2.3 Use descriptions

2.3.1 Turning the Phone On and Off

To turn on or off the phone please hold down **the Hang-up key**.

If you turn on the phone without having inserted the SIM card, phone will display “**Insert SIM**”. After inserting the SIM card the phone will automatically check if the SIM is useable.

The following will be displayed in this order:

Enter phone lock code

—If you set the Phone Lock.

Enter PIN

—If you set the SIM Lock.

Greeting text

—If you turn on greeting status and edit greeting text.

Searching

—The phone will conduct a search to find the appropriate network connections.

2.3.2 Insertion of the SIM Card

Metal interface of SIM card is very easy scrape. Before inserting into the phone you must carefully remove it.

- Turn off the phone; remove the battery and unplug other external power sources.
- Insert the SIM card into the SIM slot as shown in the following picture.
- When you need to remove the SIM card, please first turn off the phone, remove the battery, then remove the SIM card.

2.3.3 Insertion of the Memory Card

- Turn off the phone; remove the battery and unplug other external power sources.
- Put the Memory Card into the Memory Card trough.
- When you need to remove the Memory Card, please first turn off the phone, remove the battery, then remove the Memory Card.

2.3.4 Removal and Installation of the Battery

- When removing the battery follow the following steps:

- Push the battery cover towards bottom;
- Raise the battery bottom, break out the battery from the mobile-phone.

Warning: You must turn off your mobile phone before removing the battery. Under no circumstances should you remove the battery when the mobile phone is on as this may damage the SIM card and your mobile phone.

- When installing the battery follow the following steps:
 - According to arrowhead direction, push the battery to inset mobile-phone.
 - Cover with the battery cover.
 - ③ Push the battery cover towards top.

2.3.5 Battery Charging

- The charger connector with the top of the phone.
- The charger connector with the electrical source.
- The battery capacity indicator in Icon Area will then flash periodically; when charging at power-off status, charging indicator on the screen means the phone is charging now. If you are using a phone in low battery, it may need certain time for charging indicator to appear on the screen after starting to charge.
- When the Capacity Indicator in Icon Area is full and doesn't flash any more, the charging process is complete. If your phone is charged in power off status, charging complete screen will also display. Charging process usually takes 1-2.5 hours. Battery, phone and charger normally turns hot during charging process.
- When charging process complete, disconnect connections between AC power outlet, your phone and the charger.

Attention:

- Be sure to charge in ventilated place with the temperature ranging from -10°C to +45°C, and always use the charger provided by original manufacturer. Using unauthorized charger may cause danger, and also violates warranty coverage of the manufacturer.
- Charge your battery in time when the phone automatically powers off or displays low battery warning. The phone will automatically decrease charging time when the battery is not exhausted before charging.

- **Select SIM** to select **Always ask**, **SIM1** or **SIM2**.
- **Edit profile** to display the edit profile list. After edit and save the list, select “**Activate Profile**” to activate .
 - **Rename profile:** to change the name.
 - **Homepage:** to change the homepage.
 - **Data account:** to select the data account from GSM Data and GPRS.
 - **Connection type:** to select the connection type from **WAP** and **HTTP**, depend on the gateway. Press the **up\down keys** to select.

If you select **WAP**, you can set:

Ø **IP address:** to input gateway **IP address**, such as:010.000.000.172.

Ø **Security:** to set joint security, depend on the gateway.

If you select **HTTP**, you can set:

Ø **Proxy address:** to input gateway **Proxy address**, such as:010.000.000.172.

Ø **Proxy port:** to set the **proxy port**.

➤ **Username:** to set the user degree of APN Service.

➤ **Password:** to set the user password of APN Service.

- **Browser options** to set the **Timeout** and **Show images:**
 - **Timeout:** to set a time limit, integer of 30-300 (second) , if there is no data entered or transferred beyond this time limit the service will automatically turn off.
 - **Show images:** to set the images, show and not show, by turn **On** or **Off**.
- **Service message settings** to set to incept or not incept the WAP service message.
- **Clear cache** Data or services that you have visited will be saved in the cache memory of your mobile phone. Please promptly clear these temporary files which record your online data.
- **Clear cookies** Data or services that you have visited will be saved in the cookies memory of your mobile phone. Please clear these temporary files which record your online data.

Note: If you tried to visit, or successfully visited confidential information that required a password (such as a bank account), please clear your mobile phone's cache memory each time.

4.11.3 Data account

4.11.3.1 GPRS

In this menu, the mobile-phone will list **Data account** listing of GPRS data. You can select and edit the GPRS data:

Account name: to edit specify a name for the account

APN: to edit APN.

User name: to the user identification to login the APN.

Password: to the password to login the APN.

Auth. Type Set up Normal/Secure/

4.12 Shortcuts

You can edit the shortcut menu, it will display in the [**shortcuts**] menu.

5 Input method

5.1 General information

This mobile phone is able to operate on kinds of language. The menu not only displays English, you also can use other language to write message. You also can write, edit phone book and so on. In edit interface, please press shortcut key “#” to change the input method, press “*” key to enter into the punctuation interface. The phone provide following input method:

5.1.1 Intelligent English capital and small letter input method

This mobile phone provides both capital and small letter intelligent Zi English input method. Intelligent English input method has associational function, the more letters you enter; you can get the more integrative word. For example, Press key 2, 3, 7, 8, the phone display “best”. If the word is not what you want, press up/ down direction key to search.

