
Phone number 2: input phone number of the contact.

Call Log
View the dialed, answered and missed calls, call time and call toll.

View call log

1. Operating path: standby > call log> dialed-in calls /dialed-out calls/all calls.
2. Scroll the log list with the sliding wheel and view the call log entries.

Send SMS to logged Phone Number
1. Operating path:standby > call log> dialed-in calls /dialed-out calls/all calls.
2. Press the left soft key to open the option menu, select "create SMS".
3. The phone will skid to the SMS-editing window and export the logged phone numbers as the phone number of the receiver. Refer to the pertinent content for SMS edition and send.

Save Logged Phone Numbers
1. Operating path:standby > call log> dialed-in calls /dialed-out calls/all calls.
2. Press the left soft key to open the option menu, select " save phone number".
3. Select a save mode from: create contact or update existing contact. Refer to pertinent content for editing contact.

Set up Logged Phone Number as Quickly Dialed Number
1. Operating path:standby > call log> dialed-in calls /dialed-out calls/all calls.
2. Press the left soft key to open the option menu, select "set as quickly dialed number" 。
3. The phone will skid to the quickly-dialling list window, select a shortcut key with the sliding wheel and press the left soft key or the side OK key for confirmation of the setting.

Clear Away Call Log
1. Operating path:standby > call log> dialed-in calls /dialed-out calls/all calls.
2. Press the left soft key to open the option menu, select "delete all" .

About Accessories

Pay attention to the maintenance of the products that are placed in the clean dust-free location.

Be sure not expose the product to the liquid or high humidity

Be sure not expose the battery to the temperature extremes.

Be sure not place the products in the lit cigar or fire.

Be sure not drop, throw or bend the products.

Be sure not paint the products.

SAR Data

Your phone is a low-energy wireless transceiver. Upon power-on, the phone will emit a low-level RF.

Varous countries in the world all adopt the national security guidances formulated by the specialized scientific organizations, such as ICNIRP and IEEE. These guidances establish the approved level of the RF exposed to the general population, including the difference in any measurement, such as age and health in the calculation, guaranteeing the safety of the human being.

The specific absorption rate(SAR) refers to a unit measuring the quantiy of the RF absorbedby the human body. The SAR value is regulated based on the verified maximjm energy level based on the experient status. The true SAR level of the phone will be far lower than the level. Generally, the closer to the base station, the lower the energy emited by the phone is.

The SAR levels of various models of phones vary. The phone is designed and manufactured based on the radio exposure directive in order to ensure the safety and health of the users.

The SAR of RF applicable for the public is 2.0w/kg /10 g body issue in the average limit. The phone conforms to the restriction after tested.

Failure and Solution

Before contacting with the post sales server, you can check the phone simply, or you can

avoid the excessive maintenance time and expense waste.

Cannot power the phone on

- Check whether the Powering-on key is pressed and hold for 1 second or above;
- Check whether the battery is contacted badly or not. Please remove the battery firstly and then try to power the phone on;
- Check whether the battery capacity is used up or not; please charge the battery;

When the phone is powered on, there is no information displayed

- Check whether the SIM card is installed rightly;
- The phone is locked with the Auto Lock function activated and the password shall be input;
- Input PIN; select the function of inputting PIN when the phone is powered on. The PIN shall be input (the PIN attached with the SIM card should be input for the first use.);
- Input PUK: after the PIN is input wrongly for successively 3 times, the phone will be locked. The PUK provided by the network operator should be input;

USIM card error

- There is some dirt on the metal surface of the USIM card. Please wipe the metal contacts of the USIM card with a clean cloth ;
- USIM card is not installed ;
- USIM card is damaged. Please contact with your network supplier;

Cannot access to the network

- The signal is weak, please move to the place where the signal is strong and retry;
- Beyond the coverage of the network of the network server;
- USIM card is invalid, please contact with your network supplier;

Can not dial a phone number out

- Please confirm whether the dial key is pressed after the number is dialed;
- Please confirm whether the call is barred due to owned toll;
- Please confirm whether the SIM card is valid or not;
- Please confirm whether the call restriction function is set up;
- Please confirm whether the fixed dial function is set up;

Bad Call Quality

- Check whether the volume is adjusted appropriately;
- Use the phone at the place where the receiving quality is not good, such as near to the building or in the basement where the radio wave cannot reach.
- Use the phone at the peak time, such as at the time of going on/off the duty, the channel is congested;

Contact can not call you

- Please confirm that the phone is powered on and is uplinked with network;
- Please confirm that the call is barred because of owned toll;
- Please confirm whether the USIM card is valid;
- Please confirm the ingoing call is barred due to owned toll;

Contact can not hear you

- Please confirm that the microphone is opened.。
- Please maintain the lower end of the microphone aligned to your mouth.

