*Passat Sedan, Modell year 2006 – edition 00.2005*

### **Cell phone package**

Supplement | Cell phone package for Passat Sedan, Model year 2006 | Art.-Nr.:  
Print status: 00.2005 | edition : American English 00.2005

# About this booklet

This booklet contains important information, tips, suggestions and WARNINGS on using your vehicle. The other booklets in the Owner's Literature contain further information that you should be aware of for your own safety and for the safety of your passengers.

Make sure that you always keep the complete Owner's Literature in the vehicle. This is especially important when you lend or sell the vehicle.

This manual describes the **vehicle equipment** at the time of publication. Some of the equipment described will not be available until a later date, or is only available for certain markets.

Some sections of this booklet do not apply to all vehicles. If this is the case, a text at the beginning of the section indicates which vehicles it applies to, for example "Applies to USA models only."

You will find any **Supplements** in the Owner's Literature immediately after the *Alphabetical Index* booklet.

**Illustrations** may slightly vary from your vehicle. For this reason you should regard illustrations as a general guide.

At the beginning of this booklet, you will find a **table of contents** showing all the items described in this manual in the order they appear.

**Directions and positions** (for example right, left, front, rear) are always relative to the direction of travel of the vehicle unless stated otherwise.

▶ The section is continued on the next page.

◀ Indicates the **end of a section**.

® Registered trademarks are marked <sup>TM</sup> or ®. However, the absence of this symbol does not constitute a waiver of the rights concerning any term.

⇒ ⚠ Cross-reference to a "WARNING" within or outside of a section.

⇒ ⚠ Cross-reference to a "Note" within or outside of a section.

 <b>WARNING</b> Texts with this symbol contain important information on safety and how to reduce the risk of personal injury or death.
--

## Note

Texts with this symbol draw your attention to potential sources of damage to your vehicle.

## For the sake of the environment

Texts with this symbol contain information about the environment and how you can help protect it.

## Tips

Texts with this symbol contain special tips and other information about getting the most out of your vehicle and its features.

## Cell phone package

Applies to vehicles: with cell phone package

### Cell phone package description

*The cell phone package is a convenient hands-free device that is connected to the cell phone using Bluetooth<sup>®</sup> radio communication technology.*

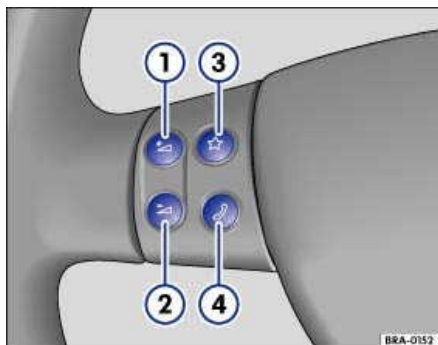

fig. 1 Multi-function steering wheel left side

fig. 2 Base plate: release button (1) for removing the cell phone cradle.

On vehicles with a cell phone package, there is a base plate ⇒ fig. 2 on the instrument panel for a cell phone cradle<sup>1</sup>. Cradles for supported phones are available at your authorized Volkswagen dealer.

---

<sup>1</sup> Where applicable

2 Cell phone package

The cradle, when mounted to the baseplate, connects the cell phone to the cell phone package in your vehicle (hands-free device, integrated exterior antenna and battery charger). More information about phone cradles is available in the User's Guide for the cradle.

Before you can use the cell phone package, a compatible cell phone must undergo a one-time initial pairing process to the cell phone package ⇒ page 5 using Bluetooth® wireless technology ⇒ page 4.

After the initial pairing process, the connection between the cell phone package and a *recognized* (previously paired) cell phone is automatically established when the ignition is switched on or the telephone is placed in the cradle.

The following also applies:

- The telephone is connected to a microphone in the vicinity of the front interior light.
- Calls are routed over the vehicle loudspeakers, during which time the factory-installed radio is muted.
- Telephone calls can be answered, rejected or ended using the telephone button on the multi-function steering wheel .

If the cell phone is in the cradle, the following also applies:

- The cell phone is connected to the integrated exterior antenna.
- The cell phone battery is charged, if needed.

### **Radio**

During an incoming or outgoing call, the radio is automatically muted so that unnecessary noise does not interfere with the call.