5.1.2 English capital and small letter input method

The mobile phone provides capital and small English letter input method. Press a key to enter a relevant word. For example, press key 2 to enter ‘A’, press key 3 to enter ‘D’, repeatedly press key 2 to select ‘A’, ‘B’, ‘C’ or ‘2’

Use this input method, you can input the number

6 Appendix

Trouble shooting.

Questions	Reasons	Answers
Poor signal	Using the mobile phone in bad reception areas, such as near the high building or in the basement, radio waves can not convey effective.	Try to avoid
	Use the phone in crowded conversation time, and line congestion may lead to unable to talk	Try to avoid
	Relevant with the distance with the network base station	Ask the network service providers to provide the services regional map
Echo and noise	Caused by the bad network trunk lines, is a regional problem.	Disconnect and re-dial, or change a better trunk line
	Bad line in some areas	
Standby time changed to short	Relevant with the network system settings	Please turn off the phone while in bad reception area
	Need to change the battery	Change to use a battery
	The phone will continue to search the signal while it can not receive a signal, then will spend a lot of battery power and resulting in shorter waiting time.	Please move to the strong signal area or turn off the phone.
Can not turn on the phone	Battery out of charge	Check the power level of the battery or charge the battery
SIM card error	SIM card broken	Contact with you network provider
	SIM card is not installed properly	Make sure the SIM card is installed

		properly
	SIM card gold contact points interface is dirty	Use a clean cloth to clean the SIM card gold contact points.
Can not connect to internet	Invalid SIM card	Contact with you network provider
	Out of GSM service	Check the service
	The signal is too weak	Try again in a strong area
Can not make a call	Using the call limit function	Cancel call limit settings
	Using the fixed dial function	Cancel fixed dial settings
PIN error	Continue to enter the PIN code error three times	Contact with you network provider about the service area
Battery can not be charged	Battery or charger broken	Change the battery or charger
	Charging below -10°C or higher than 45°C environment	Change the charging environment
	Bad contact	Check the plug is connected properly
Can not add the contact	Phone book storage capacity is full	Delete some contacts
Can not setup some functions	ISPs do not support this function, or you do not apply for this function.	Contact with you network provider

FCC RF EXPOSURE INFORMATION:

WARNING!! Read this information before using your phone

In August 1986 the Federal Communications Commission (FCC) of the United States with its action in Report and Order FCC 96-326 adopted an updated safety standard for human exposure to radio frequency (RF) electromagnetic energy emitted by FCC regulated transmitters. Those guidelines are consistent with the safety standard previously set by both U.S. and international standards bodies. The design of this phone complies with the FCC guidelines and these international standards. Use only the supplied or an approved antenna. Unauthorized antennas, modifications, or attachments could impair call quality, damage the phone, or result in violation of FCC regulations. Do not use the phone with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Please contact your local dealer for replacement antenna.

BODY-WORN OPERATION:

This device was tested for typical body-worn operations with the back of the phone kept 1.5cm from the body. To comply with FCC RF exposure requirements, a minimum separation distance of 1.5cm must be maintained between the user's body and the back of the phone, including the antenna, whether extended or retracted. Third-party belt-clips, holsters and similar accessories containing metallic components shall not be used. Body-worn accessories that cannot maintain 1.5cm separation distance between the user's body and the back of the phone, and have not been tested for typical body-worn operations may not comply with FCC RF exposure limits and should be avoided.

For more information about RF exposure, please visit the FCC website at www.fcc.gov

Your wireless handheld portable telephone is a low power radio transmitter and receiver. When it is ON, it receives and also sends out radio frequency (RF) signals. In August, 1996, the Federal Communications Commission (FCC) adopted RF exposure guidelines with safety levels for hand-held wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies:

<ANSI C95.1> (1992) / <NCRP Report 86> (1986) / <ICIMIRP> (1996)

Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature. For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI Standard (C95.1). Nevertheless, we recommend that you use a hands-free kit with your phone (such as an earpiece or headset) to avoid potential exposure to RF energy. The design of your phone complies with the FCC guidelines (and those standards).

Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the phone and may violate FCC regulations.

NORMAL POSITION:

Hold the phone as you would any other telephone with the antenna pointed up and over your shoulder.

TIPS ON EFFICIENT OPERATION:

For your phone to operate most efficiently:

- Extend your antenna fully.
- Do not touch the antenna unnecessarily when the phone is in use. Contact with the antenna affects call quality and may cause the phone to operate at a higher power level than otherwise needed.

Vehicle mounted external antenna (Optional, if available))

A minimum separation distance of **7.9 inches (20cm)** must be maintained between the user / by stander and the vehicle mounted external antenna to satisfy FCC RF exposure requirements.

RF Exposure Information:

FCC RF Exposure requirements: This transmitter must not be collocated or operating in conjunction with any other antenna or transmitter.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) this device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help
