Ⅲ. Getting Started

1. Installing the battery

（Make sure your mobile phone is power off）

Install & Remove the battery according to the following steps:

I Push the battery cover downward, and lift the battery at the bottom side to remove.

II While inserting the battery, insert the upper end of battery into the groove & slide the battery cover into back of phone until it is locked.

2. Installing of SIM card

Power off the mobile phone, and then remove the battery. During installation make sure that metallic part of SIM facing downward & you must take care of the SIM card slot direction.

In order to take down SIM card, shut down the mobile phone and remove the battery first, and then take down the SIM card from its socket.

9

3. Installing of T-Flash card

This mobile phone supports T-Flash card (you might buy it separately), which is a small multimedia memory card used to increase the memory of your mobile phone. Take care when installing to avoid the damage.

Installation methods of T-Flash card:

Shut down the mobile phone & remove battery before inserting memory card. Insert the T-Flash card in the groove with the golden metal contact facing downward, put back the cover of T-Flash socket and pulling forward to lock it. After the battery assembled, The T-Flash Card can be used after normal switch ON.

4. Battery charging

Plug the charger into the data cable port at the bottom of the mobile phone. Then the power indicator at upper right screen will flash. While charging, if the phone is off, the screen will display an icon indicating the battery is being charged. And after charging is done, it would be prompt with "Charging Complete". When the power indicator at upper right screen of the phone displays battery full and stops flashing, it means that the charge is done.

When battery is low, phone will give you warning alert, when it is too low will automatically switch off.

After the charging, disconnect the AC socket and mobile phone from the battery charger. During charge, it is normal if the battery, mobile phone and battery charger become hot.

Note: Initially phone is just charged 50%. It can be used after discharging. Please use it and recharge it fully. This is the case with the second recharge. After three repetitions, the battery can achieve its best performance conditions.

5 Safety Password

■ PIN & PUK number

PIN code (Personal Identification Number) can protect the SIM card from unauthorized use. The PIN code is provided along with the SIM card. If the PIN code is activated, it is necessary to input the PIN code whenever the cell phone power on. If a wrong PIN code has been input for 3 times continuously, it is needed to input the PUK code, for PUK code ask for service provider.

■ Mobile phone password

In order to prevent the use of your mobile phone without authorization, you can set a password to protect your mobile phone. If you select this function, you need to input the password every time when starting up your phone. Otherwise, you cannot unlock your phone, and cannot dial or answer phone calls. The password is set as 1234 by default. In the case you forget your password, you must contact your retailer or local authorized service center to unlock the password of your mobile phone.

■ SIM Lock

Press on to enable PIN lock, which will require you to input a password when the mobile phone is started up. Otherwise, the

11

SIM card is unavailable. During setup, it is required to input the correct PIN code. If wrong codes are inputted for three times, the PUK (Personal Unlock code) will be required, PUK is used to unlock and change the locked PIN code. PUK code is not provided by your local network service provider.

Ⅳ. Functions

1.　Calls

1.1 Making a call

In the menu, please input the numbers from the phone book or dial the desired the number by pressing the dial key. Press the end key to end the call.

1.2 Answering a call

◆ Switch off your mobile phone in hospitals or the places where the use of mobile phone is forbidden. The mobile phone may interfere with/affect some electronic devices and medical instruments like heart pacemakers, hearing aids and other electronic medical devices.

◆The unauthorized/non-original accessories and fittings have no warranty qualification.

◆The user cannot disassemble the mobile phone without authorization. Please contact the supplier for the mobile phone failures.

◆Do not connect the charger without the battery in the mobile phone.

◆The charging should be carried out under the environment with good ventilation and good heat dissipation and far from the flammables and explosives.

◆In order to avoid demagnetization, do not place your mobile phone around magnetic substances like magnetic disk cards, credit cards, etc.

◆Ensure your mobile phone does not contact any liquid. In case of this situation, please remove your battery and contact your

supplier.

◆Do not use your mobile phone under extremely high or low temperatures, and do not expose it under direct /strong sunshine or higher moisture content environment.

◆Do not use liquid or wet cloth with strong detergent to clean your mobile phone.

◆The mobile phone is equipped with the built-in antenna, when the mobile phone is powered on please do not contact the antenna (on the top of the mobile phone) so as not to affect the telecommunication.

◆This mobile phone is equipped with sound recording function. Please use this function in compliance with related laws and regulations. Sound recording will risk you to violate laws and regulation.

◆The Company shall bear any responsibilities for the application of sound recording, or any loss occurred due to the no recording, deletion, damage of sound recordings due to the accessories and software.

◆At the time of applying network functions, in case the user downloads some files with viruses and affect the mobile phone, the Company will not be responsible.

◆It is strictly forbidden to load damaged photo, ring tone and files with. In case if the mobile phone fails, the Company shall not assume any liabilities of phone.

◆Use original battery & charger if use any other company's it invalidate warranty. The Company shall be not liable to cover such losses.

27

Ⅵ.Other important information

◆Please use the original accessory or approved by manufacturer. Any unapproved accessory may affect the performance of your mobile phone, damage your mobile phone, even cause danger or violate relevant national regulations on communication terminal production. Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

◆Some electronic devices are susceptible to electromagnetic interference sent by phone if inadequately shielded. Please use phone at least 20cm or as far as you can from TV set, radio and other automated office equipment so as to avoid interference.

◆This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and

(2) This device must accept any interference received, including interference that may cause undesired operation.

◆Use wet or antistatic rag to clean mobile phone; don't use dry rag or the rag that easily cause static. Don't use chemistry product such as detergent to clean the surface of mobile phone. Close it when cleaning.

◆For body-worn operation, this phone has been tested and meets FCC RF exposure guidelines when the handset is positioned a minimum of 15 mm from the body without any metal parts in the vicinity of the handset.

◆This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC

28

Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

—Reorient or relocate the receiving antenna.

—Increase the separation between the equipment and receiver.

—Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

—Consult the dealer or an experienced radio/ TV technician for help.

◆Your mobile phone will cause electricity magnetic field, don't put it near magnetic storage Medias such as computer disk etc. It will have interference when using mobile phone near TV, phone, radio or PC, thus affect the performance of mobile phone.

◆Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed limits for exposure to radio frequency (RF) energy set by the Federal Communications Commission (FCC) of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on

29

standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age or health. The exposure standard for wireless fixed phoned employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limits set by the FCC are 1.6W/kg. Tests for SAR are conducted using standard operating positions accepted by the FCC with the phone transmitting as its highest certified power level in all tested frequency bands.

Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station, the lower the output power.

The Highest SAR Values for this model phone when tested for use on the Right cheek were 1.26mW/g.

◆Don't put your mobile phone under the strong sunshine to avoid heat.

◆Avoid all kinds of liquids from entering the internal of mobile phone, which will damage your mobile phone.

◆Don't throw it, strike it, treat your mobile phone rudely, which will damage its inner circuit.

◆Don't connect with other incompatible devices.

30

Warning: Company will not be responsible for, if any consequence caused by misuse and not following any above written suggestions and instructions.
Note: Please send the rejected lithium battery to the appointed place or to our Company and please do not throw in the garbage can.