The radio will automatically switch on if it is turned off when the phone package is in use.

### **Call Volume**

You adjust the volume of the call with the radio volume control or by using the volume control buttons  and  on the multi-function steering wheel. It is not necessary to make any adjustments on the cell phone. During a call, the volume control adjusts only the volume of the call, and does not affect the volume of the radio or CD modes.

### **Navigation System<sup>1</sup>**

If you have started a navigation system, navigation directions will continue to be given during a telephone call.

### **Cell Phone Charging**

While the cell phone is in the cradle, the cell phone battery will be charged as needed while the ignition is on as well as during the delayed off period.

### **Delayed off**

After the ignition is switched off, the cell phone remains switched on for about 30 minutes (delayed off). The multi-function steering wheel is switched off during delayed off.

If the ignition is switched off during an active call, the delayed off does not begin until the call has ended.

The delayed off period can be reprogrammed by your Volkswagen dealer.

### WARNING

**Improper use of the cell phone causes driver distraction and accidents as well as serious personal injury.**

- Always devote your full attention to the traffic around you! Use the telephone only if traffic and other conditions permit.
- Always set volume levels so that you can clearly hear horns, sirens and other warning sounds outside the vehicle.
- Using a cell phone inside the vehicle without having a separate outside antenna can be dangerous to your health and that of your passengers because the electromagnetic radiation energy that cell phones emit may be above established limits.
- Never leave a cell phone on the seat, instrument panel or in other places where it can be thrown around the inside of the vehicle during a sudden braking maneuver, a crash or other accident and injure the vehicle occupants. Always place the cell phone securely in a cradle.
- Always make sure that the cell phone is properly secured in the cradle and that the cradle is securely locked onto the base plate. In an accident, a cell phone that is not properly secured can be thrown from the cradle and cause injury.
- In areas with no or inadequate network reception, and under certain conditions such as in tunnels, garages and underpasses, it may not be possible to make a telephone call – even in an emergency!

### Tips

- Cradles for supported cell phones are available from authorized Volkswagen dealers.
- Please observe applicable laws concerning the use of a cell phone in your vehicle.
- We recommend that you use the cell phone only in a suitable cradle in order to minimize the electromagnetic radiation in your vehicle and the risk of injury.
- The cell phone controls in the multi-function steering wheel work only when the ignition is switched on.

Applies to vehicles: with cell phone package

## Bluetooth® wireless technology

Bluetooth® wireless technology is an industry standard for wireless connection of devices over short distances. Bluetooth offers a wireless interface over which small mobile devices such as cell phones and PDAs as well as computers and peripheral devices can communicate with one another.

With the cell phone package, Bluetooth® wireless technology offers a connection between a compatible cell phone and the vehicle's hands-free device. A one-time initial pairing process is necessary for this ⇒ page 5.

A cell phone with Bluetooth® that has already been *recognized* (previously paired) by the cell phone package is automatically recognized and connected when the ignition is switched on or when the cell phone is inserted in the cradle<sup>2</sup>. The cell phone and its Bluetooth® option must be switched on and all active Bluetooth connections between the cell phone and other devices must be ended.

When the ignition is switched off, the Bluetooth connection is ended after the delayed off period ⇒ page 3.

<sup>2</sup> Where applicable

Radio connections using Bluetooth® radio communication technology do not increase cell phone usage fees.

The Bluetooth® word mark and logos are owned by the Bluetooth SIG, Inc. and any use of such marks by Nokia or Volkswagen is under license.

### Tips

- In some countries, there may be restrictions on the use of devices that support Bluetooth® wireless technology. Local authorities can provide you with the pertinent information.
- If you connect the cell phone package to another device using Bluetooth® wireless technology, read the User's Guide for that device to obtain more detailed safety instructions. Use only compatible products.

Applies to vehicles: with cell phone package

## **Linking the cell phone with the cell phone package (Initial pairing process)**

---

*Cell phones that support Bluetooth® wireless technology must undergo a one-time initial pairing process before the cell phone can be used with the cell phone package.*

Please consult your cell phone manufacturer's User's Guide for the cell phone settings. If necessary, close all active Bluetooth connections for the cell phone to be linked.