Shortened Standby Time

- The stand-by time is relevant to the system setup. The phone is possibly at the place where the signal state is bad. When the phone cannot receive the signal, the phone will transmit to search the base station continuously; consuming a great deal of battery capacity and shortening the stand-by time of the battery. Please move to the place where the signal is strong to use the phone or temporarily power the phone off.
- The battery requires to be displaced with a new battery ;

Can not Charge

- Bad contact; please check whether the plug is connected well;
- Accumulated dirt, clean the phone and battery sockets with   soft dry clothing.
- Charge at the environment below -10℃ or beyond 45℃. Please change the charging environment;
- The battery or adapter is damaged and requires to be replaced;

If the aforementioned instructions cannot facilitate you to conquer these problems, please record:phone model and SN,detailed contents in the guarantee-to-repair sheet and clear statement of the problem, and then contact with the post sales service department or the local distributor.

Other

If the aforementioned instructions cannot facilitate you to conquer these problems, please record:

- Phone model and SN
- Detailed contents in the guarantee-to-repair sheet
- Clear statement of the problem
- The battery or adapter is damaged and required to replace.

Guarantee and After Serive

Gurantee

We provide a limited guarantee-to-repir for the phone together with the accessories. If your products need a gurantee service, please be sure to mail to the guarantee sheet to the distributor.
During the guarantee period, under the normal usage and maintainane condition, if the product fails due to defective design, material or process, the distributor or repair partner from the products are purchased by the user wil decide to repair or replace the product by themselves base don the regulations.

Repair

If the products delivered to repair do not conform to the gurantee-to-repair consition, the authorized maintenance center reserves to charge the maintenance of such products:

- Only when the repaired and replaced products can be issued with the original purchase invoice with the purchase date and SN issued by the distributor to the purchaser , the guarantee will be valid. After the product is purchased from the distributor, the purchase invoice or three-guarantee certificates are changed, alternated or deleted, the authorized maintenance service center will reserve to refuse to repair.
- If the authorized maintenance service center replaces or repair the products, the repaired or replaced products, the gurantee service will be continued within 30 days from the repairing date or within the remained guarantee period. The equivalent components can be used for the repair or replacement. The replaced or changed components will be processed by the authorized maintenance service center.
- The guarantee-to-repair is not covered the fialed products which is worn out or damaged by the wrong manmade operation. The fialed products due to accident, refitting, debugging, force majeure, improper ventilation, damp or wrong operation will not be covered in the guarantee-to-repair range. The battery is a consumable product with a limited service life. After a period of useage, the capacity of the battery will be reduced gradally. When the call time and the standby time are drastically cut off, a new battery should be purchased. Please use the authorized original battery and adapter.
- The screen brightness and colors of various phones will be different from each other. The smaller light points or dark points on the screen are called as defective pixel. When individual points appear the failure, the failure can not be adjusted. The individual pixel on the screen is regarded as acceptable.
- We understake no any accountabililty for the system operation, availibity, coverage area, service and service range becaue the cellular system for the product is provided by the telecommunication company.
- Any product failure due to installation, refit, repair or disassembly by not authorized service center personnel will not be covered in the gurantee-to-repair range.
- The fialed products due to usage of the non-authorized accessories or other peripherial devices will not be covered within the guarantee-to-repair range.
- Changing or damaging any orginal labels will result in failure of the guarantee-to-repair.
- Only the limited gurantee-to-repair will be acknowledged in the publication with exception to the oral or written form. All the hinted gurantee-to-repair, including but not limited to the trial-promotion or gurantee-to-repair of hint suiability for a special purpose, are all based on the provision of this gurantee-to-repair article. Any accident or undirect damage in violation of the laws, including but not limited to the gain loss or commercial bankruptc will exempt the law responsibility of our company.

The forgoing limitation or disclaimer may not suit for you because some countries or regions prohibit or limit the accident or accasional or subsequently occurred damage or gurantee-to-repair period in concealing form.
Additional information requires to be provided in some nations or regions, thus, the effectivepurchasing certificates shall be indicated with the information.

Attention

Please note: for some products, the user's personal data, setting or saved information will be lost after the products are maintained or replaced. Currently, based on the related laws, regulations or technical limitation, the authorized service center is not allowed to treat the information. The authorized service center will not undertake any responsibility for or indemnify any lost. Please back up your personal data saved in the products before delivering them for repair or maintenance.

Accessories

Please consult with the related distributor or the maintenance partners of the products for maintenance.
Please replace the accessories with the authorized original ones in order to ensure the safe and effective use.

Reference

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

15.101 statement:

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

IMPORTANT NOTE:

Federal Communication Commission (FCC) Radiation Exposure Statement

This EUT is compliance with SAR for general population/uncontrolled exposure limits in ANSI/IEEE C95.1-1999 and had been tested in accordance with the measurement methods and procedures specified in OET Bulletin 65 Supplement C.

For body worn operation, this phone has been tested and meets FCC RF exposure guidelines when used with an accessory that contains no metal and that positions the handset a minimum of 1.5cm from the body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines."