### **Pairing process**

- Switch the cell phone on.
- Activate the Bluetooth® function on the cell phone.
- If necessary, end all active Bluetooth connections with the cell phone.
- Switch the ignition on.
- Within five seconds, press the  button on the multi-function steering wheel twice.
- You will hear a beep over the vehicle speakers confirming the cell phone package has entered pairing mode. Once the cell phone package enters pairing mode, you have five minutes to pair your cell phone with the system.
- As described in your cell phone user manual, use your cell phone to search for available Bluetooth® devices. The cell phone has a list of Bluetooth® devices found.
- Select the “VW UHV” device.
- Your cell phone will ask for a password.
- Enter the password “0000”.
- When the Bluetooth® enabled cell phone and the cell phone package in your vehicle have been connected, you will hear a beep over the vehicle loudspeakers.

### Ending Bluetooth® connection

- Press the appropriate key on the cell phone. Read the User's Guide from the cell phone manufacturer for the correct procedure. **Or**
- Remove the ignition key and take the cell phone out of the cradle.

### Establishing connection to the cell phone package with an already recognized Bluetooth® device

- Switch the ignition on or place the cell phone in the cradle.
- The cell phone package automatically detects the cell phone as a *recognized* device. The Bluetooth® connection is established.
- A beep over the vehicle loudspeakers confirms that the cell phone package is working.

### Deleting the list of all recognized devices from the cell phone package

- Switch the ignition on.
- If necessary, end all active Bluetooth® connections.
- Make sure that there is no *recognized* cell phone within Bluetooth® range.
- Hold the  button on the multi-function steering wheel down longer than fifteen seconds or press the emergency call button on the cradle longer than fifteen seconds.
- A beep confirms the deletion.

Up to seven different Bluetooth® enabled cell phones can be stored as *recognized* in the vehicle cell phone package. If an additional device is linked to the cell phone package, authentication to the device that has not been used for the longest period of time is automatically deleted.

#### Note

Not all (Bluetooth® capable) cell phones will connect to the cell phone package. (Please consult your dealer for a list of compatible phones and available cradles.)

#### Tips

- The linking process as well as Bluetooth® settings in the cell phone package are only available when the vehicle is not moving.
- When establishing a connection automatically through Bluetooth®, the cell phone package looks for recognized devices within its operating range. If there should be several previously recognized cell phones within Bluetooth® range, the device last connected is given priority. It does not necessarily have to be the cell phone in the cradle for the recognition and connection to occur.
- Connecting a cell phone to a cell phone package makes the cell phone package invisible to other Bluetooth® devices, i.e. other cell phones cannot be paired or connected to it.
- Ensure the Bluetooth® - Authorization required - setting on your cell phone is set to 'NO' in order to allow automatic reconnection. Please refer to the User's Guide of your cell phone manufacturer.
- When Bluetooth® devices have been paired or have "gotten to know" each other once, the Bluetooth® setting "Visible to All" is no longer needed. The phone package in your vehicle switches its visibility off

after the linking process. For privacy reasons, you should also deactivate the visibility of your cell phone as appropriate.

- In some countries, there may be restrictions regarding the use of Bluetooth devices. Local authorities can provide you with the pertinent information.

Applies to vehicles: with cell phone package

## Using the cell phone package

---

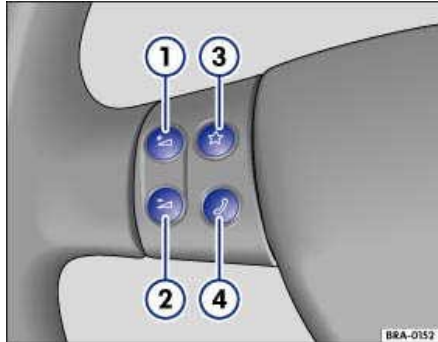

fig. 3 Multi-function steering wheel left side

### Placing a call

- Enter a telephone number on the cell phone or select an entry from the directory.
- Press the appropriate key on the cell phone to establish the connection. Read the User's Guide from the cell phone manufacturer for the correct procedure.

### Accepting a call

- Briefly press the  button on the multi-function steering wheel.
- Press the appropriate key on the cell phone. Read the User's Guide from the cell phone manufacturer for the correct procedure.

### Rejecting a call

- Press the  key on the multi-function steering wheel for more than two seconds.
- Press the appropriate key on the cell phone. Read the User's Guide from the cell phone manufacturer for the correct procedure.

### Ending a call

- Briefly press the  button on the multi-function steering wheel.
- Press the appropriate key on the cell phone. Read the User's Guide from the cell phone manufacturer for the correct procedure.

### Switching to Private Mode

- Press the  button on the multi-function steering wheel again for more than two seconds to switch the call from the cell phone back to the hands-free device.
- During an active call, press the  button on the multi-function steering wheel for more than two seconds to switch the call from the cell phone package to the cell phone.

### Additional functions

- Additional functions, such as call waiting, are possible from the cell phone itself only if it supports these functions. Read the User's Guide from the cell phone manufacturer for the correct procedure.

#### WARNING

Improper use of the cell phone causes driver distraction and accidents as well as serious personal injury.

- Always devote your full attention to the traffic around you! Use the telephone only if traffic and other conditions permit.
- Always set volume levels so that you can clearly hear horns, sirens and other warning sounds outside the vehicle.
- Using a cell phone inside the vehicle without having a separate outside antenna can be dangerous to your health and that of your passengers because the electromagnetic radiation energy that cell phones emit may be above established limits.
- Never leave a cell phone on the seat, instrument panel or in other places where it can be thrown around the inside of the vehicle during a sudden braking maneuver, a crash or another accident and injure vehicle occupants. Always place the cell phone securely in a cradle.
- Always make sure that the cell phone is properly secured in the cradle and that the cradle is securely locked onto the base plate. In an accident, a cell phone that is not properly secured can be thrown from the cradle and cause injury.
- In areas with no or inadequate network reception, and under certain conditions such as in tunnels, garages and underpasses, it may not be possible to make a telephone call – even in an emergency!

#### Tips

- When making calls, there may be interference with reception which affects performance in no-reception areas.

Applies to vehicles: with cell phone package

## Information and emergency calls

Using the  and  buttons on the cradle, you can connect to the main emergency and service office at the Volkswagen Service® Call Centers.

fig. 4 Buttons for information and emergency calls

Using the two speed dial buttons on the cradle,<sup>3</sup> you can connect to the main emergency and service office at the Volkswagen Service® Call Center. Here you can call for assistance if you have a problem with your vehicle or call for information about traffic and your trip. A telephone connection can only then be established if the ignition is switched on and a cell phone is connected to the vehicle's cell phone package via Bluetooth®.

### Information call

- Hold the  ⇒ fig. 4 button down for more than two seconds. The connection is established.

### Vehicle emergency call

- Hold the  button down for more than two seconds. The connection is established.

By pressing the information call button  you can call for information about the Volkswagen brand and value-added services concerning traffic and your trip.

By pressing the emergency call button  you will immediately receive assistance in the event of a breakdown or an accident - assuming that your cell phone is in an area where signals can be received. The nationwide Volkswagen dealer network with its service vehicles is available around the clock.

The system automatically tries to connect you to a Service Center in your home country.

<sup>3</sup> Where applicable

### WARNING

**Improper use of the cell phone causes driver distraction and accidents as well as serious personal injury.**

- Always devote your full attention to the traffic around you! Use the telephone only if traffic and other conditions permit.
- Always set volume levels so that you can clearly hear horns, sirens and other warning sounds outside the vehicle.
- In areas with no or inadequate network reception, and under certain conditions in tunnels, garages and underpasses, it may not be possible to make a telephone call – even in an emergency!

### Tips

- A call made with the  or  buttons on the cradle has higher priority than a normal call. If the  or  button is pressed during a normal call, the call is terminated and an information or emergency call is made.
- If the vehicle emergency button  is pressed during an active information call, the information call is terminated and the emergency call is made and vice versa.
- A cell phone network must be available to make the information and emergency calls. It is possible that service is not available in some areas or in some countries.
- In countries for which no “information call” number is available, the emergency call is made when the  button is pressed.

Applies to vehicles: with cell phone package

## Declaration of compliance

NOKIA CORPORATION declares it assumes full responsibility that the product HT-1 complies with the regulations of Directive 1999/5/EC of the Council of the European Union. You can obtain the full text of the declaration of conformity over the company hotline.

CE 0168
